With insignificant exceptions the missionaries would subscribe to the Nicene Creed—and fully 95,000 of the native Christians would do the same.

2nd *The great powers of the world are Christian;* and the cross upon their flags is a sign of strength. "God is on the side that has the heaviest artillery" is said to have been a remark made by Napoleon. He lived to learn that in fact the heaviest artillery is on the side of God. In other words, Christianity is a force, stronger than artillery that the kings of the world find it necessary to conciliate, until to-day, the only non-Christian powers worthy of the name are the Turks, the Chinese, and the Japanese. Were the support of Christian England withdrawn, the Turks would soon be swept out of Europe, so that the jealousy of two Christian nations is the foundation of Turkish power. Given a few more Armenian massacres and the Sublime Porte will be deposed, and the only anti-Christian power will be humbled in the dust. China is non-Christian rather than anti-Christian, and that rather from collossal conceit and ignorance than from any intelligent opposition to the faith. What shall we say of Japan?

While it is too soon to call Japan a Christian power, yet she is rapidly approaching that position; and in her present mood, the power displayed by Christian nations appeals most strongly to her. She recognizes the truth of the proverb of King Solomon that

> Righteousness exalteth a nation:
> But sin is a reproach to any people.

Japan has been accustomed to get her ethics from China. But now that China has proved to be an unfit foster-father to Korea, and this war has manifested the rottenness of China's government, in spite of the political maxims of Confucius, Japan may be ready to seek the source of the ethics that gives strength to Christian nations.

Daniel Webster was once asked, "What is the greatest thought that ever occupied your mind?" After a few moments of profound silence he said with the dignity of sincerity: "The greatest thought that ever occupied my mind is the sense of my personal responsibility to Almighty God!" The Japanese, being agnostics, lack this sense, hence their proneness to suicide, thinking it a virtue rather than a crime.

Pro. Ladd, some summers since in his Osaka speech, advised the young men to become Christians to give them calmness in the hour of death. Almost anyone of his audience could have given the professor points on dying calmly. The Japanese are quite too ready to die calmly. They have not the hesitation felt by Hamlet, but they do their "quietus take with a bare bodkin" quite too freely. What they need to be taught is the responsibility and duty of living. To be sure they will concede that their lives belong to their parents, to their Emperor, but this does not prevent them from rushing all unbidden into the presence of their ancestral shades.

They need the Websterian sense of responsibility to Almighty God. They need not only more Christian soldiers but Christian generals also; men like Havelock and Howard, McLellan and Lee: men instant in prayer like "Stonewall" Jackson, whose soldiers could tell that there was hard fighting ahead when his lips were moving in silent supplication; men like "Chinese" Gordon who organized the "Ever victorious army" that beat the Tae-pings.

Mohammedans are fierce fighters because falling in battle for the faith they are sure of Paradise, and they believe in One God and that their Sultan is the successor of the Prophet. In other words, they have a real religion, which is stronger than patriotism.

When the Russian fights it is for God and the Emperor. Nor is his loyalty to the Emperor the less because of his devotion to God. The Nihilists are atheists almost to a man.

Why should the Chinaman fight? He has no god but the demons of Taoism, and no Emperor of his own race.

The Japanese are without doubt the most patriotic people on the face of the earth. Perhaps "X." will say that they are so patriotic because they have no gods higher than the Imperial Ancestors.

Naruhodo, go mottomo desu, and moreover if religion is going to give them regicides like Cromwell or sour schismatics like his Ironsides, God forbid! But the religious sense of the nation is awakening, it is impossible to put the people back to the *Tempo* period, when *reisuru* was synonymous with *haisuru*.

The notice boards of the Tokugawas were taken down in 1873; the one that used to be in the Uyeno museum has been hidden; and the Christians' God is no longer threatened with decapitation. The government is awake to the fact that whether there be a God or no, a very respectable minority of the subjects of the Empire believe in His existence and are none the less loyal because they have received this Asiatic faith through Europe and America. The Christians of the Empire do not need to have their loyalty bolstered up by any belief in the Imperial descent from any Gods historical or mythological.

"X." is quite right in saying that the Japanese soldiers are good; they are doubtless in some respects far superior to any soldiers on the planet, because the whole nation is more highly developed on the ideal side in certain directions than the outside barbarians, *e.g.* the absence of avarice—but never-the-less the soldiers need God, and a sense of their responsibility to Him to make them fight like Joshua did of old and to give them constancy to live when they have to bear cold and long marches on short rations.

If recent reports are true, the coolies seem to need "comforters" much more than the rank and file.

Let the Christian Chaplains shout
"*Strike* till the last armed foe expires!
Strike for your altars and your fires!
Strike for the *green graves of your sires*,
GOD and *your native land!*"

Yours truly,
March 4th, 1895. Y.

SILVER IN JAPAN.

To the Editor of the "Japan Mail."

Sir,—I agree with W.K.B. so far as to believe that silver is a much better standard than gold. Yet I regret to say that I cannot go to the length of preferring the silver standard to the joint standard, because

1. It would be almost impossible to convert the whole world to the silver standard within any reasonable length of time. A very large number of people who are now listening favourably to the claims of bimetallism would turn a deaf ear to the proposition of a silver monometallism. I cannot of course show much proof of this statement, as it is largely a matter of observation, but I think no one acquainted with the state of opinion in the fields of industry and commerce will question my conclusion. I believe it would require a hundred years longer to convert the world to a silver than to a bimetallic standard.

2. If most of the countries of the world adopted the silver standard and discarded gold, the value of silver would rise so rapidly, and that of gold would fall so rapidly, as to dislocate the industry and monetary relations of all the countries retaining the gold standard. Besides, the increase of the value of silver, in case it were widely adopted, might be so serious that the world would suffer as severely from its appreciation—*i.e.* the fall of prices in silver—that we would gain nothing by the change. I need not go into detail to prove this, as it seems to be perfectly clear that if the chief countries of the world discarded gold, as money, and coined silver, the former would drop enormously in value while the latter would rise to the same degree in value. There would be no gain in this except to the holders of silver investments, but on the contrary an enormous dislocation to commerce and industry.

3. Even if the silver standard could be adopted without great appreciation it would never be as stable as the joint standard. Here no doubt W. K.B. is sceptical and wishes to know how it is possible to secure stability between two commodities, which, according to the law of supply and demand, must change in value to each other. To quote W.K.B.'s words, "the ratio of the quantities of the two metals available will keep constantly varying." He adds:—"It seems to me that this is a part of the subject always shirked by bimetallists." This last expression is the only statement not true, as a statement of fact, in W.K.B's. letter. I can mention, without consulting a reference, at least ten works on the subject of bimetallism where the point in question is explained. I shall attempt an explanation in my own words, but I can claim no originality in the matter, as it has often been done before by men who are regarded as economists of the first rank in every other department of the science. And I believe that if many of our hard-and-fast monometallists (among whom I do not at all class W.K.B.) who I find are the most cock-sure people in the world, were to read a few authorities on bimetallism, in a fair and impartial spirit, and in the belief that they had not exhausted the subject of money by simply referring it all to "supply and demand," they would lose a little of their air of omniscience,—nay, possibly out-Herod Herod in their devotion to bimetallism. All the bimetallists ask is a fair investigation of the principles of their system both in theory and in history.

To make the matter clear, let us assume that at present half of the nations of the world have adopted the gold standard and the other half the silver standard, and to make the conditions as simple as possible, let us assume that the money of the gold countries is 100 X, the quantity X representing any multiple sufficiently large to equal the actual sum of gold in existence; and further, let us assume that the money of silver countries is 100 Y, the quantity Y being some multiple similar to X. Then we could represent the monetary system of the world as follows:

$$100\ X + 100\ Y = \text{all money.}$$

There would be in this case no bimetallism but only two monometallisms, and so long as these quantities remained the same in relation to the demand for money, there would be no alteration in the ratio of exchange between the two standards. But if there were an increase, say of 10 % of the amount of gold, and a decrease of 10 % of the amount of silver (such as could happen in many ways by a change in the output or in the demand), we should have the following

$$110\ X + 90\ Y = \text{all money.}$$

In the present case, the total amount of the money of the world would not have changed, but only its value in the gold and silver countries respectively. The countries using gold would suffer an inflation of prices (just opposite of the present state of things in Europe), while the silver countries would suffer a decline of prices. Above all, the financial and commercial relations between the two groups of countries would suffer enormously, because every debtor in the gold country would still get only the previous number of pounds or francs, and every creditor in the silver countries would demand as before the same number of dollars or *yen*. All people with investments *between the two groups* would suffer still more severely—a point too clear to require explanation.

Now let us study the same system under the operation of a bimetallic league. The arrangement at first was

$$100\ X + 100\ Y = \text{all money.}$$

A bimetallic league is now formed, partly out of the gold and partly out of the silver countries as follows:—

$$20\ X + (80\ X + 80\ Y) + 20\ Y = 100\ X + 100\ Y, \text{ or all money.}$$

We have the same amount of money as before, only

$20\ X$ = purely gold using countries.
$(80\ X + 80\ Y)$ = Bimetallic League.
$20\ Y$ = purely silver using countries.

In other words, 80% of the gold using countries unite with 80% of the silver using countries in a Bimetallic League, by which I mean that they are willing to coin either metal, gold or silver, to any extent at a fixed ratio and to make it full legal tender, just as gold is in the gold using countries, or silver in the silver using countries. The other figures, 20 X and 20 Y, represent what is left of the purely gold and silver using countries after the Bimetallic League is established. The

Digitized by Google UNIVERSITY OF ILLINOIS URBANA-CHAMPAIGN

total amount of money in the world is of course just the same as before. Now let us suppose precisely the same conditions occurring as before: 10 % increase of the whole amount of gold and 10 % decrease of the whole amount of silver, what would happen? Let us, to bring out the point distinctly, represent the increase and decrease taking place at first in the purely monometallic countries. We would have:

30 X + (80 X + 80 Y) +10 Y=all money.

Now by a familiar operation of money known as Gresham's Law, gold, because it is cheaper in the gold countries (being more abundant) than in the countries of the Bimetallic League, will enter the countries of the League and to some extent drive out silver. This matter is not a subject of dispute between monometallists and bimetallists and so I need not waste time in further explanation. Gold, in other words, can never have a greater value in the gold using countries than in the countries of the Bimetallic League. Consequently we would have the following:

20 X +(90 X +70 Y)+20 Y=all money.

The 10 X increase of gold having entered the Bimetallic League displaces the same amount of silver and drives it to the silver countries.

Can anyone fail to see at a glance the great advantages of the Bimetallic League. In the first instance, before the League was established, the increase of gold or decrease of silver had to take effect in their respective countries, because the gold group refused silver and the silver group refused gold *as money*. It results, however, from the bimetallic system that in spite of the variations in the amount of each money, prices and money values would not alter. First, prices in gold countries would remain the same as before, as they have the same amount of money, viz., 20 X.

Furthermore, prices in the bimetallic countries would remain the same, as they also have the same amount of money; viz., 160 of variously arranged X and Y; and lastly, silver countries would also be in as good a situation as before, since they, too, have the same amount of money; *viz.*, 20 Y. Thus in spite of an enormous change in the respective amounts of gold and silver, greater *in fact* than it would be possible to imagine occurring in the actual world, there is absolutely no disturbance in prices or in the purchasing power of money.

The whole operation, which I have tried to explain, takes place under what Wolowski called the *Law of Compensatory Action*. By this law is meant that if a Bimetallic League is established on a fairly large scale, it will always act as a compensating machine between the two other groups, or, as others call it, a balance-wheel between the two groups. And the value of money will not only be steadier in the whole world, but there will be no more variation of exchange between gold countries or silver countries, or between these and the Bimetallic League, than now obtains in the exchange between gold countries. Only a small percentage above par is necessary to move gold from the United States to England, and in the same way, if the League were established, only a small per cent. of advance in exchange would be necessary to move silver from the silver country to the League countries, or *vice versa*.

"But," I hear my monometallic friend say, "even according to your statement the cheaper money would always drive out the dearer in the countries of the Bimetallic League." This is always regarded by monometallists as a crushing argument against the system. But I answer "No." The relatively cheaper would, indeed, to a slight extent drive out the relatively dearer metal, *but the total value of money* in the Bimetallic League would not change, and that is all men demand from a money standard. For people do not care essentially for gold and silver as money, but stable purchasing power, and this they would acquire under the bimetallic system. "But," says the Monometallist driven to a corner, "what if a very large increase of gold should take place and a very heavy decrease of silver. Would not all the silver tend to disappear from the bimetallic countries?" In the latter case, I answer, the boon of a Bimetallic League would be greater than ever, since it would preserve the world from a monetary cataclysm. If a very heavy decrease of one metal should take place under the monometallic system, it is not difficult to see what a great fall in prices, what a heavy increase of burdens to debtors, and what a disastrous series of calamities would result.

It is sometimes said that we do not use at present much gold or silver, but we use bank-notes or other substitutes for metallic money, and therefore the importance of gold and silver is declining. To this can be replied that all of these substitutes are finally based on the value of gold or silver. These two metals are the foundations of the monetary structure, and we need good foundations to every structure, though after it is built, we need not live in the cellar. There is no necessity for individuals to handle either gold or silver to any great extent, any more under the bimetallic system than under any other system. All that would happen, if bimetallism were adopted, is that the bank reserves, now composed either of gold or of silver, would be composed of gold *and* silver, as they were in France and other bimetallic countries before 1873.

Lastly, the practical question arises whether a Bimetallic League can be established on a thoroughly efficient basis so as insure its success. I believe there can be no doubt that if England cordially cöoperates, the following countries can be counted:—Great Britain, including the dependencies (Canada, Australia, India, and others), the United States, Germany, France, including the other countries of the Latin Union (Belgium, Switzerland, Italy, and others Holland), and probably Japan and Mexico. And if this solid array of nations does not satisfy the trepidations of the monometallist, if his soul is still haunted by the fear of an inundation of the cheaper money, he is beyond the power either of theoretical arguments or of practical experience.

Thanking W.K.B. for his letter, I remain yours truly,

GARRETT DROPPERS.

March 16, 1895.

THE RELATION OF UNITARIANISM TO NON-CHRISTIAN RELIGIONS.

To the Editor of the "Japan Mail."

Sir,—The enclosed letter written by Mr. MacCauley, President of the Senshin Gakuin (the School for Advanced Learning) in Tokyo, to Mr. Ushiro Nakanishi, a prominent magazine writer and Buddhist scholar of this country, was published recently in translated form in the *Shukyo*, the Unitarian magazine. As the letter has aroused considerable interest among people who are interested in Christianity in Japan, we have desired to see it as it was originally written and to make it known to others. We have requested a copy of the letter from Mr. MacCauley, and we send it to you, hoping that you will kindly give it a place in the *Japan Mail*.

Yours very truly,

Some Students of the Senshin Gakuin.

Tokyo, March 18, 1895.

Mr. Ushiro Nakanishi, Tokyo, Japan.

My dear Mr. Nakanishi,—I have not had time since the receipt of your letter of the 2nd inst. to give it the attention it deserves. But to-day I shall try to answer at least its main question. This question has been answered by me many times during the past five years, and always essentially in the same manner. For some reason, however, I do not seem to have made my meaning perfectly clear. Whether the fault is in me or is in the minds of the persons I have addressed, I do not know. But it is evident that what I have intended should be understood, is not yet understood either by yourself or by many who show a good deal of interest in the Unitarian movement in Japan. I shall therefore try once more to make my meaning plain.

First.—Unitarianism is a religious movement whose history shows it conclusively to be directed by three principles:—

1.—Free thought in the investigation of religious problems.

2.—The supremacy of the human reason in deciding truth or error in religious doctrine.

3.—Moral character and work as testing the worth of men, and as being the ultimate basis of church or associated religious fellowship.

Now, my dear Mr. Nakanishi, if you and your friends would accept this statement, and then never forget it in your inquiries about Unitarianism, your present misunderstanding could not occur. *The three principles above stated, are supreme.* They govern everything else that may have place under the name Unitarian. Their logical conclusions also are always accepted by Unitarians as soon as such conclusions are made known.

Next then.—Never putting out of mind these three fundamental principles, which may be called the "Unitarian standard," we should remember that under this standard the Unitarian Churches, or Church, has naturally occupied many positions and made many changes, and we should know that these variations are to be substantially repeated in the future. As long as men think and think freely, their minds will change and grow with human knowledge and progress. The Roman Catholic Church boasts that it never changes. Why? Because it claims for itself that it is a perfect divine institution established in this world by God himself. The Orthodox Protestant Church subjects all its development to what it claims is a perfect divine revelation—the Bible. But the Unitarians have always refused to submit their minds to either the Church of Rome or to the Bible of Protestantism as such. Their authority has been, and is to be, the enlightened Reason.

At this point we are brought to consider Unitarianism as having part in Christian history. It is a fact that Unitarianism had its origin within Christianity. It is also a fact that most Unitarians at the present day are Christians; in this sense, that they accept the religion which Jesus Christ [illegible] believed, and practiced as the highest form of religion [illegible] which they can direct their own lives. But it is further a fact that Unitarianism has never had a fixed Christian theology. It has again and again been modified by deeper and larger conceptions of Christianity. The early Unitarians were as different in their notions about Christianity from the Unitarians of the present time, as present Unitarians are different from Orthodox Christians. From generation to generation Unitarians have changed in their conceptions of Christianity until now their National Conference in America, by a unanimous vote given last year, stands upon this platform:—

"*The Unitarian Churches accept the religion of Jesus, holding in accordance with his teaching that practical religion is summed up in love to God and to man.*"

But notice, also, that this Christian position is the result of the steady growth of Unitarianism in Christian countries, and as a part of Christianity. Unitarianism is not necessarily confined to Christianity, nor do Unitarian Christians shut up their religious fellowship to those only who are professed Christians. Unitarianism does not belong exclusively to any one form of religion, be it Christianity Buddhism, Mohammedanism, or any other historical faith. The American Unitarian Christians last year, at the same time they adopted the conception of Christianity above given, adopted also unanimously the following declaration:—

"This Conference recognizes the fact that its constituency is congregational in tradition and polity. Therefore, it declares that nothing in this constitution is to be construed as an authoritative test; *and we cordially invite to our working fellowship any who, while differing from us in belief, are in general sympathy with our spirit and our practical aims.*"

Unitarianism, as the word is understood in religion, has therefore become a world-wide movement even although its birth and growth have taken place in Christendom and as part of Christianity.

Now you can see that when Unitarianism is carried outside of what is called Christendom, or Europe and America, and is brought into a non-Christian country like Japan, its relations to the religious and to the general life of such a country, are above everything else, those which arise from its fundamental principles and methods, that is, from its threefold standard spoken of at the beginning of my letter. The personal faith or definite creed of any Unitarian representative or teacher is therefore a secondary matter, and is *not* to be considered *authoritative* in the counsel or aid he may give to those who may wish to associate themselves together for Unitarian faith and work.

So, then, Unitarianism in being brought to Japan must not be thought of as hostile to any form of *religion in Japan, as such*. If, for example, a Buddhist is a free and impartial investigator of religious problems, if he is sincerely willing to submit his faith to the authority of philosophy and science, and if he puts character or moral excellence before everything else as the test of manhood, then he and any true Unitarian can be intellectual friends, even though they differ very widely in other special conclusions. And if any Buddhist is sincerely desiring to help to make men better and happier, by bringing them under the law of justice and love, then such Buddhist can work hand in hand as a religious brother, with any true Unitarian. Of course, a bigotted Buddhist and a free Unitarian can no more study together and work together than can a bigotted Christian and a free Unitarian. But free Buddhists and free Unitarians can and ought to be brothers in principle and in work, even though the Unitarians may find in Jesus Christ their own teacher and guide. No true Unitarian would find fault with a Buddhist for his love of Sakya Muni as teacher of holy thought and living, and, likewise, no true Buddhist should find fault with a Unitarian who may also be a follower of Jesus Christ. The Unitarian principle requires a genuine catholicity of religious sympathy, and the largest toleration in matters of intellectual speculation. The Unitarian is in fact opposed only to intellectual slavery, bigotry, falsehood, and vice.

I hope that I have now answered your question. If you understand my answer as I mean it to be understood, you will see that there is no obstacle set up by Unitarianism itself to your cöoperation with me or with any other representative of Unitarianism who is true to his principles. I understand that a writer in *Bukkyo* has lately found fault with Unitarianism because there are Unitarian workers in Japan whose beliefs differ from one another. I suppose that this writer considers that when men differ in belief, they should separate and form their own parties. Japan is a country of parties, I know. It seems to be difficult for your countrymen "to agree to disagree." But the Unitarian aim is to recognize as far as possible the right of every man to his own opinions in matters of speculation, and to try to find a bond of sympathy and cöoperation in universally acknowledged truth and goodness. Unitarianism is therefore not the agent of a tyrannical partisanship in small things; it is the guide of those who ignore petty partisanship for the sake of a free, all-inclusive service to the largest welfare of mankind. Unitarianism has often been reproached as being "mere morality." Unitarians hold this reproach to be the highest kind of praise. They do not neglect the search for truth, of course, but they hold that truth has its highest value in making mankind better, nobler, purer, happier.

In a word then, I am bold enough to claim that, among the religious movements in the world, the freest, most progressive, most tolerant, most inclusive of all is Unitarianism. It is marked by method rather than dogma. It is as varied as nature or the human mind is varied. It is as united as the hunger for truth or the need of moral excellence can unite men. Every Unitarian has his own faith, and this faith is usually very strong and clear. I have my own definite creed on all the problems of theology and ethics. All Unitarians are pretty well agreed in their disbelief in so-called Roman Catholic and orthodox Protestant creeds concerning the Trinity, the deity of Christ, the Bible, Salvation, and Human Destiny, even though they differ in the emphasis they put on their denials of various parts of these creeds. All Unitarians believe in a universal spiritual endeavour on the part of mankind, in the worth of religion under all its forms in all nations, in a growing manifestation of the faith which underlies all historical expressions of faith, in the duty and the privilege of the disciple of all forms of religion to rise to a common level on which by enlightened Reason they may find at last

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

an intellectual as well as moral basis of harmony and cooperation. I hold that this sublime conviction was justified by Christ himself. You may hold that it was justified by the Buddha himself. Each of us can cherish his conviction without any break in sympathy. It involves no antagonism. Jesus and Sakya I believe would have found no reason for separation from each other. They would have gone hand in hand to feed the hungry, to comfort the sorrowing, and to fill mankind with love and peace. It is foolishness, it is even a crime against the human soul, for the followers of Jesus and Sakya to separate from each other as enemies or even as strangers.

Unitarianism has not come to Japan to destroy but to fulfil. I am not here to reproduce in Japan the Unitarian Church of America, except in its spirit. Unitarianism is here to set men free, or rather to help the free minds of Japan to set all minds free in spirit, and to hasten the coming in the world, as far as may be, of the sublime empire of love and righteousness which will at last make of humanity a true Brotherhood under the care of the infinite and eternal God, our Father.

I am, with sincere respect, yours always,

CLAY MACCAULEY.

Tokyo, Mita, February 18th, 1895.

ASIATIC SOCIETY OF JAPAN.

A general meeting of the Asiatic Society was held at No. 17, Tsukiji, on Wednesday, March 13, at 4 p.m. The Hon. Treasurer, Mr. J. McD. Gardiner occupied the Chair.

After the minutes of the previous meeting had been read and approved, the Chairman called upon Rev. Dr. D. C. Greene, the President, to read his paper on *Tenrikyo*, or the Teaching of the Heavenly Reason.

At the outset, Dr. Greene called attention to the rudimentary character of the ancient Shinto, and to the fact that the more important schools of Shinto thought, like the Ryobu Shinto, Yuitsu Shinto, etc., owed their origin to the attempt to interpret the old traditions in the light of Buddhist philosophy. In like manner, the spirit of organization, so active in the Meiji period has led to the transforming of what had been many schools, or societies, into true sects. Sects among the Buddhists were numerous before, but within the Shinto circle, it may be questioned whether they existed at all, in the Western sense of the term. The love of organization, however, partly instinctive, partly the outgrowth of a desire for Government recognition, has led to a hardening of the lines of demarcation between rival schools and to the formation of true sects, like the Kurogumi, the Remmon, and other so-called *Kyo-kwai*, or churches, and, apparently also, Fujiko, the On Take Ko, etc., which, while very old, were until recently merely societies, or clubs. These are an important feature of the religious life of Japan.

Among these, the Tenrikyo is perhaps the most important, because of its assertiveness and rapid growth. It might be roughly characterized as a reaction against the allegorizing tendency of modern Shinto scholars. It possesses much interest because of the light it sheds upon the religious condition of the mass of the Japanese people and also because of certain psychological phenomena associated with its history.

The materials for the study were found in a manuscript copy of the scripture of the sect, of which only twelve hymns have been printed; a number of sermons preached in six different chapels in Tokyo, Kyoto, and Kobe; interviews with priests and preachers; and a number of tracts and magazine articles from Buddhist and Shinto sources.

Dr. Greene then passed on to the story of the founder, who was the wife of a farmer living in the village of Mishima, some six miles south of Nara, the old capital of Japan. She was born in 1798 and died October 26th, 1887, at the ripe age of eighty-nine years. Her first striking experience of the divine favour came to her at the age of thirty-two. Though very poor, and already having three children of her own, she took, out of pity for a still poorer neighbour who was ill, a little babe which she nourished and cared for as her own. One day to her great grief, she found that her foster child had the small-pox in its most virulent form. She felt that the disease was a sign of neglect, and hence of disloyalty, on her part. As the doctor's could give her no help, she turned to the gods and promised, if need be, to give up two of her own children, if only the foster child might be saved. The child recovered, but within a few years two of her own children, her daughters, died, one of them born a year to two after the vow. Later on, in her fortieth year, a son suffered from a lame foot, due to an ulcer. This was also cured by an appeal to the Gods—this time by the use of the *gohei*, as so graphically described by Mr. Percival Lowell in his paper in Esoteric Shinto. In connection with this use of the *gohei*, Omiki for this was the name of the prophetess, went into a trance which lasted three days. At the close of this trance, she was taken with convulsions, which a voice from her lips proclaimed to be due to the presence of the deity, Kuni-toko-tachi no Mikoto. After an interval of quiet, he was followed by nine other deities, of whom the last was Izanagi and Izanami no Mikoto. Omiki was declared to be the prophetess of these ten gods, who styled themselves The Kings of the Heavenly Reason, *i.e.*, Tenri O no Mikoto.

This experience forms the starting point of the history of the sect. During the life of the founder there was much opposition, but six months after her death Government recognition was secured, and since that time, its growth has been rapid till now the priests of Mishima claim 10,000 priests and preachers and 1,400,000 adherents. These are mostly from the lower classes, but their *esprit de corps* has led to generous gifts, so that the head of the sect was able, it is said, to offer the Government a few years since *yen* 50,000 for coast defence.

When Omiki died, her remains, after a gorgeous funeral, were buried on a hill near Mishima in a tomb fashioned after that of the old emperors.

According to the teaching of Omiki, the world, formerly a mere mud sea, was reformed and peopled with the human race by the ten deities who forced themselves upon her hospitality, but among these the two first, Kuni-toko-tachi and Omotani no Mikoto, who represent respectively the moon and the sun, constituted the real source of creative power. Omiki differs from the orthodox Shinto writers, both as to the names and sex of these deities, but the pressure of public opinion has led to a revision of the original teaching in the interest of orthodoxy. After a time Izanami-no-Mikoto gave birth to 999,999 pigmies six-tenths of an inch in height. These in the course of ninety-nine years grew to be four inches tall. They were followed by an equal number which grew to be five inches tall. Then Izanami died in great joy, because she saw in this advance the promise of a future race of men of five foot stature the fulfillment of the creative purpose. At this point, the direct agency of the Gods appear to have ceased, and similar pigmies of gradually increasing size were born in groups of ten, and later on in pairs. By this time the stature had become three feet. Thence the evolution went on until man reached his normal height and the world its present aspect.

The next division of the paper was devoted to the literature of the sect. The literature is meagre, consisting, so far as is known of only about sixty-one closely written manuscript pages and a few pilgrim songs which have been printed. The illiteracy of Omiki and her reporters makes the work of interpretation difficult and not infrequently the only resort is to conjecture. It is probable that, if a considerable number of manuscripts could be collated, some of these difficulties would disappear; but in spite of considerable effort to secure others only one manuscript has been available for investigation. The style is a mixture of the ordinary book language and a provincial colloquial with here and there phrases from the epistolary dialect. These scriptures consist of four sermons of Omiki, the story of her life, an account of the cosmogony, and twelve hymns.

The paper closed with a few extracts from the sermons of Omiki.

A supplementary paper was promised which should deal with the hymns, the doctrines of the sect, its worship and its methods of propagation.

The CHAIRMAN, after thanking Dr. Greene in behalf of the Society, called attention to the interesting character of the essay.

Mr. TYNG stated that he had heard that the doctrines of this sect had been influenced by Christian teaching, and he questioned Dr. Greene as to the truth of this.

Dr. GREENE replied that there was probably no conscious attempt on the part of the followers of this doctrine to be influenced by Christianity, but he thought it very likely that certain Christian influences had been at work in it.

The meeting adjourned at half-past five o'clock.

REVIEW.

The Lilac Sunbonnet. By S. R. CROCKETT. London: T. FISHER UNWIN.

THE "Lilac Sunbonnet" is the sweetest love idyl we have read for many a long day. Its heroine, Winsome Charteris, claims kindred with the very best and brightest of her sex in fiction, past or present. She is worth more than all the "girls of the period" put together, she has nothing in common with the "wild woman of the future," she has no "mission" and no "rights," except the right of being loved, and loving in return.

She is no languishing, love-sick maiden, however, but a practical little woman of business, virtual mistress of Craig Ronald Farm while she is still in her teens.

Gentle and refined from her fair, curly head to the pretty feet she was so eager to bare for the "tramping of the blankets;" ready to take her full share of the day's work, from the baking and churning down to the water carrying; ready too, when the time comes, and indeed it is not long in coming, to give her heart, whole and without a thought of worldliness, or self-interest, into her lover's keeping: each picture we have of the gentle Winsome, whether it is "guddlin for trout" in the burn with little Andra Kissock, carrying her two shining pails of water, throwing her arms round her lively old grandmother, or sauntering by her lover's side in the sweet mid-summer's morning, the famous sunbonnet dangling from her hand, each picture seems the special one which we should like to cherish in our memory, until we came to the next, which seems still more charming. Mr. Crockett has been hardly as successful with his hero, who, after all, is almost worthy of his sweetheart, and that is saying a great deal. We are told that Ralph was a poet, and this is a pretty specimen of what he could do:—

> Large heart true love, service void of sound
> Life-trust, death-trust here on Scottish ground,
> As in olden story, surely, I have found—
> Love, love, love, the whiteness of the snow
> Love, love, love, and the days of long ago.

But the mavis did better still, from the laurel bush by Winsome's window, and this is what she sang:—

> There—there—there—
> Can't you see, can't you see, can't you see ■?
> Love is the secret, the secret!
> Could you but know it, did you but show it?
> Hear me! hear me! hear me!
> Down in the forest I love her!
>
> Sweet, sweet, sweet!
> Would you but listen,
> I would love you!
> All is sweet and pure and good!
> Twilight and morning dew,
> I love it, I love it, I love it,
> Do you, do you, do you?'
>
> Hear! hear! hear!
> Dear! dear! dear!
> Far away, far away, far away,
> I saw him pass this way,
> I saw him pass this way,
> Tirrieoo, tirrieoo! so tender and true,
> Chippiwee, chippiwee, oh, try him and see,
> Cheer up! cheer up! cheer up!
> He'll come and he'll kiss you,
> He'll kiss you and kiss you,
> And I'll see him do it, do it, do it!

Of the minor characters little need be said. Saunders Mowdiewort is a first class bore, and Jock Gordon is not much better. We are disappointed in Jess Kissock, about whom we cannot but think the author must have modified his intentions during the progress of the tale. Agnew Greatorix provides the only scene of passion, but we cannot, for our own part, believe in the existence of such a character. The two old Ministers, faithful remnant of the Marrow Kirk, are touching pictures, if not absolutely true to nature; but John Bairdieson, the Minister's man, and Elder of the Marrow Kirk, who had "followed the Sea" in his youth, is capital. The scene where Ralph comes back to his father's house in semi-disgrace is too good to leave unquoted "Dear Siss!" said John, anxiously, "was't ill-doing or unsound doctrine?" "Mr. Welsh said that he could not company with unbelievers."

"Then it's doctrine—wae's me, wae's me! I wuss it had been the lasses. What will his father say? Gin it had been ill-doin', he micht hae pitten it doon to the sins o' his youth; but ill-doctrine he canna forgie. O Maister Ralph, *gin ye canna tell a lee versel, wudl ye no kaud your tongue—I can lee for ye*, for I'm but an elder—an'I'll tell him that at a kirn ye war over persuaded to drink the health o' the laird an' you no bein' acquaint wi' the strength o' Glenlivat——" Surely the words in italics are worthy of Caleb Balderstone. One word for faithful Meg Kissock, who is a jewel, but who most certainly would never have said, "Juist what I was on the point of remarkin," under any circumstances whatsoever.

It will be seen that Mr. Crockett possesses the "divine afflatus;" indeed it breathes from almost every page. He is filled with a fervent love of nature in all her moods, and he has the power to make her speak, so that he who reads may almost hear her voice; the power to paint a picture which he who reads can almost see with his bodily eyes; the power to describe a spray of honeysuckle so that he who reads may almost breathe its scent. But with power comes responsibility. If Mr. Crockett has the power to charm thousands wherever the English language is spoken, let him not be above taking pains. We have perhaps lost ourselves in the sweet noontide hush; the sound of the bees humming, and of the burn tinkling over its pebbles is in our ears; we can almost feel the soft breeze laden with the

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

scent of sweetbrier, bright; tender smiling Winsome stands before us; the picture is a real living one; when suddenly, some absurdity such as the butter refusing to "come" without the encouraging stimulus of hot water, on a midsummer afternoon, wakes us up with a start, and the spell is broken. Then we feel inclined to exclaim with the ploughman who had just devoured a "fairy book" with delight: "They're naething but lees, efter a'!" A careless sentence spoils the *vraisemblance*. We are told for instance that "Afternoon is slack water in the duties of the house, at least for the womenfolk," but on the very next page we find that Winsome was at her "bake-board," and that churning was also going on in the dairy, and this upon an afternoon when a visiter was expected.

At another time we are introduced to Mr. Welsh and Ralph over their breakfast, and we are distinctly told that it consisted of "a wooden platter of porridge." Yet what follows in almost the next paragraph? "Ralph answered looking over his own" cogfu' o' brose "as Manse Bell called them." Now a platter and a cog are different things, so are brose and porridge, as Manse Bell very well knew, and as Mr. Crockett knows too if he will take the trouble to think. These are little faults. Spots in the sun, it may be argued. So is a false note, but it jars on the ear and spoils a beautiful song for all that.

There is, however, a graver fault which may be found with the volume before us. A touch, it is but a touch of vulgarity, or shall we say coarseness, is visible here and there, like a dirty smudge on a fair picture, which contrasts unpleasantly with the simple style, fresh and pure as a May morning, that constitutes the author's greatest charm. Let S. B. Crockett take example by Mr. Stevenson, at whose feet he has sat, or we are much mistaken, and he will purge himself of this sin.

A PARODY.

(With Apologies to the Shade of Lord Tennyson).

We stood beside the bar; he to the East
Was newly come from home—too green, too green;
One whom the strong sons of the world despise
For patent boots and hat of glossy brown.
His name was Juggins, and himself would take
The thing that is not for the thing that is.
So I, with much fair show of courtesy,
Said "Juggins, there's a man you ought to know,
A very learned literary man,
Whom you, being learned, surely ought to know."
And saying thus, I led him to the sage
And named them each to other, for a jest.
Then Juggins, being a fool and rather more
Than half seas over, would not shape his tongue
To some familiar phrase of civil speech—
As "pleased to meet you," "Warm it is to-day"—
But being, as I say, a drivelling fool,
Chirped with a feeble snigger, "Who are you?"
Whereto the gloomy sage, why not? replied:—

I hustle foes alive or dead
With many a vulgar sally;
I sparkle—like a feather bed;
I bicker—like a valet;

And, when I really take offence,
I'm great at foaming rages,
With hardly half a line of sense
To half a hundred pages.

To keep a flickering hate aglow
Is still my chief endeavour,
For men may come and men may go,
But I go on for ever.

Dull modern days, weak modern ways
I roll a scornful eye on,
And bubble into fulsome praise
Of Parkes, the British lion.

I snarl and sneer, I fume and fret
At Japanese successes,
And thank my stars I don't forget
To curse whom fortune blesses.

I chuckle, chuckle, for I know
Though patrons writhe or shiver,
That men may come and men may go,
But I go on for ever.

I wind about, and in and out,
Round, over, through, and under,
With here and there a clumsy flout,
And here and there a blunder;

And here and there a word will start
That haply seems to wander
Across the narrow lines that part
A comment from a slander.

I care not, I, if friends are glum
Or rivals brisk and smiling,
For men may go and men may come,
But I'll go on reviling.

LOVE'S YOUNG DREAM!

Dream of a love that wakes with the dawn
And fades when fresh night folds her wing;
Love with the paling stars that is born,
And dies when nightingales sing.
Dream of a love that lives but a day,
A love, frail, fanciful,—fair,
A wand'ring love,—that never will stay;
White wings, on the whisp'ring air.
Love, that is shadowy, subtle, and sweet,
A love that lives but a night;
Love that lasts, while the red lips meet,
And dies with the dawning light!
Love that is born with the wild West wind,
And is gone while the sad sea sighs!
One look in the eyes! a quick glance behind!
"Goodnight! sweet, goodnight!" and it dies!
This is the love we claim and we crave!
Love that lies crushed in *one* kiss!
Love that is winged on the wand'ring wave!
The "new" love, and "modern" is *this!*

"Fin de Siècle."

THE TOKYO YOUNG MEN'S CHRISTIAN ASSOCIATION.

Mission work in behalf of Christianity in all lands is marked by great diversity of men and measures. Such variety of means and methods is generally demanded by the fact that the work is among "all sorts and conditions of men," who must be reached in all sorts of ways. In this aspect the diversity is beneficial, and is an essential condition of success. But there is another kind of variety of men and beliefs that is not so productive of success, and is, in fact, more often an absolute hindrance to effective Christian work. This is the division of Christian believers into many denominations, whose differences, small or great, are based upon, sometimes trivial, sometimes important, matters. A Christian institution, therefore, that tends to minify and to unify sects, and at the same time to magnify and to emphasize diversity of means and methods, is one that deserves the sympathy, not only passive, but also active, of all who are anxious for a great moral up-lift in Japan. Such an institution is the Young Men's Christian Association.

Englishmen and Americans in Japan are too familiar with the work of the Y.M.C.A. in their native lands to demand special instruction; they need only occasional reminders that this great institution has an important work in the metropolis of this Empire. The humble beginning was in 1880, when a band of young men, including Kozaki (now President of the Doshisha), Ibuka (now President of the Meiji Gakuin), Hiraiwa, Uemura, Matsumura, and others, organized the Tokyo Young Men's Christian Association. During the first decade the work of the Association was rather limited; but the visit of Mr. L. D. Wishard in 1889 gave an impetus to enlargement. Mr. J. F. Swift come out the same year from America to assist in this enlargement, and in 1890 began, not merely the second decade, but also a new era in the history of this institution.

This new epoch has been marked by several important features. In the first place, the reorganization was carried out along two important principles; "first, that the development of the Association work to be most effective and permanent must be worked out through and by the Japanese young men themselves; and second, that to be true to the history of the Association, its control must be as far as possible in the hands of *laymen*, members of evangelical churches." In the second place, it became necessary in 1890 to appoint a general secretary, Mr. S. Niwa, to devote his entire time and strength to the work. In the third place, the management of the Association was put into the hands of a permanent Board of Directors, consisting of eminent Christian laymen of several denominations; these are earnest workers, who represent the best types of Christianity in Japan, and who may, each of them, be called, what Daniel Webster called Robert Rantoul, "a Liberal-Conservative and a Conservative-Liberal." In the fourth place, through the active efforts of Mr. Swift, a fund of $50,000 was raised in America for the present fine building, which was dedicated last May.

This building is a hive of Christian industry. It is the local habitation of a great work, divided into three departments, educational, social, and religious. The educational department includes evening classes in English, a practical business course for clerks, a public reading-room and library, popular lectures and concerts, and a magazine, called the *Kirkutokyo Seinen*, or *The Christian Young Man*.

The social department provides monthly social meetings in the comfortable rooms of the building, keeps the look-out to furnish employment to worthy young men; and manages a boarding-house, which gives "a Christian home for young men coming to Tokyo from the country and exposed to fierce temptations."

The religious department conducts evangelistic meetings every Sunday afternoon at 2 o'clock; Bible classes during the week; and various meetings for prayer, inquiry and discussion of religious subjects.

The work of the Y.M.C.A. has been very successful, as a comparison of the statistics for 1893 and 1894 shows clearly. At a time when, on account of the distractions of the war, other branches of Christian labour are satisfied to hold their own, the work of the Y.M.C.A. has doubled or trebled in nearly all its departments. And this increase still continues: the average attendance at the evening classes has grown from 134 in November to over 140 now; and the average attendance at the Sunday meeting has increased from 124 in November to about 175 now. It is quite evident that the combination of practical, social, educational, and religious elements (especially the interdenominational phase) commends the Y.M.C.A. to the Japanese, and is destined to produce valuable results.

Another advance step is proposed this year; and it is one well suited to the times in Japan. The present tendency among the Japanese towards independence will undoubtedly be accelerated by the successful issue of the war with China. It is, therefore, the aim of the Tokyo Young Men's Christian Association to reduce gradually the amount of assistance received from America, until self-support is attained. Such a movement, to be permanently successful, must be gradual. It is, therefore, proposed to increase the number of "sustaining memberships among both foreigners and natives in Japan. At present there are about 30 such members, who pay annually from 3 to 5 *yen*, each according to his ability. Cards will soon be sent out in the hope of getting numerous responses in the shape of such memberships.

This appeal for local aid in behalf of the Y.M.C.A. work in Tokyo, will not be limited to Christian workers, or even to Christian believers, but will be made to all who might be expected to sympathize with a movement that promises much for the moral advancement of New Japan. It may, in some cases, become an appeal to personal interests. In America the work of the Y.M.C.A. among railroad employés has so commended itself to the business instincts of many railroad corporations, that large annual appropriations are regularly included in the budget of running expenses. The physical, mental, and moral development in the Y.M.C.A. has been so practical as to increase the actual efficiency of the railroad employés.

It is hoped, therefore, that even those who may have no special sympathy with Christianity as a religious or theological system, and who withhold sympathy from sectarian efforts, may be so impressed with both the practical and the unsectarian aspects of the Y.M.C.A. work as to tender financial assistance. And it is confidently expected, that all Christians who are labouring and praying for the spread of the Gospel among the Japanese, will gladly respond to this appeal from a profoundly Christian and interdenominational institution that is intended, not to supplant, but to supplement, other evangelical work, and to present to unbelievers the grand possibilities of united Christian effort.

HAKODATE.

(From our Correspondent.)

March 15.

The fire at this port on the night of the 13th, in which thirty houses were burned to the ground and a woman and two children lost their lives—as I telegraphed to you yesterday—has been traced to the careless handling of a *kotatsu*. We have been free from fires in Hakodate for nearly eleven months previous to this conflagration, a somewhat unusual occurrence of late years, but misfortunes never come singly, and I regret to have to report another outbreak last night and a further destruction of property. The fire broke out in a godown, and the destructive element was quickly communicated to two others, the result being that the three godowns were in a short space of time reduced to smouldering embers, constructed as they were of wood. The contents of the buildings were 20,000 fish oil barrels and tins, the greater portion of which were empty, otherwise the loss would have been much heavier. The cause of the calamity is said to be through a beggar who had made a little fire by the side of one of the godowns at which he was warming himself.

LEAVES FROM A WAR CORRESPONDENT'S JOURNAL.

Sunday, January 27th.

To-day has been cold enough to satisfy, I should think, even the Oldest Inhabitant, and cold enough certainly to convince me that when I am rich enough to retire from business as a War Correspondent I shall not build my winter-residence in North China. Still, the sunshine all day was so glorious as nearly to make one forget that the heating rays had all been left out.

I had some conversation last night with the correspondent of a Tokyo newspaper who is returning to Kinchow. This morning he came to me to explain that he was returning because he had forgotten his passport—how without it he had got so far as Kaiping did not appear—but he wished me to allow him to return with me, as he was afraid he should miss the important movements shortly expected to take place. How the poor man had come to think it was in my power to grant his request I could not waste time in trying to find out, though it would have been an interesting problem in psychology; I could only express my regret that my own authorization did not extend beyond certain specified personal attendants, and that I was utterly unable to do anything to help him.

I missed a station again to-day, the one at which I had intended to make a mid-day halt, and so rode on from nine to half-past two without stopping. I had been warned that the station was a little way from the main road, and had, I believe, turned into the proper by-way, when a Chinaman, with whom I communicated by signs, sent me back into the main road, and kept me waiting three hours more for my dinner.

In the latter half of my ride I met twenty or thirty wounded soldiers being conveyed south—more serious cases, evidently, than those I have previously encountered, for some were lying at full length in Japanese hand-carts, others were in stretchers carried by four coolies each.

I hope I have now heard the last of Marshal Oyama's proclamation, which I did *not* remove from the north gate of Fuchow. The Commandant of the station where I slept last night had received a telegram about it for transmission here, and the colonel in command here sent for me to ask me about it as soon as Tamura arrived. He will telegraph back to Fuchow my statement that I know nothing of the matter, and I hope the report will not follow me any further. A brilliant idea has struck me as to how the Chinese invention originated. The night before I left Fuchow I took a photograph of the north gate. The next morning, let us suppose, Field-Marshal Oyama's proclamation had disappeared. What could have seemed a more natural sequence of cause and effect to the Chinese crowd that watched me taking the photograph? With a somewhat foggy Chinese interpreter, this would easily develop into the legend that they had seen me take the proclamation down.

This town, Mon-yu, is a repetition of Kinchow and Fuchow on a much smaller scale. I cannot learn the strength of the Japanese garrison here, but it is larger certainly than at the other transport stations I have passed, and there is a Colonel in command. Twenty-nine Chinese prisoners from Kaiping arrived here to-night on their way south.

The contrast between the ruined condition of the houses for the first 30 miles north of Kinchow and their freedom from destruction for the rest of the way has been explained to me by the Colonel here to-night. After the taking of Kinchow by the Japanese on November 6th, a Chinese army remained in the villages immediately to the north of that city for a fortnight, using the roofs of the houses for fuel. When the Japanese were engaged in the taking of Port Arthur, the Chinese north of Kinchow made an unsuccessful attempt to regain the latter city; and, the attempt failing, retreated rapidly to Kaiping, not lingering long enough on the way to work any serious destruction.

Monday, January 28th.

No, the cold is certainly not exaggerated, if to-day, is a fair specimen. In the morning I simply could not bear it on horseback, and had to walk to keep myself warm. The draught animals all had icicles hanging to their nostrils, and my own beard and moustache froze to the face flaps of my fur-lined cap, so that I had an experience whenever I moved my head of a species of punishment of which I have heard or read, in which a pitch plaster is applied to a whiskered face and then torn off with the hairs attached. The icicles on the fur of the cap yet remain after three hours in the office here (Kaiping), and another three in the room in which we are to sleep.

I was asking myself to-day, in the words of the children's game, whether my revolver was "useful or ornamental." Had I met a Chinese bandit, it would, I fear, have proved ornamental merely. To expose my bare hand to the wind and to handle cold metal would in a second or two have rendered my fingers too stiff to pull the trigger; and my fur-lined gloves, like those of the giant Skyrmir, in which Thor and his companions once passed the night, have one bag for the thumb and another for the four fingers, and so could not be used in firing a pistol. The soldiers' gloves have three divisions, for thumb, forefinger, and the three remaining fingers respectively; and mine should have the same, which would have rendered them more handy also for the less warlike but frequently needed operation of blowing my nose.

Riding as fast in the afternoon as the slippery roads would permit, I reached Kaiping fully three hours before Tamura. In consequence of this, various officers who were full of information they were eager to impart to the first foreign newspaper correspondent who has found his way here, were compelled to bottle it up for want of a means of communication. When Tamura did at length arrive I was too tired to digest much, and must go into various questions to-morrow. The point they were fullest of was that the Chinese army in evacuating the city had left instructions that the wells should be poisoned before the arrival of the Japanese.

Monday, January 29th.

In the morning I had a conversation with Mr. Okawa, one of the Chinese Interpreters attached to the army. I wished to get some information from him about the relations between the invaders and inhabitants in this district, and was referred to him for information, as he had come with the advance guard to within four *ri* of Kaiping more than a month ago, and was with the army when it entered Kaiping on the 10th of the month. His knowledge of Chinese also gives him exceptional opportunities of learning what the Chinese peasants have suffered at the hands of the soldiers of their own nation.

I have already spoken much of this last point, so I will give one more instance only. When the advance guard entered Shonyu, the fortified town at which we spent last night, they found some houses actually burning. Calling some of the inhabitants together, and showing them Field-Marshal Oyama's proclamation of immunity for all peaceful inhabitants, Mr. Okawa then asked them why their houses were on fire. They had been set on fire, they replied, by the Chinese soldiers who had just evacuated the town, in revenge for the inability of the inhabitants to satisfy their extortionate demands. The Chinese, they said, had no regular service of supplies, and obtained everything by extortion from the districts in which they were settled. Their conduct was cruel in the extreme; and, notably, many of the wives and daughters of the peaceful inhabitants had been violated by the soldiers.

When the Japanese reached Kaiping many of the inhabitants showed them letters they had received from friends in the south explaining that the Japanese army was not cruel like the Chinese, and that they need have no fear of ill-treatment.

The Japanese arrived here on the 10th inst. only, and no system of civil government has yet been established. A military officer, however, is appointed to hear complaints from the inhabitants. No serious complaints against Japanese have been received; but several citizens have suffered at the hands of Chinese robbers, and about ten of these have been arrested. There are about 2,000 Japanese coolies in the town and its neighbourhood, and to avoid danger to the inhabitants these men are kept under military surveillance, and are not allowed to leave their quarters without a permit.

The goods needed by the army are bought from the merchants here. No forced sales take place. The goods are bought through the medium of the Chinese interpreters, and if no agreement is reached about the price nothing is bought. Purchases are effected in silver wherever possible, but when silver runs short notes are used. These are now accepted quite readily by the merchants.

In conclusion, I asked Mr. Okawa why it was that the peasants seemed so perfectly indifferent to the change of masters; had they no national feeling? He thought they had none; that they recognized only the authority of the official with whom they were immediately concerned, and had no general conception of China as a whole. Some time ago, shortly after the landing of the Second Army, Mr. Okawa passed between the First Army and the Second in company with a body of about sixty Japanese soldiers. The people of the district through which they passed exhibited curiosity and interest, but no hostility whatever. No "Alsace-Lorraine question" certainly need arise if the conquered province I have been traversing should be permanently retained by Japan.

After dinner, Tamura and I walked over to General Nogi's camp at Fei-yan-tsai, leaving Takeguchi at Kaiping in charge of baggage, notwithstanding his protests that he would feel dreadfully, "lonely" without us. He, who was so full of valour before we left Japan, proves a wretched coward now that he is in China. All the way along the road he was afraid to be left alone with the Chinese coolies in charge of the baggage; now he is afraid to be left alone in a fortified town swarming with Japanese soldiers; he proves afraid even of the Chinese curs, which have no more bite in them than an October mosquito.

The camp is five miles north of Kaiping, but the outposts of the Second Army stretch ten miles further on over the plain in the direction of the treaty port of Newchwang.

I saw General Nogi as soon as I arrived, and had a long talk with him, but can learn nothing, of course, of future movements. The Chinese troops in the neighbourhood considerably outnumber the Japanese, but that, as he says cheerfully, only offers a bigger target to shoot at.

Tuesday, January 30th.

In the morning one of the officers went with me to the top of a small hill in the neighbourhood of the village to point out the disposition of the Japanese and the Chinese forces in the plain beneath us.

As there seems no prospect of any fighting here immediately, I decided to go on to Haicheng to-morrow. I sent Tamura back to Kaiping for the baggage, which he is to bring on as early as possible to-morrow.

I spent the evening in conversation with Captain Kawasaki, an officer who speaks French.

Saturday, February 17th.

The noise of the Japanese artillery yesterday, which, being at close quarters, I found considerably more trying to my nerves than that of the enemy, had given me a headache which continued this morning, and I was moreover stiff and tired from the unusual exertion of the previous day. But as it was not likely that the enemy would take these facts into consideration, I had to get up and go round to Head-quarters to learn if any further attack was pending. I was advised to go to Kyanchashan, as the Japanese artillery intended to open fire on the enemy if they should venture to come within range. My private opinion, as I plodded along through a blinding snowstorm, was that the enemy would not be such fools as to do anything of the kind, as they would have the wind and the snow in their faces, and would in consequence be at a greater disadvantage than ever. At the foot of the hill I met Major-General Oseko, who had come to the same conclusion, and was returning to his quarters. On his advice I returned to Hai-cheng, and as there was really after all no fighting I had no occasion to regret having done so. But as the walk had cured most of my ailments, I was not sorry to have gone off on a false scent; and I spent the rest of the day very pleasantly, as I at last really had some substantial food for my pen.

Sunday, February 18th.

I was informed to-day that the Chinese yesterday made an attack on Tomu-cheng, between this place and Suiyen, but I have not yet been furnished with details.

In the afternoon Tamura and I walked out to Tauwanshan, the hill which on the 16th was attacked by the infantry of the Chinese left wing. This is farther from the town than I had thought—quite three miles judging by the time it took us to reach it. It is also considerably higher than the other elevations in the neighbourhood of the city; my aneroid gave at the summit a reading of 350 feet above the plain. As luck would have it we were half an hour too late to witness a skirmish that took place on the plain near the foot of the hill, between 200 Chinese cavalry and 100 Japanese infantry. A young officer walked up the hill with us, and told us about the attack of the 16th. Towards the north-west the hill sends out into the plain a shoulder a hundred feet high, and the Japanese, before they opened fire from the summit of the hill, allowed the Chinese to gain the brow of this shoulder. Only a round or two as usual was needed to send them back faster than they had come. A large portion of the force that threatened this position withdrew to a considerable distance; but 3,000 men remain in a large village about a mile and a half from the hill, and will probably make another attack before long.

The brother of the officer we were talking to was a member of the scouting-party surprised by the Chinese on the 6th inst., and was one of the three men killed. I had previously thought that only one man had been killed, the man whose decapitated body was shown to me, but in this it appears I was mistaken. This officer's body, like

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the one I saw, had also been decapitated by the Chinese before it was recovered by his comrades.

Monday, February 19th.

Rumours of wars to-day, but no wars. An attack was expected on Kyau-cha-shan or Tau-wan-shan, the hills westward of the town, so immediately after breakfast we went to the former. When we arrived at the top we found that there was no sign of an advance, so, after waiting for an hour, we went on to Tau-wan-shan. Before climbing the hill we went to the military headquarters in the village at the foot. This is the village at which we dined on February 16th, the last day of our journey to Hai-cheng, and I was therefore already acquainted with Major Ishida, the officer in command. This place had been the scene of some of the severest fighting on the 16th instant, and I was able to obtain some information from an officer who kindly accompanied me to a position from which the ground of the contest was visible throughout. I need not, however, enter into a full description of the affair, for I have already said a good deal about it, and, moreover, it is impossible to make the events intelligible to anyone that has not seen the place. But I may mention one point that puzzled me at the time and has only now been made clear to me. I mean the fact that whereas the Japanese allowed a considerable force of Chinese to get within comparatively easy range before opening fire on them, the casualties on the Chinese side were reported to be only 70 and 80 killed. The explanation of this is that the casualties given in the Japanese official reports were limited to those actually known to have occurred, namely, to the number of dead found upon the field. But the Chinese being in great force—immensely outnumbering the Japanese—were able to carry away many of their dead, and were indeed seen removing several cartloads, whose contents did not, of course, enter the Japanese tally.

I have alluded once or twice to the terror that the Japanese artillery fire never fails to inspire among the Chinese, and I may mention a quaint illustration of it that occurred on the 16th instant. The story was told to me by an eye-witness. A little duel of artillery was commenced at a range of about 600 yards, each side having one gun in action. The Chinese ran out their piece to a position some ten yards in front of a wall, probably deriving a sense of security from the mere propinquity of a hiding place. They served the gun for a few minutes, but after two or three rounds from the Japanese side, they suddenly fell into a mood of discretion and retreated helter skelter behind the wall, leaving their gun *in situ*. By and by they ventured out once more to remove the gun, but a Japanese shell drove them back speedily. Then, from behind the wall, they resorted to a comical device—nothing more or less than to lasso the piece. A great many casts were made without success, but at last they managed ■ hitch the rope over the gun in such fashion that the weapon could be drawn back through the door in the wall. I suppose they said *hai-ya!* when they accomplished their unique feat, and I am sure that the Japanese observing it laughed a great deal more than even I did on hearing of it.

The Japanese infantry on the hill were under the cover of forts built of snow. These were found to give a very efficient protection. The walls were made 6 feet thick, and shots fired from a distance of four to six hundred yards penetrated less than two feet. The snow on this occasion happened to be of good quality for the purpose. Powder snow of course is useless; the snow must be "binding," like that suitable for making snowballs.

February, 20th.

I am becoming quite accustomed now to my brick bed, and sleep quite comfortably on it. When I return to European habits, I expect I shall find a horse-hair mattress and spring extremely luxurious, or, as Shakespeare's Henry VI., said, "curious," and perhaps difficult to sleep in at first.

Moreover, the weather being again very cold, we look forward to the hours in bed as the warmest of the twenty-four. I have to keep the window open all day, as I find the smoke that creeps in from a green wood fire on the floor of the next room less tolerable than the cold. How Takeguchi, who works in the smoke all day, endures it, I cannot understand. I don't think I could ever be accustomed to that as I have become accustomed to the cold. To this last I am now inured. Out of doors I have to be as careful as ever of my extremities; but in doors I can sit without serious discomfort and write for hours in a room so cold that my ink is frozen hard, and I have to do all my writing with pencil on carbon paper. If I thaw my fountain pen with a hot water bottle I can use it by blowing on the point every few seconds, but this becomes wearisome after a time. I have to write in thick gloves, or my hands are stiffened by contact with the ice-cold paper. But my feet are on the hot bricks, and are thus kept warm whatever the temperature of the atmosphere.

So much for the cold: and as for the dirt—I am drinking of the waters of Lethe, and shall soon have forgotten that I was ever clean!

THE TONG-HAK.

In conversation with a Japanese friend not long ago, I remarked that the Tong Haks were the occasion of the Chinese-Japanese war. He showed a good appreciation of the word by replying. "Yes, the relations of China and Japan had become petroleum, and the Tong Hak was the match." Being then the occasioning cause of this great war, it may not prove uninteresting to make more inquiry concerning its history.

The Tong Hak originated at Kyeng Chu in the province of Kyeng Sang in 1859. Kyeng Chu is a walled town forty five-miles north of Fusan. Its founder, Choi Chei Ou, was a scholar and claims to have had the following experience. Having been for some years a witness of the progress made by the Roman Catholic church, he began to think deeply as to whether it was the true religion. "Since they have come so far and spent so much money in its propagation, it ought to be true; and yet if true why are its followers now being killed by the government as criminals?" As he brooded thus from day to day, he fell sick. Though he used much medicine, he became no better and finally was at the point of death. One morning just as the sun's rays began to peep over the eastern hills, he fell into a kind of trance and there appeared unto him some supernatural being.

He called his name—"Choi Chei Ou!"

"Yea."

"Knowest not who speaketh unto thee?"

"Nay, who art thou?"

"I am God; worship me and thou shalt have power over the people."

Choi then asked him concerning the question nearest his heart—"Is the Roman Catholic the true religion?"

The answer was—"No, the word and the time are the same, but the thought and spirit are different from the true."

I shall not attempt to interpret the above. With this God departed. Choi, seeing a pen close by, grasped it and there came out in circular form upon the paper these words: "Since from aforetime we have worshipped Thee, Lord of Heaven, according to thy good will, do Thou always bestow upon us to know and not forget all things (concerning Thee); and since thine unspeakable thoughts have come to us, do Thou abundantly for us according to our desire." Choi then picked up the scroll, burnt it, poured the ashes into a bowl of water and drank it. Immediately he arose, and his sickness was entirely gone.

Choi felt himself called to found a new religion. He thereupon proceeded to make the Tong Hak Bible, which is called *Sung Kyeng Tai Chun* or "Great Sacred Writings." He took from Confucianism the book of the five relations, from Buddhism the law for heart cleansing, from Taoism the law of cleansing the body from moral as well as from natural filth. So one of the names used for this book is made by combining the names of the three religious *You Poul Sun Sam To*. The influence of Romanism may be seen in the term for God in the prayer, *Chun Chu* being the one chosen. Romanism is also, indirectly at least, responsible for the name they called it, Tong Hak or Eastern Learning in contradistinction to So Hak (Romanism) or Western Learning. This taken in connection with the fact of its being a combination of the true Oriental religions easily accounts for the name.

Beginning in the province of Kyeng Sang, the Tong Hak religion spread over into Choung Chong and Chulla. It increased in numbers until 1865 when a persecution broke out against the Roman Catholics. Choi was apprehended, accused of being a Romanist, and was beheaded at Tai Ku, the capital of Kyeng Sang, by order of the Government, and the religion was thus put under ban.

The Tong Haks are monotheists. They reject the Buddhistic belief of the transmigration of souls, and do not use images in worship. Their rites are few and simple. When members are to be initiated, a master of ceremonies calls the candidates before him. Two candles are lit, fish, bread, and sweet wine are placed before them. Then they repeat twenty-four times in concert the Tong Hak prayer "*Si Chun Chu*," &c. Bowing before the candles completes the ceremony, when they rise and partake of the banquet—the expenses of which are paid by newly initiated. They claim that they do not sacrifice, making a distinction between the words *Chei Sa* and *Tchi Sung*. They worship as follows: Cement, red clay and one smooth stone are taken and an altar is made. Upon this a bowl of pure water is placed and at night the worshipper bows before this with forehead on the floor praying the "Si Chun Chu," &c. When his prayers are over, he drinks the water, calling it the cup of divine favour.

It is stated that when the founder was miraculously cured, that he wrote a number of mystic signs upon slips of paper, which, when given to any sick Tong Hak, produced instant recovery. I have in my possession a copy of a paper taken from the body of a Tong Hak recently slain in the province of Choung Chong. The signs are utterly unintelligible, looking much like a child's first attempt at drawing spiders. The first reads: If you carry this, hundreds of devils cannot overcome you." The second makes the body weapon proof. It is said that one of the Tong Haks approached the Korean soldiers flourishing one of these papers. At first they were overcome by his daring and were afraid to fire. Finally a brave, more bold than the rest, ventured a shot, killed the Tong Hak and dispelled the enchantment. The third gave a prosperous journey, &c. This superstition is practiced in China; and I am informed that Japanese magicians profess to heal by means of the same mystic characters. The Tong Hak doubtless adopted it from China. We are told by outsiders of other miraculous powers belonging to them. It was the custom of the founder to ride upon a cloud. To jump over a house, or from one hill to another was a common practice. A house so commanded by a Tong Hak suddenly disappeared. If an enemy suddenly appeared in the same room with a Tong Hak, the latter mysteriously vanished. Perhaps there is a modicum of truth in the last statement. This too may be a Chinese custom. An empty purse obeyed the command of the magician and became full. These so-called miracles remind one of the apocryphal gospels and serve in common with other earthly systems to show the infinite disparity between the true miracles of our Divine Lord and all the attempts of feeble man.

Confucianism and Taoism have nothing to say about the future life, and as the Tong Hak refuse the degrading doctrine of the Buddhists, their teaching is concerned solely with this present world. They know nothing of the great scripture truth of the immortality of the soul; and hence, in common with all other Koreans when asked—"If a man die shall he live again?" they answer—"Who can know?" which is their strongest expression for—"It cannot be known."

So far I have treated the Tong Hak purely as a religious body, taking some liberty perhaps with the word "religious." Such they were until a few years ago. But there existed along side, *perhaps antedating it a few years*, a state of oppression of the people by the officials which was becoming more and more intolerable. Every spring for several years there has been the rumbling of revolution in the interior. The people were looking somewhere, *anywhere* for assistance. Some went to the Roman Catholics; the majority, to the Tong Hak. They had a common cause against those in authority. The Tong Hak leader had been beheaded and their religion prohibited. Thus there was a large ingathering of those who were Tong Hak in name only. Had the Tong Hak remained a religious body with principles in harmony with good government, it would have had a right to exist. Every man has a right to worship God according to the dictates of his own conscience. But the political soon dominates the religious and they became a body of revolutionists.

In the spring of '93, fifty Tong Haks came up to Sōul and spread a complaint before the Palace gate, on a table, over which was thrown a red cloth. They asked that their leader, the martyred Choi Chei Ou, be declared innocent, that he be given a certain rank, and that they be allowed to erect a monument in his memory. Further, that the ban be taken off their religion, and that they be allowed equal privileges with the Roman Catholics. If this was not granted they would drive all foreigners from the country. The King replied that he would give the matter serious consideration, and requested that they would cease to obstruct the thoroughfare in front of His Majesty's gate. This was followed by the arrest of a few Tong Haks in the district from which the fifty came. Their petition was not granted.

In the following Spring the long expected uprising came. At first everything was swept before them. The Korean soldiery were unable to check their forces. Governors, magistrates, and other officers were deposed in summary order, many meeting swift justice for past misdeeds. The Tong Hak gained over the people in the following manner. A man clothed as a high official was sent to a village. He carried the royal seal of authority, *pyeng pou*, a reed given by the

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

King to his messengers. This reed is broken, one half remaining in the Palace and the other being carried by the official. This intimated that there was royalty among the Tong Haks. This officer summoned the villagers before him and asked who were Tong Haks. The unwilling were then politely urged to join until the majority came over. These then were sent against the halting minority. If they failed, the officers summoned the stubborn one before him. He would not so much as see his face but the victim was made to kneel on the ground outside the officer's door and was told to join at once or take the consequences—death.

At first they were all victorious, but since the Japanese took the field against them they have gradually been driven into corners and their leaders have been killed.

Coming through the little west gate, on Jan. 22nd, I was shocked to notice the head of "Kim" the leader and wonder-worker among the Tong Haks, with the heads of three other leaders tied together by the hair and hung upon poles in the middle of street, intended doubtless as a warning to other offenders. It is, however, a most barbarous and unjustifiable custom which cannot be too strongly condemned. Let us hope that the head of Kim, the Tong Hak, will be the last sign of a custom that does not serve the purpose for which it was intended but only serves to demoralize the people and accustom them to scenes of blood.—WILLIAM M. JUNKIN in the *Korean Repository*.

CHESS.

(All Communications to be addressed to the CHESS EDITOR.

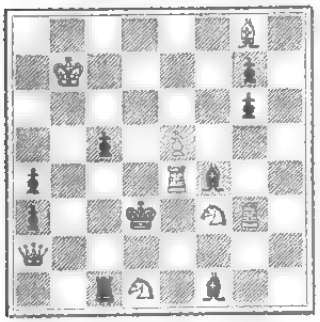
The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

SOLUTION TO PROBLEM No. 168.

WHITE.	BLACK.
1—Q to Q R sq.	1—Any
2—Mates accordingly.	

Correct solutions received from Omega, Digamma, W.H.S., Kr., J.D., W. Barrie, and E. J. King.



PROBLEM No. 169.

This problem has a second solution beginning Q to Q B 3, overlooked by the composer. A black pawn on Q Kt 5 and a black knight on Q Kt sq., will, we think, make the position correct.

PROBLEM No. 170.

By JOSEF POSPISIL.

BLACK.

WHITE.

White to play and mate in two moves.

In a recent problem-solving contest Mrs. Showalter handed in her solutions twelve minutes in advance of any of her competitors.

GAME No. 233.

MACDONNELL'S IMMORTAL GAME.

The following chess brilliant is considered by Mr. G. H. D. Gossip to be one of the most magnificent chess masterpieces on record, and only slightly inferior to the famous Anderssen-Kieseritzky game:—

QUEEN'S GAMBIT.

WHITE. Labourdonnais.	BLACK. MacDonnell.
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P takes P
3—P to K 4	3—P to K 4
4—P to Q 5	4—P to K B 4
5—Kt to Q B 3	5—Kt to K B 3
6—B takes P	6—B to Q B 4 (a)
7—Kt to B 3	7—Q to R 5
8—B to K Kt 5 (?)	8—B takes P ch. (!)
9—K to B sq.	9—B to Kt 3
10—Q to K 2	10—P to B 5
11—Q R to Q sq.	11—B to K Kt 5
12—P to Q 6	12—P takes P
13—Kt to Q 5	13—Kt takes Kt!!(b)
14—B takes Q	14—Kt to K 6 ch.
15—K to K sq.	15—K takes B
16—Q to Q 3	16—R to Q sq.
17—K to Q 2	17—Q Kt to B 3
18—P to Q Kt 3	18—B to Q R 4
19—P to Q R 3	19—Q R to ■ sq.
20—R to Kt sq.	20—P to Q Kt 4
21—B takes P	21—B takes Kt
22—P takes B	22—Kt to Q 5
23—B to B 4	23—Kt takes B P ch.
24—K to B 2	24—Kt takes Q ■
25—K R takes P ch.	25—K to B 3
26—R to B 7 ch.	26—K to Kt 3
27—R to Q Kt 7	27—Kt (Q 7) takes B
28—P takes Kt	28—R takes P
29—Q to Kt sq.	29—B to Kt 3
30—K to B 3	30—R to B 6
31—Q to R 2	31—Kt to B 5 dis. ch.
32—K to Kt 4	32—R to K Kt sq.
33—R takes B	33—P takes R
34—K to R 4	34—K to B 3
35—Q to K 2	35—R to K Kt 3
36—Q to R 5	36—Kt to K 6 and wins (c).

(a) If ■ takes KP, then 7, B to K Kt 5.
(b) A beautiful sacrifice, though not strictly sound, because White should not have taken the Q, but have played 14. B takes Kt, for if Black replied 14. Q takes B, then followed 15. B takes P, winning the exchange.
(c) An exceedingly entertaining game.

The Chess Editor of the *Sunday States* (New Orleans) has found the following paragraph in an old scrap-book:—"The first essential of an amusement is that it should amuse. Chess will always do this, if honestly played, and to a right-thinking opponent, the exertion of playing an up-hill game, or endeavouring to retrieve a slip, affords a keener joy than even that of closing in upon the prey. But young players who get most of their knowledge by going over the games printed in books fall unconsciously into the habit of thinking that the loss of a piece, or even a minority of two or three Pawns, imposes on them the necessity of surrendering to *force majeure*. The result is that what might be the most interesting part of the game is never played, and the student hardly knows how to conduct an end-game at all, but crams himself with books for the first dozen moves or so of perhaps a dozen openings."

GAME No. 234.

CHESS IN SYDNEY.

The game published below was played in 25 minutes at the School of Arts, Sydney, at the conclusion of the annual meeting. The contestants were two of the strongest players in the colony.

PONZIANI OPENING.

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to B 3	3—P to Q 4
4—Q to R 4	4—P to B 3
5—B to Kt 5	5—K Kt to K 2
6—P takes P	6—Q takes P
7—P to Q 4	7—B to Q 2
8—Castles	8—P to Q R 3 (a)
9—B to Q B 4	9—Kt takes P (b)
10—B takes Q	10—B takes Q
11—B takes P	11—Kt to K 7 ch.
12—K to R sq.	12—R to Q Kt sq.
13—B takes P	13—Kt takes B
14—R takes Kt	14—R takes P
15—Q Kt to Q 2	15—B to B 3
16—K R to Kt sq.	16—R takes R (c)
17—R takes R	17—B takes Kt
18—Kt takes B	18—Kt to Kt 3
19—R to Kt 8 ch.	19—K to B 2
20—B to B 4 ch.	20—K to K 2
21—P to Q R 4 (d)	21—K to Q 2
22—P to R 5	22—B to B 4
23—R takes R	23—Kt takes R
24—P to R 6	24—B takes P
25—Kt to Q 4	25—K to B sq. (e)
26—Kt to B 6	26—Kt to Kt 3 (f)
27—B to K 6, mate.	

(a) The proper continuation was—8. P takes P, 9. P takes P —Kt to K 4!
(b) Boldly played, but White comes best out of the mêlée.
(c) R to Kt 3 seems better.
(d) This P looks for promotion.
(e) Fatal; he should have taken the Kt with B.
(f) Missing White's threatened mate, but the game was lost for Black.

Mr. W. C. Bennett informs the chess editor of *The Times* that many years ago he went to India, and, like all young players, imagined himself almost an expert. He continues as follows:—"Going to the Bazaar in Delhi I soon picked up with a very devout and learned Munshi, Rum Buksh by name, who immediately challenged me to a friendly game. I was only too glad to give this gentleman a licking, but to my great surprise and his intense amusement I was beaten in 25 or 26 moves. I was taken down, not a step, but a flight. Well, I attribute my defeat to these facts:—1. As a rule the natives do not move a Pawn two squares at first. 2. They do not practise taking a Pawn *en passant*. 3. They do not Castle. 4. If a Pawn reaches the royal line it can become, not necessarily, a Queen but say it reaches a Rook's square it becomes a Rook; if a Kt sq. it becomes a Kt, or if a ■ sq. it becomes a Bishop, and so on, according to the royal sq. on which it arrives. These rules, of course, upset one's calculations, and would, if adopted in this country, revolutionise the game. It was some years before I quite got into Indian methods, and I may add several more before I could eradicate them from my mind. 5. Lastly, the Hindoos and Mussulmans of India, and also Arabs, adopt most irregular openings—such, for instance, as K P one sq., K Kt P one sq. But their chief skill is generally developed in their Kt play, a practice which is too often slighted in England.

GAME No. 235.

Chess-players will not have forgotten that in the recent Masters Tourney at New York Mr. Hymes, of Columbia College, played what was regarded as a new move against Mr. Steinitz. It is now announced that the move in question had been tried some months previously by Herr Schallopp. The experiment was made in the following game by correspondence between him and M. Tabuntschikoff, of Gatchina, in Russia. The score and the notes (somewhat condensed) are from the London *Standard*:—

RUY LOPEZ.

WHITE. Schallopp.	BLACK. Tabuntschikoff.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—P to Q 3
5—P to Q 4	5—B to Q 2
6—Castles	6—P to Q Kt 4
7—B to Kt 3	7—Kt takes P
8—Kt takes Kt	8—P takes Kt
9—P to Q B 3 (a)	9—P takes P (b)
10—Kt takes P (c)	10—Kt to B 3 (d)
11—P to B 4	11—P to Kt 5 (e)
12—Kt to Q 5	12—P to ■ 3 (f)
13—Kt takes Kt ch.	13—P takes Kt (g)
14—Q to R 5	14—Q to K 2
15—B to Q 2	15—Q R to Kt sq.
16—Q R to K sq.	16—R to Kt 4
17—P to K 5	17—K to Q sq.
18—B to B 4	18—P to Q 4
19—B takes R	19—R P takes B
20—P takes P	20—Q takes P
21—P to B 5 (h)	21—P to R 3
22—B to B 4	22—B to B 4 ch.
23—K to R sq.	23—B to Q 5
24—B to Kt 3	24—K to B sq.
25—Q to Kt 4	25—P to B 4
26—Q to B 4	26—Q to Q Kt 3
27—R to K 7	27—P to B 3
28—K R to ■ sq.	28—P to R 4 (i)
29—R takes ■	29—K takes R
30—R to K 6	30—Q takes R,

And Schallopp mated in four moves.

NOTES.

(a) The move made in the Hymes-Steinitz game and then regarded as new. It is obvious that if, instead, 9 Q takes P, then 9...P to B 4; 10 Q moves, P to B 5; and Black wins a piece.
(b) Best. If, instead, 9...Kt to B 3, then 10 P takes P, and Black could not continue with 10...Kt takes P, because of 11 B to Q 5.
(c) Here Hymes played 10 Q to Q 5, which led to a drawn result. Schallopp, however, saw correctly that there was more than a draw in the attack.
(d) Inferior to 10...B to K 3, after which, however, 11 P to B 4 would still have given White the better developed game.
(e) 11...B to Kt 5; 12 Q to K sq., B to K 3, is also unsatisfactory.
(f) If 12...Kt takes P, White wins by 13 Q to B 3, Kt to B 4; 14 R to K ■ ch, B to ■ 3; 15 P to B 5.
(g) If 13...Q takes P, White wins by 14 P to K 5, Q to Kt 3; 15 P to B 5, B takes P; 16 Q to B 5, B to K 4; 17 B takes P ch, K to Q sq; 18 Q to K ■ 3.
(h) A powerful move. If in reply 21...Q takes Kt P, White wins by 22 B to B 4, Q to Kt 2; 23 P to B 6, Q to Kt 3; 24 Q to K 5.
(i) If 28...B to K 4, then 29 K R takes B, P takes B; 30 Q takes K P, R to ■ sq; 31 Q takes P, and White wins.
(j) Beginning with 32 ■ to B 7 ch, ■ to K sq; and continuing with 32 P takes Q, &c.

The London *Standard* reports that among the possible matches of the early future will be one, to be played at Hastings, between Blackburne and Von Bardeleben, or, failing Von Bardeleben, between Blackburne and Mieses. The *Standard* adds that if neither German master be found available, Janowsky may be.

Game No. 236.

A Lively Skirmish.

Played at School of Arts Chess Club, Sydney, 19th January, 1895.

White. Mr. W.	Black. Mr. H. Taylour.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—Kt to B 3
4—P to Q 3	4—P to Q 3
5—Castles	5—B to K 2 (a)
6—Kt to B 3	6—Castles
7—B to K 3	7—B to Kt 5
8—P to K R 3	8—B to R 4
9—P to K Kt 4 (b)	9—Kt takes Kt P (c)
10—P takes Kt	10—B takes P
11—B takes Kt	11—P takes B
12—K to Kt 2	12—P to B 4!
13—K to Kt 3 (d)	13—P to B 5 ch.
14—K takes B, and Black announced mate in three moves (e).	

(a) or P to K Kt 3 with B to K Kt 2 to follow.
(b) Violating the "principles" and exposing his position.
(c) Sound enough for a "skittle."
(d) Awfully bad.
(e) A neat termination.

The Cult of Caissa.

(Written by a member of the Brighton Chess Club, and sung at a smoking concert recently given by the president of the club.)

They may sing of the bat and the wicket,
Of the racquet and net on the green;
But what are lawn tennis and cricket
To the game of the Pawn and the Queen?
The gun is a tyrant and slayer,
The niblick* a joy for the few;
Give me chess with a chivalrous player,
And a fig for what others may do!

In summer, when perfume of roses
Blows in at the half-open door,
When the volume unwillingly closes,
And talking is voted a bore;
Then, O for some leafy pavilion,
Some bower th' hot rays never drench,
With a friend deeply versed in Sicilian,
And the intricate web of the French!

And in winter, when dismal and dreary
The snowflakes fall thick in the street,
When newsboys limp haggard and weary,
And policemen take nips on their beat;
Then, whether it thaws or it freezes,
For a nook by a warmth-giving flame,
With the boxwood and ebony pieces,
And a comrade adept at the game.

* Used in playing golf.

LATEST TELEGRAMS.

[Reuter "Special" to "Japan Mail."]

London, March 18.

The St. Petersburg correspondent of *The Times* states that the whole of the Russian Squadron in the Mediterranean will leave there for the Pacific to be in readiness for eventualities.

Señor Sagasta and the Spanish Cabinet have resigned.

London, March 20.

Persistent insomnia greatly retards Lord Rosebery's recovery. It is officially stated that he has no thought of resigning.

["Special" Telegram to "Japan Mail."]

Bakan, March 19, 9.35 a.m.

The Chinese Embassy arrived here at 9 o'clock in two ships, piloted by the *Taiko Maru*.

Bakan, March 19, 2.20 p.m.

Wu Ting-fang and Messrs. Foster and Pethick have landed here, but, in consequence of indisposition, Li Hung-chang was unable to leave the ship. Wu Ting-fang expressed his admiration of the elaborate preparations that had been made to receive the Embassy, and said that he would try to persuade the Viceroy to land if he could obtain the doctor's permission.

Shimonoseki, March 22, 8.15 p.m.

No conference was held to-day. It is rumoured that the Peace Plenipotentiaries will not meet again for three days.

(From Japanese Papers.)

Shimonoseki, March 21.

The Chinese Envoy sent a long telegram to Pekin to-day.

Shanghai, March 22.

Twenty Japanese men-of-war were seen off Takao (Formosa) yesterday.

Hiroshima, March 22.

It is stated that nothing has yet been decided as to the departure of the Emperor for Kyoto although there is a rumour in official circles to that end. Supposing that His Majesty visits Kyoto, his departure will not take place within the near future.

The rumoured presence of the Empress at the opening of the Kyoto Exhibition, which takes place on the 1st prox. does not rest on a sound basis.

Hiroshima, March 22.

The students of the third, fourth, and fifth year classes in the Hiroshima Ordinary Middle School refused in a body to-day to continue their studies. The alleged harshness of the President is said to be the cause of the affair. The boys are determined to leave the school unless the President is dismissed.

H.I.M. the Empress inspected the Temporary Military Hospital this afternoon. She passed through all the rooms and asked each patient about the fights in which he was engaged, and inquired into the condition of the wounds. She wished them all a speedy and thorough recovery. The convalescent patients were assembled together, and the Empress passed along their front. She expressed her pleasure at seeing the progress that each had made towards recovery. She spoke to them of the joy which their conduct had occasioned to their parents, and gave them her hearty good wishes for restored health. The Empress told the disabled Chinese prisoners that they should endeavour to recover their ordinary health so that they might return to their homes. She was greatly pleased with the services rendered by Surgeon-Generals Ishiguro and Sato.

Hiroshima, March 22.

A telegram was received this morning from a trustworthy source stating that the Japanese have occupied Fisher Island.

LATEST COMMERCIAL.

IMPORTS.

The good feeling continues, but there is not an overwhelming amount of business doing just at the moment. Buyers appear to think that the improvement in exchange should deflect prices of goods in their favour, but holders are waiting to see if the better prices of silver are likely to last before they reduce quotations.

COTTON PIECE GOODS.

	PER PIECE.	
Grey Shirtings—8¼lb, 38½ yds. 39 inches	$2.25	to 2.90

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING,

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is THE Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Store keepers in the Colonies, India, China, Japan, South America and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughou World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPITOMISED DEBATES, Translations of the Bills discussed, Budgets, Speeches of the Ministers of State in full, Questions put and the answers of the Government, and the Legislative Work of the Session.

PRICE $1.

To be obtained at the Office of the *Japan Mail*, No. 51, Main Street.

"NEW CODES AND OLD CUSTOMS."

By J. H. W.

REPRINTED FROM THE "JAPAN MAIL."

PRICE FIFTY CENTS.

December, 20th 1894.

THAMES ELECTRIC & STEAM LAUNCH Co

ELECTRIC LAUNCH "GLOW-WORM," 52ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour; —also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.

A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E., *Manager*.

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

YOKOHAMA: SATURDAY, MARCH 30TH, 1895.

SUMMARY OF NEWS.

A HEAVY gale prevailed in Yokohama on Thursday, but little damage was done.

SEVENTEEN girls graduated at the Female Higher Normal School, Tokyo, this year.

THE Korean Ambassador to the Court of Japan will, it is said, leave Sôul for Tokyo on April 10th.

H.I.H. THE EMPRESS has been inspecting the military hospitals at Shimonoseki during the week.

H.I.H. PRINCE KITASHIRAKAWA, Commander-in-Chief of the Imperial Body Guards, is now in Hiroshima.

MR. SMITHERS, the U.S. Consul at Kobe, died on Wednesday morning, after an illness extending over three weeks.

A FIRE broke out in a lacquer dealer's shop in Ota, Yokohama, on Monday night, and thirty houses were destroyed.

MR. HARA, Governor, and Mr. Goto, Chief of Yamaguchi Police, holding themselves responsible for the occurrence of the Shimonoseki incident, have resigned their posts. The Government has accepted the resignations.

MR. HOSHI TORU, writes a correspondent, will shortly be appointed legal adviser to the Korean Government.

THE *Yamato Maru* of the Yokosuka Admiralty station has been wrecked off Wagu-mura, Ago District, Shima Province.

THE reports regarding the outbreak of cholera at Moji are reassuring. No fresh cases have been found for four days past.

A BIG whale, measuring over 15 *ken* (one *ken* = 6 ft.) in length, was lately caught in Miyagi Prefecture. It was sold for *yen* 577.

THE Captain and other officers of the *Chiyoda Kan* were received in audience by the Emperor on the 23rd inst. at Head-quarters.

THE Yokohama General Chamber of Commerce held its general annual meeting on Friday. The report presented was of a very interesting character.

FIFTY typhoid fever cases were reported in Hiroshima Prefecture from the commencement of the month up to the 24th inst. of which thirty ended fatally.

SIXTEEN members of the House of Peers and fifty-three members of the House of Representatives inspected the forts in Tokyo Bay on the 24th inst.

SINCE Postal Savings Bank facilities have been given to the armies afield, *yen* 1,044,424.407 has been transmitted to Japan by the soldiers and coolies at the front.

A BIG snow-slide took place at Horotakei, Yoshikuni District, Shiribeshi Province, Hokkaido, on the 19th inst. A dwelling house was crushed and four persons killed.

A GARDEN party was given by the Ministers, of State to members of both Houses of Diet, at the Akasaka Palace, on the 27th inst., after the official closing of the session.

THE Yokohama Gas Committee report that their financial year closes with a balance in hand of $1,086.63. The expenditure shows a decrease of $291.06 as compared with 1894.

OPINION is general that the Peace negotiations were proceeding so satisfactorily that they would have been concluded this week had not the attempt been made on Li Hung-chang's life.

THE family of the late Viscount Inouye, ex-Minister of Education, propose to contribute to educational and charity funds all the money presents lately received from the friends of the deceased.

MARQUIS HACHISUKA, President of the House of Peers, and Count Matsuura, proceeded to Shimonoseki on the 28th instant to visit the Viceroy Li on behalf of the members of the Upper House.

THE Japanese Government has decided to construct a railway between Port Arthur and Kaiping, and a railway corps will be organized to build a railway between Chinchow and Port Arthur.

THE man who shot Li Hung-chang at Shimonoseki on Sunday is a native of Gumma Prefecture. He purchased the revolver which he used in committing his dastardly crime, at a shop in Yokohama.

THE shareholders of Messrs. Brett & Company, Limited, in view of the unsatisfactory [illegible] presented at the semi-annual meeting of shareholders, have elected an Investigating Committee, who will report to the Managing Director the result of their inquiries.

TWELVE Chinese firms in Yokohama are at present being boycotted by the Japanese merchants. Guards have been stationed in front of these firms to prevent any breach of agreement among the Japanese merchants.

THE Shimonoseki incident has drawn forth universal expressions of sorrow from the Japanese nation. The Imperial Court sent the Emperor's own physician to attend upon the sufferer, while the Empress sent bandages rolled by her own hand.

H.E. LI HUNG-CHANG, while returning to his hotel at Shimonoseki on Sunday afternoon, was shot at by a *soshi*. The bullet entered the left cheek, under the eye, and remains imbedded. The distinguished statesman is making satisfactory progress towards recovery.

REUTER telegraphs:—Slatin Bey has escaped from Omduraman and has arrived at Cairo. Strong efforts are being made to induce the Southern planters in America to restrict the cotton growing area. It is stated that China is soliciting the intervention of Russia and Germany to protect the integrity of continental territory in China against the demands of the Japanese. Spanish troops have routed the Malay Mussulmen in Mindanao, the largest and most southern of the Philippine Islands. About one hundred were killed, including the Sultan and his son. It is stated that arrangements are already progressing in London for a new Chinese gold loan to meet the indemnity which will be required. The Emperor William has visited Friedericksruhe, where he ordered a review of all arms and thanked Prince Bismarck for his services to Germany in front of the troops.

WHILE there is a continued improvement in the tone of the Import trade, and the outlook is better than for some time past, buyers hope that the further advance in the rates of exchange will induce holders to lower prices for Yarns and Shirtings; and they hang back accordingly, thinking that competition amongst sellers will shortly enable them to come on the market. So far, however, as actual purchases are concerned, no alteration in values can be reported. In the Metal market Iron Bars and Plates have been freely taken, and little else has been enquired for. As we mentioned as probable a week ago, buyers of Kerosene have been forced to deal and pay high figures for the Oil taken —$2.20 and more for American, Russian being held for a still higher price—and at this rate holders have a free whip-hand. The Sugar trade is quiet, the demand having fallen off somewhat and arrivals exceeded sales, though a quantity of both White and Brown sorts has been moved. A fair demand has been made for Silk, and while the condition of exchange tends to weaken values for fine kinds suitable for export, coarser grades are held for full rates in consequence of the continued good demand for them for home consumption. The stock, though further reduced, is liable at any moment now to be supplemented by spring reelings. Exchange has operated against the buying of Waste Silk, holders declining to come down, notwithstanding the large stock still on the market. Nothing to report about Tea, good or bad, though the weather has been suitable for leaf growing. Exchange, which had moved upwards during the week, has fallen

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Shimonoseki incident has given rise to much discussion in the vernacular press. Ought not the House of Representatives to send a message of condolence to the sufferer? was one of the subjects of debate. The decision of the House, or rather of such of its members as were present in Tokyo pending the closing ceremony—for the session came to an end on the 23rd inst.—was that the House had no competence to do anything of the kind, the prescribed term having expired. This evoked unfavourable criticism from many of the metropolitan papers. They admitted the decision of the members to be strictly constitutional, but they contended that the House ought not to stand idly by when the nation had suffered a heavy calamity, merely for the sake of blindly adhering to the letter of the law. If it was unconstitutional to give any such decision in the name of the House, then why not do so in the name of individual members of the House, represented through their President, Mr. Kusumoto? This they did when Mr. Boissonade departed for home. Then why not now? The *Kokkai*, edited by Mr. Suyehiro, a Member of Parliament, differed from this contention. It applauded the step taken by the members of the House. A question, says our contemporary, requiring deliberate discussion before being definitely settled, is whether, while the closing ceremony has not yet been performed, the session may be prolonged by Imperial order in the event of any necessity suggesting such a course, even though the prescribed period has expired, or whether, when a session is held in that way, it should be regarded as an extraordinary one. Evidently, after the session has come to a close, the House is incompetent to submit to the Sovereign any address asking for a prolongation, and the Government is equally incompetent, so long as there is no Bill to discuss, to order a prolongation and to invite the House to deliberate. Some may maintain that, when the nation is overwhelmed by any great calamity, such as the present one, there is no use for the House to strictly adhere to the rules of constitutional conventionalism, especially when a departure from them is likely to promote the country's interests. The *Kokkai* can not share such an opinion? It condemns it as a step totally destructive of the sanctity of the Constitution and calculated to establish a vicious precedent. When a fanatic made a murderous assault upon the person of the Russian Crown Prince at Otsu in 1891, it was proposed, by way of propitiating Russia, to regard the offence in the light of a criminal attempt against the Imperial Court, and to put the culprit to death. But the judges were inflexible. They rejected that proposal as unconstitutional. And did not public opinion go with them? Why then should a different view be taken to-day especially when it is remembered that what is now proposed is merely a matter of ettiquette offering no practical benefit, and when it is extremely questionable whether the national legislators may properly offer condolence to an embassy from a State with which Japan is engaged in deadly strife?

We note with interest that even the vernacular press, so loud in time of peace to rail against the uselessness of the Peace Preservation Regulations and to urge their abolition, is obliged to acknowledge their necessity on such an occasion as the present, thus indirectly supporting the contention of the Government. But if the papers acknowledge the necessity of that law, they are highly dissatisfied with the manner in which it was put into operation in Shimonoseki, since a would-be assassin was left free to perpetrate his heinous crime. They write in sweeping terms against the local authorities whose remissness to guard against emergencies is considered the direct cause of the miserable affair. They claim, however, that the responsibility is not confined to the Local Governor and the Chief of Police, but that it ultimately rests with the Home Office. The same opinion prevailed on the occasion of the Otsu affair, and not only the Governor and the Chief of the local Police but also the Home Minister of the day were relieved of their offices. In short, the press urges Viscount Nomura to resign his post. But the Home Minister did not wait to be advised by the press. He resolved from the first to accept the responsibility. For we are now told by the same papers that the Governor and the Chief of Police having been dismissed, the latter being even deprived of his rank, the Minister also submitted a document inquiring whether he ought not to give up his portfolio.

* * *

The *Jiji* and other journals are apprehensive lest the public may become disposed, out of sympathy with the unfortunate Chinese Plenipotentiary, to moderate their feelings towards China, and view the enemy with more leniency than before. Such an opinion is denounced as entirely womanish, and as calculated to produce no other result than that of making China more insolent than ever, and converting Japan into an object of universal derision. Should the consideration that the people feel for their brethren fighting abroad be overruled by any sentiment for the Chinese Envoy in consequence of the unfortunate incident that befell him, the act of a silly fanatic, belonging to the same category as that of a man who, being resolved to die, goes to a brothel and murders any girl he meets, simply to satisfy his fancy. It was the unfortunate lot of the Viceroy to be singled out by such a senseless knave, and from that point of view the public ought to sympathize with him. But sympathy with Li and the conduct of the negotiations for peace are distinct things; the one is individual, the other national. The two must never be confounded. The spirit of true chivalry dictates due appreciation and respect for the merits and claims of the fighting men who have obtained such glory for the nation by shedding their blood and whose achivements are about to bear fruit in the negotiations for peace.

* * *

The *Jiji* warns the people not to attach too much importance to the Peace Mission of Viceroy Li, and greatly doubts its sincerity, arguing principally on the lines laid down in a communicated article that appeared recently in these columns. In the first place, Li no longer enjoys the same power in China that he enjoyed before the war broke out. In fact the ignominious defeats that China has sustained are laid at the door of Li, and in the eyes of the Tsung-li Yamên he is a man in disgrace. The loss of his trained troops and of the Peiyang Squadron has brought his influence to the ground. That the Court should entrust him with the task of negotiating for peace is easily conceivable, for he is the only man in China who has sufficient experience in diplomacy. But the very fact that Li, who rarely condescends to go even to Pekin more than once in ten years, has volunteered to come on a humiliating mission to Japan, is a good proof of his changed position. Had he really enjoyed the same influence as before he would have sent some of his trusted followers and would have dictated the plan of the negotiations from his palace in Tientsin. Moreover, the rival faction of Hunan is now predominant at the Court of Pekin, and the faction with which he is identified is declining, wherein lies the cause of his comparative powerlessness. Thus, it is extremely doubtful whether the terms to which he may give his assent will receive endorsement in Pekin. The only thing apparently lending some air of sincerity and trustworthiness to the mission, is the alleged fact that Li has prevailed upon Prince Kung and other statesmen in Pekin to adopt the ideas he holds on the question of peace. But here again another difficulty comes in that tends to counterbalance the authority vested in Li, namely, that the statesmen in Pekin, though installed in distinguished positions have really no influence over the local magnates and not unfrequently a step decided upon by the old Ministers of the Tsung-li Yamên is entirely overruled by inferior but far abler officials in the provinces. It is impossible to place any trust in the sincerity or reliability of the Court of Pekin and its Envoy with regard to concluding peace in a way satisfactory to Japan. The time for a satisfactory peace must be said to have not yet come.

* * *

Several papers bid farewell in very warm terms to the 8th session of the Imperial Diet just closed. Since the inauguration of a constitutional system of government in 1890 the only ordinary sessions that lasted for the presented period of 90 days, were the 1st session and the session that has just been brought to a close. But the latter has other grounds to commend it to the praise of appreciative folks. The *Jiji* his pertinent observations ■ make in this respect. Since the opening of the war, it writes, the Imperial Diet was twice convoked, and on each occasion it acquitted itself admirably. On each occasion it was asked to give its consent to a large war budget, and it did so at once without one dissenting voice and amid the cheers of its members. The glorious success that attaches to the Japanese arms is attributed to many causes, but among them this hearty support that the Diet extended to the Government, especially in the matter of war funds, must be considered as occupying a conspicuous place. Nothing had given more surprise and disappointment to the near-sighted statesmen in the Tsung-li Yamên than this cordial unity between the Japanese Government and the Diet. They erroneously imagined the two to be irrevocably estranged and doomed to perpetual quarrels. Nor have Western people been less struck with surprise ■ the way in which Parliament has conducted itself since the country entered upon the crucial ordeal of a foreign war. They were wont to regard the only constitutional government in the Orient with something like ridicule. But even these cynical critics must now admit that the Japanese people are fully qualified ■ successfully put into operation the complicated mechanism of constitutional government and to avail themselves of its benefits. Thus, not only in a military capacity, but also in the field of politics, the Japanese people have given proof of ability and have asserted the reality of their progress, announcing to all the world that they are henceforth to be regarded as a Power in the Orient.

* * *

The *Mainichi* has some very strong remarks about the trouble attending the Korean loan. When the *Nippon Ginko* justly declined to furnish such a large sum as a million *yen* to such a creditless debtor as Korea, unless the interest were above 8 per cent. per annum, the question was discussed in the House of Representatives, with the result that it resolved to advance that sum out of the War Fund. What chiefly led the House to adopt such a course was the consideration that the reform of the Korean administration must be accomplished if tranquillity is to be preserved in the East, and that Japan, as far as her resources permit, ought to furnish the necessary funds to carry out the reforms. Influenced by that magnanimous idea, the House imposed only one condition with respect to the loan, namely, that the interest should be at the same rate as that on the War Loan. Such being the liberality of the House toward Korea, the *Mainichi* could not but wonder when it received news from Söul that trouble had arisen about the relative proportion of coin and notes in the loan as handed over to the Korean Government, and about the length of the term. There is no difference at all in purchasing power between silver and convertible notes in Japan. The latter ought to give silver, if silver is wanted by the Korean Government, provided the charges for transporting so much metal are paid by that Government. For does not the refusal of the Japanese Government to give the loan in coin detract from the credit of its convertible notes? And yet, it is said that the request of the Finance Minister of Korea to have two-thirds of the loan in silver and the remaining one-third in paper, was one of the causes that brought about a rup-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ture of the negotiation. Another cause had reference to the length of the term, the Japanese Government insisting that it be fixed at 5 years, while the Korean Government wished for a much longer period. This was another strange objection on the part of the Japanese Government, seeing that the term of the Japanese War Loan is fixed at 50 years. The safety of the loan does not necessarily depend upon the term, but chiefly upon the nature of the security. Why this objection then about the length of the term? Another strange item of news is given in this context, continues the Progressionist organ, namely, that the Japanese Government is resolved not to countenance any idea entertained by the Korean Government to issue paper notes on the specie borrowed by it from Japan. The *Mainichi* concludes that all the three above points are entirely at variance with the spirit of the loan, and that should not the matter be made clear, it will be sure to become a subject of grave discussion in the next session of the Diet.

EDITORIAL NOTES.

FAMOUS SWORDS.

SOME weeks ago we had occasion to report the extraordinary exploit of a Japanese constable in Korea who, on meeting with a large number of Tonghaks, was compelled to draw his sword and finished by killing on the spot or mortally wounding considerably more than thirty of his assailants. As we noted at the time, the expert swordsman was originally one of the metropolitan constabulary, having been for several years attached to the Asakusa District Police. Remarkable as the story is, there seems to be no valid reason to doubt its authenticity. We now learn, from the *Yomiuri Shimbun*, that the weapon carried and used by the swordsman in his desperate encounter, is a very famous blade presented to him just before his departure from Japan. The sword is said to be several centuries old—over six, in fact,—and has always borne the name of *Iwa-kiri*, or the "Rock-cutter." Through a strange concatenation of circumstances the blade came into the family of a wholesale fish-merchant in Asakusa. Being on friendly terms with the constable in question, the merchant gave him the "Rock-cutter," saying that he preferred that the sword should be utilized against the enemies of Japan rather than rust away in an obscure godown. Before handing it over, however, he begged his friend to make an experiment with it, and turn its steel against some stone, alleging that this had frequently been done by others without in the slightest degree injuring the blade's keen edge. This the constable refused to do, saying that it ought not to leave the scabbard without being directed against an actual foe. According to the above story, "Rock-cutter" has since shown that its fame was merited.

* * *

We read in the *Miyako Shimbun* that another famous sword has recently been discovered in Mukojima. It is an undoubted Muramasa, and is traced directly back to Hideyori, son of the famous Taiko, who was at one time its possessor. From Hideyori the sword passed into the hands of his *karei*, or chief steward, who afterwards took service under Iyeyasu and became a petty *daimyo* with a yearly income of 20,000 *koku*. The descendants of this feudal chieftain are still living, though in somewhat reduced circumstances, in Tokyo. The sword is described as being one of the finest specimens of Muramasa's work extant. From another source we read that it will probably be sent to the Kyoto Exhibition, there to hold a prominent place among a unique collection of ancient Japanese swords.

PROPHET, OR BIRD OF EVIL.

Two or three days ago, relates a vernacular contemporary, a venerable-looking man with long white hair, clothed in white garments and wearing wooden clogs with only one strap instead of two, stopped in front of a *saké*-dealer's in Nihombashi District. He had a rather large bottle in his hand which he requested to have filled with the best *saké*. The bottle was evidently one of five or six *go* capacity, but when the shop-boy began pouring wine into it he was astonished to find that it would contain over five *sho*. Marvelling at this wholly unaccountable phenomenon, the boy followed after the strange customer to find out where he lived. The man walked on to Yotsuya and then to Okubo, at least three miles from Nihonbashi. Here the boy's patience gave out, and running up to the stranger he asked him who he was? "I have," replied the mysterious personage, "recently descended from the heavens. I prophesy that the Japanese troops will shortly gain several great victories over the Chinese, and that the whole Chinese Empire will be completely subjugated by the end of April." After this effort the sage went on to say that in the month of May a fearful pestilence would appear in many parts of the country, yet its therapeutics would be easy; it would only be necessary for the sufferer to eat rice-gruel mixed with a few red beans (*azuki*). Such treatment would speedily cure even the worst cases. After having received this startling information, the boy came running back to his master to whom he told all he had heard. The story soon spread, "and now," continues the Tokyo paper with fine irony, "many wise people believe it implicity." But if he who runs may read, it was not necessary for a celestial visitant to make appearance here below in order to known what was "prophesied." That the war will speedily terminate is believed by every reading Japanese; and moreover it unfortunately stands to reason that if the Moji cholera manages to escape bounds we may expect a sickly summer. Still it is gratifying to learn that the angels of the Japanese Paradise are on the side of their countrymen.

JAPANESE WORKMEN IN CALIFORNIA.

THE San Francisco correspondent of an Osaka contemporary has several interesting facts to narrate concerning the status of Japanese artisans and labourers now in the United States. It appears, he says, that the Japanese have won for themselves enviable fame in all work where a light touch and nimble fingers are required. Japanese hands are now employed in several large stores where ready-made clothing is produced wholesale, and here the men are generally set at work at button holes or sewing on buttons, which they do with a dexterity far greater than that possessed by Chinese tailors. Again the largest photographers in a number of cities have Japanese to retouch the negatives, or to apply the delicate touch of colour to the lips and cheeks of larger photographs. In the vicinity of Oakland and San José the fruit-grower prefer Japanese pickers to any others, they being very steady and always plucking the fruit daintily and without injuring the plant, vine, or tree. One large fruit-farmer had seventy-one Japanese in his orchards in 1893, and eighty-three last year. There is steady demand, in the season, for good Japanese pickers, who can always command comparatively better wages that even native-born Californians. In several instances Japanese carpenters and joiners have found good positions and steady paying work, earning much more than they would hope for in this country. In conclusion, the writer believes that the outlook for Japanese artisans in the United States in a decidedly promising one: they meet with little or no factional opposition, and can find employers even before they have learned to express themselves in English.

* * *

This is a much brighter picture than we should have expected. It is not so many months ago that a number of Japanese workmen, mostly navvies, were said to be without work and slowly starving in Vancouver. But if the above report is correct, there is always work ready for willing hands in California and the Western States. It was in 1888, if we remember correctly, that the experimental farm said to have been started by Mr. Fukuzawa, not far from San Francisco, proved a failure, this being principally attributed to the hostile feelings of native agriculturists as well as to the difficulty of irrigation. Farms managed by Japanese would be failures where farms on which Japanese were principally employed might be successful; for there is no more painstaking agriculturist in the world than the Japanese *hyakusho*. At all events it is pleasant to think that other courses are open to Japanese immigrants besides that of taking service as domestics: at best a precarious and not elevating means of existence.

A TREACHEROUS FIRM.

THE *Miyako Shimbun* reports that a certain German steamer was recently, while on her way to Shanghai, stopped by a Japanese man-of-war and subjected to a thorough search, as there was a suspicion that among the cargo there might be some contraband of war. The first search resulting in nothing particular, the Japanese were about to let the steamer go on her way when one of the officers noticed, or thought he noticed, something very suspicious in the captain's expression. A second search was immediately instituted, the hold this time being looked through most thoroughly. A case containing five hundred guns, destined for Shanghai, was finally discovered. The guns were of course impounded. On bringing them back to Yokohama, whence they had been shipped by a German firm, it was found that the real parties supplying the guns were Japanese: none other that Messrs. Omura & Co., of Shinzaimoku-cho, Nihonbashi District, Tokyo. Further investigations soon elicited the surprising fact that the guns were of Japanese make, being in fact a lot of condemned weapons sold by the Navy Department to the firm in question. Messrs. Omura & Co. had put in a document stating that the guns would be taken to pieces and the iron melted down; in consequence of which argument the Department in question had sold the weapons to the firm for eighty *sen* each. Instead, however, of keeping to their agreement, the Omura house had patched up the old guns and sold them, through the medium of a German firm, to Chinese in Shanghai, for no less than five *yen* apiece. As soon as these facts were elicited, gendarmes were sent to arrest every member of the firm, the arrest taking place on the 25th instant. The people of Nihombashi District, the commercial centre of the metropolis, are represented as being appalled at the discovery, which affects the credit of every merchant there. Coal, continues our contemporary, has been sold to the enemy by Japanese renegades since the outbreak of the war; but what shall we say to these men, members of a well-known and hitherto respected firm, who would deliberately put lethal weapons into the hands of their nation's enemies?

MR. ROBERT LITTLE AND THE WAR.

WHILE the *North China Daily News* was under the editorship of Mr. Robert Little, its readers in this country used to be astounded by the prejudice and partiality displayed in its columns with reference to the war, and even more surprised by its singular credulity in accepting, and want of judgment in publishing, stories of Chinese successes and Japanese reverses that were inherently ridiculous. Mr. Little recently visited Paris, and being interviewed by a representative of Dalziel, gave forth the following views:—

Mr. Little did not by any means endorse the general impression that the Japanese were likely to win in the long run. The more they penetrated into the country the more difficult their position became; and if they took Peking in the spring the seat of government would simply be removed further inland, probably to Si-ngan-fu, and the same thing could be done time after time. The war might go on for two or three years, and Japan would not be able to stand such a strain. The peace negotiations were merely devised to gain time. The Japanese armies had not done by any means as well as they had tried to make out, for their inability to march prevented them from following up whatever troops they engaged in fight. Then Chinese, if properly led, were the more formidable troops. Nearly all the telegrams published in London about the war came from Japanese sources, and were utterly unreliable. It was well known that no correspondent with the Japanese forces could transmit anything the authorities did not like, while the Japanese are constantly sending out despatches designed to influence public opinion in their favour. The war had affected foreign trade very

UNIVERSITY OF ILLINOIS
URBANA-CHAMPAIGN

little except in the north. At Shanghai there was no sign of anything unusual going on, and people had almost ceased talking about the war.

Mr. Little's opinions as to what may happen if the war continue for two or three years, are his own property, and may be put into any shape he pleases. But his assertions about so-called facts are different matters. When he says that "nearly all the telegrams published in London about the war came from Japanese sources and were utterly unreliable," it becomes plain that he lacks capacity to appreciate the simplest facts, for we can not suppose that he intended to tell a deliberate falsehood. The truth is that the vast majority of the news transmitted to London from Japan has been sent by public news agencies, and that the intelligence sent across the wires from Tientsin and Shanghai has been notoriously incorrect—so incorrect as to become at last a veritable laughing stock, to which nobody any longer pays the slightest attention. On the other hand, we can not recall a single instance of perversion of truth in a Japanese official report from either the naval or military authorities. There may have been some concealment; of that we know nothing. But there has been neither distortion nor falsification. In every case subsequent events have proved the correctness of the Japanese versions, and in nearly every case subsequent events have proved the incorrectness of the Chinese. Yet Mr. Robert Little ventures to accuse the Japanese of "constantly sending out despatches designed to influence public opinion," and alleges that news from Japanese sources is "utterly unreliable." It always seems to us that one of the most striking and humiliating contrasts suggesting itself to readers of some of the foreign local journals in the East is furnished by the wholesale charges they perpetually prefer against Japanese want of veracity as compared with the complete indifference to truth or justice that they themselves display.

THE HOUSE OF REPRESENTATIVES AND THE ARMY AND NAVY.

THE following is a translation of the Resolution passed by the House of Representatives on the 20th instant:—

RESOLUTION RELATING TO THE ACHIEVEMENTS OF THE EXPEDITIONARY LAND AND NAVAL FORCES.

The House of Representatives, in its recent Extraordinary Session, acting on behalf of the nation, thanked the Expeditionary Forces for the hardships undergone and the merits achieved by them. Since then the Army and Navy, surmounting snow-clad mountains and crossing frozen seas, have fought valiantly in scores of battles and skirmishes, with the result that Shinking has been brought under the sway of the Army, Shantung has been swept clear of all resistance, the Peiyang Squadron has been annihilated, and the glory of the National Flag has been made conspicuous on both the shores and the seas of China. It is impossible that such deeds should have been accomplished had not the Army and Navy been thoroughly inspired with the spirit of loyalty and patriotism and had they not met the enemy with those sentiments always in their breasts. Now that the sphere of action has become wider and the second stage of the campaign is about to be entered upon, still greater hardships and suffering may have to be encountered in the path to complete success. For the deeds already accomplished and for those still to be accomplished the nation feels profoundly grateful, and this House, by the present Resolution, desires to give expression to the sentiment of the people.

Presented by SUYEHIRO SHIGEYASU and 7 others.

DEATH OF CONSUL SMITHERS.

A TELEGRAM was received at the United States Consulate on Tuesday morning, informing Consul-General McIvor of the death at Kobe, at 1.30 on Tuesday morning, of Mr. E. J. Smithers, Consul of the United States, from aphasis and hemiplegia.

* * *

The *Kobe Chronicle* says that the death of Mr. E. J. Smithers, U. S. Consul at that port, has cast a gloom over the entire community. A man of the highest integrity and the most upright conduct, his loss will be sincerely mourned by all brought into public or private relations with him, and the deepest sympathy will be felt for his sorrowing family. The *Hyogo News* says:—As a public man in Kobe, Mr. Smithers had identified himself quietly but always sincerely with every good work. As Chairman of the Municipal Council he was most regular in his duties; as a member of various Committees he was painstaking and thorough. As Consul for the U.S. of America he upheld his office with dignity, administered justice with firmness, and won the respect and esteem of his colleagues, his nationals, and of all, in short, with whom he came officially, and still more personally, into contact.

* * *

A large number of prominent residents of Kobe, both foreign and Japanese, attended the funeral of the late of Mr. E. J. Smithers, U.S. Consul at that port, on Thursday afternoon. The services at the Church and by the grave were conducted by the Rev. Sydney Swann. Messrs. Hunter Sharp, U.S. Vice-Consul, J. J. Enslie, H.B.M.'s Consul, G. de Wenndrich, H.I.R.M.'s Consul, P. de Lucy Fossarieu, Consul for France, F. Thiel, of the German Consulate, W. F. K. Fearon, Belgian Consul, H. Lucas and T. F. McGrath, acted as pall-bearers. Mr. R. Von Krencki, H.I.G.M.'s Consul, and Messrs. Playfair, Griffiths and Foster, of the British Consulate, followed the chief mourners, Messrs. G. F. and H. Smithers, and A. N. Hansell, the sons and son-in-law respectively of the deceased.

THE IMPERIAL DIET.

THE Eight Session of the Imperial Diet was formally closed yesterday, the ceremony taking place in the House of Peers at 11 a.m. Mr. Watanabe, Minister of Communications, Mr. Yoshikawa, Minister of Justice, and Marquis Saionji, Minister of Education, were present. Mr. Watanabe, who represented the Premier, read the Imperial Decree authorizing the closing of the present session. A garden party was given by the Ministers of State to the members of the Diet at the Akasaka Detached Palace at 3 p.m., at which Mr. Watanabe, Viscount Nomura, Mr. Yoshikawa, and Marquis Saionji, Ministers of State, the Government Delegates in the Diet, the Presidents and members of both Houses, numbering in all over five hundred, were present.

THE GALE.

THE south-westerly Gale that raged all day Thursday did very little damage in Yokohama, beyond the stripping of plaster from the fronts of houses and the disturbing of fences in various parts of the Bluff. A boat carrying passengers capsized in the harbour about eleven o'clock in the forenoon, and the Water Police promptly proceeded to the rescue. A sampan in which were three men was dashed to pieces against the Breakwater. Two of her crew succeeded in swimming to land, but the third has not since been heard of. The police, however, think he must have effected a landing in the vicinity of Kanagawa. A good deal of rain has fallen all over Japan.

THE "KEIZAI" ON THE PEMATURENESS OF THE PEACE NEGOTIATION.

We have repeatedly maintained, writes the *Keisai* in its latest issue, that only after the Japanese Army has entered the Capital of China can negotiations for peace be started with any hope of genuine success. The Detring mission and the Chang mission ended in a fiasco, because they were found not to be properly accredited to carry on negotiations for peace, and Japan could reject them with justice on her side. But it is more than probable that the Viceroy Li has brought with him credentials complete in all essential respects, and the question is how should the Japanese Government treat him. It is a grave question. For, in opening negotiations with him, should the conditions on which Japan would consent to peace be disclosed, a very serious mistake may be committed. The relations between a Sovereign and his representative sent on a mission of the kind now entrusted to the Viceroy, is not the same in China as in Western countries. The Emperor of China may refuse to ratify a treaty concluded by the Viceroy. He may denounce his Ambassador as having acted contrary to his will. The only issue of such a transaction would be to publish to all the world the demands of Japan. That would be the case even though the Ambassador gave his consent to the conditions, and it would be the case in a still more marked degree did he withhold his consent. The disclosure of Japan's demands must therefore be strictly avoided. The thing above all others to which Japan should pay the strictest attention at this juncture is not to excite the jealousy of other Powers. Thus far, the sympathy of Western countries is on the side of Japan, seeing that she is engaged in the noble task of initiating China into the comity of civilized countries. Further, the facts that the Japanese people are magnanimous in money matters, showing a degree of disinterestedness comparable with that of the knights of old; that they extend kind treatment to their Chinese captives, and that they are generous to the enemy's people—all these things have elicited the admiration of Western peoples. But if in any way a sign be shown that Japan is intent on persecuting a beaten foe and seeks to exact undue terms, the sympathy of other countries will inevitably be enlisted on China's side. It is not in the interest of Japan, therefore, to disclose at this juncture the terms on which she will consent to terminate the war.

Needless to say, however, that demands which, preferred now, might seem excessive, will bear a different aspect when preferred under the walls of Pekin. What might now be regarded as improper, will then appear quite justifiable. Many grave points must be taken into consideration in concluding peace. Japan has just entered the comity of Western Powers, and her manner of proving herself qualified to be one of that comity, is among the foremost of these points. To effectually maintain her newly won status—Japan must at least have a navy that can cope with the British Squadrons on the China, India, Australia, and Canada stations. To procure a navy of such dimensions requires large funds; too large to obtain at home without subjecting the people to heavy burdens. It follows, therefore, that in order to establish her status, Japan must obtain land in China, thus procuring resources to support her navy. The present Manchu Dynasty is already doomed, it is beyond recuperation. Did Japan abandon it to its fate, she would simply be handing over China to European Powers, which have long been gloating over the Middle Kingdom as a desirable prey, and have been prevented from pouncing upon it merely through lack of good opportunity. Such an opportunity now presents itself to Japan; an opportunity that can never be expected to occur again. Shall such a rare opportunity be suffered to slip away unutilized? If not, in what manner should the Peace Embassy be rendered abortive? The only way is to require that China before the negotiation is entered upon shall give some conclusive proof of her earnestness in suing for peace. In other words, she should be made to surrender her most important military posts for temporary occupation by the Japanese expeditionary army. Only when that demand has been complied with should the negotiation be formally entered upon.

TREATY WITH PERU.

The *Nichi Nichi Shimbun* publishes a telegram from Hiroshima to the effect that a treaty between Japan and Peru was concluded at Washington on the 23rd inst., the negotiators being the Japanese Representative in that city, Mr. Kurino, and the Minister Resident for Peru. Doubtless the principal object of this treaty is to provide for the immigration of Japanese.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

IMPERIAL DIET.

FRIDAY, MARCH 22ND.

HOUSE OF PEERS.

The House did not meet.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being :—

1.—Representation relating to the Qualifications of District Headmen.
2.—Representation relating to a Grant in Aid of the Hiroshima Water Works.
3.—Representation relating to the Experimental Growth of Sugar Canes.
4.—Representation relating to the Free Education of Military Men's Children.
5.—Representation relating to a Submarine Cable.
6.—Petitions.

Various Government Replies to Questions preferred by Members were read.

Mr. Kurihara Ryosuke asked permission to say a few words with respect to the Tariff Bill. It had been a parliamentary question ever since the second session, and its importance needed no exposition. Owing to various causes, it had failed to come up for discussion this session, only one day more of which remained, and he therefore desired to bespeak the attention of the members so that the Bill should certainly receive consideration next session.

The Chairman of the Petitions Committee reported that 420 Petitions had been placed in the Committee's hands since the beginning of the session. Of these, 90 had been brought before the House; 164 had not been submitted; 140 had been forwarded for the Government's information; 22 had been handed to Special Committees for their information, and 7 had been rejected.

The Representation relating to the Qualifications of District Headmen was then passed, without debate, an amendment proposed by Mr. Kokure Budayu being adopted, namely, that the selection of such officials by examination be abandoned, and that the Government should choose suitable persons in the localities concerned.

Mr. Mayekawa introduced the Representation for a Grant in Aid of Water Works at Hiroshima. He urged that Hiroshima, apart from its own importance as the capital of the Central Provinces, was evidently destined to be a military centre. It became, therefore, of the utmost importance, to provide a pure water supply so as to protect the inhabitants and the troops against zymotic diseases. The Representation proposed that an estimate in the desired sense be presented to the House next session.

The House adopted the Representation without debate.

The Representation for the Establishment of Experimental Sugar-cane-growing Stations in Shikoku, Kiushu, and Oshima was opposed by Mr. Kusakari Shimmei on the ground that agricultural experimental stations already existed where such work could be carried on.

Mr. Oshima Shin spoke in the contrary sense, explaining that the yearly import of sugar now amounted to some 15 or 16 million *yen*, and that there was ample reason to believe that the country might become self-supplying if proper steps were taken. The required stations had to be in special localities, and the work contemplated could not be carried out at the existing Agricultural Stations.

After some discussion, the Representation was adopted.

Mr. Shito Rikuzo introduced the Representation for providing free education for the children of soldiers engaged in a foreign campaign. He urged that this duty was not less important than that of providing properly for the soldiers themselves.

The Government Delegate explained that if the Representation were intended to refer to children the pecuniary condition of whose parents precluded the furnishing of proper education, there were already ample provisions to meet such cases. Of course if the Representation contemplated aid to soldiers' children irrespective of the parents' circumstances, the question became altogether different.

The House adopted the Representation without debate.

Mr. Miyazaki Yeiji introduced the next Representation. He explained that many important lines of submarine cables—as that to Okinawa Prefecture, that between Oki and Bungo, that between the islands of Fukuye and Nakatsu and so forth—had as yet received no attention and ought to be laid as soon as possible.

The House adopted the Representation.

Three Petitions were then presented by the Petitions Committee and adopted for presentation to the Government without debate.

The House rose at 3.50 p.m.

SATURDAY, MARCH 23RD.

HOUSE OF PEERS.

The House met at 10.45 a.m., the Order of the Day being :—

1.—Report of the Petitions Committee.
2.—Bill (Second Reading) for amending the Law of Finance.
3.—Bill (Second Reading) for amending the Law of Election for the Lower House.
4.—Resolution relating to the Settled Accounts of the 25th year of *Meiji*.
5.—Petitions.

The President announced that a message had been received from the Minister President of State, to the effect that the official closing of the Diet would take place on the 25th instant.

Prince Tokugawa, on behalf of the Petitions Committee, reported that 331 Petitions had been received during the session, and gave details as to their treatment.

Viscount Tani, on behalf of the Special Committee, reported that the Committee, by a majority of one, recommended the rejection of the Bill fixing that the Settled Accounts for each year must be presented to the Diet of the year but one following. The Government Delegate had explained that such a rule could not be observed in practice.

After a brief debate, the House unanimously rejected the Second Reading of the Bill.

Viscount Tani reported that the Special Committee recommended the rejection of the Bill for amending the Law of Election for the Lower House. With some of the proposed amendments the Committee agreed, but on the whole they considered the proposals premature.

The House, without debate, unanimously rejected the Bill.

Viscount Tani introduced the Resolution relating to the Settled Accounts for the 25th year of *Meiji*. There were two points included in the Resolution. The first related to road-repairing in Miyazaki Prefecture. A certain sum had been appropriated for that purpose in the Budget. It had proved too large, and the Government, instead of returning the surplus into the Treasury, had passed it over to the general expenditures of the locality. Such a course was unlawful. The second point related to the purchase of cement for the Yokohama Harbour Works. The method of inviting tenders had been contrary to law.

Mr. Mitsukuri Rinsho, in reply to questions and speaking on behalf of the Special Committee, said that the Committee had considered the Government's procedure proper in both of the cases referred to. The grant for road repairing in Miyazaki Prefecture had been made, not because the locality was unable to bear the outlay, but because the work was of general utility. Hence there was no occasion to return the surplus, especially as the sum allowed had been a mere estimate and not an accurately calculated amount. As to the second point, the Government Delegate had explained that the method of calling for tenders in the case of the Yokohama Harbour Works had been in accordance with the supplementary clauses of the Law of Finance, and the Committee had endorsed the explanation.

Mr. Furuichi, Government Delegate, pointed out that the allowance for road repairing in Miyazaki Prefecture had been a lump sum. There was no question of its insufficiency or excess. If insufficient, it would not have been supplemented. If in excess of the work immediately undertaken, the Treasury had no title to the surplus: it belonged to the Prefecture.

After debate, the House rejected the Resolution by 75 votes to 44 so far as concerned the grant to Miyazaki Prefecture, but when an open ballot was taken with regard to the tenders for cement in the Yokohama Harbour Works, the votes were equal, 54 for and 54 against. The President therefore gave the casting vote against the Resolution.

Various Petitions were then adopted for presentation to the Government, and others were rejected, 17 in all being discussed.

The House rose at 3.45 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being :—

1.—Settled Accounts for the 25th year of *Meiji*.
2.—Bill for amending the Tax Collecting System in Cities and Prefectures.
3.—Bill for changing the Boundaries of Chiba and Ibaraki Prefectures.
4.—Representation relating to Emigration.
5.—Representation relating to the Purchase of Military Material.
6.—Petitions.

The President announced the receipt of a message to the effect that the official closing of the House would take place on the 25th inst.

Mr. Konishi Jinnosuke asked permission to say a few words before the House passed to the Order of the Day. He wished to call attention to the manner of dealing with the Settled Accounts. They had no precedent to guide them in this matter, but were called upon to establish a precedent. Hence it behoved them to proceed with the utmost deliberation. An opinion seemed to be held that the Settled Accounts were, as a whole, a subject for the House's Debate. But a moment's consideration would show that such was not the case. The House had no power to touch any item of the Settled Accounts. It could not reduce or disallow the expenditures as it did with respect to the Budget. Hence the Accounts, as a whole, did not constitute a subject for debate. All that the House was entitled to do was to examine the Accounts, and if any improper item were discovered, to make that item a subject for discussion, adopting with regard to it whatever course seemed desirable. He begged the House to consider this question of procedure maturely, and he moved that the Settled Accounts be handed back to the Special Committee.

Mr. Ozaki Yukio opposed this view. He considered that the Settled Accounts, as a whole, were submitted to the House just as the Budget was submitted, and ought to be debated in the same manner.

Several members having spoken, the House rejected Mr. Konishi's motion, and proceeded to debate the Settled Accounts.

Mr. Fuji Kinsaku, on behalf of the Special Committee, reported that the Committee had found the Settled Accounts for the 25th year of *Meiji* to be compiled in a much more satisfactory manner than the accounts for the 24th year. There were a few points needing improvement, but these would doubtless be noted by the Government in compiling the next Accounts.

Some debate ensued, and finally the House, by a large majority, voted in the sense of the Special Committee's Report.

The Bill for amending the system of Taxation in Cities and Prefectures was then passed through all its readings in the form sent down from the Upper House.

The next Bill was withdrawn, as no possibility existed of its passing the Upper House this session.

The Representation relating to Emigration was passed without debate. The Representation set forth the fact that emigration being of great importance to the people of Japan, every possible step should be taken to encourage it. Investigation had showed that Mexico, Brazil, and Nicaragua were well suited for purposes of emigration. A treaty existed with Mexico, but not with Brazil or Nicaragua. Steps should therefore be taken to conclude a treaty, or at any rate to enable emigrants to proceed without difficulty to those countries.

Mr. Suyehiro Shigeyasu, on behalf of the Special Committee, reported with regard to the Representation relating to the Purchase of Military Material, that the Government Delegate had admitted the recurrence of some abuses in the past, but did not think them sufficiently

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

important to call for criminal procedure, and engaged that their re-occurrence would be prevented. Nevertheless, a sharp debate had taken place between the Delegate and the Committee, and at one time no prospect of an agreement presented itself. Reference had been made, however, to Hiroshima, and the result had cleared up many points which he regretted to be unable to explain as they had been stated in secret session. The Vice-Minister of State for War had sent a message expressing his regret at being unable to attend the House in person, and had added that as the Government Delegate was unacquainted with what actually took place on campaign, it was unlikely that he could submit any thorough explanation to the House. Despite all this, the Committee was of opinion that the passing of the Representation would have a useful effect.

The House adopted the Resolution without Debate.

Eleven Petitions were then adopted for presentation to the Government, and the President having briefly congratulated the House on the results of the session, the House rose at 5.20 p.m.

BILL RELATING TO THE AMENDMENT OF THE LAW OF ELECTION OF MEMBERS OF THE HOUSE OF REPRESENTATIVES.

In the Law of Election of Members of the House of Representatives issued in the 22nd year of *Meiji* (1889) by law No. III., the following amendments shall be effected :—

Art. VI.—Clauses 1 and 3 shall be amended thus :—

Clause 1. He must be a male Japanese subject not less than full *twenty* [twenty-five] years of age

Clause 3. For not less than one year previous to the date of the compilation of the electoral list, he must have been paying, in the *Fu* or *Ken*, direct national taxes to the amount of not less than *Five* [fifteen] *yen*, and must be still paying the same.

Art. VIII.—Those alone shall be eligible that are male Japanese subjects of not less than full *twenty-five* [thirty] years of age.....

Art. IX.—All Government officials shall be ineligible, with the exception of the following :—

1. *Ministers and Vice-Ministers of State.*

Art. X.—This Article shall be expunged. [Officials of a *Fu*, *Ken*, or *Gun* shall not be eligible within the limits of the jurisdiction of their respective office.]

Art. XIV.—The following provision shall be appended to clauses 4 and 5 of this Article :—Provided that an offender of political nature shall be exempted from these disqualifications.

Art. XIV.—The following provision shall be appended to clauses 4 and 5 of this Article, and the phrase in the latter, "or to imprisonment for a political offence," shall be expunged.
Provided that a political offender shall be exempted from these disqualifications.

Art. XVII.—Any person, against whom a criminal prosecution has been brought, and who is in detention or is under bail, shall be incapable of exercising the right to elect [or to be elected], until the completion of the proceedings.

Art. LXVI.—The following clause shall be appended to this Article :—When the term of four years of a member who is elected at a general election subsequent to a dissolution expires, he shall be regarded as still holding office till the next general election.

Art. C.—The following article shall be added after Art. C.

Art. C. 1—A Policeman or an Official of a *Fu*, *Ken*, or *Gun* who, on whatever pretext, interferes in the election in his respective *Fu*, *Ken*, or *Gun*, by persuasion or by any other act, shall be liable to minor confinement for not less than two months and not more than two years, with the additional penalty of a fine ranging from 10 to 100 *yen*.

Arts. C. and C. 2 of the present Law shall be changed respectively into Arts. C. 2 and C. 3.
Introduced by Mr. Yamashita Chiyoo and 2 others.
Supported by Mr. Suzuki Jyubi and 3 others.
N.B.—In the above draft bill, brackets are used to show words expunged and italics to show words introduced.

N.B.—The above Bill was passed by the House of Representatives, but did not receive one favourable vote in the House of Peers.

QUESTIONS RELATING TO THE SUSPENSION OF NEWSPAPERS.

1.—The Government has hitherto suspended the publication of newspapers several hundreds of times on the ground that they disturb public tranquillity, and has thus, on each occasion, inflicted no small inconvenience and loss on the proprietors. The latest instance of the kind was the suspension of the *Nippon*, published on the 2nd of March of the current year at the *Nippon's* Office, Kijicho, Kanda, Tokyo. On perusing the issue of that day, not an article is found that can be considered in the least degree hurtful to the maintenance of public tranquillity. The enforcement of the law by the Government can not but be strictly just and impartial, and therefore there must be in that number something calculated to disturb the public peace. What article in that number was considered obnoxious?

2.—Art. XIX. of the Press Law provides that a newspaper whose contents are deemed by the Minister of State for Home Affairs prejudicial to public tranquillity or to public morals, may be suspended or suppressed. It follows that when a newspaper is suspended, it must have been guilty of the offence of actually disturbing the public peace. Yet the Government frequently passes sentence of suspension on the ground that there is danger of the public peace being disturbed. The late suspension of the *Nippon* is considered by some to have been a hasty measure on the Government's part, dictated by apprehensions that that paper might ventilate its opinions on the Questions asked by the two Houses of the Diet with respect to the Revised Anglo-Japanese Treaty. If so, does the Government hold that the power of suspending a newspaper, as vested in it by virtue of Art. XIX. of the Press Law, may be exercised as a means of guarding against possible disturbance of public tranquillity, though no such disturbance has yet taken place? The foregoing questions are submitted in accordance with Art. XLVIII. of the Law of the Houses.

Presented by Suyehiro Shigeyasu.
Supported by Otake Kanichi and 29 others.

March 8th, 1895.

THE GOVERNMENT'S REPLY.

1. It falls within the competence of the Minister of Home Affairs to judge whether or not a newspaper's writing is prejudicial to public tranquillity, and he does not consider himself obliged to clearly set forth the particulars on which his judgment is based.

2. The Government has never suspended a newspaper unless some article already appearing in its columns has been deemed prejudicial to the maintenance of public tranquillity.

(Signed) Viscount Nomura Yasushi,
Minister of State for Home Affairs.

March 18th, 1895.

PROJECTED LAW DEALING WITH THE PREVENTION OF CATTLE EPIDEMICS.

Art. I.—When cattle disease is epidemic in a foreign country and there is a danger of its spreading to this country, the landing of diseased cattle from the infected locality, or the passage of cattle through the infected area ; or the landing of cattle suspected of having come either from or through such a district ; or the landing of any article deemed likely to spread the disease, shall be forbidden.

Art. II.—Any person who contravenes this Law shall be liable to a penalty of not less than 5 *yen* and not more than 100 *yen*. Concurrent offences shall be treated as one offence in fixing the penalty.

Art. III.—Rules relating to measures to be taken to prevent the spread of cattle diseases, as to the mode of inspecting cattle, and so forth, shall be determined by Imperial Ordinances.

APPENDIX.

The present Law shall be put into force from July 1st, 1895.

Introduced by Mr. Mori Baku and three others.
Supported by Mr. Motoda Hajime and 19 others.

LAW OF PROVISIONARY COURT-MARTIALS OF THE NAVY.

Art. I.—In times of war or emergency a Provisionary Court-Martial Council shall be established under a special Commander-in-Chief or Commander to adjudicate in the cases of the following :—

1. Officers below the rank of Commander who are subordinate to a special Commander-in-Chief or Commander, and who are guilty of delinquencies ; others who are at the seat of war, or the crew of a ship in the service of the Navy, and who are guilty of delinquencies.
2. Persons to whom examination and judgment have been entrusted in accordance with Art. II.

Art. II.—The Commander of the Fleet, the Commander of a Squadron, the Commander of a detached Squadron, and the Captain of a man-of-war belonging to the Fleet may, in accordance with Clauses 2 and 3 of Art. XXIII. of Naval Criminal Procedure entrust the examination and adjudication of delinquents to a Provisionary Court-Martial Council.

Art. III.—With the exception of Art. XXVII., Clause 2 of Art. XXVIII., and Art. XCIV. of the Naval Criminal Procedure, provisions relating to the Court-Martial Council held in places of seige shall be applied to the Provisionary Court-Martial Council.

WAR NEWS.

Saturday, March 23rd.

At the Shimonoseki conference on the 21st instant, Count Ito and Viscount Mutsu proceeded to the place of meeting on foot, reaching it before the arrival of the Viceroy Li. According to the *Jiji Shimpo*, the only business done had reference to the credentials of the Plenipotentiaries of each Power, and that occupied two hours.

The same journal says that 30 Chinese officials are lodging at Insho-ji with the Viceroy. Four of them, namely, Lord Li, Lo Tung-lo, Ma Chien-chang, and Wu Ting-fang, rank as Ministers of State.

According to the *Yomiuri*, the method of conducting the negotiations is that Mr. Inouye Katsu translates into English and Mr. Narabara renders the English into Chinese, Mr. Wu Ting-fang, who renders most of the replies, speaking in English. But that seems incomprehensible. Why should the Japanese Plenipotentiaries' statements be translated into English for Mr. Narabara, who is a Japanese? Probably the meaning is that the statements of Count Ito and Viscount Mutsu are given in both English and Chinese, Mr. Inouye rendering them into the former and Mr. Narabara into the latter, so that the English-speaking members of the Viceroy's suite may have two versions to compare.

The Viceroy Li's reported message to Tientsin, to the effect that, as there is no possibility of acceding to Japan's demands, preparations for defence must be vigorously pushed on, is interpreted by the Japanese as a mere bluff to procure some diminution of Japan's proposals.

It is stated that Captain Miyazaki of the cavalry, with three transport officials and eight artificers, set out from Hiroshima for Port Arthur on the 21st instant, in order to prepare the new Head-quarter Staff Office at the latter place.

A telegram from Amoy, published by the *Chiuo Shimbun*, says that the Japanese have effected a landing, unopposed, on one of the Panghu Islands (Fisher Island).

Monday, March 25th.

The occupation of Fisher Island on the 21st instant by a Japanese force is the only item of intelligence from the seat of war. Practically this involves the occupation of the Pescadores, a group of 21 islands lying between Formosa and the mainland. The largest of them is Panghu Island, measuring 22 miles from north to south, according to the *Hochi Shimbun*. Fisher Island is the next in size. The population of Panghu is 6,400. Amoy is 30 nautical miles distant ; and Formosa, 25. From Nagasaki the distance is 760 nautical miles. The islands are connected by submarine cable with Amoy and Formosa. Panghu Island is fortified. On the east it has two forts called Makung and Yuenting ; on the west three, Sinoteupao, Siaochipao, and Tochipao. The *Hochi* says that the forts will probably be bombarded by the fleet, and that troops will be landed behind them on the north of the island. At the time of the Franco-Chinese "state of reprisals" in 1885, Admiral Courbet, with four ships, attacked the islands on the 30th of March, and having reduced the forts on Fisher Island, bombarded the Makung fort also. At that time the Chinese garrison consisted of 2,600 men, but it now numbers 4,500. The forts, too, have been re-armed since Admiral Courbet's time :—They have now 26-cent. and 21-cent. guns mounted in them. Panghu Island is in the centre of a group of three, and is thus excellently protected against wind. On the occasion of the Japanese expedition to Formosa in 1874, it formed the anchorage for the men-of-war convoying the flotilla. The capital of the group is Fangkung-kwan. In former times the Pescadores are said to

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

have belonged to Japan, from whom they were taken by China. They, as well as Formosa, were discovered by a Japanese. The celebrated Minamoto Koretsuna held the islands in the days of the Yuan dynasty, and on his return to Japan was succeeded by Saga Shumpei, who in turn was followed by Osada Sakubei. It was in the latter's time that Hamada Yahei over-ran Formosa. Subsequently the Japanese gradually left the islands and they fell into Chinese possession. The only staple of export is dried fish.

A telegram from Shanghai, dated the 21st instant, says that a Japanese Squadron attacked the forts on the Pescadores that day, but only a few shots were fired on each side. Intelligence from Hiroshima, however, is more explicit. Two telegrams are to hand, both despatched on the 23rd instant, one at 9 a.m., the other at 4 p.m. The former says that the garrison on Panghu Island had been increased to 5,000 men before the Japanese expedition arrived there, and the latter that a force led by Colonel Hishijima has landed on the island and taken possession of it without difficulty.

The *Nichi Nichi Shimbun* explains that the temporary suspension of the Conference at Shimonoseki was owing to a request preferred by the Viceroy Li. On the 23rd instant, however, His Excellency intimated that he desired to re-open the deliberation on the afternoon of the 24th, and in accordance with that intimation the third meeting place yesterday.

In the *Nichi Nichi* we find a statement of the Japanese casualties from the 21st of September to the 8th of March. Those killed in battle numbered 542; those that died of wounds, 131; those that died of sickness, 981, making a total of 1,654. The *Jiji Shimpo* contrasts these figures with the record of casualties in the Satsuma Rebellion of 1877, when 12,000 men were wounded and 4,653 killed on the Government side.

Tuesday, March 26th.

The attempt upon the Viceroy Li's life is the one topic of the day. So far as we can judge, the Japanese nation is almost as much excited about the affair as it was about the attack upon the Czarewitch. There is a universal sentiment of execration toward the wretched youth that raised his hand against the aged Envoy. The Japanese public understand what it means to a statesman of Li's reputation, position, and years to cross the sea on a suppliant mission, and to appear before Japan in the character of one pleading for mercy on his country's behalf. That the life of such a man should be attempted by a miserable youth, under the influence, probably, of a fanatic desire to see the war pushed to its bitterest end, is a spectacle that may well evoke feelings of disgust and regret among the Japanese.

Such further particulars as reached Tokyo by Monday evening, were these:—When Count Ito, Viscount Mutsu, and Mr. Ito Miyoji visited the Viceroy at the temple where he is lodged, they found him reclining in a long chair. His wound had been temporarily bandaged, but the bullet had not yet been extracted. Surgeon-General Ito was expected from Hiroshima the following morning, and his arrival was impatiently awaited. Great excitement prevailed on all sides. The Japanese authorities were doing everything in their power to show how thoroughly they abhorred the nefarious attempt, and the Chinese seemed to be much pleased by these efforts. Of course, no precautions taken by the police, short of closing the houses on both sides of the street and completely clearing away the people could have averted Koyama's enterprise. As for Koyama, he is stated to be the oldest son of a *heimin*, Koyama Kobachiro, residing in the Oshima Division of Kodzuke province, Gumma Prefecture. He is 26 years old this year. On the 13th of this month, he left Tokyo for Hiroshima, and from the latter place went on to Shimonoseki, which he reached on the evening of the 23rd. He obtained from the police a permit to reside, and the very next day he perpetrated the crime. His dress at the time of the affair suggested a student in impecunious circumstances—striped flannel trousers, blue socks, straw sandals, a dirty kimono, and no hat. The *Nichi Nichi Shimbun* says that he caught hold of the chair in which the Viceroy was riding, and succeeded in firing one shot before the police seized him. The *Jiji Shimpo's* account of the affairs is this:—"The Viceroy had left the place of conference and advanced westward about 500 yards along Amidaji-machi, when a pistol was fired from a point immediately before a house on the right of the street. Blood was immediately observed to flow from the Viceroy's left cheek. He applied his hand to the wounded place and turned his head slightly upward. His bearers hurried along to his residence, only a hundred and twenty yard distant. The would-be assassin was a small, slight man, wearing a light-blue *kimono*, a working-man's girdle, bare-headed, and having socks (*tabi*) only on his feet. He wore no surcoat, and seemed to be a common artizan. He had a pistol in his sleeve. It was about 8 inches long "(other accounts say 5 or 6 inches) "and rusty, and when Li's palanquin passed before him at a distance of about 2 yards" (it will be observed that nothing is said here of Koyama's seizing the palanquin) "he took aim and fired. The ball struck beside the nose and pierced the cheek, but the wound was not of a fatal nature; according to the evidence of those present at the time. The miscreant was at once arrested." Supplementing this from the *Kokkai's* version, we learn that Koyama formerly advocated the Radical cause, and had already been in trouble for some violation of the law. He obtained his pistol—a six-shooter, five or six inches long—from one Kanamaru Kenjiro of Yokohama. The Viceroy's wound is under the left eye.

With regard to the Viceroy's condition, we have the following telegrams:—

Shimonoseki 24th instant, 11 p.m.

The Viceroy's wound having been bound, he is now in bed. His pulse is normal. The wound is 4 inches (centimètres) and is under the left eye, but the sight is not in any way injured.

Shimonoseki 25th instant, 10.22 a.m.

The Viceroy's condition is excellent. He went to sleep quietly at 7 o'clock last evening, and slept, without developing any fever or showing any sign of pain, until 7 o'clock this morning. He is perfectly quiet.

Shimonoseki 25th instant, Afternoon.

A wire from Dr. Sato, the Emperor's Physician, to the Head-quarters at Hiroshima, says that the Viceroy's wound is in a good condition and that there is no cause for anxiety.

Our readers remember, doubtless, that immediately after the incident, Count Ito telegraphed to Hiroshima asking that the Emperor's physician might be despatched at once to treat the wounded man. In response to that message, Dr. Sato must have been sent off by special steamer, so as to reach Shimonoseki on the morning of the 25th.

The *Nichi Nichi Shimbun* has the following statement about the wound telegraphed from Hiroshima at 1.05 a.m. on the 25th instant:—"Li's wound is under the left eye, about an inch from the eye. The bone is slightly fractured, and when the wound is washed, the liquid passes into the mouth. The ball has not yet been extracted. It will be removed after careful examination to-morrow morning. A French physician and Dr. Lin Lienhwai, who came in the Viceroy's suite, have done everything necessary. The Viceroy's strength is in no way impaired, and he can speak without difficulty."

It is stated that Their Majesties the Emperor and Empress were profoundly grieved by the intelligence of the Viceroy's injury, and that they immediately despatched a Chamberlain, Mr. Nakamura, to convey a message of condolence.

His Majesty the Emperor has issued the following Rescript:—

A state of war exists at present between Our Empire and China, but the latter has nevertheless despatched a duly accredited Ambassador to negotiate terms of peace, and We, on our side, have invested certain of Our Ministers with full powers to treat, and have caused a conference to be held at Shimonoseki. It was of course incumbent on Us, in observance of international usage and on account of the credit of Our country to treat the Chinese Ambassador with proper courtesy and consideration, and we appointed special officials for the purpose, instructing them to discharge that duty. Most unfortunately, however, a fanatic has come forward and inflicted injury on the Chinese Ambassador. We are profoundly pained by the incident. The fanatic will of course be punished by Our officials in conformity with law. We hereby enjoin all Our officials to carefully observe Our will, and to take care, by strict preventive measures, that the prestige of Our Empire be not injured.

A telegram from Shanghai, says that Japanese ships of war shelled the north Makong forts in the Pescadores on the morning of the 23rd, and renewed the bombardment the following day, troops being at the same time landed to attack from the rear. On the 25th, telegraphic communication ceased between Formosa and the Pescadores, from which it is assumed that the latter group has fallen into Japanese possession. The telegraph line, we may mention, runs from Amoy and Tamsui in Formosa, and from a more southerly point of the latter to the Pescadores.

Wednesday, March 27th.

Some of the metropolitan journals allege that the bullet has been extracted from the Viceroy Li's wound. We believe the intelligence to be incorrect. In view of the sufferer's great age, and, above all, of the malady from which he lately suffered, the use of an anæsthetic could scarcely be thought of, and without an anæsthetic the operation of extraction would be out of the question. Besides, the bullet may be left where it is without producing dangerous complications. The *Nichi Nichi Shimbun*, account, telegraphed from Shimonoseki at 5.20 p.m. on the 25th instant, is to the effect that Drs. Ishiguro and Sato, after careful examination, came to the conclusion that, in view of the impossibility of using an anæsthetic, the bullet had better be left where it is. We find it difficult to understand the course actually taken by the bullet. The report of our contemporary is that it passed between the cheek-bone and the hollow of the eye, lodging deep under the nose. At all events, it can not be extracted, and its presence gives no special cause for anxiety. The Viceroy is said to have expressed himself profoundly grateful for the consideration shown by the Emperor in sending a Chamberlain to convey expressions of Imperial regret, and the two Chief Court Physicians to attend to the wound.

The *Nichi Nichi Shimbun* reports that the members of the Diet now in Hiroshima have asked Count Ito to procure the prolongation of the Diet's session for one or two days in order that a resolution of regret and condolence may be passed with reference to Viceroy Li's wound. The Premier has laid their request before the Emperor.

The *Jiji Shimpo* says that there are now mounted in the batteries at Shanhaikwan over 130 pieces of artillery, 8 among them being 21-cent. Krupps. New forts have been erected and the garrison has been increased in view of the possible advent of the Japanese, but the *Jiji* adds that about one-half of the garrison have deserted.

There is no news from Formosa.

Some of the Tokyo papers say that Koyama, the would-be assassin of the Viceroy, is the son of a member of the Gumma Prefectural Assembly, and that he had already distinguished himself by administering a beating to Mr. Kokure Budayu, one of the members of the Diet for that Prefecture. If that be the case, he must be a man of some education. It is evident, however, that he had very little command of money.

Thursday, March 28th.

The Viceroy Li's condition remains satisfactory. There is no appearance of any complications, and if he progresses as he has hitherto done, he ought to be able to re-open the conference in a few days. He has himself expressed a strong desire in that sense. The Emperor's instructions were that Dr. Sato should remain at Shimonoseki in attendance on the patient, and that Surgeon-General Ishiguro

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

should return to Hiroshima to report on his condition. His Majesty's injunction is of course observed, but the Viceroy naturally likes to be attended as much as possible by the Chinese doctor that came in his suite, and some fears are entertained lest the latter's practice may not be in accord with the best antiseptic principles of modern times. For the rest, no cause of anxiety seems to exist. It is said that the Viceroy, in conversation with those about him, frankly admits the weakness displayed by China, and regrets it for her sake, but at the same time thinks that her defeat will make for the cause of civilization in the East, and is therefore not altogether regrettable.

The Minister of State for Home Affairs has addressed a very strongly worded reprimand to the local authorities in Yamaguchi Prefecture, through whose want of sufficient precautions his Excellency considers that the lamentable event of the 24th instant occurred. The Governor of the Prefecture and the Chief of Police have submitted their resignations, but whether they will be accepted remains to be seen. It must be confessed that the police seem blameworthy. Considering the immense importance of preventing all such incidents, and considering that the narrowness of the Shimonoseki streets rendered its almost impossible to completely control the acts of foot-passengers if they were allowed to be present at the time of the Viceroy's going and coming, the only really efficacious course would have been to clear the street completely whenever the Ambassador's palanquin was expected. But it is easy to be wise after the event.

Many stories are told about the antecedents of Toyama, the assailant of the Viceroy, but it is difficult to determine what portion of these tales is genuine, and what portion has been discovered for the occasion. The *Nichi Nichi* says that his real name is Toyotaro, not Rokunosuke, but that item of news, though doubtless correct, is of small interest. His preliminary examination has led to the framing of a charge of premediated but unaccomplished murder and he has been transferred to the Criminal Court for trial.

An insignificant skirmish with the Tonghaks is reported by Captain Tamamura at Chyan-lyan. Several half-armed rebels were captured, together with a small store of rice. It is about time that these disturbers of the peace should be quieted completely.

The members of the House of Peers held a meeting at the Nobles Club on the 25th instant, and decided to send a telegram, followed by two delegates, expressing their profound regret for the assault committed on the person of the Viceroy Li, and their fervent hope that he may speedily be restored to health. They further resolved to despatch a telegram commiserating with the Emperor on account of the anxiety that the event must have caused His Majesty, and to send two members of the House, as representatives of the whole, to Hiroshima to inquire after the Sovereign's health. The drafting of the telegram was entrusted to Marquis Hachisuka; the delegates to be sent to the Emperor were to be chosen, one from the Princes or Marquises and one from the Counts; and the delegates to the Viceroy were to be either the President or Vice-Persident and one Count, the expenses connected with the carrying out of the scheme to be defrayed by the whole House. Steps were subsequently taken to elect the delegates, the result being that Prince Tokugawa and Count Kyosu were chosen to proceed to Hiroshima, and that the choice of the delegates for Shimonoseki was deferred until Viscount Mutsu could be consulted.

The House of Representatives is not taking any step collectively, for the session having terminated, it would be unconstitutional for the members to come together again for any such purpose.

Immediately on receipt of the news reported by Field-Marshal Nodzu that the Yingkow foreign Red Cross Hospital was treating some 600 Chinese wounded in the engagement of February 24th, the Committee of the Red Cross Society in Shanghai asked the telegraphic authorities in Japan whether it would be possible to have a money credit telegraphed to Yingkow. Inquiry having been made of the General Head-quarters at Hiroshima, an answer was received that there would be no difficulty in employing the military telegraph lines for the proposed purpose. Shanghai was accordingly so informed, and soon afterwards, at the request of the Red Cross Committee, a bank credit of five thousand taels, to meet the requirements of the Red Cross Hospital at Yingkow was sent on by telegraph. The message had to be sent, of course, in Japanese *Kana*, but the chief of the military telegraph office at Yingkow was requested to supply a translation with the original *Kana* despatch. The incident is not without interest.

Friday, March 29th.

The reports from Shimonoseki continue most favourable. Dr. Sato and the other medical attendants examined the Viceroy at 9.30 a.m. on the 27th, and found that, since their previous examination at 5 p.m. on the 26th, there had been no change. The patient's rest had not been quite unbroken during the night, but that was attributed to mental anxiety. His pulse and temperature were good, and his appetite was normal. Before changing the bandages on the wound, Dr. Sato showed Earl Li the medicated bandages prepared by the Empress herself and sent for his use, as well as the two female nurses specially despatched by Her Majesty. The Viceroy took the bandages in his hand reverentially, and said:—In truth the benevolence of Her Majesty the Empress of Japan is as profound as the sea. When I return home and tell my Imperial Mistress what has been done for me, she will be very satisfied." The bandages were then changed, and various antiseptic measures adopted as usual. The wound was found to be in a healthy condition.

The above facts are given by the *Jiji Shimpo*. In the *Nichi Nichi Shimbun* it is stated that Li's condition improves daily, and that at 5 p.m. on the 27th when Dr. Sato paid his second daily visit, as usual, the Viceroy conversed with him on various topics. "The fanatic," said his Excellency, "was my enemy, but to you I owe my life. When I return to China I shall report the facts to my Sovereign and ask him to recognise your services." The Viceroy also alluded frequently to the gracious treatment accorded to him by the Emperor and Empress of Japan. Lord Li spoke, on the same occasion, privately to Dr. Sato and asked him to admonish the Viceroy. The aged statesman, Lord Li explained, when in China rose every morning at 5 o'clock and worked at his official duties the whole day, not going to bed until 11 at night. Remonstrances from ordinary folks were quite unavailing, but if a physician of Dr. Sato's reputation were to speak to him, he would probably attend. From the 28th instant it was intended to add milk, if possible, to the Viceroy's diet. There appeared to be no need of the nurses sent by the Empress, and their speedy return to Hiroshima was expected.

The finding of the magistrates before whom the would-be assassin was brought, is published by the *Nichi Nichi Shimbun*. It appears that his true name is Koyama Toyotaro, and that he is registered as having no occupation. The finding runs thus: "The accused, Koyama Toyotaro, being of opinion that the complication which arose in the fall of last year with reference to China and Korea, and led finally to the outbreak of war, was due to the procedure of the Chinese Minister of State and Viceroy of Chili, Earl Li, and that unless the latter were removed, lasting peace could not be secured to the East. Therefore, with the intention of killing the Viceroy, he would have gone to China but could not. Hearing, however, that the Viceroy was to come to the town of Akamagaseki in the capacity of Peace Plenipotentiary, and deeming this a good opportunity not to be lost, he determined to proceed thither with murderous intentions. Accordingly, on the 11th of the 3rd month of the 28th year of *Meiji*, he procured a pistol from Kanamaru Kenjiro of Yokohama, and on the 12th of the same month set out from Tokyo, and proceeding overland, reached Akamagaseki on the 24th. At ten minutes past 4 p.m. on the same day, in Sotohamamachi of that town, he aimed at the breast of the Ambassador with the above pistol and fired from the outside of the palanquin, but missing his aim, struck the Ambassador at a point one centimètre below the centre of the hollow of the left eye, failing to inflict a mortal wound. The above facts being established by ample proofs, the prisoner, in accordance with such and such (here follows a recital) provisions of the Code and Criminal Procedure is remanded for trial before the Criminal Section of the Local Court."

In addition to the removal from office of the Governor and Chief of Police—Messrs. Hara, and Goto—of Yamaguchi Prefecture, the following have also been dismissed from the service in connection with the Li affair:—The local inspector and the chief of gendarmes of the place where the event occurred; the local inspector and the chief gendarme of the station that failed to note the would-be assassin's arrival overland, and the two policeman on duty near the place where the crime was committed.

From Korea another rebellious attempt by about 1,000 Tonghaks is reported. It was a repetition of the old story. The Tonghaks were driven back with a loss of 40 or 50 men, and not a Japanese killed or wounded. The "staying power" of these Tonghaks is something very remarkable.

KOREAN NEWS.

The principal subject of interest in Sōul at present is the examination of the assassins of Kin Kakun, Vice-Minister of Justice. As was already opined, the plot appears to have been hatched in the "Mysterious Mansion" and the Tai Wŏn-kun, the "King of Mystery," seems to have been the plotter. Kin Kokujen, one of his dependents, was suspected as the principal tool in carrying ont the evil deed, and the Police were determined to arrest him, but that was no easy task, for, harboured as he was in the Tai Wŏn-kun's residence, there was much difficulty in getting at him. Disguised detectives were stationed round the mansion, and Kin was lured out of his hiding-place and thus arrested. The facts brought to light during his examination have confirmed the suspicions of the Police, and it has been proved beyond doubt that the "King of Mystery" was at the bottom of the affair. He first won Kin over, and the latter, with the help of two others, got together thirteen desperadoes and perpetrated the murder of the Vice-Minister of Justice, whom the Tai Wŏn-kun hated, and dreaded on account of his ability and fearless opposition. The problem which has now to be solved is what to do with the arch plotter—a difficult question to dispose of considering the position and rank of the aged Prince. A certain newspaper correspondent writes to the effect that the crafty Prince, in order to evade the grave charges constantly being brought against him, contemplates coming over to Japan. It would be a wise step for him to take, as his existence in Sōul is, at the best, thorny. It is important that he should be prevented from doing any further mischief, if Korean affairs are to be arranged satisfactorily.

The King of Korea has despatched his War Minister to the Japanese Head-quarters in Manchuria, to convey his congratulations and thanks to the Japanese officers and soldiers. The messenger has been charged with a Royal Rescript to the effect that, the motive of Japan's declaration of war against China was her desire to maintain the tranquillity of the East, the King desired to express the congratulations and gratitude both of himself and his people for the glorious victories achieved by the Japanese officers and soldiers. The Royal messenger left Sōul on the 11th instant, accompanied by a numerous suite.

The final survey for the construction of a railway between Sōul and Niusen has been

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

completed, and the line will be commenced before long under the superintendence of Engineer Sengoku. The work will take six months. It is said that an agreement has been made by Japan with the Korean Government, by which Japan has the control of the railway for fifty years, after which period the ownership is to be transferred to Korea on the payment of a certain sum by the latter country.

Mr. Suyematsu's arrival in Sōul with a portion of the loan appropriated by Japan out of the War Fund, for the use of the Korean Government, has given rise to some difficulty between the two Governments, the cause of difference being the form of money, namely, whether the loan should be in paper or silver, and what should be the relative proportion of the two. The installment carried over by Mr. Suyematsu was entirely in the form of convertible notes, at which the Korean Cabinet expressed dissatisfaction. The Japanese ambassador himself appears to share that feeling more or less, according to the *Jiji's* correspondent, although obliged to admit the justice of the conditions that Mr. Suyematsu was instructed to ask of the Korean Government in forwarding the loan to it. Count Inouye is said, therefore, to be in a painful dilemma. The Korean Government is desirous of receiving the loan mostly in the form of silver coins, or, if notes are to predominate, to have exchange offices established, not only in Sōul and the Treaty ports, but also in several important cities in the interior. Of course if the loan be advanced chiefly in the form of notes, the Japanese Government must be prepared to establish exchange offices in Sōul and in Treaty ports, but to found them in every other inland city of importance is out of the question.

A subsequent telegram says that the above difficulty has been compromised and the negotiation completed.

The Tonghaks have been suppressed, for the time at least, but the question is, is their suppression permanent? The *Jiji's* Sōul correspondent does not think so, unless radical reform is made in the local administration of the country. The Tonghaks are a sort of religious body, very difficult to eliminate entirely, and another serious disturbance is likely to be made by them if the local officials continue their oppression of the people. There is no limit to the greed and lawlessness of these men, as is shown by their conduct while the districts under them were being overrun by the insurgents. When the Japanese troops were despatched to southern Korea to suppress the rebels, they of course paid for everything supplied to them by the people. The local officials, seeing an opportunity for plunder, not to be thrown away, told the people that, as the Japanese troops had been sent to help the Korean Government and to put down the insurgents on its behalf, they should be treated with the utmost hospitality. Should it be heard at the Court that the troops had been obliged to pay for their food and so forth, while they were fighting the Tonghaks, the Governors would be severely reprimanded. The officials, therefore, made the people hand over all that they had received from the Japanese troops, on the pretence that they would overtake the latter and return the money.

The *Nichi Nichi's* correspondent sends an astonishing piece of news. About a dozen Korean women have resolved to come to Japan for the purpose of observing the domestic conditions of their patron country and of inaugurating changes in Korean family life. As it is a notorious fact that Korean women pass their existence in seclusion, seeing no men except their relations, the resolution of several of them to break loose from their domestic fetters and to cross the sea, is a very striking phenomenon. The wife of the Superintendent of Police is among the number, and her husband approves of the idea so thoroughly that he has promised to devote half of his salary for her maintenance while in Japan.

LETTERS FROM SHIMONOSEKI.

(From our Correspondent.)

Shimonoseki, March 19th.

This morning at about half-past seven a large steamer looking very much like the old favourite of the Shanghai line, the P. & O. Co.'s *Cathay*, was seen slowly steaming in from the east. Spy-glasses quickly indicated that the ship was indeed the *Cathay*, now differently named and differently owned, being the property of the Nippon Yusen Kaisha and called the *Ikaye Maru* (or *Weihaiwei Maru*). She left Hiroshima yesterday evening at five o'clock with Count Ito on board. Among the passengers were Secretary-General Mr. Miyoji Ito, of the Imperial Cabinet, and Police-Inspector Ogawa of the Metropolitan Police Bureau, besides several others Government officials of *Hannin* rank, in all about twenty.

Viscount Mutsu had arrived here a few days previously, so that the coming of the Premier this morning completed the number of Japan's peace plenipotentiaries.

Scarcely an hour had passed when another cry of ships in sight was heard from the seamen crowding the beach, and it was quickly learned that the new arrivals were the vessels carrying the Chinese Envoy and his suite. As the ships steamed in from the west piloted by a small Japanese steamer, the *Taiko Maru*, one of them was seen to have a blue ring on her funnel, and the other a white ring with a red star. Both flew at the foremast the Chinese flag, a black dragon on a yellow ground, and at the peak a German merchant flag. The ships were the *Kung-yi* and the *Lai-yu*, belonging to the China Merchant's Steam Navigation Co. When the anchors were lowered Japanese steam-launches under the Police of the Prefecture, were soon at the vessels' sides. A couple of hours later, one of these launches brought to land some of the passengers. Among them were seen the familiar faces of Mr. Wu Ting-fang and General Foster. Another foreigner with them proved to be Mr. Pethick, the private tutor to one of the Viceroy's sons. On landing, the whole company under special police escort and the guidance of officers of the Department of Foreign Affairs, drove to the Temple Injoji set apart for the Embassy's lodging. Mr. Wu Ting-fang expressed great admiration of the elaborate preparations made for receiving the Envoy and his suite. Two private houses were ready for General Foster and Mr. Pethick. The Viceroy Li, according to Mr. Wu, was not well enough to land, but Mr. Wu added:—"Seeing all the careful preparations made by the Japanese Government, I feel bound to pursuade His Excellency to come on shore as soon as his doctor will permit." The Temple, a spacious building is situated on a slight eminence to the north of the one long street forming Shimonoseki, and together with sub-buildings, will no doubt easily accommodate the whole suite of the embassy, which consists of 132 souls.

Count Ito is in the villa of the Chief Shinto Priest of the locality, while Viscount Mutsu is in an inn called Daikichi. The town is unusually full, and is placed under the provisions of the Peace Preservation Regulations. The police are always on the alert, on land and in steam launches, by the side of the Embassy's ships. The inns in Amidaji Street are closed to ordinary travellers on account of the needs of the Government officials, for whom even private houses have had to be rented. The town cannot stretch itself sufficiently for such an occasion.

The place appointed for the meeting of the delegates is the Fujino Hotel, situated on the side of the hill about midway between the residences set apart for Count Ito and Viceroy Li. The apartments where the conference will take place command a splendid view of the harbour and the blue mountains of Kyushu on the opposite shore. Adjacent to the hotel is a famous shrine dedicated to the unfortunate Emperor Antoku, who is believed by most historians to have perished in the arms of Nii no Ama in the sea not far from the place.

Shimonoseki, March 20th.

I took a walk through the streets about nine this morning. Loungers and spectators were already collecting on the roads along which the Chinese Envoy was expected to pass after landing. The hour of meeting had been appointed for three in the afternoon, and it was known in well-informed circles that the Viceroy would not land much earlier than that time. The inhabitants and most of the irresponsible visitors were not aware of this, however, and showed great impatience as they waited for the coming ashore of the Chinese Ambassador. It was believed that he and his suite would land at the pier in the part of the town known as Jinguji. In an open space leading from the pier, ropes had been stretched enclosing a place for the newspaper correspondents to see the procession. Along the streets farther on, the front rooms were thrown open and families with their relatives and friends were already beginning to take their seats there. At two in the afternoon, the street in the vicinity of the pier was filled by an eager crowd kept in order by a body of constables and gendarmes. It soon began to be whispered that the Chinese Envoy had expressed a wish to land from another pier nearer to the place of conference. The report proved well founded, for the police authorities and the gendarmes hastened at the top of their speed in the direction of the new place of debarcation below the shrine of Chinjei Hachiman. The rush of the crowd in the same direction caused much confusion and raised great clouds of dust. I had no little difficulty in forcing my way through the crowd so as to reach the top of the stone steps leading to the landing place. As I got there, a number of Chinese had just carried ashore a palanquin in which the Viceroy was to proceed to the place of meeting. This palanquin was soon brought to the top of the stone steps, in the vicinity of which I was standing in company with several representatives of the Japanese papers. The Chinese carriers were middle-aged men of fine physique. The palanquin was not particularly beautiful. When the oil cloth protecting it had been removed, the outside was seen to be covered with blue cloth to about a foot from the bottom, and on the lower part was stretched red cotton cloth, the inside being lined with brocade of light blue. On three sides there were glass windows about 15 inches square, while at the back the upper part bulged out a little with a small glass window at the end. The inside of the protruding portion was a place for keeping a pillow, and beneath it was a fur-covered seat. The palanquin was about 5 feet high. At a quarter to three a steam launch was observed to proceed from one of the Chinese ships. It was escorted by five other launches, one on each side and the rest following at a short distance. The largest launch in the middle contained the Envoy and his suite. In the space of a little over five minutes, the Viceroy and his suite, including Lord Li and Secretaries, Lo, Ma, and Wu, landed. Under the guidance of the Chief Police Inspector of the Prefecture, the Chinese Envoy at once came up the steps preceded by an official reverentially supporting with both hands a box evidently containing the Viceroy's credentials. His Excellency, on reaching the top of the steps, cast a searching glance around him as though he expected to see some familiar faces among the persons collected in the neighbourhood. He then entered the palanquin, and was briskly carried off to the Fujino Hotel, the appointed place of meeting. Lord Li and other members of the suite followed in *jinrikisha*. The Viceroy looked very young for his years, and showed wonderful vivacity in his movements. The indisposition that had prevented his landing yesterday seemed to have been of a slight nature. At all events he appeared sound and well. At the hotel, the party was met by Count Ito, Viscount Mutsu, Mr. Miyoji Ito, Mr. Nakada, Mr. Katsunosuke Inouye, Mr. Hirokichi Mutsu, and Mr. Tei, who had arrived there some time previously. The meeting between the delegates of the two

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Empires is reported to have been very cordial and friendly. The principal business of the day was the exchange of credentials. They were found to be in due and proper form, and the conference came to a close in about an hour. It was conducted in English; the Japanese Delegates, being well versed in that language, required no interpreter, while Mr. Lo acted in that capacity on the Chinese side. The Viceroy and his suite then left for the pier through a dense crowd of spectators on both sides of the street. He returned to the ship, being still advised by his doctors to remain there. It is, however, reported that he will land to-morrow morning and take up his residence at the temple Injo-ji. The next conference is fixed for half past twelve to-morrow. The foreign members of the mission landed this morning and took up their quarters at the above-mentioned temple. Among the visitors here, I may mention Mr. Koizuka, M.P., Mr. Takata, M.P., Mr. Ohigashi, M.P., Mr. Takahashi, chief editor of the *Osaka Asahi Shimbun*, and Mr. Asahina, editor of the Tokyo *Nichi Nichi Shimbun*.

Shimonoseki, March 21.

This morning at 10.30 the Viceroy Li landed at the eastern *hatoba* and took up his residence at the Injo-ji temple. Previous to his arrival, I paid a visit to the temple and, with the permission of the Japanese officials, inspected the apartments fitted up for the occupation of the Chinese Envoy. Entering by one of the principal doorways, and passing through a number of corridors, I was brought to a suite of three apartments all fitted up in European fashion. These are to be occupied by the Viceroy during his stay here. The first room, measuring eight mats, is to be the sitting-room. The alcove is adorned with a fine *kakemono* (hawk) by one of the modern Japanese masters. The sliding doors separating this from the next room are hidden by a screen with elaborate paintings of the *Shijo* school. A number of good, comfortable looking chairs, and one or two desks complete the furniture. The room is warmed by a stove. The next room contains a European bed, and a number of arm chairs brought from the Chinese ship. The third and last is the dining-room, with a long table in the middle. The way in which these rooms have been fitted up and furnished shows that the local officials have done everything in their power to lessen the inconvenience and discomfort incidental to the Viceroy's stay in such a place as Shimonoseki. The rooms for the members of the suite have also been prepared in becoming style. While I was going through the different apartments, the servants of the members of the Chinese mission were fast arriving with bundles of various descriptions on their shoulders. The baggage of the Viceroy and his suite was carried from the pier by a large number of Japanese coolies. In the kitchen, several Chinese cooks were already beginning to make preparations for dinner. They had brought from the ship everything necessary for the purpose; bags of rice; baskets containing dishes, cups, chopsticks, and other articles of the kind; pots, pans, and cooking utensils generally. The Japanese officials had erected a special cooking-place and engaged the services of a number of skilled cooks from the Osaka Hotel, and every preparation had been made for the entertainment of the party in European fashion. But the Chinese Envoy and his suite seem to prefer their own national food.

While I was making these observations, the approach of the Viceroy's palanquin was announced by the police constables stationed at the top of the long flight of steps leading from the street below. The palanquin carried by four men, was soon brought to the doorway through which I had entered. Viceroy Li, emerging from the conveyance, at once entered the house, supporting himself on each side on the shoulders of his Secretaries. He seemed to be in excellent spirits, and was smiling most contentedly. Lord Li, Messrs. Ma, Lo, and a few others were in the suite. Of the whole suite of 132, sixty-five have landed, including, besides those already named, a number of military officers and students.

At half-past two, the Viceroy proceeded to the place of conference in a palanquin, followed by Lord Li and other secretaries on foot. The conference lasted two hours. Nothing is, of course, known about the proceedings of to-day's meeting.

THE SHIMONOSEKI INCIDENT.

As on the occasion of the attempt on the life of the Czarewitch, now Emperor of Russia, so to-day the Japanese people are busily sending messages of condolence to the Chinese Ambassador. Already the representatives of 29 vernacular newspapers now at Shimonoseki, have addressed a consolatory letter to the Viceroy. The *Keiogijuku*, Mr. Fukuzawa's College, the Radicals, the Progressionists, the National Unionists, and so forth have lost no time in taking a similar step. The question has also been discussed by the members of the House of Representatives, especially as the date of performing the official closing ceremony of the Diet had to be deferred on account of the incident. Several members assembled in the House on the 25th instant for the purpose of considering the matter. It was, however, decided that though the closing ceremony had been postponed, the Diet could no longer be considered to be in session, and that, consequently, the proposed step would be unconstitutional. The members decided to manifest their sympathy through the media of the political parties with which they are respectively identified.

The *Asahi* and other papers say that the Governor and the Chief of Police of Yamaguchi Prefecture should be held accountable for the occurrence of this grave incident. When Shimonoseki was selected as the place for holding the peace negotiations, those officials were asked whether a detachment of police should be sent from Tokyo to effectively provide against emergencies, and the same question was also addressed to them from Hiroshima. They declined both offers, saying that the local Police were sufficient for the purpose. Hence they have no excuse to make for their failure to protect the Viceroy. The streets of Shimonoseki present special obstacles to the enforcement of effective police control, being very narrow. When Earl Li passed along in his palanquin only a narrow space remained on each side, and any one harbouring a murderous intention might easily approach the palanquin, as did the fanatic Koyama, before the guards could interfere. Such being the case, the refusal of the Governor and of the Chief of Police to avail themselves of the offer of reinforcements must be considered an act of grave negligence on their part. It was perfectly proper, therefore, that they should, as they have done, present a document offering to resign office.

What a high medical authority had to say to the representative of the *Hochi* about the wound of the Viceroy is worth quoting. He explains that as the bullet can not have reached the brain, since it would have caused death on the spot, or in least unconsciousness, it must have lodged at the upper jaw bone. From the descriptions thus far given of the wound, the case is apparently not serious. He thinks that the bullet will not be extracted. According to the latest practice of surgery a bullet that does not protrude externally is generally not extracted; neither is one that does not tend to cause suppuration. That is the system commonly followed by Japanese surgeons in the present war. When a bullet reaches the brain the wound generally proves fatal in 24 hours. In the case of the Viceroy, the bullet must have failed to injure the brain. The only ground of anxiety is in connection with the period of convalescence. The Viceroy being very old, may develop some other trouble, as of the lungs, for instance. If things go on as they are doing now, the patient may be so far recovered in about a week as to be able to engage in conversation on a moderate scale, and in a fortnight or so he may be so completely restored as to admit of his renewing the conference.

THE VERNACULAR PRESS ON THE SHIMONOSEKI INCIDENT.

The Tokyo papers manifest profound sorrow and regret at the murderous assault made by a fanatic upon the person of the Chinese Peace Ambassador. Japan has never been desirous of war, says the *Jiji*, and is therefore ready to receive a duly accredited envoy from China, and to negotiate for the restoration of peace. Consequently, the arrival of the Viceroy Li invested with full powers to negotiate peace, has been regarded with satisfaction, for it shows that this time at least China appears to be sincerely anxious to terminate hostilities. The prestige and position of the Ambassador, and the mission he was sent on made the Japanese Government accord to the aged statesman exceptionally warm treatment, as cordial as any foreign Ambassador ever received in Japan's hands. Under the circumstances, the public expected that the Ambassador would be highly satisfied by his reception, and that a successful termination of the negotiation would be soon reached. Hence the grave incident that happened on the 24th instant took people completely by surprise and evoked sentiments of the sincerest sorrow and regret. The issue of the negotiations depends in great part on the personality of those conducting them. The Viceroy's individuality is as important a factor as that of the Japanese Plenipotentiary. The fate of Japan and of China depends upon the issue of the conference between the Representatives of the two belligerents, and to shoot the Viceroy Li was just as heinous and mischievous as to shoot the Japanese Plenipotentiary. Any person guilty of such wickedness must be denounced as a traitor to the country. Indeed, when it is remembered that the result obtained by Japan's loyal and patriotic warriors, shedding their blood on foreign soil, and supported to the utmost by their fellow-patriots at home, was about to bear fruit in the peace negotiations, and that the people were hoping to realize their fervent prayer for the prosperity and greatness of their country,—when all this is remembered, the occurrence at such a juncture of such an unexpected incident not only compels us to abhor the fanatic as a traitor, but also fills us with an even greater and more profound anxiety on account of the calamity thus brought upon the empire. We can not but mourn at the terrible misfortune that our country suffers. It is easy to conceive with which displeasure and anger the news will be received in China, and it is important that the severest punishment sanctioned by law be meted out to the malefactor, so as to soothe, in some small degree, the feelings of the country's illustrious guest. Whatever China may feel, however, the pain and wrath of the Japanese people must be far greater, seeing that the crime was perpetrated on their own soil, and while they stood in the position of hosts to the unfortunate sufferer. The incident must in truth be regarded as one of those terrible but inevitable calamities with which nations as well as individuals are frequently afflicted. Regrets will not mend or mitigate its gravity. As for the peace negotiations, they should not be delayed even a day. If China is really desirous of peace, and if the wound of the Viceroy is likely to take long in healing, China should forthwith appoint a suitable substitute. She must not suffer a conference of such gravity to be suspended or otherwise affected because of an injury suffered by her Representative. This suggestion is made not for the benefit of Japan, but really for the benefit of China. Every day that the termination of hostilities is deferred signifies so much additional injury to China.

While expressing the profoundest sorrow and regret toward the Chinese Ambassador on account of the murderous assault made upon him, the *Nichi Nichi* can not but feel keenly pained by the reflection that now, for the first time since the war began, Japan is compelled, by the mad deed of a miscreant, to assume an apologetic attitude toward China. Her honour,

Digitized by UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

hitherto unsullied and even greatly enhanced by the war, has been stained.

The *Kokumin* says that the character of the nation as a whole should not be impugned simply because a fanatic has attempted to commit a rash deed. The occurrence of one unfortunate incident can not justly be made a source of embarrassment to the country. At such a juncture as the present, the sincerest and keenest sympathy should be shown toward the sufferer, and the characteristic magnanimity, justice, frankness, and chivalry of the Japanese people should be manifested in the eyes of all the world. It depends upon the conduct of the Japanese people whether an apparently great misfortune shall be converted into a subject of commendation.

We do not wish, writes the *Nippon*, to wage any unjustifiable war, or patch up a temporary peace. Yet unforeseen accidents frequently lead to unexpected results. What is now to be apprehended is that Japan may be obliged, on account of this most unhappy accident, to consent to a superficial peace. Any one opposed to such a result should endeavour to repair the disgrace brought upon the country by the unpatriotic culprit. The only way of effecting that is to show the deepest sympathy with the sufferer and to extend to him every courtesy and hospitality demanded by the occasion. Shallow thinkers may secretly rejoice in the hope that the incident may prevent the two countries from continuing their peace negotiations. Such persons do not perceive that other Powers, hitherto perplexed to find any sufficient ground for interfering with the actions of Japan, will now be furnished with a plausible pretext for doing so. In this connexion, we may note a message sent to Tokyo by the Shimonoseki correspondent of the *Nichi Nichi*, under date 11.40 a.m. of the 25th instant. He wires that but for the accident of the 24th, the last conference would have been held on the forenoon of the 25th.

"LE MONDE MODERNE."

A very beautiful addition has been made to French periodical literature in the shape of "Le Monde Moderne," a monthly illustrated review. The "get up" of the magazine is irreproachable—excellent paper, clear type, and really artistic illustrations—and the matter, judged by the contents of the first number, promises to be a really valuable addition to the library of the time. The volume before us commences with a story entitled "Petite Cora"; a pretty story and plaintive, in the telling of which the writer seems to dwell upon the music of the French language as though the sound of a few simple words made his heart vibrate. A writer in French has immense advantages. Then follows an essay, "Pour fonder une Révue," from which we learn that there were already 6,263 periodical publications in France on 1st of May 1894, yet the projectors of "Le Monde Moderne" have not hesitated to add another to the long list. In this essay the editor takes his readers fully into his confidence. He tells them exactly what the Review is expected to cost, and then explains the anxiety devolving upon those that had to choose the best means of recouping the outlay. These figures will interest our readers:—

	Francs. annually.
Editing at least	60,000
Illustrations	80,000
Information, artistic designs, and special pictures	30,000
Rent and administration	40,000
Composition, printing, &c.	40,000
Advertising, interest on capital, &c. (these expenses are supposed to be defrayed by the receipts from advertisements)	00,000
	250,000

In addition to the above, there is the cost of machining, of paper, of binding, of wrapping, of addressing, and of postage. Items that at present about 10 francs annually per number. Thus, in order to recoup the mere outlay, it is necessary to have 12,500 subscribers at 30 francs (*i.e.* 20 francs net). The price, however, has been fixed at 18 francs, which makes the periodical almost the cheapest of illustrated French periodicals, other things being equal. Eighteen francs annually means eight francs net, so that 31,250 subscribers must be obtained before the magazine can pay its way. It is a bold venture.

The Magazine contains a number of other interesting essays, and concludes with three of special utility, "The Fashions of the month," "Autumnal Menus," and a "Review of Inventions." We shall allude to only one more chapter in detail, namely that describing "The Fire of Infantry." The chapter opens with a striking comparison between the infantry arm of 1854 and that of 1894. The former, with a calibre of 10 millimètres, discharged a bullet weighing 27 grammes with a charge of 9 grammes of powder. Its useful range was 200 mètres. At 300 mètres it was less exact than the present rifle is at 1,800 mètres. As for its power of penetration, its bullet could not pass through the body of a man except at a very short distance; and as for rapidity of fire, a skilled soldier could discharge it three times in two minutes. Thirty rounds per man was a sufficient supply of ammunition for a day's fighting. To-day the French Lebel repeating rifle—we mention it because it is the arm discussed in the essay before us, not because of any supposed superiority to the German Mannlicher, the English Lee-Mitford, the Italian Vitali, the Swiss Schmidt, the Danish Krog, or the Russian Modèle—with a calibre of 8 millimetres, a bullet weighing 14 to 15 grammes, and a charge of 2.5 grammes of smokeless powder, has an effective range of 2,000 metres and a maximum range of 3,500 metres; its projectile passes through four men placed one behind the other at 300 metres; an ordinarily drilled soldier fires 12 to 15 shots per minute, and 300 rounds of ammunition must be provided for each man per diem when fighting. This wonderful progress toward perfection is supplemented by a contrivance that multiplies enormously the deadliness of the rifle. A range-finder has been invented. It consists of a pair of spectacles, "Lunette Souchier," the principle of which, roughly speaking, is that two images are projected on the retina of the person using the spectacles; one is the real image of the object whose distance has to be ascertained; the other is an imaginary image. These images appear partially or wholly superposed, and by the degree of superposition the distance is determined. If the head of the real image reach to the shoulders of the visual image, the distance is 300 mètres; if to the waist, 600 mètres; if to the knees, 1,000 mètres; if the two are exactly superposed, the distance is 1,400 mètres. The officers being then enabled to fix the range with nearly absolute accuracy, the fire of a company becomes terribly destructive. The results recorded with dummies representing an enemy are such as amount to the practical annihilation of an army at a range of from 600 to 400 mètres—96 men hit out of 176, or nearly 55 per cent. According to experiences recently recorded in manœuvres on the camp de Châlons, a company commencing fire at 1,300 mètres and drawing up finally to charging distance, discharged 6,500 rounds, of which 1,897 took effect. If even one-tenth of this result were attained in actual combat, the enemy would lose 189 men out of 250. Yet, throughout all this extraordinary progress in the art of manufacturing destructive weapons, the soldier remains just as vulnerable as ever. Ships are protected but not men. Captain Danrit, the author of the essay, predicts that the infantry soldier will soon have armour as effective as his weapons are deadly.

Kipling, Barrie, Jerome, Howells, Stockton, Mark Twain, Bret Harte, are none of them above the medium height, and several of them are actually diminutive. Marion Crawford and Conan Doyle are tall, athletic-looking men, but they are the exceptions that prove the rule.

ADMIRAL ITO'S STORY.

The Hiroshima correspondent of the *Hochi* succeeded in interviewing Admiral Ito during the latter's stay of a few days in that town after the Weihaiwei affair had been duly disposed of. The Admiral observed that in the adventures he had passed through thus far since the commencement of the war, what caused him most pain was being obliged to order the torpedo flotilla to attack the enemy's fleet in Weihaiwei. Every body knows full well that to go to war is to go to probable death, and so death is regarded as an ordinary incident for fighting men. Yet in practice, it is a terrible thing for any one to tell others to go and die. This he was obliged to do. He believed that in sending his men into Weihaiwei, he was sending many of them to death. Commander Mochihara, the chief the flotilla, and all the other officers received his orders with the utmost readiness. The Admiral simply told them to go, and they with equal brevity answered that they should. Not another word was uttered either by the Admiral or his brave subordinates. They simply exchanged wine cups and drank in profound silence, believing them to be in truth farewell cups. The resolution displayed by Commander Mochihara was admirable. The attack to which this account refers was the second, the first, delivered on the previous day, having resulted in the torpedoing of the *Ting-yuen*. Hence there was every reason to expect that the enemy would be keeping a keen look-out, and it seemed morally impossible that the crews of the torpedo-boats should return alive. The Commander, thoroughly appreciating this danger, took steps, before his departure, to avert any inconvenience that might result from his death. Of his own accord, without receiving instructions, he caused to be transferred to the man-of-war that accompanied the flotilla in the early stage of the attack, all the Admiral's written instructions, the naval records, signal sheets, charts, and every other document of importance in the keeping of the flotilla. That done, he addressed his subordinates as follows:—"The chance of returning alive is practically none; death is almost a certainty. Our boats and our bodies are the enemy's, and there is no need at this juncture to have recourse to such elaborate things as secret signals. We have but to signal to port or to starboard, as the case may be. Moreover, there is no occasion to retain many articles in the boats. A hand lamp alone will do." Such an address has the ring of sincerity: it shows nothing of the braggadacio that men are often apt to indulge in on occasions of peril. The Commander's resolution was worthy of his ordinary conduct, and when the Admiral subsequently learnt of what had happened, he strongly applauded the gallant officer's acts. Nor was the behaviour of the sailors less worthy of admiration: Not only in the last battle at Weihaiwei, but also in the battle of Haiyang, they acquitted themselves admirably. They had stout hearts, and never lost their presence of mind. In the battle of Haiyang the sailors seemed to be absolutely unconscious that they were engaged in deadly strife. They laughed and joked in the hottest moments of the battle. Among all these cool and resolute men, the Admiral alone was harassed by a thousand painful thoughts. The flag-ship, moving at the head of the line, was of course the principal target of the enemy's cannonade, but it was not on account of danger to himself or to his ship that the Admiral was distressed. It was on account of the other ships in the line. No one can imagine what his feelings were when he saw one of his ships struck by the enemy or when the smoke hid it for a while. On the other hand, when, with bated breath, he gazed at the place where the ship had been, from his position of vantage commanding a view of the whole line, and when, his heart throbbing with apprehension lest she should have been sent to the bottom, he saw her emerge from the smoke, gallant and unscathed, and proudly defying the enemy, the sensation of relief and delight that he experienced was indescribable. His greatest joy,

Digitized by Google ARCHIVE http://Archivebeta.Sakhrit.com URBANA-CHAMPAIGN

however, was when, after the terrible gale that blew on the 21st of January, and the 1st of February, he found the torpedo flotilla safe.

The gale was of the fiercest, and the spray that broke over the ships froze at once, so that a rope of a finger's size grew as large as a man's arm. It was impossible to walk the deck in shoes, and every body put on Korean sandals. Yet the Admiral could not leave the vicinity of Weihaiwei, lest the Chinese Fleet might escape from the harbour. The gale, however, grew so strong that the Fleet was compelled to make for the bay of Yungcheng. The British Squadron had already taken shelter there, and when the Japanese Fleet steamed in, Admiral Fremantle sent a messenger to inquire whether any accident had happened to the Japanese vessels, especially the torpedo-boats. Admiral Ito himself did not know about the boats and was very anxious about their safety. As soon as the gale abated a little, on the morning of the 2nd, the Fleet at once proceeded toward Weihaiwei and impatiently awaited the dawning of the day, for it was still dark. The Admiral then directed his telescope toward the coast of Weihaiwei, and saw close by it several objects that appeared to be small rocks, but were soon perceived to be the Japanese torpedo boats. His anxiety about them was not yet relieved, however, for it was not clear whether they were safely moored by the coast or stranded upon it. Soon a small torpedo-boat came out and signalled that all the boats were perfectly safe. The joy experienced by the Admiral and his officers after the painful suspense of the preceding two days was beyond description. The Japanese are wont to say, when speaking of any great and unexpected pleasure, that it is as though one condemned to the torments of Hell should suddenly meet the saviour Buddha. The Admiral thinks that the simile falls short of expressing the joy he felt on that occasion. He also felt considerable anxiety to know how the steps taken on his sole responsibility with regard to the surrender of Weihaiwei were regarded by his superiors. The first thing about which he spoke to Admiral Count Saigo, Minister of State for the Navy, when he reached Hiroshima was the surrender. "War has now become a troublesome affair," continued the conqueror of the Chinese Fleet, "for while in former times all a general or an admiral had to do was simply to destroy the enemy, he must now keep in view, in conducting his operations, such things as international law, the criticism of foreigners, and so forth. I was therefore much concerned to learn whether the steps I took in connection with the Chinese surrender at Weihaiwei were not faulty. My anxiety was anticipated by the Minister and the Commander-in-chief of the Navy. They specially sent Captains Yamamoto and Ijuin as Ujina to receive me, and as soon as I landed, the two officers greeted me with the exclamation "Excellently done."

A WONDERFUL FEAT OF MEMORY.

Mr. Wadamori Kikujiro, of Tokyo, claims to have discovered a set of fundamental principles, the application of which will enable anybody to achieve extraordinary feats of memory. Having been invited by Mr. Maruyama Meisei, an ex-Member of the Lower House and a well known barrister, to examine the wonderful powers of memory exhibited by his friend Mr. Wadamori, we arranged a meeting with the latter on the 8th instant at the office of Mr. Shiwoiri Daisuke, a lawyer, in Yariya-cho, Kyobashi-ku, Tokyo. Mr. Wadamori is a young man, two or three years below thirty, rather short in stature, keen and intelligent of countenance, with a slight tendency to nervousness. As early as 1886 his attention was called to the subject of memory. He was then strongly possessed with an idea that the operations of the faculty of memory are reducible to some fixed rules, and that a proper application of such rules must be of great assistance in committing things to memory. It was not, however, until 1892 that he began to investigate the subject in a scientific manner. He was then in prison, and had excellent opportunity for the prosecution of the research. He consulted most of the works treating of memory, but these, he states, were of little service to him, and he had to work out his system almost entirely by his own unaided efforts. It took him two years of prison life to complete his task. By the aid of the principles so laboriously discovered by him he can now perform incredible feats of memory. He invited us to pronounce to him any number of words in Japanese, or any other language, or in several languages; he would then repeat them in the order of their original delivery or give any of them should its position be named. We selected the following hundred words and put them down on paper:—

1—Kawa (river).
2—Iye (house).
3—Karada (body).
4—Tokyo.
5—Kaya (mosquito net).
6—Kata (shoulder).
7—Shina (China).
8—Komori-kasa (umbrella).
9—Hawk.
10—Gun (army).
11—Kaze (wind).
12—Kancho (spy).
13—Kaminari (thunder).
14—Lion.
15—Tah lei (Chinese "to thunder").
16—Karyûdo (hunter).
17—Game.
18—Gakkô (school).
19—Kazoku (family).
20—Tôhatsu (hair).
21—Umi (sea).
22—Education.
23—To (door).
24—Ten (heaven).
25—Akugane (copper).
26—Scholar.
27—Chih (Chinese for "paper").
28—Kanna (saw).
29—Abura (oil).
30—Kanakin (cambric).
31—Kaki (persimmon).
32—Shôri (victory).
33—Katana (sword).
34—Kagi (key).
35—Garasu (glass).
36—Koshi (waist).
37—Kappa (rain-coat).
38—London.
39—Shashin (photograph).
40—Hôgaku (direction).
41—Kagami (mirror).
42—Kani (crab).
43—Isu (chair).
44—Victory.
45—Kawabako (leather box).
46—Rock.
47—Poet.
48—Kawo (face).
49—Kanjo (bill).
50—Kôtai (alteration).
51—Tsushin (correspondence).
52—Heiki (weapon).
53—Heya (room).
54—Kisen (steamer).
55—Yama (mountain).
56—Hôdai (fort).
57—Eijin (Englishmen).
58—India.
59—Ichigetsu (January).
60—Ninbu (coolie).
61—Ushi (cattle).
62—Ninjin (ginseng).
63—Nichiyo-bi (Sunday).
64—Hata (flag).
65—Kodomo (child).
66—Come.
67—Pan (bread).
68—Rojin (old man).
69—Go-getsu (May).
70—Ume (plum).
71—Toshi (year).
72—Kaigun (navy).
73—Goluku (dry goods).
74—Cha (tea).
75—Mei-rei (order).
76—Coffee.
77—Chichi (father).
78—Teppô (gun).
79—Yômuki (business).
80—Aki (autumn).
81—Myonichi (to-morrow).
82—Arashi (storm).
83—Shôbô (trade).
84—Sakujitsu (yesterday).
85—France.
86—Ane (elder sister).
87—Nakôdo (middleman).
88—Fire.
89—Issakujitsu (day before yesterday).
90—Yuki (snow).
91—Lark.
92—Tetsudo (railway).
93—Mori (grove).
94—Boston.
95—Gyunyu (cow's milk).
96—Momo (peach).
97—Beer.
98—Yukai (pleasure).
99—Shoseki (book).
100—Shiro (castle).

We did not show the paper to him; on the contrary, we took particular care to keep it away from him while writing the above words as well as when we read them out to him. He requested us to pronounce each word distinctly and deliberately, and not to proceed to the next word unless he said "go on." Following those instructions, it took about 15 minutes to finish the process. He then said he had fixed all the words in his mind and that he was ready to repeat them from the beginning or the end or from the middle; in fact he could name the exact position of any particular words. "What is no 52?" we asked him. "*Heiki*" he answered, promptly and without hesitation. We then tested his accuracy on a number of other words. Lastly, he repeated the vocabulary from head to foot without the slightest hitch. Now consider what this means. Is it not truly a wonderful feat? We pronounced the words only once, though deliberately and distinctly. Try for a moment to commit these words to memory in the order in which they are written down, so that you may be able not only to repeat them in their order but also to repeat off-hand any particular word the number of which is given. Can you do that in ten hours? We doubt it. Mr. Wadamori did it in a quarter of an hour. He says that the same result could be easily obtained by any man of ordinary intelligence if he only knew the principles. He of course refuses at present to divulge the nature of those principles. But he declares them to be of a nature admitting of easy acquisition by most people. It is natural to suspect that perhaps he may have a special gift, and that what is very easy to him may prove difficult and even impossible for others differently constituted. But he is positive that the same degree of proficiency is within the reach of most persons if they devote the same attention to the principles discovered by him. He had not been in any way conspicuous for good memory before he worked out the system. "Have you turned your newly acquired faculty to some good account?" "Yes," answered he, "I have commenced the study of English and have made considerable progress in it by the aid of my principles of memory." Working according to the rules of his system, he never forgets a word once fixed in his mind. He intends to write a book on the subject and thus secure copyright. Meanwhile, he will seek to attract the attention of the public. The first of these exhibitions took place on the 17th instant, when representatives of the metropolitan dailies as well as of some of the local English journals were invited to witness the feats. The experiment above described took place in presence of Messrs. Maruyama and Shiwoiri, and also of Mr. Noguchi Motonosuke. Mr. Wadamori is willing to arrange such meetings with any honest seeker after truth. He is to be addressed under care of Mr. Shiwoiri.

FORMOSA.

The explosion in Formosa, of which we heard so much that was vague last month, is thus described by a correspondent of the *North China Daily News*:—

About two o'clock on the afternoon of the 1st of February, a tremendous explosion took place at one of the forts. For obvious reasons it is not expedient to go into details as to which one, although in truth, disastrous as the occurrence otherwise was, the fighting portion of the fort escaped all injury. At least 90, if not 100 persons lost their lives, and houses, both in native and foreign portions of the port, were more or less seriously damaged. Forty or forty-five dead bodies were discovered intact amidst the ruins, while fifty others missing, known to have been in the fort at the time, were blown into pieces and scattered all over the place. Most ghastly sights met the eye on walking round soon after the explosion had taken place, as every here and there one came on legs or arms or some other portion of the human body! One large stone was thrown for a height of 300 or 400 feet into the air, and falling on board a junk, anchored a quarter of a mile away from the scene of the disaster, crushed one of her men so badly that he died a few hours afterwards. Another stone embedded itself in a man carrying him up for a similar distance, and both fell through the roof of a house right in the midst of a party of men and women who were seated round a table playing at cards. Only about 10 persons in all were taken out alive and of these more than half died within an hour or so. It seems that a change of commandants was taking place and the retiring incumbent was collecting arms and ammunition for the inspection and acceptance of his successor. Moving about with their usual carelessness, and, of course, smoking, the soldiers engaged in this work ignited about a ton of native-made powder, thus causing all the trouble! About 25 or 30 tons of foreign ("pebble") powder was stowed in apartments not far off from that in which the explosion actually took place, the cartridges being simply piled one on top of the other like so many bags of flour. Extraordinary to relate, though the walls were blown down, and even the cloth cases in many instances ripped up, letting the powder run down, it was not ignited. Had this also gone off it is improbable that anyone in the port could have survived.

The foreign residents at Tainan seem to have

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

been justly anxious about their safety during the past two months. They say with truth that in the event of any trouble the first thing to happen would be the closing of the telegraph and their consequent isolation from the outer world. Meanwhile, the soldiers gathered to oppose a Japanese invasion, are in many cases bandits or outlaws of whom the Chinese population entertain the most vivid fears, and it is rumoured that these ill-conditioned braves have made no secret of their intention to engage in the game of loot on a large scale if they find any pretext. Tainan does not appear to be of sufficient importance, or the British Squadron is not sufficiently numerous, to justify the constant presence there of a man-of-war, and the Chinese take advantage of the absence of such protection. By way of illustrating the violent and outrageous conduct of the soldiery, the same correspondent describes how they "forcibly boarded and took away from a British launch some treasure that had been brought down by way of freight," refusing utterly to pay the carriage charges.

On the Captain of the launch remonstrating against the non-payment of the freight, an officer standing by threatened to kill him if he made further objection, whereupon one of the soldiers drew his sword and said that he would promptly decapitate him "though the operation should entail the removal of eight or ten heads." The affair was eventually stopped by yielding to *force majeure* and allowing the treasure to be taken away. Subsequently the officer in charge sent back $1, which he said was all he would pay in discharge of his debt to the launch. H.M.'s Consul at once took the matter up, but affairs, which had been gradually tending to the acute condition of which the foregoing is typical, still seemed to be assuming even more threatening aspects, and it was thought best, after due consideration and full opportunity had been (apparently ineffectually) afforded the authorities for interference and reparation, to despatch the telegram which, as before said, brought the *Mercury* hither. Even while that ship was here, trespasses by the soldiers on foreign property, accompanied by theft and violent language, occurred, and one of these involving threatened brutality towards a lady-resident by a party a soldiers, who took advantage of her being alone in the house to enter it and misbehave in the grossest manner, showed that the Consul's appeal for naval protection had not been made one moment too soon.

It may be presumed that in view of the imminence of the Japanese attack upon Formosa the British Admiral has now taken ample precautions for the safety of his nationals. The time of real danger is the period that immediately precedes the organization of full protective measures by the victorious Japanese.

A COMPLICATED CASE.

A trouble of a complicated nature that happened at Kobe between certain Japanese and German merchants is reported by the *Nippon* and some others Tokyo papers. It would appear that Mr. Otachigawa, a Kobe merchant, chartered, last fall, the German steamer *Rheingold* (?), though the medium of the firm No. 25, in Kobe Settlement, who acted as agents for the owner and the captain of the ship. Mr. Otachigawa then sub-let the ship to Mr. Nishitani, a wealthy merchant of Otaru, being entitled by the terms of the original charter to hire the vessel to a third party. Mr. Nishitani placed several of his employés on board as managers and interpreters, and two trips were made to Hokkaido. On the third trip, the ship started from Kobe for Fushiki, with a cargo worth about 10,000 *yen*, and reached her destination on the 10th ultimo. She was to take on board 5,000 *koku* of rice and 200 passengers at Fushiki. At about noon on the day after her arrival the Captain, who had always showed himself—we quote exactly what the vernacular papers say—a man of rather rude disposition, suddenly declared to the chief manager, while the shipment of the cargo was actually in progress, that the lading must be stopped. He gave no adequate reasons, though repeatedly asked by the chief manager, once in the presence of an officer of the Fushiki Customs. Apparently some defects had been discovered in the ship, for the captain seems to have sent a telegram to her owners in Germany. These defects, whatever they were, the Captain wished to keep secret, lest the disclosure should affect the price of the ship when she came to be sold. The chief manager was considerably embarrassed, being unable to give any definite reply to shippers and passengers as to when the ship would start for Hokkaido. A steamer of the Yusen Kaisha happened at the time to be leaving Fushiki for Hokkaido, and the shippers transferred their goods to her, the passengers also taking passage by the same ship. The chief manager had no recourse but to give his assent to these changes, and was moreover obliged to pay the balance of freight and fares to the Yusen Kaisha. Further, Mr. Nishitani had engaged that his steamer should take over about ten thousand fishermen from Aomori to the opposite coast of Hokkaido, the herring season being on the eve of commencing. That engagement also the steamer was of course unable to keep, to the great loss of her charterer. One of the managers hastened to Kobe by land and reported the particulars of this extraordinary incident to Mr. Otachigawa who had originally chartered the ship from No. 25. Mr. Otachigawa laid the matter before the foreign agents. They, of course, could not be expected to view the matter with the impartiality of a Law Court, but the course they took was altogether extraordinary. Not only did they refuse to make good the losses incurred by Mr. Nishitani, on account of the non-fulfilment of the steamer's engagement, but they went a step farther and demanded the payment of a large sum of money by way of charges on account of the vessel. Now Mr. Otachigawa had already paid the charter money covering the period up to February 21st, for which he had received a due receipt. He had, moreover, deposited a sum of 1,000 *yen* with the agents. He therefore demanded that the charge for 11 days, that is the period extending from February 11th, when the contract became void by non-fulfilment, to the 21st, and also the sum deposited, should be refunded, the two items aggregating about 2,600 *yen*. The agents, however, flatly rejected the demand, and on their part required that the sum of 4,000 *yen* be paid by the charterer. In the meanwhile, the captain of the steamer arbitrarily steamed back to Kobe with the cargo on board, and having arrived there, presented himself several times at the German Consulate, prefering a complaint of alleged blameable conduct on the part of the charterer. He further asserted that the latter did not pay the sum of 4,000 *yen*, for which the vessel had been chartered, and he asked that, in lieu of the money due, he be allowed to dispose of the cargo and to deduct the sum out of the proceeds. The Consul sent notice to Messrs. Otachigawa and Nishitani to come to the Consulate as he had something to say to them about the ship. When the two merchants made their appearance, they were told, to their great surprise, that though the Captain demanded the sum of 4,000 *yen* as the charter price of the ship, the Consul would use his good offices to have it cut down to 2,500 *yen*. The two Japanese, somewhat excited at what they considered a totally absurd and preposterous demand on the part of the Captain, were about to state their side of the matter. The Consul, however, cut short their statement, on the ground that he had no time to hear them out, and asked them to give a simple answer, yes or no. They declared, their absolute refusal and left the Consulate. The Consul subsequently sent a similar notice to them two or three times, urging them to consent to his intercession, as he would have the sum reduced to 1,600 *yen*, but always omitting to give any adequate reasons why they should pay the money, and declining to hear what they had to say. At last the Consul definitely adopted the captain's part and sent notice to the Hyogo Local Office that as the cargo was about to be put up to public auction at 2.30 p.m. on the 11th inst., the two Japanese should be made to appear before the Consulate. Alarmed by this intimation conveyed to them from the Kencho, the charterers communicated it to the owners of the cargo, who thereupon appealed to the Local Court of Kobe for protection of their goods, depositing the necessary security. When, however, the Court sent a sheriff to the ship, the crew forcibly opposed the execution of his mandate, one of them, even presenting a pistol at the sheriff. The latter was therefore obliged to return without fulfilling the duty on which he had been sent. The shippers next applied for protection to the Kobe Police, but the latter declined, explaining that they had no competence to board a foreign ship on a mission of the kind. The two charterers of the steamer then made application to the Local Court in the sense that, as the cargo was apparently about to be landed the next day and put up to public auction, the Court should send notice to the Consulate in order to restrain the landing and subsequent sale. The Court did not acquiesce, on the ground that a provisionary order issued by the Court could not extend to the captain of the ship. But neither the shippers nor the merchants who had chartered the ship could tamely submit to be subjected to what they considered an unjust loss of no small amount. They therefore submitted a written statement to the Governor of Hyogo and applied for his protection. The Governor deemed the appeal reasonable, and transmitted the document to the Foreign Office. The Consul, too, seems to have resolved, on subsequent deliberation, to submit the case to the German Minister, which step he took at about the same time that the Governor's document reached the Foreign Office. The latter is said to be of opinion that it was not proper on the part of the German Consulate to attempt to dispose of the matter according to the provisions of German Commercial law. Further, as the German Minister's attitude is said to be strictly impartial, the affair will doubtless be settled before long in a manner satisfactory to the Japanese merchants. It does not appear that this is a solitary instance. Similar complications have happened of late between Japanese and foreigners. Another instance of the same kind is said to have occurred a short time ago, also in Kobe, between native and German shippers.

We (*Japan Mail*) do not profess to have any special information on the above subject, yet we venture to affirm that the version given by our vernacular contemporaries is incorrect. The German Consul could not possibly have had competence to take the course assigned to him. The case, as it is said to have come before him, was a claim preferred by a German subject against a Japanese. On such a case the German Consul could not adjudicate, a Japanese tribunal alone could decide it. Then, further, the German Consul is alleged to have ordered the seizure and public sale of Japanese goods on his own authority. That, too, is totally out of the question. We translate the details as they have been submitted to the Japanese public, in order to bring them to the notice of those concerned, who may think it worth while to correct the misconception.

CHOLERA AT MOJI.

The *Nichi Nichi Shimbun* publishes a paragraph to the effect that true cholera has broken out at Moji. There have already been 21 cases and 9 of them have ended fatally. The existence of the disease is said to have been discovered on the 17th inst. Many apprehensions have existed that an epidemic of cholera would occur this year in Japan. It looks only too likely that they will prove correct.

THE REVISED TREATY BETWEEN THE UNITED STATES OF AMERICA AND JAPAN.

A telegram published by the *Nichi Nichi Shimbun*, says that the Ratifications of the Revised Treaty between Japan and the United States of America were exchanged in Washington on the 22nd instant.

ATTEMPTED ASSASSINATION OF THE VICEROY LI.

THE third meeting of the Peace Plenipotentiaries was held on the 24th instant in the afternoon. At about half-past four, as the Viceroy Li was on his way back to his lodging in Iujo-ji Temple, and was turning a corner, a pistol shot was fired at him. The bullet struck him in the face, but happily inflicted no serious injury. The perpetrator of the crime was immediately seized by the police. He turned out to be a *soshi*, aged 21, a native of Gumma Prefecture, named KOYAMA (or OYAMA) ROKUNOSUKE.

It is quite unnecessary to discant upon the enormity of this crime. Indeed, we can scarcely trust ourselves to speak of it calmly so soon after the event. Japan has been exceedingly fortunate and exceedingly unfortunate in this war; fortunate in finding China unprepared to be attacked, and unfortunate because the brilliancy of her record has been marred by two indefensible acts. The first was the excesses committed by the troops at Port Arthur; the second is this shooting affair. What the world will say of her now, it is easy to predict. One *soshi*, however, does not represent a nation. That is a point to be remembered. The *soshi* are the curse and the disgrace of modern Japan. Not the mere fact that hot-headed and lawless youths exist and commit heinous crimes has to be noticed, but the fact that such lads find sufficient support to carry on their wretched occupation. Were they not maintained, in great part, by members of the Diet, their continued existence would be out of the question. KOYAMA ROKUNOSUKE doubtless belongs to the party that considers the occupation of Pekin by Japanese troops an essential preliminary to the conclusion of peace. He may, of course, be one of those fanatics that exist in every country, and are ready to lose their moral balance under the pressure of any great event. But whatever he be, his act will bring universal execration on his country among roughly judging folks. That it will be condemned and bitterly regretted by the Japanese nation in general, we cannot question. But in foreign countries the attitude of respectable Japanese will be little thought of in comparison with the event itself. Coming in the immediate sequel of the Port Arthur affair, it will seriously alienate the respect and goodwill of Europe and America.

THE CAUSE OF THE WAR.

A TIME is perhaps coming when local foreign critics will know what they believe as to the cause of the war between China and Japan. They are now highly elated by a discovery that they profess to have made. They think they have found contradictory statements in the *Japan Mail*. Eight months ago we said:—"An Oriental Power, Japan is undertaking the propagandism of Occidental civilization in a neighbouring Oriental State, and is prepared to enforce her creed by the aid of arms if necessary. That is a spectacle wholly new in the story of human progress. . . . . Japan has drawn the sword in the very cause that prompted England to send a fleet here 37 years ago—the propagandism of Occidental civilization. . . . . Japan has not shrunk from war in order to secure for a neighbouring people the benefits derived by herself from Occidental civilization." These three sentences appeared in our columns during July and August, 1894. To-day, we are accused of contradiction because we have just said:—"Of course Japan is fighting primarily for Japan. Had there been question—abstract question—simply of turning the light of civilization into the dark places of China, not a bullet would have been fired or a bayonet fixed." We cannot imagine that any reader desiring to be fair could pretend to think these statements contradictory. Even without the context in which they appeared they are perfectly consistent. With that context, their quotation in the sense implied by our critics is not honest. The first of the sentences appeared at the conclusion of an article published on July 26th, 1894. In the earlier part of that very article the following explanation of the War was given:—"Japan's procedure in Korea finds a parallel in England's action in Egypt, and is justifiable by considerations at least as powerful and logical as those that dictated the bombardment of Alexandria." The second of the sentences brackets Japan's action with that of Great Britain in sending a fleet to this country 37 years ago. Does any one imagine that Great Britain's prime purpose in bombarding Alexandria or forcing Japan to open her ports was the propagandism of Western civilization? Of course not. Her prime object was to secure her route to India and to find a new market for her commerce. Yet she did most undoubtedly represent Western civilization, and the sympathies of the Western world were with her because it was recognised that the triumph of her enterprise involved the propagandism of that civilization. No just critic can pretend to think that in placing Japan's action toward China in 1894 side by side with England's action toward Japan in 1857, we intended to claim absolutely disinterested and humanitarian motives for Japan.

However, controversy of this character serves no particularly useful end. Men whose opinions are worth consideration can not be mistaken as to the real causes of this war, and can not have misinterpreted the explanations of them given from time to time in the *Japan Mail*. That Japan represents Western civilization in the struggle, that her success will be the success of progress and liberalism as against stagnation and conservatism, is as certain as the fact that she did not draw the sword merely in the interests of Western civilization, or of progress, or of liberalism, but that she drew it primarily in her own interests. Nations fight for themselves, not for abstract ideas. What seems to us particularly curious is the complaint of one of our critics, one of Japan's constant assailants, that really if some body had been kind enough to tell him the truth about the reasons of the war at the outset, he would have adopted quite a different tone. "Had it been stated," says the *Japan Gazette*, "that Japan saw that the time had arrived when, in order to check Russia's advance on the one hand, and Chinese encroachments on the other, especially in view of the inherent weakness of Korea, it was necessary for her to take prompt and decided action, we might have questioned her judgment but never her rights. Events have proved her judgment was sound, and if ever she was to make a determined stand in relation to Russia's designs she undoubtedly chose the opportune moment."

It is impossible not to admire the naïveté of this confession. Had the *Japan Mail* only been so good as to tell the *Gazette* earlier the considerations that led to the war; had it explained that in order to avert the danger of foreign aggression and to rescue Korea from the paralysing effects of Chinese interference, it was necessary for Japan to take prompt action, then the *Gazette* "might have questioned Japan's judgment but never her rights." Now that the *Mail* has vouchsafed the required information, the *Gazette* admits Japan's rights, and admits also that events have proved the soundness of her judgment. That is one of the most remarkable retractations we have ever seen in a newspaper column. The *Japan Gazette*, which, ever since the outbreak of the war, has been reviling Japan as a selfish aggressor, an unrighteous disturber of the peace, and a wager of wholly unjustifiable wars, now declares that its verdict, forsooth, was based on ignorance; that the *Japan Mail* had not furnished it with eyes to see the truth, and that, in view of the *Mail's* recent explanation, it fully admits Japan's right to undertake the war, as well as the soundness of her judgment in doing so! We respect a writer that has the courage to take such a sharp curve when he finds that he has been on the wrong track, but we cannot allow the *Japan Gazette* to make us the peg whereupon to hang its excuses. That it had no means of its own to discover the truth, is very conceivable. But so far from our having failed to remove its ignorance, we did actually supply it with the very information that it now complains of having so long wanted. In an article published in the *Japan Daily Mail*

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

and reproduced in the *Weekly Mail* of August 11th, 1894—an article 10½ columns long, entitled "The Korean Imbroglio," purporting to give a full explanation of the causes of the war, and placed before the public 10 days after the proclamation of war—we used the following words:—

> Not merely did Korea's spirit of independence languish in the shadow of Chinese interference; not merely was the development of the country's resources effectually checked by the maladministration and gross corruption of its officials; but in the struggles of rival factions and the insurrections of suffering provinces, constant opportunities for foreign aggression were furnished. Whatever interest China may have in preserving Korea from the grasp of a Western Power, Japan has at least an equal interest. The security of each empire is deeply concerned in this question, and to suffer the peninsular Kingdom to drift into a condition of such administrative incompetence and national debility that a strong aggressor might at any moment find occasion and plea for interference, would argue as blind fatuity on the part of Japanese statesmen as though England were to withdraw all supervision from the Indian Free States, and allow them to become hotbeds of intrigue and corruption. . . . . When, therefore, shortly after the Kim Ok-kyün incident and its revolting sequel, news was received of another insurrection in Korea, and when it became known that the Ming family had once more solicited Chinese armed intervention, the Tokyo Government concluded that in the interests, first of the Japanese empire, and secondly of civilization in the Orient, steps must be taken to put an end once for all to the barbarous corruption and misrule that rendered Korea a scene of perpetual disturbance, offered incessant invitations to Western aggression, and effectually checked the country's capacity to maintain its independence. . . . . To secure Korea's immunity from foreign aggression is of paramount importance to both empires. Japan believes that such security can be attained only by introducing into the peninsula the civilization that has contributed so signally to the development of her own strength and resources. China thinks that she can guarantee it without any departure from old-fashioned grooves and by the same perfunctory processes of protection that have failed so signally in the cases of Annam, Tonquin, Burmah, and Siam.

Nothing, we think, could be clearer than the above. Not only does it fully and completely dispose of the charges of inconsistency, now brought against us—"The Tokyo Government concluded that in the interests first of the Japanese empire, and secondly of civilization in the Orient"—but it also sets forth in the plainest language that Japan's great object was to avert the danger of foreign aggression in Korea. We compliment the *Japan Gazette* on its radical recantation, but we do not compliment it on its attempt to escape the pain of confession by pretending that we said what we never did say, and left unsaid what we did most distinctly say. Certainly not at our door can be laid the misfortune that our contemporary remained until the day before yesterday ignorant of the true causes of a war that began eight months ago.

"THE BIMETALLIST."

BIMETALLISM has now a publication of its own—"*The Bimetallist*, a monthly journal for the advancement of monetary reform." Early in 1884 we remember writing in these columns:—"The consideration surged by Mr. CERNUSCHI with lucidity and perseverance, and supported by Mr. LAVELYE with cleverly compiled statistics and subtle deductions, cannot, in our opinion, fail to force bimetallism into prominence, and to restore silver to the place that nature seems to have destined for it." That was said eleven years ago. It was hard then to get a hearing for bimetallism. The men that deemed themselves the financial seers of the time, and were so regarded by the public, would have nothing to do with the subject. They treated it as the rankest heresy; showed a kind of religious intolerance toward it. Fortunately for themselves and unfortunately for the world, they were able to invent a formula that appealed to the least instructed. Thus the passage from darkness to light has too often been barred by a shibboleth. "Two standards of value are an impossibility," said the monometallists, and the most superficial of their disciples thenceforth had an unanswerable argument. As well tell a man that to burn wood and coal together would give his fire-grate a dual capacity. No bimetallist ever dreamed of having two standards, but it was convenient to attribute that silly conception to them. Times have changed, however. Bimetallism is now a living question, attracting scientific, political, and parliamentary obsérvation. Many of the leading thinkers of the day advocate it. No one ventures any longer to dismiss it as a "mischievous fad." A glance at the list of men that have promised to contribute to *The Bimetallist* shows the kind of support the theory now receives. "Almost the whole array of the Professors of Political Economy," says HENRY HUCKS GIBBS in the opening article of the new periodical, are on the side of bimetallism; "on the side, not of realized and stagnant wealth alone, but of active and re-productive wealth." England, the creditor nation, in whose breast the idea of having her debts paid in silver has hitherto created such consternation—England is beginning to see "that it is better to be paid in silver than not to be paid at all; and that her silver debtors do not pay, because they see that remittances, whether of silver or goods, such as formerly sufficed to pay their debts, pay now but half, and that her gold debtors (enjoying the blessings of a gold standard) are in like case, so far as that to pay a given sum they have to sell two pounds of products now, where one would formerly have sufficed." In France great intellects are busy in the same cause. In America shrewd men of business lend it their "best aid." It will soon be the problem of the day, and that it will win the day, we entertain no doubt whatever. Meanwhile, the pages of *The Bimetallist* show that the work done in the Far East is receiving due recognition. Messrs. JAMIESON, WETMORE, TALBOT, the Eastern Bimetallic League of Shanghai,—all these figure in the new periodical. Thus we in these distant lands have the satisfaction of feeling that whatever we contribute to the great discussion will no longer be lost, but will find its way to, and produce its effect on, the public of Europe and America. We sincerely trust that Mr. GIBBS' prediction may be verified when he says of the birth of the new periodical and the entrance of a new year, "that the one will further, and the other will see, the virtual triumph of the cause of monetary reform."

ORIGIN OF THE JAPANESE.

WORDS are relics of high antiquity. Trees decay, flowers fade, animals die, books become worm-eaten and may wear out with ill usage; but words have a principle of vitality within them which withstands the assaults of time.

The history of words used for numbers is very instructive. They begin their career in the family, and it is continued and modified in the market. A demonstrative pronoun is used for one, and a bundle of ten pebbles, chestnuts, or sticks, bound together, would possibly originate a word for ten which might for example be *dek*, to bind. The Persians and Hindoos have the same names of numbers with ourselves, with the exception of "one" which in those countries is heard as *ek* or *eka*. On this word AUGUST FICK, in "Vergleichendes Worter buch, 1890," says *aikas*, one (like) S. *éka*, one, may be perhaps compared with Latin *acquus*. The *send aiva*, one, he compares with Greek *οἶος* only, alone. The modern Persian has *yak*, one. That is as far as philology has now gone, except that GEO. CURTIUS holds that the Sanscrit *ekas* and the Zend *aiva* are one word and are expanded from a root *ai*. This is not all we may learn on the subject. In fact there is much more to learn. The Aryan people came to their present homes in Asia and India from Russia. On their way they would, in markets, meet with Turkish, Mongol, and other races. It is our philological duty to ask what words are now used for "one" in those countries through which they probably passed. The Mongol has *nig*, the Turkish *bir*, the Tungus *umun*, the Tibetan *chig*. The Aryan word agrees with the Tibetan and Mongol which are reducible to a root, *dig*, and this is a demonstrative pronoun. The word was accepted by the Aryans who dropped the initial *d*. There is no doubt on the principle that market intercourse and joint occupation of territory may change the names of numbers. All who live in the far East and take interest in ethnological inquiry may well consider this point. A word preferred in the market finds its way into the family. Are not words for number liable to such changes as this as the result of nomad life? Words for one, two, or three may be ousted from use in the speech of a nomad nation in a large market centre and replaced by others. Nomad races may change their words

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

quickly. Settled races may keep the same words through many centuries. The Japanese, having a polysyllable structure in their words, were nomads once, and took to agriculture and manual arts because they became possessed of a fertile country bounded by the sea which placed a limit to their wanderings.

In Tibet we find a population which uses Chinese words for names of number in the case of two, three, four, five, six, and nine. But one and seven agree with Mongol names of number, and eight seems to be Sanscrit. A nation of traders will force in their names of number among a population of nomads. The Chinese having more commercial instinct than the Hindoos or Mongols impress their arithmetic successfully on the nomads of Tibet, because these keepers of sheep have weak perceptions of number. The Japanese, on the other hand, being an educated nation and clear in arithmetical perception, maintain in constant use both their original names of number and those that they have learned from China. This renders it highly desirable to compare the names of number of other continental nations with those of Japan, to learn what nations had commercial intercourse with them in pre-historic times. Among the Japanese names of number *hito* is like the Turkish *bir*, one, and *futats*, two, is like our *both*. Nanats, seven, is like the Sungu's *nadan*, Mongol, *dolon*, Turkish *yedi*, all meaning seven, as also the Korean *nirkop*, a compound of two words. The Japanese *yats*, eight, is like the Korean *yotarp*. The Japanese *kokonots*, nine, is like the Sungu's *yagin*, and the Turkish *dokuz*, if we admit the principle that *d* changes to *g* and that in Japanese there has been a movement from *g* to *k*. The Koreans have a habit of running two synonymous words into one. As for the Japanese *towots*, ten, it probably means many, as *araban* in Mongol signifies ten, though it also means many. The Korean for ten is *yor*, and may once have been like in its sound to the Japanese and Mongol words.

What I contend for is that close resemblances are likely to be quite accidental. Slight resemblances like these now pointed out are likely to be real. The Ainu and Japanese we have the opportunity, through Mr. BACHELOR'S admirable Grammar of the Ainu, of comparing with confidence. The ten cardinal numbers differ widely, so that we are forced to seek for kindred names of number on the continent. The Japanese obtained their names of number before entering Japan. There is no resemblance between Chinese and Japanese names of number except in that for seven, and consequently the Japanese at the time when they were a continental people had no commercial transactions with the Chinese except such as were of very slight importance. They would, however, be long enough in Siberia to have the same words as the Turks for one, four, seven, and nine. This need not surprise us if we reflect on the history of the Turks. They are a military people and so are the Japanese. Both races have been successful in warlike expeditions proceeding to a distance from home. The national differences between the Japanese and Chinese are so striking that we may naturally suppose that the former people when they were on the continent were not near China, but away in the north among the Tartar races, and that there was sufficient proximity between the Japanese and the Indo-Germanic people to allow of and to account for the very large admixture of common words which exist in the European and Japanese vocabulary. Geographical proximity explains the fact that many Manchu words are also Japanese words. But if the likeness in Japanese words to those of Europe strikes the student in very many instances, there must have been ancient geographical proximity between the races. We may discover where the Japanese lived before they conquered the Japanese islands by carefully comparing their vocabulary with those of Asia and Europe as well as, by accurately estimating their national characteristics.

To sum up, the Japanese names of numbers teach us that this nation might have been at one time nomads in Siberia and neighbours to the Turks and Mongols. It was only after they reached Nippon and Kiushu that they became acquainted with the Chinese. The polysyllabic character of Japanese numerals is accounted for by nomad life which is unfavourable to monosyllabism. The Japanese prefer a soldier's life to that of a trader because they once wandered like the Turks on the grassy steppes of Northern Asia. The hereditary tendency is powerful in them still, and shows itself in the long continuance of feudal institutions in their history. To follow to the field some warlike lord they much prefer to the drudgery of book-keeping in a counting house. Nothing pleases them better than to join an army to cross the sea and invade China. The Chinese, not being of nomad origin, have no idea of invading Japan, and the probability is that they will never do so. The tendencies visible in the national life of Japan and China are curiously contrary. The philology of the languages and the mythological legends current among the people when treated from the standpoint of comparative science, show quite plainly that both belong to the common stock of primitive man, and prove with equal clearness that the cause of deviation, and the source of their unlikeness to each other were in the choice by the one of a settled agricultural life and by the other of nomadic freedom.

J. EDKINS.

THE WAR AND THE PEERS.

The old relationship between the former feudal lords and their ex-retainers has never been wiped out. Indeed, it has perhaps become more cordial since the abolition of feudalism in consequence of the removal of old conventionalities. The present war has strengthened the bond between ex-lords and their old retainers. Originally founded and subsequently maintained by military valour, war, above all things, evokes strong feelings in ex-chiefs of clans, and invariably brings them and their followers into closer relationship. Such was the effect of the civil war that broke out in Kyushu about 20 years ago, and how much more is it the case with the present conflict, a conflict against a country that has repeatedly shown a supercilious contempt for Japan and has at last provoked her into a declaration of war. The ex-feudal lords are therefore earnest in their endeavour to do everything in their power to encourage the combatants going from their former fiefs, and to inspire them with patriotism and loyalty. Any word from an old feudal master is heartily welcome, for although the Japanese soldiers are thoroughly imbued with a sentiment of fidelity to their Emperor and country, encouragement from a highly venerated lord of a clan weighs greatly with them. The farewell gatherings now being held in Tokyo, presided over by former lords of *Han*, to take leave of the soldiers departing for the seats of war are most commendable. It is already known that each *Kyu Hanshu* extends all the aid possible to the soldiers levied from his former dominion. The help mostly takes the form of gifts of money for those families left in straitened circumstances on account of the bread-winner's departure for the war. Several of the great lords, such as Princes Shimazu and Mori, have sent special messengers to convey their presents to such families. Their kindness and solicitude does not end their, however. They have even despatched stewards to the seat of war to compliment their ex-retainers or their distinguished achievements and to try to alleviate their hardships. This latter plan was taken into consideration by the Peers' Club in Tokyo and it was decided to despatch three delegates to the Chinese districts now occupied by the Japanese Army. The choice as to who should go, fell on Marquis Tokugawa (Mito), Marquis Daigo, and Viscount Nagaoka. They left Tokyo for Hiroshima in the early part of the month accompanied by a few assistants. They met Admiral Ito, Commander of the Japanese Fleet, who was staying in Hiroshima for a short while, and presented him with a complimentary letter, a refreshment fund, and packages of cigarettes for distribution among the officers and marines under his command. The Admiral tendered his thanks graciously for this considerate act on the part of the Peers. The Delegates will go next to Manchuria. The total refreshment fund to be presented to the Army and Navy is 50,000 *yen* and the number of boxes of cigarettes, 203, each containing 30,000 pieces. Of the latter, 20 boxes are to go to the Fleet, and the rest, to the land forces. The fund for refreshments is to be distributed according to the following rates:—An officer, 1 *yen*; a non-combatant whose rank is equivalent to that of an officer, 75 *sen*; a non-commissioned officer, 50 *sen*, any soldier or marine 30 *sen*. Letters and sums of money for refreshments are also to be sent to the 13 military hospitals established in various parts of the country. The total amount to be thus distributed is almost 1,000 *yen*.

Quite a profitable business is done in some of the large cities in Europe by renting turtles to restaurants. They are permitted to remain on their backs a few days before the restaurants, and are then whirled off to some other section of the city as advertisements for other eating-houses.

The Rev. Howard T. Widdemer, of the First Presbyterian Church of Asbury Park, New Jersey, says that the world will become to an end as soon as the China-Japan war is over. The reason why the Japanese are not in a hurry to make peace is therefore apparent.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sence responsible for the sentients or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE WOUNDING OF LI HUNG-CHANG.

To the Editor of the "Japan Mail."

Sir,—In the "War News" of to-day's issue of your esteemed journal, I note that you say "As far as we can judge, the Japanese nation is almost as much excited about the affair (*i.e.* the attempt upon Viceroy Li's life) as it was about the attack upon the Czarewitch. There is a universal sentiment of execration toward the wretched youth that raised his hand against the aged Envoy." As one who must come daily into contact with a large number of Japanese, and who has many opportunities of meeting with Japanese newspaper men in particular, I beg to endorse your remarks most emphatically: It really seems to me that the regret and indignation felt by the people of Japan were never deeper than they are now. Not even the most hot-blooded youth—and I meet with scores of such—but who hangs his head to think of the disgrace that Koyama's vile act has put upon the nation. The newspapers of the capital, both great and small, condemn the deed in unmeasured terms and call for swift punishment for the criminal. The *Nippon* of to-day's date translates the leader in Monday's issue of the *Japan Mail* and remarks editorially that every word is just. This is a good deal for the leading radical-independent newspaper to say. One or two journals advise a crusade against the *sōshi* of Japan and their radical removal; for Koyama is an ex *sōshi*, it appears, though he had recently resigned membership. The papers of Gumma Prefecture, which is so unfortunate as to be the home of the would-be assassin, unanimously deplore that so vile a wretch should have come from among their midst. In a word, the attempt on the Viceroy's life has called forth a storm of indignation and loud-voiced regrets from one end of Japan to the other.

With apologies for thus encroaching on your space, I am, yours, etc., W.

Tokyo, March 26th, 1895.

SILVER IN JAPAN.

To the Editor of the "Japan Mail."

Sir,—I am one of those who have been much interested in Professor Droppers' lecture and the discussion to which it has given rise, and in an amateurish way have had my thoughts and doubts on the subject, some of which I venture to set forth in your columns, not as a teacher, and hardly as a disputant, but rather as a learner. If I shall put anything in the form of assertion, this is only for the sake of convenience and brevity, and I wish to have what I have to say taken as tentative merely.

First, as to the possibility of success in the maintenance of bimetallism, supposing it to have been once established. Monometallists, we are told, are "cocksure" as to the impossibility of this. If this is a fault, it is surely not all on one side. Bimetallists are also "cocksure" that their theory is practicable. Perhaps so. But I have my doubts notwithstanding. This certainty that bimetallism is workable seems based chiefly on the experience of the Latin Union from 1803 to 1873. Unquestionably, this experience is very instructive, and gives a very strong support to the bimetallic argument. For myself, I will frankly own that the exposition of the working of bimetallism under the Latin Union by Professor Droppers, and by Helm in his "Joint Standard," for the loan of which I am indebted to Professor Droppers' kindness, has made the success of bimetallism appear much less improbable than it before seemed to me. Nevertheless, I am not wholly convinced, and for this reason. For the first fifty years of the Latin Union there was little change in the production of silver and gold. It was only about the end of that period that the new discoveries of gold brought in a disturbing factor. It was, I suppose, undoubtedly the fear of ultimate failure by reason of this that led to the abandonment of free coinage by the Union. An experiment abandoned in this way seems to me to fall short of affording absolute certainty of the success of another similar experiment, even though attempted by a much stronger combination than the Latin Union.

Next, as to the need of the bimetallic experiment. Supposing the success of bimetallism to be absolutely sure, and its adoption possible without too great disturbance, this would need no argument. But I have already expressed my doubt of the first, a doubt which is entertained also by many others, and I shall give presently some reasons for doubting the second. The great special reason at the present time for the adoption of bimetallism is the fall in prices; which is due, we are told, to the appreciation of gold. This raises the question, first, to what is this fall of prices due? Besides this alleged appreciation of gold, the continuous simplifying and cheapening of production by improvements in the use of machinery in manufactures, in agriculture, and in transportation, has certainly contributed something; some people even go so far as to say everything. Without going to this extreme, we can at least say that the fall of prices is not all due to the lessening use of silver as money. This would be conclusively proved by the assertion of the bimetallists that prices in silver have remained stable, if we could be sure that this is a fact. If silver prices have remained unchanged, in spite of lessened demand for silver, they must fall when the adoption of bimetallism increases the demand for it. Prices measured by the double standard must then, other causes apart, be between the present gold prices and the silver prices, and the difference between the prices thus reached and the present silver prices (which are supposed to be substantially the same as gold prices in the decade from 1867 to 1876), cannot be accounted for by the appreciation of gold, but must be ascribed to some other cause.

The next question calling for consideration is: Has gold really appreciated at all? And the answer to this depends upon the standard of measurement that we adopt. If it be silver, or merchandise, as in Mr. Sauerbeck's tables, quoted by Professor Droppers, we must admit of course that gold has appreciated. If, however, we measure not by the price of goods, but by the price of labour, or by the earning capacity of the average man, the case is not so clear. Helm, bimetallist though he be, has expressed the opinion that the fall in wages has been comparatively slight, though he believes this advantage to be more or less counterbalanced by a diminution in the amount of work which the average labourer can obtain. Here the burden of proof rests clearly on the bimetallist. Unless he can show that earning capacity has diminished in a similar ratio with prices, he has no case. If, while prices have decreased, the earnings of the average man have diminished (if at all) in a less ratio, the average man is better off than he was before, and not being in Egyptian slavery, does not need any bimetallist Moses to deliver him.

One argument for the desirability of bimetallism urged by bimetallists very strongly, perhaps more strongly than any other, is the hardship supposed to be caused to debtors by the appreciation of gold. To discharge a debt which, when incurred, could have been paid by a given amount of merchandise, a much larger amount we are told must be given now. This argument implies, that while money is not necessarily a just standard for determining the amount of a debt, merchandise is so. But there is still another possible standard, namely, earning capacity. And this seems to me to be decidedly the most equitable one. When a man borrows money he saves himself so many days' labour, and receives the product of so many days of his neighbour's labour. When it comes to payment of the debt, whatever be the amount of merchandise which he returns, he has suffered no hardship if he can earn this with no more labour than would have been needed to earn the sum originally borrowed at the time when he borrowed it. We are brought here to the same point as before. If the debtor's earning power has not diminished, the fall of prices is not an injury but a benefit, to him as to his neighbours.

But this is not the whole case. Earning power may fall as well as prices, and still the debtor be no worse off than before, provided the diminution of earning capacity is somewhat less than the fall of prices. A man borrows $100. At the time of the loan he is earning, we will say, $2 a day, of which $1.50 is needed to support his family, leaving 50 cents with which to pay the debt. If now wages diminish 25 per cent. and prices 33⅓ per cent., the man, if he still has steady employment, is no worse off than before, for he can now support his family on $1.00 a day, still leaving 50 cents to pay the debt. As soon as the debt is paid, he is better off than before, for his 50 cents, surplus will buy 50 per cent. more than it would originally. It is further to be borne in mind that the continous increase of productive power, due to never ceasing improvement in methods of production, also favours the debtor class.

We shall be told, no doubt, that all this is mere theorising, and that when we come down to cold bare fact, we find that the world is out of joint, and that there is no such happy state of things as I have here described. But I have not been attempting a comprehensive description of the condition of the business world, but only endeavouring to separate one factor in it from the rest, and consider the contribution made by this alone to the general result. A bad condition of the business world by no means proves the necessity of bimetallism, unless it can be shown that monometallism is the cause of this condition, and that moreover it is a continuing cause. But there are other causes, and very serious ones. First of all, I may mention the disturbance in the relations between labour and capital, due to the rapidly changing conditions of production. Modern methods make necessary larger and larger aggregations of capital in nearly every industry, thus diminishing the number of employers on the one hand, increasing the number of the employed on the other, and continually widening the breach between them. Here we have a disturbing force almost incalculably great, one which bids fair to force us to reorganize our whole industrial organism.

Another cause of disturbance, alluded to by Professor Droppers, and emphasized by Mr. Helm, is the growth of protectionism on the European continent, now happily somewhat checked, as well as the wild career which has been pursued in America by the same crazy notion that you can make people rich by taxing them.

Still another and growing cause of disturbance is the modern system of military armaments, now in most European countries taking several years out of the life of every young man, and at the same time taxing his fellows to support him in idleness or worse, and keep him supplied with more and more expensive instruments of death.

Another serious cause of disturbance, I am sorry as an American to say, is the Congress of the United States, which for these last ten or fifteen years has been a field in which crack-brained ignorance, demagogy, and corruption have been playing football with public faith and national credit, and so with the industrial peace of their own country, and of the rest of the world as well.

And then there is the bimetallic agitation itself, which, whether its object be good or bad, wise or unwise, is certainly a disturbing force of no small magnitude. You cannot call every two or three years an international conference to determine whether or not the world's standard of value shall be changed without disturbance.

And this brings me to one more point, with which I must conclude. The course of prices during the last twenty years or so is said to show a continuous appreciation in the value of gold. The figures, however, as set forth in Mr. Sauerbeck's tables, do not show a continuing decrease of prices for twenty years, but rather a marked decrease for twelve years, followed by comparative steadiness for eight years more. Mr. Sauerbeck's table is as follows, 100 indicating the average price in the eleven years from 1867 to 1877:—

AVERAGE VALUE IN RELATION TO GOLD OF 45 COMMODITIES.

1870	96	1882	84
1871	100	1883	82
1872	109	1884	76
1873	111	1885	72
1874	102	1886	69
1875	96	1887	68
1876	95	1888	70
1877	94	1889	72
1878	87	1890	72
1879	83	1891	72
1880	88	1892	68
1881	85	1893	68

Of these figures, the first four represent the period of inflation which preceded the panic of November, 1873. Starting with the next year, 1874, when prices had nearly reached the normal level, we have a decline to 72 in 1885. From this time to 1893 we have no marked decline whatever, but only slight fluctuations, the index number for 1885 being the same with that for 1889, 1890, and 1891, and that for 1887 being the same as that for 1892 and 1893. This table then, if it proves anything at all, proves that the decline of prices came practically to an end about 1885, and that from that time on to 1893 there was marked stability. In other words, the great decline of prices ended nearly ten years ago, business has had all that period in which to adjust itself to the new conditions, and bimetallism becomes a proposal, not to check a disturbance of the market, but to create a new disturbance. It seems then that even if the practicability of bimetallism were as absolutely certain as its advocates tell us, we should have to pay very dear for our whistle.

Very truly yours, T. S. T.

Tokyo, March 23rd, 1895.

A TENTATIVE LIST OF CHRISTIAN CHARITIES.

To the Editor of the "Japan Mail."

Sir,—In response to circulars sent to a large number of missionaries, I have obtained so much information that I am very desirous of securing more and thus preparing a complete list of all charitable organizations in Japan under Christian influence. Hence this publication of a preliminary report in the hope of calling out corrections and additions. If every Christian worker who notes any errors or omissions will be kind enough at once to inform me of such, I shall esteem it a personal favour, and in return will shortly give to him and the public a fuller and more reliable list of organized Christian charities.

Ordinary Day and Sunday Schools are purposely excluded from the list, which is designed to cover only Industrial Schools, Orphanages, Asylums, Homes of Refuge, and Hospitals of all kinds.

I have a few data for Buddhist charities and for public and private charities organized by other than Christians, but full statistics are so difficult to secure that I do not press for these at present.

Thanking those who have already furnished me with information or may yet do so, and you, Mr. Editor, for your courtesy in printing the list, I will reserve explanations and comments until the full list is completed.

I remain, Sir, yours, &c., J. H. PETTEE.

Okayama, March 19th, 1895.

SCHOOLS FOR THE POOR.

LETTER FROM AUSTRALIA.

(From our own Correspondent.)

Healesville, Victoria, February 13th.

Carbine, the greatest racehorse ever foaled in Australasia, has been sold to the Duke of Portland for 13,000 guineas. It is hardly necessary to remark that this is the record price for a thoroughbred horse in the colonies. Nordenfeldt, who is by the same sire as Carbine, fetched 5,600 guineas at public auction, while Maxim, also by the same sire as Carbine, only realised 4,000 guineas. Carbine's new owner has been a prominent figure on the English turf since 1881, and has won most of the leading races in England. In 1889 he won in stakes no less a sum than £73,858. Carbine's record in Australia is a remarkable one. He won 33 first class races, taking stakes to the amount of £30,000. He won the Melbourne Cup carrying 10st. 5lb., against 38 of the best horses in the Colonies, two miles being the distance, in 3 min. 28¼ sec., the record time in Australia for that race. Carbine was foaled in 1885 in New Zealand. He is by the world-renowned Musket, now dead, his dam being Mersey. He was purchased for 620 guineas as a yearling, and sold as a three-year-old for 3,000 guineas.

A letter of considerable interest and importance appeared in the Sydney *Daily Telegraph* in December last, and was reproduced in the *Argus*. The writer was Mr. Edward Pulsford, and the subject Australia's attitude to Asiatics. The letter has attracted no small amount of attention in the colonies and seems likely to produce some lasting results. As it gives a good idea of the tendency of thought and opinion among the more liberal-minded colonials I think it well to send you full quotations.

"It appears likely—nay, certain—that the question of the admission of Asiatics to the Australasian colonies will before long require further consideration. The subject has come to the surface of late in various quarters, and, according to a cable message, *The Times*, discussing Eastern and especially Japanese trade, recommends these colonies to admit Japanese immigrants on terms of equality with European immigrants.

"It has always appeared to me that the Chinese Exclusion Act of 1888 reflected no great honour on New South Wales. A poll-tax of £100 is practically prohibition pure and simple, and it is difficult to imagine anything more offensive to China than such legislation. While I say this, I am yet no advocate of the unrestricted immigration of Chinese or other Asiatics. I have no shadow of doubt as to the necessity for limiting such immigration. European and Asiatic races cannot coalesce: their characteristics are too divergent. The difficulty, of course, is not so apparent in the old countries of the world, where population is so thickly settled, and where, consequently, attractions for immigrants are limited. Great Britain stands in no danger of a big influx of either Chinese or Japanese, and neither China nor Japan stand in any danger of a big influx of British. But, granting the difficulty, cannot we meet it without the brutal disregard of the susceptibilities of other races shown by our existing legislation? I think we can.

"It is worth while pointing out one result of the Chinese Exclusion Act which probably was not anticipated. The Act has undoubtedly checked the departure—the return to China—of the Chinese actually resident in the colony; it has made more or less permanent residents in New South Wales of Chinese who would otherwise have returned to their native land, and so far has acted rather as an Inclusion than as an Exclusion Act. I take from Coghlan 'the numbers of Chinese arriving at and departing from New South Wales since 1871' as follows:—

Year.	Arrivals.	Departures.	Year.	Arrivals.	Departures.
1871...	496...	442	1883...	...1,936...	...1,402
1873...	890...	597	1884...	...2,191...	...2,038
1873...	496...	400	1885...	...2,909...	...2,726
1874...	803...	933	1886...	...3,072...	...1,883
1875...	685...	...1,209	1887...	...4,436...	...2,763
1876...	690...	949	1888...	...2,818...	...1,562
1877...	884...	490	1889...	7...	943
1878...	...2,485...	...1,560	1890...	15...	637
1879...	...2,079...	557	1891...	17...	581
1880...	...2,942...	876	1892...	22...	755
1881...	...4,405...	929	1893...	34...	558
1882...	...5,003...	884			

"In 1881 an Act was passed imposing a poll-tax of £10, which the Act of 1888 raised to £100. The figures in the tables are well worth studying. In the five years preceding 1888 no less than 8,458 Chinese left the colony, whilst in the five years succeeding 1888 the number was only 3,472. It appears, therefore, that but for that Exclusion Act a large number of Chinese, possibly 5,000, would have returned to China who now reside in our midst. By making residence in the colony represent £100, thousands of Chinese have remained instead of departed. It seems somewhat as if, having delayed to deal properly with the subject, we at last rushed at it in a panic-stricken spirit. At one blow we smashed to bits a steamship passenger traffic averaging, for New South Wales alone, 5,000 persons a year, which certainly brought some profit to Sydney, and we have succeeded in keeping thousands of Chinese who would otherwise have departed. In 1891 the census showed that the aggregate number of Chinese in the whole of the seven colonies of Australia, Tasmania, and New Zealand was 41,534, whilst at the census of 1881 there were 43,706. These figures show a positive reduction during the 10 years of 2,172—a fact which plays sad havoc with the Chinese invasion theory so generally held in 1888. I think the figures which I have given lead fairly to the conclusion that the Chinese who come to Australia do not desire to settle in our midst, but only to make a little money and return with it to their own land. This love of their native soil is probably an instinct of all Asiatic races, and is a factor on which we may reasonably rely in considering the whole subject.

"There is one reason—I doubt whether it is generally known—why Australia, and especially New South Wales, can afford to look with friendly eyes upon Asiatics. It is that it is due to them, and not to Europeans, that it has been possible and profitable to develop our great silver mines. It is almost entirely owing to Asia that to-day silver is worth mining, even at Broken Hill. According to a statement published by Marshall, out of a silver production valued at £520,000,000 for the 50 years ending with 1880, the 'East,' that is Asia, absorbed £351,000,000, manufacturers consumed £131,000,000, whilst Europe and America coined £38,000,000. Asia has not only taken the bulk of the production of the years named, but she has also taken large quantities that were in stock in Europe. During the eight years 1881-88 the East imported silver valued at £116,000,000. Unfortunately I have not at hand the figures since 1888, which, by a strange coincidence, was the year when our silver production became important, and when we passed that Act excluding from our shores one large section of the people who are taking our silver. Since 1888, however, silver has had more than ever to depend on 'the East.' Therefore it may be said with truth that Australia is more benefited by Asiatic commerce than Asia is by Australian commerce. Even now in many quarters efforts are being made to open new markets for Australian produce in Asiatic countries, and the time, therefore, seems ripe for this question of the exclusion of Asiatics to be looked at afresh."

Through the clumsiness of our British law, all the prisoners charged with the murder of the infant of Margaret Chrosier, of the gruesome details of which I gave an account in my last letter, have been acquitted. The prosecution, though conducted by very able hands, utterly broke down. Some of the witnesses were too young to testify on oath or unwilling to testify truthfully. According to a technicality of the law, the damning confession of the youngest prisoner could not be used against any of the accused not present when it was made. The Chief Justice, before whom the case was tried, after the jury had acquitted three of the parties concerned, remarked that the prisoners had been acquitted, "not perhaps because they deserved to be acquitted, but because the evidence was not forthcoming which the law required to fasten guilt upon them." Such glaring miscarriages of justice under British law are, according to experts, not uncommon.

Some very curious facts were elicited by a trial that took place in Sydney in November last. Two persons pleaded guilty to practising the ancient art of fortune-telling and were informed by the judge that they had narrowly escaped a sentence of 12 months' imprisonment. The principal personage was a blind and ignorant old woman, who to ordinary people would seem to have no title whatever to veneration. Yet such are the credulity and gullibleness of a large section of the Sydney community that this old hag had a medical practice such as no fashionable surgeon could boast of, and more converts and admirers than are possessed by half a dozen orthodox divines. Her *clientèle* included "half of the fashionable ladies of Sydney." Among those who testified to the reality of her powers so-called religious people were conspicuous. A clergyman, for example, related how by simply feeling his hand she discovered an internal and dangerous complaint which had baffled all the doctors and so saved his life. The witnesses called were for the most part educated men and women of social influence. One lady, the wife of a police magistrate, informed the astonished judge that her own husband had been a clairvoyant and had turned the art to professional use. "My husband," she said, "sat for 3 weeks in this very court in the Alderson case, while in a clairvoyant trance." If this experience is common it may account for some of those legal decisions which puzzle the lay mind. This trial furnishes material for serious meditation to those who argue that the present generation has reached a stage of civilisation unapproached by the ancients. To find a descendant of the Witch of Endor driving a flourishing trade in a fashionable colonial city among habitual church and chapel goers, and numbering among her converts civil servants, members of the legal profession, clergymen, and others equally influential in society, comes as a shock to one's sense of the importance of Nineteenth Century Civilisation. And these followers of the witch are the earliest to scowl on the Asiatic as a being of inferior cult. The belief that nothing can be known about the unseen world is the only true safeguard against such imbecilities as were revealed by the Sydney trial.

The following ■ of interest:—From the report on the trade of Japan for 1893, recently published by the Foreign Office, we learn that during the year the imports from Australia amounted to £43,033, being an increase of £2,258 as compared with 1892, and the exports to Australia amounted to £220,446, being an increase of £114,890. The import of raw wool amounted to 1,518,720 lbs. The export of coal is rapidly increasing, 653,000 tons having been shipped during the year. Japanese coal is gradually ousting Australian from Eastern ports. In matches Japan is doing an active trade, but the quality is reported to be generally bad. The export of tea is falling off, the quantity being 1,750,000 lb. less in 1893 than in 1892.

The proprietor of one of the largest vineyards in the colony, Mr. Hans Irvine, of Great Western, received not long ago a telegraphic order from P. B. Burgoyne ■ Co. of London for 100 hogsheads of wine. The condition of the order was that the wine was all to be shipped the day following the arrival of the message. Though the casks had to be cleaned, filled, and loaded in seven trucks, the order was executed and the wine safely shipped the following day. Such a feat could not have been accomplished anywhere else in the colony. Mr. Irwine has spent some £70,000 on the Great Western vineyard. He has now 183 acres in bearing and is still extending the plantations. He has 90 acres of the Pineau variety of grape, planted solely for the manufacture of champagne. The bottling and maturing of champagne are superintended by French experts in the employ of Mr. Irvine. The bottling this year occupied over two months, the total number of bottles, though less than that of previous years, was nearly 5,000 dozen. No less than a quarter of a million bottles are stored underground at the vineyard. The wines of this vineyard are not only noted for maintaining a high standard of quality but for a uniformity of flavour and an unvarying consistency of type. Taste the Great Western clarets and hocks where you will, there is an unmistakable *cachet* about them which is never missed. Strenuous efforts are being put forth to make these wines better known in India, China, Japan, Java, Singapore, and other places in the East.

The keenest interest is being taken in the Test Cricket matches now being played between Stoddart's English team and teams selected from the best of Australian cricketers. Four of the five matches to be played are over and have resulted in 2 wins for England and 2 for Australia. The first test match played at Sydney was most exciting. The Australians made 586 in their first innings, and felt confident that the match was theirs. The Englishmen made 325 in their first innings and followed on, adding 437 to their previous score. With 586 in hand, the Australians considered that the game was in their hands. But the weather favoured the Englishmen. On the evening before the final day of the match heavy rain fell and the wicket was entirely spoilt for batting, so that Peel, the last English bowler, had it all his own way. With eight wickets to go down and only 63 runs to make, however, the Australians were confident to the end, but the Englishmen never lost heart and pulled off the match in the most plucky manner, winning by only 10 runs. The takings for the match were £2,950. The proceeds at subsequent matches have been correspondingly larger. The Australians seem to have lost the match by over excitement and nervousness at the close, the last two or three batters were too afraid of getting out to play the ball with their usual skill. The next match was played in Melbourne and was won by the Englishmen in a most brilliant fashion. In Adelaide and afterwards in Sydney the Englishmen were defeated. A youthful and hitherto little known cricketer, A. E. Trott, has scored a great success as a bowler against the Englishmen, having ac-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

complished the remarkable feat of taking 8 wickets for 43 runs. The final match is to be played in Melbourne next week.

Australia has just celebrated the anniversary of her foundation as a civilised state. On the 26th of January one hundred and seven years ago the *Sirius* man-of-war was guided by Governor Philip to the Sydney harbour. She was followed by a long line of lumbering transports which carried no less than 700 criminals. More than half of these criminals, owing to the undue severity of British law and the imperfect way in which it was then administered, were serving unjust sentences and when their time was up made excellent colonists. The other half have no doubt left a taint on Colonial Society, but it must be admitted that this taint is growing less and less perceptible as years roll by. So that the Colonies to-day need look back with no feeling of shame on the manner of their origin.

Important meetings of the Federal Council and a Conference of Premiers have been held at Hobart. The Premiers have agreed to a scheme of federation, of which the following are the chief outlines:—

1. That the conference regards federation as the great and pressing question in Australasian politics.

2. That a convention, consisting of ten representatives of each colony directly chosen by the electors, be charged with the duty of framing a federal constitution.

3. That the constitution, when framed, be submitted to the electors for acceptance or rejection by direct vote.

4. That such constitution, if accepted by the electors in three or more colonies, be transmitted to Her Majesty the Queen by addresses from the Parliaments of those colonies praying that the necessary legislative enactment may be passed by the Imperial Parliament.

5. That a bill be submitted to the Parliament of each colony for the purpose of giving effect to the foregoing resolutions.

Thanks to the Legislative Council of Victoria, the obnoxious Land Tax of which I wrote in my last is not to be levied. The Turner Government, which is still in, has to be content with an income tax, reduction of municipal subsidies, and other devices for filling the empty coffers of the Treasury. The prospects of Banking business have greatly improved, the prices of shares and Bank Deposit Receipts has risen. The financial horizon is no longer dark.

LETTER FROM PHILADELPHIA.

(From our Correspondent).

Philadelphia, February 23rd.

We are but just past our city election. A new Mayor and new Councilmen have been chosen. The office of Mayor of such a city as ours is, in its opportunities, in its power, in its salary, one of more importance than even that of Governor of the State. This has been a peculiarly bitter election. The "Combine" of politicians had picked out a candidate, Senator Boies Penrose, as their choice for Mayor, but there was such a clamor raised, reflecting on the moral character of Mr. Penrose, that the "Combine" could not push its way in the nominating Convention. That Convention selected for its candidate Mr. Charles Warwick to represent the Republican party; Mr. Warwick was elected by about 61,000 majority. The Democrats chose ex-Governor Pattison. Mr. Pattison has a most brilliant record and is a man of thorough probity, save only that the Republican newspapers declare that he is under the thumb of an eminent politician named Harrity. After Mr. Warwick's selection the candidature of the Mayor became a matter of secondary importance and all attention was turned to the selection of Councilmen. The Councils of Philadelphia have tremendous power. Of late they have been spending money by the millions, and, unquestionably, an unprincipled lot of corporations have used the Councils to further their ends. Almost every newspaper in the city was against the re-election of a lot of these Councilmen on the score of their having been concerned in certain "jobs." A Municipal League, a committee on purity of elections, and scores of other energetic measures were resorted to. But all was in vain. The old Councilmen were returned in almost every instance and there was little difference in the vote from former years. This is not at all to the credit of the citizens of Philadelphia. And moreover it demonstrates that to head off politicians some other method than newspaper clamor is necessary. The people have got so used to newspaper lying at the expense of candidates, and to the [illegible] that they repose little confidence in the papers.

Business is still very flat. No revival has begun as yet. The factories (and Philadelphia is a city of factories) are not yet running in any number. The trade-papers all complain of the dull outlook. One most striking instance of the slackness of business and of the stringency of the times is shown in the matter of liquor-drinking. The applicants for the renewal of saloon licenses have just finished filing their applications. No more can be entered now. Last year there were in Philadelphia 2,729 saloons, this year the number of applicants for renewal is 2,387, showing a falling off of 342. There has been no temperance agitation of any unusual sort, nor can it be accounted for in any other fashion than as due to the hard times. Liquor is about the last thing men will give up in hard times. Added to the above is the fact that a number of the brewing corporations, who advanced the $1,000 for the license fee to saloon-keepers, are now suing to obtain back their advance. There are multitudes of other signs that no improvement has taken place. In Congress our legislators are doing nothing to relieve the situation. One of our Philadelphia ministers prayed last Sunday in his pulpit petition that the Lord might pardon the foolishness of our Congressmen, that He might break up their excessive partisan zeal, and that He might yet grant that Congress should do something for civic righteousness ere it should adjourn. In the congregation were many eminent men of business and politics, and I bear witness that there was a responsiveness to his prayer that was very distinct.

Political discussion has for the time being abated the general interest in the Japanese-Chinese War. The newspapers daily give space to news as to the War, but editorial comment is scant and scarce. I think the general idea over here is that the sooner the War is now over the better, and that China has probably learned what the War was intended to teach her. Unbounded admiration is incessantly exhibited for the bravery and skill of the Japanese army and its officers and for the shrewdness of the diplomacy of its officials at court.

Philadelphia, in common with the rest of the country, has been interested in the death of two men eminent in missionary matters. Dr. William M. Taylor, of New York City, was prominent in the affairs of the American Board C.F.M. As an author of books of Bible biography, as a great preacher, and as counsellor of the Board Dr. Taylor was noted. He came to America from Great Britain about 25 years ago. Dr. A. J. Gordon, of Boston, Mass., was chairman of the Executive Committee of the American Baptist Missionary Union, another of the great missionary organizations of the the Protestant world. He had been pastor in Boston for 25 years. His church gave annually from $12,000 to $20,000 for foreign missions. Dr. Gordon was an eminent author. His death has profoundly affected American Christians. Dr. Edward A. Lawrence, whom many in Japan will remember as having visited the missions in that country a few years since, passed away some little while ago, and now his mother issues an account of his visit to Asia and his impressions of missions, as he gave them in a series of lectures to the students at Yale. The book is "Modern Missions in the East," which Harper and Brothers published a day or two since.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND THE UNITED STATES OF AMERICA.

Signed at Washington, 22nd day of the 11th month, 27th year of Meiji. Ratifications exchanged at that City, 21st day of the 3rd month, 28th year of Meiji.

His Majesty the Emperor of Japan and the President of the United States of America being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the Treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and, for that purpose, have named as their Plenipotentiaries, that is to say: His Majesty the Emperor of Japan, Jushii Shinichiro Kurino, of the Order of the Sacred Treasure of the Fourth Class, and the President of the United States of America, Walter Q. Gresham, Secretary of State of the United States; who, after having communicated to each other their full powers, found to be in good and due form, have agreed upon and concluded the following Articles:—

Art. I.—The subjects or citizens of each of the two High Contracting Parties shall have full liberty to enter, travel, or reside in any part of the territories of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free access to the Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects or citizens to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects or citizens.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort and in any manner whatsoever which they may lawfully acquire, the subjects or citizens of each Contracting Party shall enjoy in the territories of the other the same privileges, liberties, and rights, and shall be subject to no higher imposts or charges in those respects than native subjects or citizens, or subjects or citizens of the most favoured nation. The subjects or citizens of each of the Contracting Parties shall enjoy in the territories of the other entire liberty of conscience, and, subject to the laws, ordinances, and regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever, to pay any charges or taxes other or higher than those that are, or may be paid by native subjects or citizens, or subjects or citizens of the most favoured nation,

The subjects or citizens of either of the Contracting Parties residing in the territories of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, national guard, or militia; from all contribution imposed in lieu of personal service; and from all forced loans or military exactions or contributions.

Art. II.—There shall be reciprocal freedom of commerce and navigation between the territories of the two High Contracting Parties.

The subjects or citizens of each of the Contracting Parties may trade in any part of the territories of the other by wholesale or retail in all kinds of produce, manufactures, and merchandize of lawful commerce, either in person or by agents, singly or in partnerships with foreigners or native subjects or citizens; and they may there own or hire and occupy houses, manufactories, warehouses, shops, and premises which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the laws, police and customs regulations of the country like native subjects or citizens.

They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the territories of the other, which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects or citizens, or subjects or citizens of the most favoured nation without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, other or greater than those paid by native subjects or citizens or subjects or citizens of the most favoured nation.

It is, however, understood that the stipulations contained in this and the preceding Article do not in any way affect the laws, ordinances, and regulations with regard to trade, the immigration of labourers, police and public security which are in force or which may hereafter be enacted in either of the two countries.

Art. III.—The dwellings, manufactories, warehouses and shops of the subjects or citizens of each of the High Contracting Parties in the territories of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances, and regulations for subjects or citizens of the country.

Art. IV.—No other or higher duties shall be imposed on the importation into the territories of the United States of any article, the

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the territories of His Majesty the Emperor of Japan territories of the any article, the produce or manufacture of the of United States, from whatever place arriving than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the territories of either of the High Contracting Parties, into the territories of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

ART. V.—No other or higher duties or charges shall be imposed in the territories of either of the High Contracting Parties on the exportation of any article to the territories of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the territories of either of the two High Contracting Parties to the territories of the other which shall not equally extend to the exportation of the like article to any other country.

ART. VI.—The subjects or citizens of each of the High Contracting Parties shall enjoy in the territories of the other exemption from all transit duties, and a perfect equality of treatment with native subjects or citizens in all that relates to warehousing, bounties, facilities, and drawbacks.

ART. VII.—All articles which are or may be legally imported into the ports of the territories of His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in vessels of the United States, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and, reciprocally, all articles which are, or may be, legally imported into the ports of the territories of the United States in vessels of the United States may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in vessels of the United States. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the territories of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese vessels or in vessels of the United States, and whatever may be the place of destination, whether a port of either of the High Contracting Parties or of any third Power.

ART. VIII.—No duties of tonnage, harbour, pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature, or under whatever denomination levied in the name or for the profit of Government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of the territories of either country upon the vessels of the other country which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

ART. IX.—In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the territories of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

ART. X.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the laws, ordinances, and regulations of Japan and of the United States, respectively. It is, however, understood that Japanese subjects in the territories of the United States and citizens of the United States in the territories of His Majesty the Emperor of Japan shall enjoy in this respect the rights which are, or may be, granted under such laws, ordinances, and regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the territories of the United States and a vessel of the United States laden in a foreign country with cargo destined for two or more ports in the territories of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and custom-house regulations of the two countries.

The Japanese Government, however, agrees to allow vessels of the United States to continue, as heretofore, for the period of the duration of this Treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata, and Ebisuminato.

ART. XI.—Any ship-of-war or merchant vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again, without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, she shall be bound to conform to the regulations and tariffs of the place to which he may have come.

If any ship-of war or merchant vessel of one of the High Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul General, Consul, Vice-Consul, or Consular Agent of the district of occurrence, or, if there be no such Consular officers, they shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of the United States, shall take place in accordance with the laws of the United States; and, reciprocally, all measures of salvage relative to vessels of the United States, wrecked or cast on shore in the territorial waters of His Majesty the Emperor of Japan, shall take place in accordance with the laws, ordinances and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furnitures and appurtenances belonging thereunto, and all goods and merchandize saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls, or Consular Agents upon being claimed by them within the period fixed by the laws, ordinances, and regulations of the country, and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandize saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects or citizens of one of the High Contracting Parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorized, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects or citizens of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

ART. XII.—All vessels which, according to Japanese law, are to be deemed Japanese vessels, and all vessels which, according to United States law, are to be deemed vessels of the United States, shall, for the purposes of this Treaty, be deemed Japanese vessels and vessels of the United States, respectively.

ART. XIII.—The Consuls-General, Consuls, Vice-Consuls, and Consular Agents of each of the High Contracting Parties, residing in the territories of the other, shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects or citizens of the country where the desertion takes place.

ART. XIV.—The High Contracting Parties agree that, in all that concerns commerce and navigation any privilege, favour, or immunity which either High Contracting Party has actually granted, or may hereafter grant, to the Government, ships, subjects, or citizens of any other State, shall be extended to the Government, ships, subjects or citizens of the other High Contracting Party, gratuitously, if the concession in favour of that other State shall have been gratuitous, and on the same or equivalent conditions if the concession shall have been conditional; it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

ART. XV.—Each of the High Contracting Parties may appoint Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents, in all the ports, cities, and places of the other except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the High Contracting Parties without being made likewise in regard to every other Power.

The Consuls-General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions and immunities which are, or may hereafter be, granted to Consular officers of the most favoured nation.

ART. XVI.—The subjects or citizens of each of the High Contracting Parties shall enjoy in the territories of the other the same protection as native subjects or citizens in regard to patents, trademarks, and designs, upon fulfilment of the formalities prescribed by law.

ART. XVII.—The High Contracting Parties agree to the following arrangement:—

The several Foreign Settlements in Japan shall, from the date this Treaty comes into force, be incorporated with the respective Japanese communes, and shall thenceforth form part of the general municipal system of Japan. The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such Settlements shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place existing leases in perpetuity upon which property is now held in the said Settlements shall be confirmed, and no conditions whatever other than those contained in such existing leases shall be imposed in respect of such property. It is, however, understood that the Consular Authorities mentioned in the same are in all cases to be replaced by the Japanese Authorities. All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said Settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

ART. XVIII.—The present Treaty shall, from the date it comes into force, be substituted in place of the Treaty of Peace and Amity concluded on the third day of the third month of the seventh year of Kayei corresponding to the 31st day of March, 1854; the Treaty of Amity and Commerce concluded on the 19th day of the 6th month of the 5th year of Ansei, corresponding to the 29th day of July, 1858; the Tariff Convention concluded on the 13th day of the 5th month of the 2nd year of Keio, corresponding to the 25th day of June, 1866; the Convention concluded on the 25th day of the 7th month of the 11th year of Meiji, corresponding to the 25th day of July, 1878, and all Arrangements and Agreements subsidiary thereto concluded or existing between the High Contracting Parties, and from the same date such Treaties, Conventions, Arrangements, and Agreements shall cease to be binding, and in consequence, the jurisdiction then exercised by Courts of the United States in Japan and all the exceptional privileges, exemptions, and immunities then enjoyed by citizens of the United States as a part of, or appurtenant to such jurisdiction shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

ART. XIX.—This Treaty shall go into operation on the 17th day of July, 1899, and shall remain in force for the period of twelve years from that date.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date it goes into operation, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

ART. XX.—This Treaty shall be ratified and the ratifications thereof shall be exchanged at Tokyo or Washington as soon as possible, and not later than six months after its signature.

In witness whereof, the respective Plenipotentiaries have signed the present Treaty in duplicate and have thereunto affixed their seals.

Done at the City of Washington the 22nd day of the 11th month of the 27th year of Meiji, corresponding to the 22nd day of November in the eighteen hundred and ninety-fourth year of the Christian era.

AMENDMENT TO THE FOREGOING TREATY PROPOSED BY THE GOVERNMENT OF THE UNITED STATES OF AMERICA AND RATIFIED WITH THE TREATY.

ART. XIX.—Clause 2, after the world "time" insert the word thereafter and strike out all after the world "time" down to and including the word "operation," so that the clause will read: "Either "High Contracting Party shall have the right, at "any time thereafter, to give notice to the other "of its intention to terminate the same, and at the "expiration of twelve months after such notice is "given this Treaty shall wholly cease and deter-"mine."

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of the United States of America, deeming it advisable in the interests of both Countries to regulate certain special matters of mutual concern, apart from the Treaty of Commerce and Navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1.—It is agreed by the Contracting Parties that one month after the exchange of the ratifications of the Treaty of Commerce and Navigation signed this day, the Import Tariff now in operation in Japan in respect of goods and merchandize imported into Japan by the citizens of the United States shall cease to be binding. From the same date the General Statutory Tariff of Japan, shall, subject to the provisions of Article IX. of the Treaty of March 31, 1854, at present subsisting between the Contracting Parties, so long as said Treaty remains in force, and thereafter, subject to the provisions of Article IV. and Article XIV., of the Treaty signed this day, be applicable to goods and merchandize, being the growth, produce, or manufacture of the territories of the United States upon importation into Japan.

But nothing contained in this Protocol shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food, or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs or any other indecent or obscene articles; Articles in violation of patent, trademark, or copyright laws of Japan; or any other article which for sanitary reasons or in view of public security or morals, might offer any danger.

2.—The Japanese Government, pending the opening of the country to citizens of the United States, agrees to extend the existing passport system in such a manner as to allow citizens of the United States, on the production of a certificate of recommendation from the Representative of the United States at Tokio, or from any of the Consuls of the United States at the open ports in Japan, to obtain upon application passports available for any part of the country and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokio, or from the Chief Authorities in the Prefecture in which an open port is situated, it being understood that the existing Rules and Regulations governing citizens of the United States who visit the interior of the Empire are to be maintained.

3.—The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Commerce and Navigation signed this day, and that when the said Treaty is ratified the agreements contained in the Protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the same and have affixed thereto their seals.

Done at Washington the 22nd day of the 11th month of the 27th year of *Meiji*, corresponding to the 22nd November, in the eighteen hundred and ninety-fourth year of the Christian era.

(Signed) WALTER Q. GRESHAM. (L.S.)

IN MEMORIAM.

There came a call upon the crystal air;
Like broken harps it wept;
Across the slumb'ring sea, it travelled here;
Soft in my soul it slept.
Thy loving lips, that lonely message sang,
Thy plaintive voice through storm-tossed water rang,
Farewell! farewell!

And 'cross those 'wild'sing waves, I sob replies,
Like restless Autumn breeze,
That wildly, wierdly, wanderingly sighs,
Through naked Maple trees!
My words go forth, Beloved! and meet thy song,
Which on the wind's wan wing is borne along,
Farewell! farewell!

Thy voice is silent: never more again
'Twill cross the shimm'ring sea;
Nor pant, dear heart, with passion and with pain
Its sombre song to me.
So fair were't thou, Death willed thee for his own,
And from that land, thou waf'st a whisp'ring moan,
Farewell! farewell!

And as for me! who linger here behind,
Beloved! and weep for thee,—
I listen silent to the wistful wind,
That sighs in every tree.
For in that sound of sorrow and of pain,
I hear the voice I loved, weep once again,
Farewell! farewell!

E. M. D'A.

A LECTURE.

'Ere, listen to me! There's a stupid mistake
Which ignorant folks is accustomed ■ make:
In men of full age and of any pretence
To culture it's reckoned a 'angin' offence;
In schoolboys a blunder so bad, I have heard,
That, even in standards as low as the third,
It's the kind of be'aviour they treat with a switch
—The damnable error of writin' "*and which.*"

You may say there is authors for whom people claim
A place, high or low, in the temple of Fame,
But who seem to have ended where duffers begin
If usin' these words is a cardinal sin:
You may cite to me essayists, earlier, later—
Haddisou, Johnson, Macaulay, or Pater:
Not a man of them all has a right to a niche,
—Bein' tried and found guilty of writin' "*and which.*"

In the temple of Fame not a writer may stand
Who has coupled a "which" to a "which" by an "and;"
But I rather imagine that I shall be there,
With my scissors and paste and my Editor's chair,
For I trust, my good friends, that I'm not such a fool
As (hexcuse me for smilin') to break my own rule;
I may trip 'ere and there, but I'm clear of the ditch
—The damnable error of writin' "*and which.*"

D.

BRETT AND COMPANY LIMITED.

The semi-annual general meeting of shareholders in the above-named Company took place in Kiel's Building on Tuesday afternoon. There were present, Mr. J. F. Lowder (Managing Director), in the chair, Messrs. S. D. Hepburn, M. Russell, F. G. Woodruff, H. Moss, C. W. Ure (Auditor), R. Home Cook, and A. T. Watson (Manager).

The CHAIRMAN said that he had to ask the meeting to make a slight alteration in the accounts which were laying before them. It was in the profit and loss account, the first item on the debit side of which mentioned a 5 per cent. dividend paid in September, 1894. This should be March, of that year. The alteration was merely verbal and made no alteration in the accounts at all. With the permission of the meeting he would take the accounts as read. It was seldom that a Company in Yokohama had so unsatisfactory a statement of account to present to its shareholders. He could offer no other explanation for this bad condition of affairs than that which was given in the report. Nobody, no shareholder, could have been more surprised than he was when he first saw the accounts as prepared by their auditor, Mr. Ure. It was reasonable to suppose that if it was possible for any one to have known how things were going it should have been the managing director. The managing director, they might reasonably say, at all events, should have been in a position to have checked the neglect which has evidently taken place. He did not wish to excuse himself from any portion of the blame which might properly devolve upon him; he would only say this, that he took the position of managing director during the temporary absence of Mr. Donald Fraser from Yokohama, simply because no other shareholder in the Company would come forward to fill the place. Neither did he wish it to be understood that he had any desire, now that the business of the Company had got into a difficult position, to shirk the duties properly falling upon him. But at the same time, it was in the interests of the shareholders that some one should be appointed—some one who had more time and a business knowledge of retail business such as he never possessed or ever pretended to possess—to take the post of managing director. So far as he could see, the business ought to be a good one. So far as he could see, the management of the business required a very much more thorough oversight than a professional man could give. Therefore, somebody who had a knowledge of the working of a retail business should be appointed to the position. He did not wish it to seem that he wanted to retire from a difficult position, but he placed his resignation in the hands of the shareholders in the hope that they would appoint some one with practical business experience to assist Mr. Watson in the management of the business. In the few remarks which he had just made, he had no intention whatever of finding fault with Mr. Watson. He (Mr. Watson) was one of the most energetic men which he (the Chairman) had ever met. He had done all that he could to develop their business. In fact, the only thing that could be said against the Company was that there was a lack of business management which required supplementing. Perhaps it would facilitate matters if he, as Chairman, moved the adoption of the accounts. Then, if some one would second the proposal, the accounts would be open for discussion and remarks.

REPORT.

The statement of Assets and Liabilities, and the Profit and Loss Account for the year ended the 31st December, 1894, accompany this report.

The profit on sales for the year 1893, amounted to $15,733.81, whereas in the year under review, it was only $10,809.64, showing a decrease in gross profit of $4,914.71; and this notwithstanding the fact that the gross sales for the year 1894 exceeded those for 1893 by $5,061.85. There was a slight increase in expenditure for the year 1894: but not enough to account for the enormous falling off in profit, which can only be attributed to the impaired purchase-power of the yen in procuring drugs that have to be paid for in gold, and to neglect in not adding to the selling price of stock the difference in value between the two currencies. In other words, the Company has sustained a loss, by reason of its customers having been supplied under cost.

This seems to be the true and only explanation of the unsatisfactory nature of the accounts presented; in which case it will be apparent that the stability of the Company as shown by its earning power remains unaffected.

J. F. LOWDER,
Managing Director.

STATEMENT OF LIABILITIES AND ASSETS ON 31ST DECEMBER, 1894.

I have compared the above Statement with the Books and Vouchers of the Company, and find the same in accordance therewith.

CHAS. W. URE, Auditor.

Yokohama, March 12th, 1895.

MR. WATSON said that if he was in order he should like to make a few remarks. It was not, he thought, quite sufficient to put the present position of the Company all down to neglect. That did not cover the thing exactly. During the last two or three years all businesses here had had a peculiar position to meet—a constant fall in exchange. It must be remembered that goods were not sold at once after being landed here. Therefore, when a price was put on an article which was put in stock

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

it resulted that when it came to be sold the dollar had fallen in value, thus entailing a loss. The position of importing retailers had consequently been something terrible. For instance, when the dollar was at 3/4 goods were marked accordingly; but the dollar fell to 3/ and the result was a lose of four pence in every dollar. Now when they came to take $30,000 it could easily be seen that the loss of thirty thousand four-pences amounted to a considerable sum. Mr. Russell, one of their shareholders there in the room, could bear him out that heavy losses were incurred through the fall in exchange. Things were better now, the position being very different. There was a prospect of a hardened exchange, and consequently he was confident that making their calculations accordingly the position of the Company would be very different at the end of the ensuing twelve months. One thing he would recommend: they must cut down expenses, and he might perhaps be allowed to point out where this could be done. The post of Managing Director, as their Chairman would doubtless allow, was in their Company, quite a sinecure,

The CHAIRMAN—Quite so.

Mr. WATSON (continuing)—By taking away his remuneration $600 a year—$50 a month—a considerable saving would be made. Then their auditor, Mr. Ure, had consented to make an audit of their books at the rate of $50 per audit. This would effect another saving of $250. By reducing expenses in other directions he had full confidence in earning a dividend next year. And, should the amount for distribution be above that required for the dividend, the remainder might then be divided between the managing director and the auditor. Or, if they so wished it, pro rata among the shareholders. He would give them figures to prove this if they desired; but he thought it best not to have the figures reported in the newspapers—it would be giving the details of their business away. He appealed to the Chairman.

The CHAIRMAN—If you appeal to me, I can only say that I am distinctly in favour of the most frank explanation being given to the public that it is possible and advisable to make.

Mr. WATSON—I ask the shareholders, shall I give the figures?

Mr. RUSSELL—No.

Mr. URE—I agree with Mr. Russell.

Mr. RUSSELL—They can be given after the meeting.

The CHAIRMAN—I don't think that it will serve any purpose to give explanations in private which could not be told in public.

Mr. WATSON thought that the shareholders did not require the figures being stated in public.

The CHAIRMAN—Very well; then I ask if any gentleman present will second my proposition that the accounts be passed.

Mr. WATSON—I second it.

Mr. COOK—The discussion being in order, I rise as a shareholder to express my surprise at the accounts of the company as here set out. The very explanation that is given of the cause of the Company's position—that goods were supplied to customers under cost price—is sufficient to damn any company. He could not accept the excuse at all, and he was surpised at their manager expecting that such an excuse would ever be taken by the public. A more probable explanation of their loss, would, he thought, be found in the large running expenses of the Company. He would beg them to look for a moment at the original prospectus of the Company wherein it was stated that the estimated expenses of the business was $7,170 per annum. Yet look at the amount placed under the various heads of expense in their present balance sheet. Some reduction must be made in them somewhere; the expenses must be cut down with all rigour attendant with safety if they ever expected to occupy a position different to the one they held at present. If this could not be done, he did not see the use of going on with the business any longer.

Mr. WATSON said he thought he could see his way to reducing the expenses by something between $1,600 and $2,000.

The CHAIRMAN—That will be delightful, if it can be done.

Mr. WATSON—If the managing director forgoes his fees, and Mr. Ure's fees are reduced to $50, a big reduction will at once be made. I think we can still compare favourably with Messrs. North and Rae, our competitors, in the matter of expenses, if you eliminate the extraordinary expenses which had to be met in December. In that month we had to expend $400 in sending an assistant home, and $600 in bringing another out. Now the agreement of the assistant runs for five years, but the $600 has not been spread over that period; it is all put down in December. I don't think it should have been. We have an opposition to fight, and fight it for you. You will see that when this $1,000 extraordinary expenditure is eliminated there has not been much loss. The going down of exchange of course affected us very greatly.

Mr. COOK said he would like to know the details of the salaries and wages account—$7,700.

The CHAIRMAN referred the questioner to the Auditor, who had all the items to hand.

Mr. RUSSELL—If a Shareholders' Committee be appointed and instructed to draw up a report, to be presented to days' hence, all these items can be gone into and explained. Then this meeting can be closed and another meeting called which will not be public, but at which the report can be presented.

Mr. HEPBURN thought that the present meeting was called to pass the accounts. He thought that this could be done: then the public meeting could adjourn and a private meeting be afterwards called. It would prevent the publication of the details of their business in the newspapers. By doing as he suggested they could easily avoid publicity.

The CHAIRMAN—I fear no publicity, let us discuss our affairs in public. I am sure there is nothing that we need be ashamed of. This meeting is public, and having once been declared public can not be turned into a private assembly of shareholders. I believe in every publicity being given to our business. I firmly believe that the accounts now before you are absolutely correct.

Mr. HEPBURN quite agreed that their affairs so far were satisfactory, only some persons seemed to be questioning different items of expense.

The CHAIRMAN—I hope Mr. Russell will accept the office of Managing Director. If he will, there will be no necessity for a Shareholders' Committee, nor of a subsequent meeting. He was sure that all the shareholders were agreed that Mr. Russell would do all that he could for them, having himself a knowledge and experience of a retail business.

Mr. RUSSELL could not entertain the suggestion. It would conflict with his own business; and he felt that he could not act in a dual capacity.

Mr. HEPBURN said Mr. Russell had spoken to him in a similar strain before the meeting commenced. For himself he could not see where the conflict would come in between a chemists' business and Mr. Russell's, still he gathered that their business could sell anything from a pair of boots to a ship.

Mr. RUSSELL said that both business had runners engaged in soliciting business on board the ships, and on that account he could foresee a conflict.

Mr. URE.—In that case why should we not have a combination, we could then reduce the wages account.—(Laughter.)

The CHAIRMAN—If Mr. Russell is referring to the aërated water business, I must say that I should feel inclined—I don't say that I really would—to adopt Mr. Russell's view. But I feel sure the shareholders would be fully convinced of the perfect honesty of Mr. Russell's actions in any report he might present to them.—(Hear, hear.) I feel sure that by appointing Mr. Russell managing director we should be affecting a saving for shareholders.

Mr. RUSSELL—I must decline the position. I propose instead that a Committee of Shareholders be appointed, consisting of Messrs. Hepburn and Cook, to report to the Managing Director.

The CHAIRMAN—I have no doubt, Mr. Russell, that Messrs. Hepburn and Cook would agree to serve on a Committee with you.

Mr. URE—I second the proposal that a Committee of three be appointed, and that it consists of Messrs. Russell, Cook, and Hepburn.

The CHAIRMAN—The Committee to have full power of inspection to report?

Mr. RUSSELL—Yes, to report to the managing director.

The CHAIRMAN—Who would act upon it and call another meeting? I may here say that when the Articles of Association were drawn up, a question arose as to the expense attendant upon running public companies in Yokohama, and it was upon my suggestion that only one Director was appointed, the object being to pursue economy in regard to the business. When a public company is formed a Board of Directors must be constituted, and I thought that a managing director would be cheaper than a Board. Should you desire me to fill that position in the coming year, I beg to state here, that I shall forego any fee whatsoever. I had wished to make the move before, but, as you are aware, I was really appointed merely as a *locum tenens* while Mr. Fraser was away. I was then under the impression that Mr. Fraser was about to return to Yokohama and therefore I did not wish to take any step which he might think would conflict with the good of the company. I now know, on good authority, that Mr. Fraser is not returning to Yokohama, and now I am free to state that I will not receive any fee all. I think you have come to the best decision you could have done in appointing a Committee of Inspection. Now we must all do our best to devote our attention to the business, to save where we can, and to knock off altogether any branch of the business which it is advisable, so as to devote ourselves to the business of chemists and druggists.

Mr. URE—I should like to say, should it be the wish of the Company to retain my services as auditor during the coming year, that I shall charge nothing at all for auditing your accounts.

The CHAIRMAN—The generous offer of Mr. Ure, is one, I think, which the Company cannot properly accept. Mr. Ure is a professional man, and as such is entitled, I hold, to charge his fees for work done in his professional capacity. With the managing director it is different, he is not there professionally. I vote that Mr. Ure's generous offer be not accepted.

Mr. URE—Thank you, Mr. Chairman. But I would rather not take any fees. I am one of the largest shareholders—with the exception of Mr. Watson—together with my wife, and at a time like this I feel that I should like to do something in the way of making a sacrifice for the common good.

The CHAIRMAN—A most excellent spirit has been shown by shareholders to-day. I take it that the accounts have been passed and an Investigating Committee appointed. We will now endeavour to work together to achieve a better showing in the future than we have been able to do in the past.

Mr. WATSON proposed a vote of thanks to the Chair, which was carried, and the meeting separated.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

ANNUAL MEETING.

The annual general meeting of the Yokohama General Chamber of Commerce was held on Friday afternoon, but owing to it being mail-day the attendance was small, and the discussion remarkably short. There were present, Mr. J. Lindsley (Chairman), Messrs. J. D. Hutchison, W. W. Till, Jas. Walter, G. Buchanan Dunlop, J. P. Mollison, M. Kaufman, H. C. Pigott, E. Flint Kilby, A. S. Garfit, H. Pinckney, J. A. Fraser, M. W. Kochen, and O. Kiel (Secretary).

The SECRETARY read the notice convening the meeting, and the minutes of the previous meeting were taken as read.

The CHAIRMAN then read the following:—

REPORT.

Whereas last year the report of the Chamber showed a decrease of about $1,500,000 in the foreign trade of Yokohama, as compared with that of 1892, it will be seen from the tables appended to this year's report that the volume of trade, expressed in currency, has exceeded that of 1893 by $32,000,000, and that the total increase at all ports has amounted to nearly $53,000,000. It may be thought that this great increase in the foreign trade was due chiefly to the unusual demand for vessels and munitions of war; but upon reference to the tables it seems that less than $12,000,000 of the total gain can be attributed to such purchases.

So far as Yokohama is concerned, the greatest gain is in the export of Raw Silk and Silk Fabrics, which has exceeded that of 1893 by $16,000,000. It must be borne in mind, however, that the tables cover transactions made between the beginning and the end of the year, instead of those between the beginning and the end of the season.

It should also be mentioned that the statistics showing the total volume of trade do not include movements of specie and bullion, of which roughly $34,400,000 in value were exported in 1894, against $12,300,000 in 1893, very nearly three-fourths of which went to British India. On the other hand, nearly $27,000,000 were imported, against $11,000,000 in 1893, more than half of which was imported from Great Britain.

EXPORTS.

RAW SILK.—The total export from Yokohama to Europe and the United States during the year 1894 exceeded that of the previous year by 16,831 bales in quantity, and by $11,051,700 in value.

The respective figures are as follows:—

		Average Price.
For 1893	36,363 Bales, valued at $28,275,800	=$776 per Bale.
For 1894	53,194 Bales, valued at $39,267,500	=$738 per Bale.

But in comparing the two seasons as a whole, there will not be the same excess, as the total export from the opening of the new season on the 15th of last June until its end next June, will probably not exceed 50,000 bales against 44,017 bales exported last season.

The large increase during last year is due to the

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

resumpti on of purchases for the United States, following the long period of depression there, which lasted until the end of 1893.

The export to the United States during 1894 was more than double that of 1893, being 30,205 bales against 14,809 bales; whilst that to Europe shows an increase of only 1,435 bales, being 22,989 bales against 21,554 bales.

The crop for the present season has been a good one, and it is estimated that 50,000 to 55,000 Bales will be available for export. An unsold stock of 5,300 Bales was carried over from the previous season, but this and whatever increase there has been in the total production have been absorbed by the Japanese looms, owing to the increased demand from Europe and America for silk piece-goods of Japanese manufacture. There are, however, no means of obtaining accurate returns of the quantity used by Japanese looms.

The following table will show the course of prices for No. 1 Filatures during the years 1893 and 1894:

	1893. Filatures No. 1.		1894. Filatures No. 1.	
	Coarse Size.	Fine Size.	Coarse Size.	Fine Size.
January	$ 860	$ 910	$780	$780
February	880	960	800	800
March	—	980	820	840
April	1,020	1,175	800	780
May	900	1,060	710	730
June	—	—	680	730
July	800	930	680	748
August	750	880	820	820
September	750	830	740	760
October	730	780	760	770
November	740	770	760	770
December	780	780	800	800

From the foregoing table the prices it will be seen that there have no great fluctuations in value excepting in May, when prices declined $50 to $90 per picul, but recovered again in August.

Waste Silk.—The year opened with low prices in the consuming markets; quotations on the 1st of January being fcs. 7½ per kilo. for good Oshu Noshi, and fcs. 4½ per kilo. for Joshu Noshi (ordinary classification).

The stock on hand at the beginning of the year was heavy, amounting to 20,000 piculs, and the low quotations for Raw Silk favoured its consumption, there was a corresponding decrease in the demand for spun yarns. The trade consequently languished all through the first half of the year, prices in the manufacturing centres showing a decline of ten per cent on those current at the beginning of the year. August, September, and October brought some improvement in the demand for Japan Wastes; but this afterwards fell away, and the year closes with the market dull as it began.

The course of the Waste Silk trade in 1894 has not been favourable to the exporter, with constantly declining values in the selling market. For the producer, things have been better and he has little of which to complain; the fall in Exchange has enabled him to keep the dollar price of his produce practically unchanged throughout the year.

Manufactured Silk Goods.—The export of these goods continues to increase at a rapid rate. Available statistics,—which are, however, not very reliable,—show that the greatest increase has been in plain goods of light weight, such as are made in the province of Echizen, of which Fukui is the chief town.

Of these goods 570,000 pieces, of varying lengths and widths, were made during the year 1894, of which 516,195 pieces were exported from Yokohama against 237,682 pieces in 1893. Other districts also produce large quantities of this material; and in addition some 45 to 50,000 pieces of 50 yards each must have been used in the manufacture of handkerchiefs, and similar articles for export.

The Export of Hankerchiefs, on the other hand, appears to be diminishing, having only amounted to 1,418,973 dozen in 1894, against 1,700,000 dozen in 1893.

Considerable interest has been taken in the production for export of Fancy Silks, such as Brocades, etc., and a fair quantity has been made, but in quality the goods leave much to be desired, especially in respect to finish. With proper organisation and under better conditions for manufacturing, the Japanese looms would soon become formidable competitors in Europe and America for the trade in such goods.

Tea.—Exports for Yokohama exceeded those of the previous year by one million lbs. and $95,000 in value. Kobe increases this excess by half a million lbs. and $135,000 in value.

The market for New Teas opened in Yokohama about April 20th, and a very large business resulted in May, June, and July.

The quality of the crop was decidedly superior to that of the previous season, there being a marked decrease in common grades, which as a rule help to swell up the figures of Export and bring Japan Teas into disfavour in the consuming markets.

The first dollar cost averaged from 20 to 25 per cent. over that of the preceding season, but this was offset by much lower rates for Sterling Exchange.

The outbreak of the war between China and Japan coupled with the settlement of the labour strikes in America, caused a sudden spurt in the United States and Canada during the months of August and September, when considerable profits were realised. The prevailing idea in America, at that time, was that the war might interfere with the export of Tea from both countries, instead of which it seemed rather to stimulate it. The general result of the past season has been fairly satisfactory to shippers, and probably the best the Japanese have had for many years.

There is a smaller stock of old leaf on hand to be carried over than in any previous year.

Owing to the advance in the cost of Labour and all Tea-firing Material it has been found necessary by firms engaged in this trade to make an increase in their charge for firing.

Copper.—The low rates of exchange ruling during 1894 have enabled producers in Japan to obtain remunerative prices for their production, and the export from Yokohama shows an increase of about 10 per cent, as compared with 1893. Prices have been well maintained at $20 to $21 per picul for slabs, and $22 to $23 per picul for ingots and tiles.

Most of the Copper shipped from Yokohama is the production of the Ashiwo mines.

Fish Oil.—The export of Fish Oil for the year under review has increased to 154,000 piculs against 117,000 piculs in 1893. This may be attributed partly to the better arrangements made by fishermen in the North for producing the article, and partly to the greatly enhanced prices exporters could pay on account of the lower exchange. From $3.80 pe picul in January they have gone up to $4.40 and $50 at the end of the year, which prices must pay the fishermen handsomely.

The Herring catch in April and May was a heavy one, while Sardines were caught in October and November only in small quantities, and in poor condition, so that the yield of that catch was smaller than usual.

A special feature of the last year's business has been the trial of shipments in bulk in tank steamers. It remains to be seen, however, whether Fish Oil can be obtained regularly in sufficient quantity and good quality to make this way of transporting pay.

IMPORTS.

Sugar.—The Sugar trade again shows development, but this year chiefly in the direction of Brown sugars which have been attracted hither on account of the high prices ruling for refined sugar nearly throughout the year. The usual supplies from Formosa have been augmented by receipts from Manila and elsewhere. The first sugar from Formosa arrived on the 9th February, when the price was $4.40 to $4.45. In April it rose to $4.75/80, and fell to $4.30 in December. During 1893 prices opened and closed at about the same rates as above; they, however, advanced in July to $5.15 per picul.

The production of Sugar in the province of Satsuma and in the Liu-Chu Islands is large, but the returns are difficult to obtain. This product finds a market mostly in Kiushiu and Osaka, comparatively little coming to Tokyo. The relative quantities of Refined and Brown Sugar imported will be found in the tables annexed.

Raw Cotton.—Imports at the port of Yokohama for 1894 exceeded those for 1893 by about 10 per cent. But for all Japan the increase is considerably greater, amounting to 40,000 piculs in quantity, and nearly 3½ million dollars in value.

Cotton Yarn.—Two powerful influences were at work during 1894 against the successful transaction of business in imported Cotton Yarn; first a declining Manchester market throughout the year, and secondly almost continuous weakness in Silver and Exchange, the combination preventing the determination of anything like fixity of values from month to month, and rendering all operations treacherous and uncertain.

Thus the Manchester quotations for certain Standard Spinnings in the month of January and December were as follows, c.f.i. :—

	January. per lb.	December. per lb.
16/24s	7 1/16d.	5 3/16d.
28/32s	7 15/16d.	6 7/16d.
38/42s	8 5/16d.	7 7/16d.
32s. two-fold	8 3/16d.	6 11/16d.
42s. two-fold	9 3/16d.	7 7/16d.

whilst exchange, which stood at 2s. 3d. for Bank Demand paper when the year opened, closed in December at 1s. 11⅛d.

Besides these difficulties, the war with China had to be reckoned with, and there is no doubt it exercised a very deterreut influence on the operations of Japanese Merchants, and consequently a depressing effect on business generally, and under all the circumstances it is not to be wondered at that the volume of trade shows a marked decrease as compared with 1893. At the same time from an examination of figures the falling off cannot be entirely attributed to the causes mentioned above, because it would appear to have been greatest in those yarns chiefly affected by the competition of the Spinning industry in Japan. For instance, the deliveries of 16/24s. and 28/32s. together barely reached one half of what they were in 1893; 38/42s. also showed a decrease, whereas 32s. and 42s. two-fold, which are not yet produced in any quantity in Japan, just about held their own; the inference being that as time goes on 16/24s. and 28/32s. will disappear from the list of imports altogether, just as Bombays have already done.

Grey Goods were of course affected by the same influence as Cotton Yarns, viz., declining values in Manchester and declining Exchange, and although figures perhaps do not show it very clearly, the business was of a dragging and unsatisfactory nature, specially after the outbreak of the war.

Fancy Cottons and Woollens.—The trade in Velvets, Prints, Woollens, Italians, and Blankets shows a marked falling off, and prices throughout the season have been extremely unsatisfactory. The difficulty of transportation and reduced consumption owing to the war have led to several failures of Japanese dealers in the fancy import trade.

Native Manufacturing Industry.—In connection with the foregoing remarks it has to be noted that several Cotton Mills have been enlarged and new ones erected; and the same is true regarding the Woollen Spinning and Weaving industries.

Metals.—Increases are shown in all articles under this heading except rails, which have fallen off 15 per cent. in quantity, and 2 per cent. in value. The difference in these percentages is due to some extent to the decline in silver and the consequent enhanced cost in Japanese currency.

The increases are due in several instances to special causes, *e.g.* the large import of Pig Iron is owing to the requirements of the Tokyo Waterworks, and the Government demands for war material. The Japanese production has become much larger also, and is believed to yield handsome profits, while importers, as a consequence of this competition, have to work on the scantiest of margins.

Bars, Rods, and Hoops show little change as compared with 1893, but Plates and Sheets increased 50 per cent. in quantity, mainly being employed in the construction of boilers for manufactories—these being now made in the country instead of being imported as formerly—and for iron chimneys, which, since the earthquakes of June 1894, have been largely substituted for brick ones.

The increased imports of Corrugated and Flat Galvanized Iron were in excess of requirements, and the year closed with considerable stocks in native hands, and the same remark applies to Wire Nails.

The import of Tin Plate has been larger than in any previous year, and is accounted for by the canning of bulk-imported Kerosene, and by the Government's demands for tinned meats for the Army.

The influence of the war is also shown in the augmented import of Steel,—60 per cent above 1893.

Speaking generally, the rise of prices in Japanese currency, naturally to be expected in consequence of the fall in silver, has not been observable, owing to the steady decline in the home sterling prices of metals and the conservative policy of dealers, who have been short of cash.

The consumption of Ingot Iron has increased, while that of ordinary Iron has declined, and it is a noteworthy fact that the import of English makes of Iron of all kinds is on the wane, being replaced by Belgian and German brands.

Kerosene Oil.—The total importation of Kerosene Oil into Yokohama during 1894 has greatly exceeded that of 1893, that of American oil having increased 50 per cent. But on the other hand the importation of Russian oil shows a decrease of about 6 per cent. The consumption has been in about the same proportion.

The average prices ruling in 1894 show an advance over those of 1893 especially during the first six months when they were to to 15 cents higher.

Silver and Exchange.—Silver rose slightly during the first half of January and Exchange followed, but early in February a decline set in which continued during three weeks, when a smart drop in silver of ¼d., viz: from 28⅜d. to 27⅛d. took place, and rates declined in sympathy. The fall continued until March 7th when silver touched 27d., the lowest rate on record. A slight reaction then set in, followed by the usual fluctuations, when in April a smart rise to 29⅛d. occurred, rates for Bankers' Sight Drafts on London advancing from 1s. 11⅞d. to 2s. 1⅛d. During May, June, and July silver fluctuated between 28d. and 29d., and exchange between 2s. 0⅛d. and 2s. 1⅛d. In August silver rose to 30⅛d., and exchange to 2s. 2⅛d. From that time until the end of the year a steady decline set in, rates falling in December to 1s. 11⅛d., the lowest ever known. Up to the middle of November exchange and silver had kept fairly well together, the former being if anything above the parity, but a strong demand for Bankers' Sight Drafts and Telegraphic Transfers arising, rates were forced down considerably below silver, 4 months Credit Bills being bought at 2s., with silver at 27½, as against 2s. 0⅛d. in March when silver was quoted at 27d.

The recent agitation Germany, Great Britain, and the United States in favour of Bimetallism, and the prospect of another Silver Conference, may result in a permanent advance in rates.

The issue of the new British Dollar by the Bombay Mint for use in the Straits, Hongkong, and China will probably diminish greatly, the demand for the Japanese silver *yen*, and imports into Japan of Bullion are likely to fall off correspondingly.

Memorial to the London Chamber.—In accordance with the resolution passed at the last General Meeting, a memorial in favour of International Bimetallism was drawn up by a sub-committee, and, after being approved by the committee as a whole, was duly circulated among the members and others interested, and was very generally signed, when it was forwarded to the London Chamber, and to the principal Chambers of Commerce in other parts of the world.

TREATY REVISION.

The revision of the treaties, so long deferred, has made great progress since our last meeting, and the Japanese statesmen concerned have good reason for believing that their work is in a fair way to be finished without much

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

further delay. The treaties recently made with Great Britain and the United States give to Japan practically all that she asked for, and are certainly a triumph for her diplomats, but to what extent they will prove beneficial to this country, and how far the substance has been sacrificed to the shadow, remains to be seen.

The extra-territorial clause in the old treaties, which has been considered by many as a grievance, and by some even as a humiliation, has certainly been productive of some benefit to the Japanese nation.

The treaty ports have afforded, free of expense to Japan, an epitome of the civilisation of Europe and America, as an object lesson from which she has learnt much and benefited correspondingly; and not a small factor in the gradual evolution of freedom and enlightment has been an untrammelled foreign press.

And with reference to the much abused tariff, it seems certain that the growth of foreign commerce—which, fostered by low duties, has developed rapidly, having increased nearly fourfold during the past ten years alone, viz, from $61,800,000 to $136,7000,000, and enriched the country beyond all precedent,—could not have taken place had the duties been subject to sudden and unforeseen changes.

WAR WITH CHINA.

The war which Japan declared against China last August has been vigorously waged on the part of the former power, and with unvarying success.

The disturbance to other than the trade between the countries engaged, including Korea, has been less than was anticipated.

The war has created a great demand for foreign steamers, of which 38 have been sold, realising over eight million yen, and many others have been chartered.

That Japan has been able to carry on such an expensive war for nearly nine months without a foreign loan, and maintain the value of her paper currency, seems highly creditable to those in charge of her finances, and would imply that the steadily growing demand for her products abroad, and the remarkable industrial development during the past decade have enriched the country beyond expectation.

DISCRIMINATION AGAINST FOREIGNERS IN THE PAYMENT OF CUSTOMS DUES.

Early in the year the attention of the Chamber was called to the fact that Customs dues were accepted from Japanese at the rate of 317.44 *Bus* per $100, whereas foreigners were obliged to pay at the rate of 311 *Bus*,—a discrimination of over 2 per cent. in favour of the Japanese. Proof of this practice here was not immediately available, but on the 7th August, when the requisite documents had been obtained, a letter was addressed to the *doyen* of the Consular Body, Dr. Schmidt-Leda, regarding the matter, and on the 9th October notice was received from the Superintendent of Customs through the British Consul that from 15th October the exchange value of the *ichi bu gin* would be calculated at 31 *sen* 5 *rin* when duties are levied upon imports and exports—thus doing away with the discrimination complained of.

CODE TO BE ISSUED BY THE TELEGRAPH COMPANIES.

Information has been received to the effect that a compilation of 200,000 words is being made by the Associated Telegraph Companies, and it is intended to limit senders of telegrams to the use of those words. This Chamber has joined those of Kobe, Hongkong, and Shanghai in a memorial to the London Chamber protesting against such a restriction on the part of the Telegraph Companies, and it is to be hoped that this part of the scheme will be abandoned. Such a complication, however, if printed with distinguishing numerals and issued at a moderate price, would be a boon to all merchants.

RAILWAYS.—Considerable activity was manifested through the first half of the year to increase the railway system of the country; six new lines, aggregating ■ miles, were opened in 1894, whilst extensions to existing lines, aggregating 70 miles were also made, the most important of which was that of the Sanyo Railway from Itozaki to Hiroshima, 46 miles, bringing that city into direct connection with the Capital within 30 hours.

HARBOUR WORKS.—The Iron Pier is finished, and will be open for use on the April 1st next. Rails have been laid on it and extended to the Customs compound to connect with the Export and Import sheds.

The Breakwater is still unfinished, but repairs are going on constantly, and the sum of $160,000 has been voted by the Diet to be spent on it during the present year.

CUSTOM HOUSE.—With the exception of the Kerosene Godowns at Ishikawa, where a reservoir has been built for leaky cases, saving the leaking oil, no new erection has been made in 1894. It is, however, expected that the railway tracks connecting all the sheds with the Pier will greatly facilitate the handling of goods.

THE ANNUAL ACCOUNTS are submitted herewith.

The expenditures have been less than those of 1893 by nearly $300, but receipts have fallen off by more than twice this amount, reducing the cash balance from $761.91 to $396.61. Members' subscriptions exceed those of 1893 by $55, and it is in the sale of circulars that the main difference occurs, as this source of income is less by $453.38, the remainder being due to a sale of furniture and paper during the previous year.

The thanks of the Chamber are due to Messrs. Garfit and Pinckney, who have kindly audited the accounts.

The number of Members stands at 61 against 63 at this time last year.

JOHN LINDSLEY, Chairman.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.
STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1894.

RECEIPTS.

To Balance from 1893		$ 761.91
Members' Subscriptions ... ... 63 at $25		1,575.00
Circulars sold :—		
To Members ... ... 13,666 for	$270.72	
To Non-members ... ... 3,792 for ...	338.64	
		2,355.36
Half-yearly Statistics sold ... ... 448 for		86.83

Interest allowed by Hongkong and Shanghai Bank on Current Account		7.23
		$4,801.03
Balance. Cash in hand...		$ 396.61

EXPENDITURE.

Salary of Secretary and Staff	$3,000.00
Rent	480.00
Printing Circulars, Statistics, Reports, etc.	678.90
Advertising, and subscriptions to local newspapers ...	69.00
Returns of Imports and exports	163.00
Stationery	60.10
Books of reference	8.42
Petty disbursements, fuel, lighting, collector's fees, postages and sundries	145.00
	$4,604.42
Balance, carried to new account	196.61
	$4,801.03

E. & O. E.

Yokohama, March 13th, 1894. O. KIEL, Secretary.

Examined and found correct, March 19th, 1895.

A. S. GARFIT,
H. PINCKNEY. } Auditors.

On the motion of Mr. J. P. MOLLISON, seconded by Mr. J. D. HUTCHISON, the report and accounts were adopted.

Mr. MOLLISON moved that a vote of thanks be accorded to Mr. Kiel for preparing the interesting tables accompanying the report.—(Hear, hear.)

Mr. E. FLINT KILBY seconded.

The motion being put to the meeting was carried unanimously.

Mr. KIEL bowed his thanks.

Mr. PIGOTT said that he had one point which he wished to bring before the Chamber; it was in reference to the accommodation at the Customs House. The exporters had one shed of 300 *tsubos*, but the importers' shed was more than double that size, 860 *tsubos*. Now as steamers were frequently only in port one day this caused a great deal of inconvenience, more especially to the exporters of teas. Now that various fresh arrangements were about to be made in regard to the Customs House, he thought that this subject should be brought before the authorities, who might then be able to do something towards providing further accommodation. I might mention, the speaker continued, that six small godowns are also at the disposal of importers upon the payment of special fees, but these godowns are useless so far as exporters are concerning owing to the authorities declining to collect duties there. As a matter of fact, one firm of stevedore's can in three quarters of a day fill up the exporters shed. When three mail-steamers are in port on one day, the inconvenience arising from this state of things can be easily seen; and on a wet day the loss through tea having to be left outside, is very considerable.

The CHAIRMAN—Mr. Pigott's point is well taken. But I must say that the Customs authorities experience a great deal of difficulty owing to their room being limited; and importers are also of opinion that they cannot spare any of their room. I hope that when the land which it is proposed to reclaim from the Bay is ready, that the Customs authorities will provide more room for the exporters. I had a conversation with Mr. Okoshi only the other day about this matter, and he said that he would do all that lay in his power to help us. I think that he will do all that is possible in the matter. With reference to our accounts, some step must be taken for increasing the income of the Chamber, unless our returns from the sale of circulars increases, of which there appears to be no prospect. It has been suggested that an increase in the annual dues should be made.

Mr. MOLLISON said that if it was necessary to make a formal proposition at the annual meeting, he would propose that the subscription to the Chamber be raised by the incoming committee to such an amount as they considered necessary under the circumstances.

The CHAIRMAN—It is not absolutely necessary to make such a proposition, but the incoming committee would no doubt like something of the sort carried before they move in the matter.

Mr. WALTER—I second Mr. Mollison's proposition.

Mr. BUCHANAN DUNLOP asked what amount would probably be required.

The SECRETARY—About $600, if we go on at the present rate. In 1893 the return from the sale of circulars showed a decrease of $400; in 1894 it was $500, and so far as I can see it will continue to go down. Nearly every mail day sees a decrease in the sales.

Mr. MOLLISON—I believe that formerly the subscription was $50 a year; now it is $25. This leaves ample room for the committee to raise the dues without causing any dissatisfaction. From $10 to $15 would no doubt be all that was necessary.

The CHAIRMAN—The Secretary says that $10 or $15 will be ample.

Messrs. MOLLISON and KOCKEN were then appointed scrutineers of the ballot for Chairman and Committee. After the votes had been cast,

The CHAIRMAN said that he had much pleasure in announcing that Mr. James Walter had been chosen Chairman of the Chamber.—(Loud applause.)

Mr. WALTER—I thank you for the honour which you wish to confer upon me, but I must decline. I have several reasons, but the first is that I am not *au fait* with the general business of this port.

The CHAIRMAN—The other name on the list is Mr. Mollison.—(Applause.)

Mr. MOLLISON—I must also decline the honour. I am on several committees in Yokohama, and Chairman of two, and I feel that the claims of my own business will not allow me to take the position of your Chairman. I am very sensible of the honour you wish to confer, but really I must decline.

The CHAIRMAN—Nothing remains then, but to elect the nine members of the Committee and to leave to them the appointment of a Chairman.

The voting for a Committee resulted as follows:—Messrs. J. A. Fraser, J. D. Hutchison, Jas. Walter, Jas. Dodds, J. P. Mollison, W. W. Till, H. Baelz, E. Flint Kilby, and J. Lindsley.

Mr. KILBY proposed a vote of thanks to the Chairman for his services during the past year; and a vote of thanks to the outgoing Committee.

The motion was carried by acclamation and the Chairman bowed his thanks.

The meeting then terminated.

Value of Exports and Imports for all Japan during the Years 1894 and 1893.

Total Value of Exports.	1894.	1893.	Increase of Exports

Mr. Gresham, United States Secretary of State, has sent a communication to the Senate announcing that France, Germany, Holland, Portugal, Sweden, Spain, and Russia have promised to promulgate regulations to prevent collisions at sea. Japan has already promulgated regulations. The Governments of Great Britain, Austria, and Italy have expressed a desire for a postponement. Great Britain at first agreed to a plan for an international understanding; but in October last Lord Kimberley concluded that as all maritime Powers had not signified their acceptance, it had been found impossible to put it into effect on the 1st of March.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

Leonardo da Cutri and Ruy Lopez.

There is doubtless a good deal of romance connected with the early history of Chess in Europe, but there are certain matters upon which the old writers are pretty generally agreed. One of these concerns the two celebrities named above. Mr. J. A. Leon repeats the story told by Professor Tomlinson, George Walker, and others, 50 years ago, but first recorded by Alessandro Salvio about 1634. Leonardo, a young law student, a native of Cutri, in Calabria, appeared at Rome during the Pontificate of Gregory XIII. (1572-1585). He evidently took a much more real interest in chess than in his serious studies, and attained to great proficiency. Being very young, he was known as *Il Puttino*—the boy.

About the same period Ruy Lopez, an ecclesiastic, then considered the foremost European player of the time, visited Rome to solicit of the Pope a benefice which had become vacant at the Court of Philip II. of Spain. Ruy Lopez heard of Leonardo, sought him out, and conquered him two following days. This caused Leonardo much vexation, and he retired to Naples, devoting himself for two years to closer study and practice. There is a story at this period, which may or may not be

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

true, that Leonardo heard of his brother's capture by corsairs and rescued him from the condition of galley slave. Leonardo noticed a chess board on the pirate vessel, and showing his interest, and finding the captain was a chess enthusiast, they played together, with the result that Leonardo won sufficient to rescue his brother and 200 crowns besides. Leonardo returned to Naples, where he met the celebrated player Paolo Boi, and having visited Genoa, Marseilles, and Barcelona, proceeded to Madrid, and had the satisfaction of beating Ruy Lopez in presence of the chess-loving king, Philip II. Here all accounts agree. Leonardo received 1,000 scudi, besides jewels, &c., and continued a conqueror, beating Paolo Boi, of Syracuse, in a set match.

It is said that on revisiting Calabria at a subsequent period Leonardo was poisoned by some envious person in the palace of Prince Bisignano at the age of 45.

Game No. 238.

A well-played game in the tournament of the Melbourne C.C.

WHITE. Loughran.	BLACK. Hodgson.

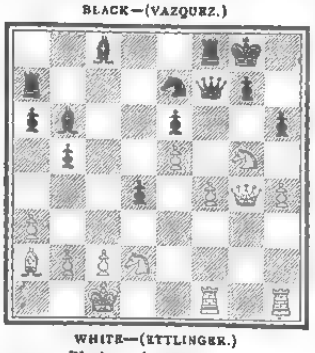
39—B to B 2	39—B to Q 4
40—Q to K 2	40—K to Kt sq.
41—Q takes Q P	41—Resigns (i)

a. So far the moves are pretty fully in accord with modern principles and the theories of experts, and this move is now generally approved, White having no Q B with which ■ attack the King's position.

b. A move of vital import in all French Defence games. White is almost compelled to capture, and his centre is thus at once disturbed.



c. As White had a good reply, this is scarcely to be commended, the pawn being separated from its supports.

d. Another consequence of Black's pawn advance is this strong move.

e. Q to K sq. seems necessary about this period, forcing the exchange. The text move caused much difficulty later, and White has now time to carry on his attack by opening the K Kt file.

f. It was necessary to prevent B x R P. Otherwise Kt to K 4 was more attacking.

BLACK—(VAZQUEZ.)

WHITE—(ETTLINGER.)

Black to play at move 22.

g. We fail to see any objection to R x Kt now, the K P being pinned by the B. Previously it was not feasible on account of the reply Q x ■ ch.

h. And here Kt to Q 6 or Kt to B 6 might be played. The text move threatens to win immediately by Q to R 5 ch., Kt interposes; K x R, mate. The position is highly interesting and suggestive.

i. If K x Kt, White wins the R by Q to B 2 ch. A game of rare interest.

Game No. 240.

A very finely played consultation game from Russia, two amateurs consulting against Messrs. Jewlifejew and Schiarski:—

SCOTCH GAME.

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3

26—K to K sq.	26—B takes R
27—Kt to K 2	27—R takes ■
28—Kt takes R	28—R takes Kt
29—B to B sq.	29—R to K 6 ch.

The Black allies win. (c).

a. A variation quoted from the Handbuch by Mr. Séguin *(Times Democrat)* runs as follows:—9—Castles; 10.—P to ■ R 3, Kt x K B P; 11.—R x Kt, B x R ch.; 12,—K x R, Q to R 5 ch.; 13,—B to Kt 3, Q to Q 5 ch; 14—K to B sq, Q x Q Kt P; 15,—Kt to Q 2, P to K B 3; 16, P x P, Q x K B P ch, and then 17—B to K B 4, and Black has a superior game.

b. Kt to Q R 4 is very tempting at this point, but the reply is B to Q 7 ch, followed by Q x P ch, &c.

c. *Novo Vremya* remarks that Mr. Jewlifejew, who was mainly responsible for the many well-calculated brilliances of this game, is a young student at St. Petersburg University. His play here justifies the brightest anticipations (Séguin).

Young Players.

From a strictly scientific point of view the intercollegiate match won by Harvard was of no great importance; but the winning college was represented by two young men of whom nothing had previously been heard. The prominence of mere youths in several recent chess events is a feature of high interest and importance. Once get the rising generation interested in chess and we are convinced nations will be benefited and elevated. Rowdyism and chess can never go together. We may note in this connexion the success of Mr. Hymes, a very young player, who recently won the Championship Tournament of the Brooklyn C. C. To come out first in such a contest means a good deal more than appears at first sight. Our English clubs are constantly telling the same tale, which seems to speak most hopefully as to the future of the game. We all honour the veterans, but if the truth must be told, some are played out, and we long for something breezy and fresh.

There was a delightful freedom from constraint and the beaten tracks in some of the play at Harvard. It is refreshing to go over these games. The irregularities in the openings would positively shock some wiseacres full of book knowledge. And yet, who can say the play is dull or wanting in point and effect?

Game No. 241.

Played in the Students' Match, N.Y.

40—K to R 5	40—B to Kt 5 mate

Note.—White, one of Harvard's representatives, got a great advantage early in the game. Then at move 17, with two Queens to his credit, he made a curious oversight, and lost both. Black, Mr. R. L. Ross, of Yale, now took over the attack, and won in a splendidly played ending game which at one time seemed hopeless.

The final scores in the New York inter-collegiate match were as follows:—

		Won.	Lost.	Total.
Columbia	J. Binion	1½	4½	
	A. M. Price	1½	4½	... 3
Harvard	M. Ballou	4½	1½	
	Van Kleeck	4½	1½	... ■
Yale	A. Bunstead	2	4	
	R. L. Ross	4	2	... 6
Princeton	W. V. Beldon	2½	3½	
	E. B. Seymour	3½	2½	... 6

Early Enthusiasts.

Other some saye that there were two brethren, the one named Lidie and the other Tirrhene, who, being afflicted with great hunger and famine, did invent this playe to the end that in playing it they might employ their spirits so vehemently that they might the more easily pass the famineall affliction, and, indeede, they passed the time so well that they made but three meales in two days.—Damiano (Rowbotham's Translation).

It is worth noting that the Bank of England has fewer notes in circulation than it had fifteen years ago, and the total active note circulation of England is hardly greater than when the Act of 1884 was passed. Banknotes are much less used in business than formerly other means of exchange having taken their place.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, March 27.

The Emperor William has visited Friederickaruhe, where he ordered a review of all arms and thanked Prince Bismarck for his services to Germany in front of the troops.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hiroshima, March 28, 5 p.m.

Surgeon-General Ishiguro reports:— The Viceroy's wound is one centimetre below the middle edge of the left ophthalmic cavity. It is of an oval shape and about eight millimetres long: the sidewise edges are irregular and the œdema reaches the eyelid. There is a swelling close to the eye. The bullet entered the haimours cavity through the anterior wall of the left superior maxillate bone. The extraction of the bullet by opening the cheek is objected to by Li and his attendants. According to reports up till to-day the wound is progressing favourably, the antiseptic treatment being fully effectual. There is no discharge and the temperature and pulse are normal. The nurses sent by the Empress are helping in the bandaging. No apprehension need now be felt.

(FROM THE "N.-C. DAILY NEWS.")

London, March 20.

Slatin Bey has arrived at Cairo in safety. In his opinion the Dervishes will not attack Kassala, but will try to prevent the Italians from advancing towards the North-west of Nubia.

The loss of the Spanish cruiser *Reina Regente*, with all hands, in Trafalgar Bay, is now confirmed, the vessel having been found submerged.

Mr. Fowler, Secretary of State for India, is still confined to bed owing to influenza.

London, March 22.

Mr. Fowler, Secretary of State for India, has informed the Viceroy that he fully approves of the steps taken for the relief of Dr. Robertson's force in the Chitral.

Mr. Wills (Liberal) has been elected Member of Parliament for Bristol, defeating Mr. Gore, the Labour candidate.

(FROM JAPANESE PAPERS.)

Shanghai, March 28.

The *North China Daily News* has issued the following extra:—The Pescadores were occupied by the Japanese on the 24th inst. after a short fight.

Hiroshima, March 29.

Count Ito, the Premier, left his hotel at 7 a.m. to-day for Ujina, whence he started for Shimonoseki in the *Yayeyama Kan*. Messrs. Ito, Chief Secretary of the Cabinet; Oura, newly appointed Governor of Yamaguchi, and Sameshima, Secretary, accompanied the Premier. Count Saigo also proceeded to Shimonoseki in the same ship.

Viscount Enomoto, Minister of Agriculture and Commerce, left for Kyoto to-day.

Shimonoseki, March 29.

The trial of the ruffian Koyama takes place in the Yamaguchi Local Court to-morrow. Mr. Ogawa Genichi will defend him.

Akita, March 29.

The Omono river has overflowed, and Ani and Nambu are inundated, many buildings being submerged. The water is a little over three feet in the deepest parts.

Shanghai, March 29.

The Hongkong Government has denied the statement that the plague had broken out there.

Hiroshima, March 28.

H.I.H. Princess Komatsu, who was ordered by H.I.M. the Empress to visit the disabled soldiers at Kokura, Kumamoto and Sascho, leaves here to-morrow for her mission.

Shanghai, March 29.

Rumour has it that the Japanese have landed at Hai-chow (Kiang-su Province), about one hundred miles to the north of the Yangtsze.

The Commander-in-chief of Nankin has dispatched 7,500 soldiers to enforce Hai-chow

REPORTS.

The British schooner *Esmeralda*, Captain J. T. Harrison, reports :—Left Yokohama the 11th February at 3 p.m.; had light northerly and easterly winds to Sunaki; thence moderate E.N.E. winds and fine. Arrived at Agrigan the 18th and left the following morning for Guam, called at Pagan, Saipan, Thian, and Rota. Arrived at Guam the 24th at 9 a.m.; American whaler *Calafornia* in port. The Spanish mail steamer arrived from Manila viâ Caroline Islands, reported heavy typhoon on January 21st, devastating the whole Island of Jap. Government and all other buildings totally destroyed. Captain O. Keefe had left three days previously on a voyage to the Eastern Island and had not been heard of since. Left Guam the 28th February for Yokohama. Arrived at Rota the 1st March and Saipan the 3rd; left the 5th for Alimagan. Arrived the 6th, communicated, and proceeded to Pagan. Arrived at 8 p.m. and left the 8th for Alimagan. Arrived the same day and lay off and on until the 11th at 2 p.m. receiving cargo proceeded to Anatakan. Arrived the 12th at 6 a.m. and left the same day for Pagan. Arrived the 13th at 6 a.m. and left at 10 a.m. for Agrigan. Arrived at 6.30 p.m., took in cargo and left the 14th at 2 a.m. for Assumption. Arrived the 15th and landed people and proceeded for Yokohama. The whole time at the Islands and thence to lat. 22 N. alternate light and moderate E. and N.E. winds and fine; thence to 30° N. strong N.N.E. winds increasing to N.E. gale, followed by 2 days calms and light airs; 32 N. to Rock Islands light to moderate S.W. winds and changeable weather; at 8 p.m. on the 27th Rock Island abeam light southerly winds freshening to strong S.W. gale. Arrived at Yokohama the 28th March at 5 a.m., blowing hard; barometer 29.60.

LATEST COMMERCIAL.

IMPORTS.

As noted last week, the tone of the market generally is distinctly better, but a further advance in Exchange makes buyers pause in the hope that holders will accept less money for Yarns and Shirtings. We leave quotations unchanged, but competition among holders will surely have the effect which buyers desire unless Exchange should decline soon. Fancies and Woollens are dull as ever.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8½ lb., 38½ yds. 39 inches	$2.25 to 2.90
Grey Shirtings—9lb, 38½ yds. 45 inches	2.50 to 3.25
T. Cloth—7lb, 24 yards, 32 inches	1.65 to 2.00
Indigo Shirtings—12 yards, 44 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
Cotton—Italians and Sattaens Black, 32 inches	PER YARD. 0.16 to 0.22
	PER PIECE.
Velvets—Black, 35 yards, 22 inches	7.25 to 9.50
Victoria Lawns, 12 yards, 42-5 inches	0.85 to 1.00
Turkey Reds—2.0 to 2.4lb, 24/25 yards, 30 inches	1.65 to 1.75
Turkey Reds—2.8 to 3lb, 24/25 yards, 30 inches	1.85 to 2.05
Turkey Reds—3.8 to 4lb, 24/25 yards, 32 inches	2.30 to 2.60
Turkey Reds—4.8 to 5lb, 24/25 yards, 32 inches	2.80 to 3.10

WOOLLENS.

	PER YARD.
Flannel	$0.30 to 0.50
Italian Cloth, 30 yards, 32 inches best	0.32½ to 0.37½
Italian Cloth, 30 yards, 32 inches Medium	0.27½ to 0.30
Italian Cloth, 30 yards, 32 inches Common	0.20 to 0.25
Mousseline de Laine—Crape, 21 yards, 21 inches	0.15 to 0.22½
Cloths—Pilots, 54 @ 56 inches	0.35 to 0.50
Cloths—Presidents, 54 @ 56 inches	0.60 to 0.65

No. 42s, Two-fold	47.00 to 49.00
	PER BALE.
No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Bars and Plates move freely, other sorts dull and slow of sale. The higher Exchange has reduced prices of Metals and we lower all quotations except those for Bars.

	PER PICUL.
Flat Bars, ½ inch	$3.60 to 3.65
Flat Bars, ¾ inch	3.65 to 3.70
Round and square up to ¾ inch	3.60 to 3.75
Iron Plates, assorted	3.70 to 3.80
Sheet Iron	4.70 to 4.90
Galvanized Iron sheets	8.25 to 8.80
Wire Nails, assorted	5.80 to 6.10
Tin Plates, per box	5.80 to 6.00
Pig Iron, No. 1	1.65 to 1.70

KEROSENE.

At last some business has been done, and about 40,000 cases American Oil have been sold at $2.20 and over. Russian is still held for an advance on this figure, and the market generally is firm with strong holders.

American	$2.20 to 2.22½
Russian	2.22½ to 2.25

SUGAR.

Brown—Arrivals have been on a fair scale, exceeding sales to some extent. Market closes quiet, with a tendency to lower prices. White—Demand has fallen off considerably but prices well maintained.

	PER PICUL.
Brown Takao	$3.60 to 3.65
Brown Manila	4.40 to 4.60
Brown Daitong (New)	3.40 to 3.50
Brown Canton	3.50 to 3.90
White Java and Penang	6.30 to 6.75
White Refined	6.50 to 9.20

EXPORTS.

RAW SILK.

A fair demand for fine Filatures and Kakeda for Europe. Prices are unchanged nominally, but the high rate of Exchange tends to weaken those kinds which must be exported. Coarse descriptions are getting high figures as the Home consumption is active. Present stock of all kinds 3,300 piculs and no Spring Reelings to hand yet.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dineio, London.

MONEY is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is THE Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in **"MONEY."**

THE MONTHLY FOREIGN AND COLONIAL EDITION, called **"MONEY AND TRADE,"** is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America and other countries.

MONEY AND TRADE enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 6TH, 1895.

SUMMARY OF NEWS.

H.I.M. THE EMPRESS still remains at Hiroshima.

THE Pescadores have been completely occupied by the Japanese forces.

THE Hongkong Government denies the presence of plague in the colony.

THE approach of the tea-season is attracting a large number of Chinese back to Yokohama.

THERE will be 4,290 candidates in the forthcoming examination for physicians in Tokyo.

THE price of gas supplied by the Yokohama Gas Works has been decreased by 10 per cent.

MR. JAB. WALTER is the Chairman of the Yokohama General Chamber of Commerce for the year.

RAILWAY loan bonds to the amount of two million *yen* were issued by the Government on the 28th ult.

THE wound of the Viceroy Li has nearly healed. He attended at the conference chamber on Wednesday.

THE [illegible] vessels-of-war are in contr[illegible]

Prince Yamashina, acting in the capacity of representative of H.I.H. the Emperor, on the 1st inst.

THE fifth children's concert given in the Public Hall, Yokohama, on Wednesday evening, was very enjoyable.

THE Naval Department had received public subscriptions to the amount of *yen* 528,082 up to the 31st ult.

AT the end of last year the residents of Tokyo numbered 1,856,915, an increase of 289,437 over the previous year.

TEN thousand letters of inquiry and condolence are said to have been received by the Viceroy Li during the past week.

THE rowing season of '95 was formally opened in Yokohama on Saturday. The weather was all that could be desired.

KOYAMA TOYOTARO, the would-be assassin of the Viceroy Li Hung-chang, has been sentenced to penal servitude for life.

THE Emperor of Japan has granted an unconditional armistice for 21 days in the districts of Mukden, Shantung, and Chihli.

THE new pier at Yokohama was opened on April 1st. Up to the present no ship has availed itself of the facilities afforded.

SEVERAL shocks of earthquake have been felt in Yokohama this week. They have been of a minor character, causing no damage.

THREE buildings of the Omi Cotton Spinning factory, owned by Mr. Shimozato Dembei, at Otsu were destroyed by fire on the 28th ult.

THE Ibaraki Prefectural Assembly has been dissolved. It attempted to pass a vote of censure on the Governor and the President of that body.

THE Itabashi Powder Factory is said to manufacture the best smokeless powder in Japan. The Government has placed large orders with the firm.

VISCOUNT AOKI, Japanese Minister to Germany, will arrive in Japan by the *Empress of India*, which is expected to reach Yokohama on the 14th inst.

A SMALL fire was discovered in the roof of a house on the Bluff on Wednesday morning. It was extinguished before much damage had been done.

THE *Kosuge Maru*, which sank off Tamashima, Korea, the other day, has been raised. She was towed into Nagasaki on the 1st inst. by the steamer *Amoy*.

LIEUTENANT GUNJI, leader of the Chishima settlers, was released from duty as Chief Torpedo Officer at Talien, on the 25th ult., to continue his work in Chishima.

THE Imperial Meteogological Central Observatory, formerly under the control of the Home Minister, was transferred to the Educational Department on the 30th ult.

OVER four hundred railway coolies from Saga, Fukuoka, and Kumamoto, passed the physical examination on the 25th ult. at the Kokura Hospital, Fukuoka Prefecture, and have since been sent to Chinchow.

VISCOUNT NOMURA, Minister for Home Affairs, has been instructed not to resign his portfolio, the responsibility for the Shimonoseki incident resting solely with the Governor and Chief of the Yamaguchi Prefecture.

by the end of 1897. Three, two battleships and a cruiser, are building in England, two, cruisers, are being built at Yokosuka, and the other, a dispatch-vessel, has been laid down at Kure.

THE HON. P. LE POER TRENCH, the British Minister to the Court of Japan, is in such indifferent health that, on the advice of his medical attendants, he has applied for leave of absence. He will probably leave Japan for home on the 10th proximo.

IT IS stated that some Directors of the Yokohama Exchange for Yarn, Raw Cotton, and Metal, and the Exchange for Silk and Four other Staples, are consulting upon the advisability of amalgamating the two Exchanges.

THE members of the Red Cross Society at Yokohama visited the disabled soldiers at the Military Sanitarium at Kumenuma on the 31st ult., and presented some cigarettes to them. They took a Band along with them to add to the pleasure of the patients.

REUTER telegraphs:—A large British column is being organised with all speed at Peshawur, to relieve Dr. Robertson, the British Resident, and the garrison at Chitral. Lieutenant Ross and fifty-four Sikhs, who were advancing to reinforce an outpost, were surroundedand killed. Mr. Allen, M.P., has brought forward a resolution that members of the House of Commons should receive payment for their services. The resolution was carried by a majority of eighteen. The Peruvian insurgents, under Piérola, have captured Lima after severe fighting. Habibulla, son of the Ameer of Afghanistan, is to visit England. Lord Elgin, the Viceroy of India, announcing to Mr. Fowler, Secretary of State for India, the junction of the Burmese and Chinese Telegraph systems, states that he trusts it will promote the friendly relations and commercial advantage of Great Britain and China. The Spanish Government is sending Marshal Martinez Campos with seven thousand troops to quell the revolt in Cuba. Seven thousand of the Reserves have been called out in Belgium owing to an ominous agitation which is being fanned by Socialists in the industrial centres. Lord Rosebery and Mr. Fowler are both slowly improving in health. The Viceroy of India wires that the position of the enemy at Chitral is closely invested and attacked nightly. The Czarevitch, who is now in Algiers, is worse.

THERE is very little to be said about the Import trade on account of the fluctuations in the rates of exchange, which have been of such a nature as to upset all calculations and deter business that certainly would be done were this factor absent. Quotations for Manchester goods are consequently nominal in the absence of business, and the same may be said with regard to Metals of all descriptions. Of the latter there have been large arrivals, though probably the greater portion have been either on Government account or private bargains. The Kerosene trade is also unsettled by the instability of exchange, and not much has been sold. There have been imports of both American and Russian oil. There is not much demand for Sugar, and the stock is being increased by fresh arrivals. The Silk trade has been insignificant, exchange having worked against shippers, while holders make no concessions. Nothing to report in Waste Silk. There is nothing doing in the Tea Trade, the next movement being the exhibition of hand musters of new Leaf, which are now being looked forward to as near. Exchange fluctuations from day to day have been a great drawback, and business generally has been

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The discussion of the Shimonoseki incident is now virtually over, and the vernacular press has returned to other topics incidental to the war. Whether the Li mission can reach a successful issue is one of these topics. The press has nothing new to say on the subject. It simply repeats its old inability to place any confidence in the mission, and adds that even if Li be induced to give assent to the terms demanded by Japan, nothing can yet be counted final, since there are the strongest reasons to doubt whether the Chinese Government will endorse or abide by the agreement. Thus, on the whole, the Tokyo papers think that the prospects of peace are as remote as ever.

* * *

The *Kokumin* and a few other journals strongly maintain that during the existence of the temporary armistice in the north, the southern expedition should be pushed on with redoubled vigour. They argue that there being no unity among the different parts of China, but each being in practice an independent unit, southern China is still indifferent as to the issue of the war, and careless about the disasters, however severe, to which the north may be subjected. Thus southern China maintains its old attitude of arrogance toward Japan, as stubbornly as ever, and there is urgent necessity that its people should be taught by actual suffering to appreciate the strength of this empire. These considerations acquire added force when it is remembered that the cession of Formosa and its adjacent islands to Japan is one of the inevitable conditions of peace, and that, consequently, the Japanese will be brought into close contact with the Southern Chinese. It is a point of prudence to educate the latter as early as possible to a due appreciation of the kind of men they will hereafter have to deal with. At the same time, the *Kokumin* has something to say about England and the island of Chusan. To occupy the Pescadores, it says, leaving Chusan untouched, would not be a prudent policy, for that would be to leave the island, not to be held by China, but to be annexed by England, who has been looking at it with hungry eyes for a long time. Suppose that the island fell into the hands of England, what would the consequence be to Japan? The consequence would be the creation between Port Arthur and Talien on the one hand, and Formosa and the Pescadores on the other, of a great obstacle to Japan's maritime supremacy; Chusan must therefore be occupied and absorbed by Japan.

* * *

The *Mainichi* contends that the surrender of China being the surrender of the Court and Government, the mass of the people, generally ignorant even about the events of the war, will probably continue as before to despise the Japanese as *Wojen*. It is therefore imperatively necessary that Japan should demand a surrender not only material but also moral. The cession of territory, the payment of an indemnity, and so forth, are all forms of material surrender. But such things are defective unless supplemented by a moral lesson. How than can China be made to morally acknowledge her defeat? The *Matuichi* suggests that on the day of the day of the conclusion of peace the Emperor of China should issue a proclamation announcing to all the subjects in his realm the details as to the causes and results of the war, thus acknowledging that justice was on Japan's side and that China's action was unjust. Such an edict may be regarded by some as a mere form of apology, but it would assuredly have great importance as a means of making China morally own her defeat, and, at the same time, of imposing on her the responsibility of hereafter maintaining peace in the Orient. The *Mainichi* advises the Japanese Plenipotentiaries to make the above suggestion one of the conditions of peace.

* * *

The *Jiji* returns once more to the discussion of anti-English feeling in Japan. It does not itself believe, as the local English papers assert, that this sentiment has lately and suddenly acquired strength. But it alleges that if such be the case, it must be chiefly attributed to the writings of those English papers themselves. The Japanese people are now passing through a momentous national crisis; so momentous that nothing similar is to be found in their history. They are therefore keenly sensitive to what other people say of their doings, and if they are extremely grateful for any favourable opinion expressed, they are equally distressed by any adverse criticism, and are provoked perhaps out of proportion to what the criticism is really worth. Now what has been the tone of the majority of the English local papers since the opening of the war? They have written as though their editors had lost their moral equilibrium, and had become blindly jealous of Japan. Their utterances have been spiteful, abusive, and calumnious. The general mass of the Japanese people, not knowing how devoid of influence these papers are among the foreign community, hastily conclude that they must represent the ideas entertained by British subjects toward Japan in connexion with the war. Whether the Japanese are to be disabused of such a misconception, or whether their umbrage against England is to grow deeper and deeper, depends almost entirely upon the tone that the local English papers adopt in the future.

EDITORIAL NOTES.

LIEUT.-GENERAL KAWAKAMI AND THE DELEGATES OF POLITICAL PARTIES.

Some days ago, writes the Hiroshima correspondent of the *Nichi Nichi*, delegates representing over 60 members of the Lower House called upon Lieut.-General Kawakami, Vice-Chief of the Central Staff, for the purpose of exchanging views in connection with the peace mission. After having stated their opinions on the problem, they asked the General for his ideas on the subject and also with regard to foreign interference. The General replied gravely that military men simply obey the commands of the Generalissimo and are not supposed to hold individual views on any subject. A newspaper rumour at present current to the effect that such and such officers entertain different notions from those prevalent at the Central Head-Quarters, cannot be correct, as there can be no choice when a mandate from His Imperial Majesty is concerned. A General, continued Kawakami, simply undertakes, in obedience to the Emperor's orders, the responsibility of carrying out various military operations, and there is, therefore, no occasion for him to express his own views on the matter. It appears that politicians not in the employ of the Government are considerably exercised about the latter's policy with respect to the peace problem, but although not at all unreasonable, being actuated by genuine patriotism, those fears are quite unnecessary. The Premier is not an inexperienced lad, said the General, and it is not likely that he is ignorant of the general tendency of public opinion. Then again, he has taken part, since last year, in all the discussions held at Head Quarters and is, therefore, intimately acquainted with the opinions prevalent there. He will neglect nothing in connection with the peace negotiations that would conduce toward arriving at satisfactory results. As to foreign interference, the same equanimity may be entertained, for has the Premier not been able thus far to do without foreign interference? No statesman could have done better, and the success thus far attained in the country's foreign relations with respect to the war may with justice inspire confidence and security for the future in the minds of the public at large. In short, concluded the General, the delegates would do well to relieve themselves of any anxiety entertained by them respecting the peace negotiations.

SNOW SCENES.

Mild as generally are the winters in this country, the Japanese are fond of the snow and their poets have, from ancient times, revelled in the description of winter-landscapes. The delights of coasting, sleighing and skating are, however, practically unknown; but to make up for these the Japanese are not only adepts in making "snow-men" but are also keenly appreciative of snow-fights and snowballing. Near the Mizaki Theatre, in Tokyo, some weeks ago, an unknown artist had made snow-busts of a number of the leading actors: Danjuro, Kikugoro, Fukusuke, and several others. Nothing but compressed snow and bits of charcoal were use, yet the likenesses were striking and inimitable. During the last rather heavy snow-fall a snow fight of an amusing nature was, according to the *Yomiuri Shimbun*, inaugurated on the premises of Lieut.-General Takashima, in Kioi-cho, Kojimachi District, the promoter of the revel being the General's mother. The male servants, grooms, ladies' maids, kitchen wenches, etc., numbering sixteen all told, were made to take part in a grand melée. They divided into two "armies," male and female, the men being dubbed the "Manchurian Division," while the women were styled the "Girls' Regiment." The "Manchurians" wore *hachimaki* around their heads, while the Amazons had the sleeves of their robes fastened up with cords (*tasuki*) and their tresses covered with the national *tenugui*. *Au reste* we quote the *Yomiuri*:—"As soon as the noble matron, who was looking on from a room in the upper storey, saw that the combatants were properly arranged, she gave the signal to commence firing. A breathless and impetuous battle ensued, each army throwing snowballs at the other with admirable vigour. In a little while all was confusion: some running away in affright while others were encouraged by success. The Amazon captain was a tall and corpulent maid who fought with undiminished ardour in the midst of the flying (snow) balls and ever exhorted her followers to 'March on!' with a loud, stern voice. At the outset the 'Manchurians' made light of their opponents but were soon forced to give way before the fearful volleys of their antagonists and were speedily thereafter put to utter rout. Loud cheers from the 'Girls' Regiment' announced their victory. Madame Takashima's delight was unbounded, and on the spot she awarded numerous *obi*, hairpins, and kerchiefs to the victors. On the other hand the 'Manchurians' were compelled, in token of their defeat, to cook rice and rub *miso* for as well as serve at the table of their vanquishers. With their hang-dog faces they looked for all the world like Chinese captives."

ATTEMPTED FRAUD ON A GOVERNMENT DEPARTMENT.

A very villainous attempt was made on the 24th ult. to defraud the War Department in a contract for coal. According to the *Yomiuri Shimbun* and several other metropolitan journals, Yamamoto Yoshizo, a coal-merchant of Kanda District, has been for some time favoured with occasional orders from a merchant named Tanaka, resident in Kyobashi District, who is well-known as a Government contractor. The other day Yamamoto received an order for 1,500 *kwamme* of coal, which Tanaka requested him to deliver at the War Department on the above mentioned date. The coal was promptly sent under convoy of Yamamoto's son, one of his employés, and a member of the Tanaka firm. According to custom, the coal had to be weighed out under the supervision of a Department inspector, a Mr. Hayashi in the present instance. Just before the coal was to be dumped into the scales the inspector noticed that Yamamoto's employé began to fiddle with the weighing machine in a rather suspicious manner. When the weighing began Hayashi was surprised at the apparently enormous weight of the coal. His suspicions being thoroughly aroused, he requested to be put on the scales himself, as he knew his own weight to a fraction; and when this was done he found that instead of his usual nineteen *kwamme* he was supposed to weigh twenty-four! He immediately began to minutely inspect the scales and discovered finally that a small bar of iron

Digitized by Google
Digitized from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

about 1½ lbs. in weight, had been slipped under the beam, thus completely falsifying the weight on behalf of the treacherous coal-dealer. So soon as this was verified the inspector sprang to arrest Yamamoto's employé, who was evidently the culprit; but the latter raced off at the top of his speed and made for the premises of the adjoining General Staff Office. Here he ran through a number of corridors and finally emerged at the main entrance is a dishevelled and breathless state. Some *kurumaya* who were waiting in front of the gate, noticing the man's wild appearance, at once seized him, under the impression that he must be a robber of some sort. The man fought furiously to free himself, but was at last captured by several gendarmes who had followed him on from the War Department. All of Yamamoto's men, ■ well as his son, were promptly arrested and will shortly be tried. Investigation showed, however, that the Tanaka firm neither knew of nor connived at the attempted fraud; so their employé was subsequently released from custody. But it ■ rare that such fraudulent dealers are caught *in flagrante delictu*, and it is to be hoped that the punishment will be exemplary.

A JAPANESE PAPER ON THE WOUNDING OF THE VICEROY LI.

As indicative of the manner in which the vernacular press have spoken on the subject of the attempted assassination of the Viceroy Li, we quote the following sentences from the *Yorozu Choho*, now the leading metropolitan *ko-shimbunshi*, and having the second or third largest circulation of all Japanese journals:—From the august Emperor down to the humble cottager, there is not one who does not feel mortified at this incident, which casts the greatest stain on Japan. The whole country is overcome with the sense of shame, horror, and remorse. The enormity of the would-be assassin's crime is so great and no palliation whatever is possible. Instantaneous death on the spot would have been but a small atonement, and all the dreadful penalties meted out under like circumstances in the days of yore—supposing they were to be revised for the sake of punishing the ruffian—seem inadequate, altogether too light. And cursed be the day on which the miscreant was born to the country! . . . Our own feeling is so intense that we cannot write of the affair calmly; and the only consoling feature, if there be one, is that the event is viewed by the whole people in its full gravity."

SCREENED FROM POVERTY.

SEVERAL metropolitan journals tell of a *Kurumaya*, living in Shiba District, who was, the other day, rescued from dire poverty in a wholly unexpected way. It appears that he was originally the son of tolerably affluent parents, but they experienced so many reverses that, upon their decease, he was compelled to ply the trade of a jinrikisha-puller. Some months ago the man borrowed a small sum from a local money-lender. When the date of repayment came, he found himself wholly unable to meet the obligation, and asked for a renewal of the note. This was done several times, until the money-lender's patience was worn out, and he caused the few belongings of his debtor to be seized. They consisted of sundry wooden and other kitchen utensils, some bedding, and an old screen, tattered and worn. On asking a dealer in second-hand articles to make an offer for the lot, the dealer said he would give thirty five *sen* but not a penny more. Somewhat disappointed at this result, the money-lender had the poverty-stricken household gods removed to his own place. The next day he once more visited the *Kurumaya*, who was not a little surprised to see his unwelcome guest so soon again, expecting, of course, to be unmercifully dunned. On the contrary, this time the usurer wore a beaming face and exclaimed:—"I have brought you good news, and come with money for you. That screen of yours had on it ■ picture by the famous artist Chodensu. I showed it to an expert yesterday who paid me three hundred *yen* cash for the painting. Of this sum I keep one hundred, and give the rest to you, wishing you better fortune and long life." The poor man was overjoyed at this unlooked-for good luck. He thanked the honest money-lender repeatedly and then went straightway to release his daughter from servitude of a deplorable kind. This done he rented a small shop, and is now fairly started in a line of business that promises no anxiety in future. The story is a true one.

CHINESE REPORTS.

A METROPOLITAN contemporary gives a number of most amusing excerpts from various Chinese papers published in Shanghai and Hongkong. We learn from these, and for the first time, that a great battle was fought not far from Chefoo a few days before the end of January. The Chinese won a complete and overwhelming victory, no less than thirteen thousand Japanese being left dead on the field. Among the spoils taken were nine cannon of large calibre, twelve Gatlings, and an innumerable quantity of *impedimenta*, such as horses, carts, tents, provisions of all kinds, and no less than five thousand excellent rifles. The Chinese vernacular paper publishing these interesting details naïvely concludes that the battle "must have taken place just after the Japanese were driven back from Weihaiwei."

* * *

Another Chinese journal tries to explain why it is that Japan has so far come off victorious in the war. Japan ■ a little country and the people are so poor that they are ■ their wit's end to supply their daily food. For this reason the youths are trained to arms from an early age in the hope that they will be able to thus conquer some wealthy and less martial nation. "We Chinese have had thirty years of peace; we are rich, and our land is a delightful place to live in; we have thus no need to resort to arms for the sake of food, ■ the Wo-jen must. That they have been victorious hitherto is ascribable to this cause alone. And what does it matter if they have won a few battles and sunk a few ships? They can never conquer our whole Empire; only a few outposts at best: and we can afford to pay for the war. It is impossible that they should take Tientsin. Our militia alone will suffice to drive them back. It is not necessary to take the trouble of spitting on our hands and preparing for a serious conflict. The Japanese are even now at the end of their resources."

* * *

A third, equally truth-loving, paper is quoted as saying that, after the battle of Weihaiwei, a band of ten Japanese troopers was surrounded and defeated, after desperate resistance on their part, by a large body of Chinese soldiers. One trooper was killed on the spot; another was severely wounded; while a third was taken prisoner. The captive, a young man of twenty-one years only, is described as saying that it was not of his own will that he had taken part in the war. He had frequently appealed to the Emperor of Japan to be let off, but all to no avail. His government was the severest and most pitiless in the world, and the Japanese the most malcontent of people. He thereupon pleaded to be let live, stating that it had ever been his desire to live under the benign rule of China. In proof of his voluble assertions, he had shaved his head and adopted Chinese apparel, and was "waiting for some good opportunity to be of service and thus show his gratitude to his new Government." There is a spice of truth in this narrative; it is a fact that such a band of Japanese scouts was surrounded and cut down, as reported at the time in these columns. But even if one trooper was taken alive, we do not believe that any Japanese exists who would act as this prisoner is said to have done.

CHARITY BAZAAR AND CONCERT AT THE CENTRAL TABERNACLE.

THE Central Tabernacle at Hongo, Tokyo, is certainly one of the most earnest, hard-working churches in Japan. In the hands of Dr. Eby, and no less in those of the Rev. Mr. Coates, the Central Tabernacle has been from first to last a centre of good works, successful Christian organization, and a host of charitable schemes whose beneficent effects have been felt near and far. On Saturday, March 30th, a Bazaar and Concert were held in behalf of the Komagome Charity School founded by the Rev. M. Kohayashi, another enthusiastic worker in the good cause. It is hardly necessary to say that both were eminently successful, and a goodly sum netted for the School in question, which the founder hopes to make a kind of "Girard College" in future. The Bazaar was well-attended, the many pretty articles exposed for sale meeting with ready purchasers; but the Concert was far and away one of the most successful ever held in Tokyo. The audience numbered over eight hundred, among whom we were pleased to see many of the highest circle in society. The programme was a pleasing one and well-adapted to a mixed audience, each number being greeted with prolonged applause. The gem of the evening was undoubtedly Prof. Dr. von Koeber's piano solo. The audience refused to remain content with the musician's bowing his thanks, and he finally yielded to the cries of *encore!* from every part of the building and gave another no less skilful rendering of a musical masterpiece. We are requested to state that the projector is fully satisfied with the result of the Bazaar and Concert and that he feels grateful toward those who took part in the programme as well as to the audience, knowing that their presence was a token of their appreciation.

ON A WRONG FOOTING.

THE *Yomiuri Shimbun* has an amusing incident to relate that befell a captain of cavalry in Tokyo on the evening of the 24th instant. He was to leave the capital on the following day, and called on an intimate friend to say farewell. According to the Japanese custom, he left his high boots at the entrance, and while he was talking with his friend and the family, one of the maid-servants, a recent importion from the country and as "green" as possible, went to take a look at the wonderful boots that were going to carry their wearer to China. She had never seen such things before; how did he get his feet in? she wondered. While pondering over this, an irresistible desire seized her to try them on herself. Now the captain had delicate aristocratic feet, while Oseki, for so the maid was called, had truly elephantine limbs. It took all her strength to force the boots on, and then she found it almost impossible to walk. Just at this moment the voice of the officer was heard; he was about returning. Oseki hastened to the corridor in an agony of shame and apprehension, but fell over a stone and hurt herself severely. On the family appearing with their guest, Oseki was discovered in a half-comatose condition. After being brought to her senses, the maid was ordered to remove the boots, but this she was wholly unable to do. Two men-servants then seized the boots, while the captain held the damsel round the waist, and in this manner they hauled at the unfortunate Oseki, who was vociferously screaming the while, until after several minutes' hard pulling the boots were finally jerked off. Oseki's ankle-joints were much cut in the struggle, but she was otherwise uninjured. On getting his boots back again and noticing the blood-stains on them, the captain clapped his hands with glee; "this," said he, "is a sure token that my campaign in China will be successful, for I have seen blood before starting!" The family were profuse in their excuses, but the gallant captain expressed himself as rather pleased than annoyed. Oseki has since returned to her childhood's home and will probably not tamper with other people's belongings in future.

BRAVE OFFICERS.

THERE are, remarks the *Miyako Shimbun*, three different opinions concerning the sinking of the *Ching-yuen* in the harbour of Weihaiwei. Some say that the *Akagi Kan* fired the fatal shell; others allege that it should be ascribed to a ball from one of the forts which had been captured by a party of marines; while a third opinion is that the sinking of the warship is attri-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

took the *Hyakushakugai*. It has, however, now become evident that the real hero of this exploit was none other that Lieutenant Fukuda, of the Artillery. He had already won for himself enviable fame in the attack on Port Arthur. When the horses dragging the guns were shot down on that occasion, he encouraged his men to pull the cannon onward, shouting out "One! two! three!" to make them keep step and pull in unison. It is for this reason that his immediate command has received the nickname of the "One-two-three" company. When Weihaiwei was assaulted, Lieutenant Fukuda was one of the first to enter the above-named fort, and one of the three guns was put under his charge. With this cannon, a 24 cent. Krupp, he managed to sink the *Ching-yuen*. Lieutenant Fukuda is a silent and reserved young man, about twenty-five years old.

* * *

Deeply lamented is the fate of Lieutenant Suzuki, who was with Fukuda on this memorable day. After taking part in the storming of the fort, he determined to cross over to Liukung Island in order to spike the guns of the principal fort there. Under cover of the night he started in a Chinese boat across the bay, accompanied by a fearless band of eighteen picked men. Somehow or other, however, the boat was upset before they managed to reach the opposite shore, and every man was drowned. A few only of the corpses were subsequently recovered.

GERMANY AND THE EAST ASIATIC WAR.

From the beginning of the East Asiatic war, says the Berlin *Echo*, German sympathies have been with Japan. Among all classes of the population, from the Court down to the lowest, among the conservatives and liberals—in fact every one has been favourably disposed towards the Japanese and sincerely wished them success. Some time ago we set forth the various causes which led up to this friendly disposition towards the Japanese. Only here and there an individual note of warning was heard, chiefly in the larger seaports which could not fully concur with this enthusiasm in the interior. One of the few, in Germany, who have constantly taken an energetic stand against the Japanese and who have watched the course of the East Asiatic war with much concern, is the former German Minister, Herr von Brandt, who for several decades was accredited as German diplomat, first to Japan and afterwards to China. Herr von Brandt is regarded as exceptionally well informed on East Asiatic affairs. His diplomatic post he left but a short time ago. With regard to the East Asiatic war and the attitude of the European cabinets, the political views of Herr von Brandt take an essentially different standpoint from those of the Berlin Foreign Office. In *Deutschen Rundschau*, a few days ago, he again published his opinion with regard to the conflict between China and Japan, and it is no doubt of interest to make the aquaintance of his views. For, as already stated, he is one of the few men in Europe who really know something about the affairs in Eastern Asia. Whether or not he is influenced by personal interests or through spite against the present German Administration because of his discharge, is of course not within the reach of a layman's eye. In his remarks nothing of the kind can be seen, and they are without personal points. Herr von Brandt wrote before the capitulation of Weihaiwei was known. In his opinion China is still far from collapsing. The Japanese are, for instance, still farther from Pekin than were the English and French troops in 1860, after the landing at Petang. The real danger of China and the neutral Powers lies not in the military success of the Japanese, but in the fact, which Europe has by no means properly estimated, namely that the policy of the present leaders of Japan is influenced by the pressure of the Radical party whose progress consists in boastfulness and hatred towards foreigners. The present government will not venture to come before the Japanese parliament with peace propositions which would not satisfy the demands of the Radicals, namely the capture of Pekin, heavy war indemnity, the concession of Formosa and the southern part of Manchuria. This will cost the Japanese a heavy sacrifice and will perhaps induce the Chinese to continue the war in a desultory way, in order to exhaust the Japanese. In examining whether it is advisable for Europe and advantageous to Germany that Japan should succeed in this way, Herr von Brandt comes to the conclusion that it is not; he answers with no. The whole modern civilization of Japan is but a thin veneer easily scratched off, and the Asian at once makes his appearance, who hates and dispises the European even more than does the Chinaman. Without considering here the possibility that large concessions of land to Japan may induce Russia, England, and France to take other portions of Chinese territory, the great danger would present itself that the Monroe doctrine in Eastern Asia would be at an end. "Asia for the Asiatics." Japan possesses the elements, vanity, thirst for glory, and greed for land, to become in Eastern Asia, like France in Europe, to all neighbouring States a constant source of anxiety. Europe is therefore acting very unwisely in allowing the uncontrolled self-consciousness of Japan unhindered, to proceed in this war against China, which it originally provoked in a most frivolous manner. Herr von Brandt can also see no advantage for the civilized world in China being shaken up in a way which will transform her into a military and industrial state, in the European sense of the word. Only a few bankers, who would loan money to China, and a few industrial works which would sell machinery to China, would do a good business. Then however, this giant empire would become a rival of Europe and America. Just see how Japan is already endeavouring to compete with Europe! According to this, Herr von Brandt represents the opinion that the wakening of China, in consequence of this war, would transform her into a dangerous rival for the whole civilized world of Europe and America, and that in consequence of her victories, Japan would become over proud and thus cause great anxiety to foreigners and their commercial interests in East Asia: and as Europe—being disunited—does not command a halt in the conflict between China and Japan, both dangers are augmented. So far Herr von Brandt has preached to deaf ears in Germany. The official policy of Germany, which is averse to all interference, notwithstanding the repeated requests of England, enjoys the complete endorsement of public opinion in Germany. On New Year's Day the German Emperor and the Mikado exchanged the highest orders of both countries, the Chrysantemum-Order and the Black Eagle. Count Aoki, the Japanese ambassador at Berlin, is a very able gentleman and well aquainted with German affairs, and his countrymen at home are a smart and a very polite people. True, Krupp has meanwhile been selling some cannon to China and some Hamburg merchants have been selling cartridges, but this is of no great consequence over against the sympathies of the German Emperor and the official policy of Germany. But for the sake of honest neutrality some voices have loudly protested against the selling of weapons to China; moreover, the selling of Krupp cannon has been in part declined and it is announced that the enlisting of German officers has been forbidden.

YACHTING AT KOBE.

The members of the Kobe Yacht Club find themselves with a balance in hand of $141 at the close of their first year's work. In the report submitted at the annual meeting the other day, it was stated that the first yacht race sailed in Kobe took place on the opening day of the Kobe Regatta and Athletic Club on the 24th December, 1870, and was sailed under the auspices of that Club. The competing yachts numbered two only, the *Hilda* and the *Black Bess*, now known as the *Shamrock*, the former winning. For 19 years yacht racing was conducted under K.R. & A.C. auspices with considerable spirit, and it was not until the Spring of 1894 that it was felt that the fleet had sufficiently grown to warrant the establishment of an independent Club. Mr. H. L. Baggalay has been re-elected Commodore of the Club, with Messrs. Sim, Dimock, Buschell, and Head as Committee. The season opens at the southern port on Sunday, April 21st, with a social cruise.

GRATUATION EXERCISES.

Last Saturday the Graduating Exercises of the Seisoku Jinjo Chugakko were held in the fine building and beautifully laid out grounds of the school in Shiba Park. In the morning diplomas were given to seven graduates, and addresses were delivered by the Principal, Prof. Kanda, and Prof. Toyama, both of the Imperial University; Mr. Watanabe, former President of the Imperial University, and Mr. Koba, chief of the Bureau of Ordinary Education. The sentiments of the students were fitly expressed in Japanese and English by a speech of thanks to the faculty and by a valedictory entitled, "Farewell to my Second Home." Of still greater interest to the public were the Athletic Sports in the afternoon. These, and probably also Momijiyama, with the fine view over the Shinagawa Bay, had attracted a large number of visitors, Japanese and foreigners, among them the teachers and students of the Morning Star School, and throughout the sunny afternoon the whole side of "Maple Hill" presented a picturesque and animated scene. The races came off in good style. The course is 200 yards, and there were 200, 400, and 600 yards races, in which Providence was, on the whole, evidently on the side not only of the swifter but also of the longer limbs. The orange, flag, and sack races afforded great delight, and many a boy lost his prize—a silver medal with the name of the school and a maple leaf, an allusion to Momijiyama, engraved on it—owing to an orange slipping from his grasp at a critical moment. The "comical procession" was the most amusing feature of the afternoon. Nearly everything of prominence in Japanese life found its representative there. Commanded by a general, who ought to have stooped under the weight of the decorations hanging from his breast, and headed by a huge dragon-fly, the procession was formed of a number of *samurai*, a statesman, a priest, two *daruma*, a mandarin, a common Chinaman, a farmer and many others, not to forget a fine-looking "gentleman" with a grand mustachio and in evening dress, with a heavy *pince-nes* on his nose, that required a great deal of balancing, and thus gave the swaggering gentleman the appearance of boundless self-confidence. The antics, which the members of the procession tried to keep in harmony with the sweet strains of music that filled the garden, were most amusing, and peals of laughter and loud applause rewarded their efforts to please the public. For the polejump the score stood at 9 feet 5 inches; for the long jump 16 feet 9 inches. Considering that the University average for the latter is about 18 feet, this is an excellent score for the lads. The students delight in sports of every kind, and the percentage of those that take an active part in them seems very large indeed. This being the only middle school in Japan where singing is taught throughout the course, it was quite fitting that the sports should be concluded with the singing by the students of a Japanese song to the tune of "Marching through Georgia" and of a song in English, the "Glory! Glory! Hallelujah!" For "John Brown," "Odera Shōshō" was substituted in the first, and "Sakamoto Kanzo" in the second verse, and thus army and navy were alike remembered and honoured. Thus ended the exercises of the day. The school itself, the establishment of which a little over five years ago by Professors Toyama, Kanda, and Motora was reported in the *Mail* at the time, has from the beginning enjoyed the hearty support and co-operation of men like Mr. Tomita, then President of the Nippon Ginko, and lately Governor of Tokyo; Mr. Suzuki, Vice-Minister of the Department of Communications; Mr. Yajima, former President of the Electric Light Company, and other public-spirited men of the capital, especially of Shiba. The object of the founders,

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

as announced at the time, was to establish a model school—*seisoku* means "regular" or "correct principle"—that should bridge over the chasm between the lower schools and higher schools, such as the Koto Gakko and special schools of a like grade. The Seisoku Jinjo Chugakko has therefore charged higher tuition fees than any other private school, and admission to it is possible only to those that really came up to its standard of scholarship. As a result, progress, as measured by mere numbers, has been necessarily slow; but the excellence of the discipline maintained at the school is attested by the condition of the beautiful garden, the daily recreation-ground of the boys, by the freedom of the walls from defacement of any kind, and by numerous minor and yet equally characteristic matters and incidents, a state of affairs such as cannot easily be paralleled elsewhere. The school now numbers two hundred students, its progress is steady, and its future bright.

THE VICEROY LI.

A SHIMONOSEKI journal reports that so soon as the miscreant Koyama fired at the aged Viceroy, a bystander, with surprising presence of mind, flung a handkerchief into the palanquin. It was this handkerchief that Li picked up and held to his cheek, in order to stanch the blood. All endeavour to trace the owner of the handkerchief has proved fruitless; he evidently prefers anonymity to receiving the thanks of the Chinese statesman. Still the act was a prompt and kindly one.

* * *

As reported by our Shimonoseki correspondent, Koyama was at once seized, after firing his pistol, by a gendarme and a police-constable. The culprit struggled frantically to free himself, it is now said, but the two men kept firm hold of him until he was safely lodged in strong quarters. The gendarme has since been promoted to the rank of sergeant, while the other has been given the grade of first-class constable. Viceroy Li, it is said, has expressed a wish to reward both men in some tangible fashion.

* * *

China has produced three heroes in the present war, says the vernacular press. The first is that Chinese general who committed suicide after the battle of Phyŏng-yang; the second is Admiral Ting, of undying fame; and the third is Viceroy Li, who, despite his severe wound, never lost consciousness and walked unaided from his palanquin to his own rooms at the Injo-ji.

INFLUENZA.

VERY many cases of influenza have quite recently made their appearance in Tokyo, and it is evident that the disease is assuming an epidemic form. According to the testimony of Japanese physicians, the parts most liable to be affected this season are the throat, lungs, and stomach, particularly the first-named. Bronchitis and similar affections of the respiratory organs are said to be unusually prevalent, and in nearly all cases the disease is stubborn and refuses to yield to ordinary therapeusis. This year's influenza is described as being peculiarly infectious and great caution is urged on all; for scarlet-fever and small-pox are already at work in the metropolis, though happily kept within bounds hitherto; and it is well-known that influenza so enfeebles the physique as to render the patient liable to contract any other prevalent disorder. In Yokohama, among the foreign residents, the worst part of the influenza epidemic seems to have passed. The malady was peculiarly infectious but comparatively mild in form.

A CENTENARIAN STUDENT.

IN Sanshu, gossips the *Yomiuri Shimbun*, there is an old woman who has this year, at the age of one hundred, for the first time started out to learn at least two of the "three R's." There is a somewhat derisive saying current in Japan: *Hachi-ju no te-narai*, "learning penmanship at eighty." But this veteran, after having spent a full century in utter ignorance of the rudiments of learning, began to study the alphabet in January of the present year. She is described as being remarkably apt, and has not only learned the *kana* syllabaries but quite a number of Chinese ideographs as well, so that she can already peruse understandingly an ordinary newspaper. Some of her specimens of handwriting are really excellent—*ikite tru yo ni mieru*, the ideographs "look as if they were alive." She is said to excel in writing the character *Kotobuki* ("joy" or "congratulation.")

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for February showing the foreign trade of the empire for the month:—

	1894: SILVER YEN.	1895. SILVER YEN.
Exports	6,513,746,710	8,633,963,380
Imports	7,825,479,090	8,239,136,430
Total exports and imports		16,873,099,810
Excess of exports		394,826,950

CUSTOMS DUTIES.

AN OLD NOTE.

THE *Meiamashi* and one or two other Tokyo *ko-shimbunshi* have a remarkable story to tell of an *amma*, or professional massageur, in Asakusa. The man is represented as being, like most of his tribe, very poor, yet he is the son of a *Kengyo*, or *amma* of the highest rank: such as were much esteemed in feudal days and ranked with physicians. During a recent house-cleaning this shampooer happened to find in one of the *tatami* a receipt for some five hundred *yen*, at one time loaned by his father to a well-known nobleman. He took the receipt to the house of the nobleman's family, where he learned that the borrower, like his own father, had died twenty years ago. There was a son, however, and he offered the *amma* thirty *yen* to have the document returned, moreover, in order to keep his father's name from reproach the nobleman engaged to provide for the indigent shampooer in future and see that he suffered no want: an offer that was of course once joyfully and gratefully accepted. The *Meiamashi* adds that the Asakusa shampooers have had an epidemic of house-cleaning since the occurrence of this incident, probably in the hope of unearthing similar documents.

THE STUDY OF KOREAN.

SEVERAL schools or classes for the study of the written and spoken Korean language have recently been opened in the metropolis, and nearly all are well attended. This increase of interest is particularly noticeable in the Higher Commercial School, where German and French are gradually becoming neglected in favour of the nearer tongue. A member of the Korean Legation recently visited this school during the recitation of the Korean classes, and delivered a short address in his native language; much to the edification of the young men, the majority of whom could follow the speaker's remarks. In Kojimachi District alone there are now three places where Korean is taught. Students from the Peninsular Kingdom are at a premium and their services as teachers are eagerly sought. It is said, however, that native Koreans pick up Japanese much more rapidly than Japanese do Korean; and this is ascribed to the difficulties of pronunciation which the Japanese student has to overcome: the frequent *l's*, the curious *ŏ* and *yu* sounds, which are not familiar to the Japanese tongue. It is decidedly gratifying to mark this increase of interest in a language which a large percentage of the Japanese must, sooner or later, acquire.

POLICE VIGILANCE AT SHIMONOSEKI.

THE Police control at Shimonoseki has become most strict, writes a correspondent of the *Mainichi*. Every person visiting Shimonoseki has to undergo a thorough search, both on land and at sea, for at least half an hour. When Mr. Fujita Tatsuyoshi, M.P., returned to Shimonoseki, on the 25th ult., from his travels in Kyushu, he was subjected at Moji to an examination that lasted about three hours. Again, Mr. Komatsu Sansho, another M.P., on landing at Shimonoseki had, most unluckily for himself, a razor in his trunk. That lethal weapon cost him three hours' detention. Another case was that of Mr. Takahashi Kenzo, editor of the Osaka *Asahi*. Going back to Shimonoseki after an excursion to Chofu, a small knife found in his purse condemned him to two hours' search and inquiries. In short, Shimonoseki is virtually in a state of seige. Even fish and vegetable dealers, who used to come in every day from the suburbs are now subjected to equally rigid control. The place presents the aspect of a pest-ridden district. After the incident of the 24th, quite a number of inquirers after the health the Viceroy flocked to the town, only to be sent away before entering the gate of the Injo Temple, the temporary residence of the Viceroy. "The unceremonious reception awaiting sympathizers is worth publication in the newspapers. Before the gate of the temple a curtain is hung, and at each side of the curtain stand a gendarme and a constable. As soon as a caller, desirous of inquiring after the health of the Viceroy, reaches the gate he is required, either by a gendarme or constable to give his name and business. The caller produces his card and states his business. One of the guard at the gate then goes in, the caller being required to wait at the gate. After some quarter of an hour's delay, the guard comes back and admits the caller within the gate, where another office stands with a number of police on duty. The porch of the Temple faces this office, but the caller is seldom allowed to proceed as far as the porch. His business is almost invariably disposed of at the office. He is made to wait there while one of the guard on duty proceeds to the porch with the visitor's card, and after a further delay of five or six minutes a Japanese civil official emerges from the porch attired in an antiquated frock coat, and having his feet invariably thrust into wooden clogs. This functionary approaches the visitor and

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

produces his card, whence the information is obtained that he is a clerk of Yamaguchi Prefecture. He asks the visitor whether he has brought with him a letter of condolence, or whether he wishes to convey his respects by word of mouth. In either case he declares his conviction that the Chinese Ambassador will make a suitable reply in due time, and then leaves the visitor. When the latter puts a question about the condition of Viceroy, a constable standing near invariably warns him to desist from further inquiries." Hitherto, writes the correspondent of the *Jiji*, travellers coming to Shimonoseki were inspected by the police at each entrance to the place, and when nothing suspicious was discovered, a passport was given entitling its bearer to enter the town. On the 28th ult. some changes were effected in this method. Thereafter only persons possessing certificates from a Government office or guaranteed by sureties known to the police of Shimonoseki, are permitted to enter or stay in the town. The Government offices referred to signify those of higher grade than Police offices. Consequently, in future, any one who intends to go to Shimonoseki should provide himself with a certificate of a competent Government office or otherwise he will suffer the misfortune of being sent away ■ the entrance of the city.

A GIFT FOR THE CZAR.

KITAGAI ITSUTARO was, it will be remembered, one of the two fortunate *jinrikisha*-pullers who happened to render a service to the present Emperor of Russia when his life was attempted by a fanatic near Otsu. Both he and his fellow were pensioned for life by the grateful sovereign. Of the other *kurumaya* various unpleasant tales have been circulated, notably that he had grown dissipated and disreputable. It was at one time stated that the Russian Government, through its Representative, threatened to withdraw the pension unless the man mended his ways. However this may be, Kitagai, at all events, has kept himself straight. He has always longed to make some offering to his munificent benefactor, and has now ordered the well-known metallurgist Yamada Sōkō to make a large incense-burner. It is to be of hammered iron, with various patterns in bas-relief, and inlaid with gold and silver. This burner (*kōrō*) he desires to present to the Emperor of Russia in token of his gratitude. The thought is a pretty one, especially ■ the *kōrō*, if really made according to the description which we find in the *Yoniuri Shimbun*, will be a very valuable gift.

FIGHTING IN THE PHILIPPINES.

A FEW days ago Reuter briefly mentioned that the Spanish forces had defeated the rebellious natives in Mindanao. From Manila papers we learn that the battle took place on the 10th March. The Spaniards made an advance in force on the rebel position and carried it after a desperate is resistence. The loss on their side was 15 killed and 172 wounded, while the natives had 23 of their chiefs (including the Sultan, who had declared a holy war) and 103 others killed. After the battle natives came in from all sides to make their submission to the Governor-General. It is believed that the war, which has lasted many months, will now be brought to a speedy conclusion.

THE "RHEINGOLD" CASE.

WE are glad to be able to state, says the *Kobe Chronicle*, that there are hopes of a settlement being shortly arrived at in the dispute between the Captain of the *Rheingold* and the Japanese sub-charterers of the vessel, both sides having consented to the appointment of an arbitrator, who will be a foreigner. The difficulty hitherto has been that the Japanese would not consent to the appointment of a foreign arbitrator, but insisted that the arbitrator should be a Japanese —a condition which could not be acceded to in view of the points of maritime law involved. We had intended dealing with this case at some length in contradiction of the statements which have appeared from time to time in the Japanese press, as it raises questions which intimately concern every shipping firm in Japan, but in view of the fact that the case is now practically *sub judice* we think it better to hold over our remarks. We are at liberty to state, however, that the long article which appeared in the *Nippon* on the *Rheingold* difficulty, and was translated from that journal by the *Japan Mail*, is a tissue of misstatements from beginning to end. All that the Captain has done has been to hold the cargo until the charter-money was paid, as he was empowered to do by the terms of the charter-party. For insisting upon the fulfilment of the contract, and resisting the forcible removal of the cargo by the sub-charterers, the vessel has been detained here for more than a month.

HONKONG PROMOTIONS.

A PRIVATE telegram has been received in Shanghai from Honkong conveying the intelligence that the Hon. J. H. Stewart Lockhart, lately Registrar-General of the colony, has been appointed Colonial Secretary. This is a well-deserved honour and will give much satisfaction, Mr. Lockhart having spent all his official life in the service of the Hongkong Colony, which he joined as a cadet, and he is still comparatively a young man; it is said he is probably the youngest Colonial Secretary in the service of the Crown.

* * *

The Hongkong correspondent of the *N.C. Daily News* writes:—Mr. A. J. Leach, Q.C., has just been the recipient of a gratifying offer. He has been appointed one of the Puisne Judges of the Straits Settlements. Mr. Leach was at the time of his appointment, Acting Attorney-General, and has several times acted in that capacity and as Puisne Judge in this Colony. It was in recognition of these services that he was made a Q.C., and his substantive appointment is a further mark of appreciation from Downing Street. Mr. Leach is well-known in Shanghai and his numerous friends there as well as in this Colony will be pleased to hear of his promotion to the judicial bench. He is a good, sound lawyer, extremely conscientious and painstaking, though hardly a brilliant advocate, and will make an excellent judge. He will also be greatly missed on the cricket field.

A SECOND SOLOMON REQUIRED.

THE metropolitan papers relate a very curious case which was recently brought up before the Nihonbashi District Police Court for decision. On the 27th ultimo, a man passing through a street in Shitaya District, suddenly rushed toward a child playing by a doorstep and crying, "Little Mankichi! Have I found you?" clasped the child to his breast with every demonstration of joy. The attention of the neighbours was roused by the act and the joyful cries of the man. On being questioned he replied that the child was his own son, not quite four years old; that he had strayed from the house on January 21st, and despite the most stringent inquiries nothing had ever since been heard of him; that his mother, the man's wife, had almost lost her senses from excessive grief, and so forth. The tale was circumstantial, and the listeners were puzzled. Finally one of them said that the child was the son of a woman in the vicinity, whose husband had gone to the wars; he would, at all events, call the mother. This he did, when quite a painful scene ensued, the woman claiming the child as her own, while the strange man as stoutly protested that this was his long-missing son. Finally, the police had to interfere, and the two rival claimants with the child were taken to the Nihonbashi Police Court. Here the strictest cross-examination failed to elicit the truth; the little boy seemed to recogise both parties, and called one "father" and the other "mother;" he answered equally to the name of "Hideuchi," under which the woman claimed him; and to that of "Mankichi," which the man swore was his real appellation, and, strange to say, he resembled both claimants. The case was adjourned until the next day, all the parties being detained at the Station. When the claim was reopened, the man said he had at home a photograph of the boy, ■ well as some of the material of which the child's dress was made; he was permitted to fetch both, and the photograph proved to be indubitably that of the perplexing infant, while the material was evidently part and parcel of the clothing worn. On her side, the woman called in her father as a witness, who was positive that the child was his own grandson. Finally, the magistrate asked the claimants if there was any mark on the child's body by which they might recognise him. The man promptly replied that there was: a small discoloration, like a nævus, on the upper left arm; the woman was silent when so questioned. The child's coat was then removed, and the mole discovered. On this the woman was subjected to a still severer inquiry, in the course of which she made a clean breast of her crime. She really had had a son the exact counterpart of the little boy in question. When her husband had left for China she had made up her mind to abandon the child, "fearing that she might not be able to feed and cloth it unaided." So she had taken her own child to a distant Shinto shrine and there left it to its own resources, believing that the attendant *Kanushi* might be moved to look after the forlorn little fellow. A day or so after, the thought of her husband's anger, should her act be discovered, gave her great anxiety; and on walking through Nihonbashi District she had met with a little runaway, almost an exact copy of her own deserted child, whom she had taken home with her without exciting any one's suspicion. It was in this way that the real father, who is a well-to-do pawnbroker in the district in question, had never obtained any clue of his lost son. Of course the child was returned to the real parent, and after remanding the woman for future trial, inquiries were instituted about her abandoned boy. It was found that the *Kanushi* had lodged the child in an orphan asylum, where it was doing as well as could be expected. The Tokyo journals state that a case of this description has not hitherto been recorded in the annals of the country.

PISCATORIAL CATALEPSY.

THE *Yorozu Chōho* publishes a fish-story of such tall dimensions that our contemporary is moved to doubt the veracity of the narrative, yet states that the particulars come from an authentic source. It relates to the poison of that ugly fish the Tetradon, better known under the common style of *fugu*. Some weeks ago a maker of *Kamaboko*, or edible fish-paste, of Okazakieki in Sanshu, was poisoned by partaking of some *fugu*. Despite all the local physicians could do, death ensued and preparations for the funeral were made by the sorrowing survivors. It happened, however, that an elderly druggist from Tokyo was in the town at the same time, and he heard of the case. He at once repaired to the house of the defunct *Kamabokoya* and begged the relatives to defer the obsequies. The man was not dead, he positively asserted, but merely in a cataleptic trance. People never did die of *fugu*-poison; it merely suspended animation for a week or so, whereupon the supposed dead person would invariably recover. He, the druggist, believed that thousands of people had thus been ignorantly buried while alive; and therefore implored the relatives to trust to his words. If the *Kamabokoya* did not revive within a week, then he was really and truly dead. The season being still very cold at the time, and fear of decomposition being therefore small, the family of the supposed dead man consented to make the experiment. *Rigor mortis* at no time set fully in, although the limbs continued stiff and there was not the slightest sign of life. On the sixth day the cataleptic gave signs of returning animation; restoratives were promptly employed, and in another twenty-four hours the man was in the enjoyment of his usual health. This much sounds credible; at all events it is not beyond the bounds of belief; but unfortunately for its credit the story fails to terminate at this point. The *Kamabokoya*, being excessively fond of *fugu*-flesh and learning that he could thus

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

partake of his favourite dainty with impunity, has several times since then eaten the forbidden food. Each time the cataleptic periods have been of less duration. He has now got things down to such a fine point that a *fugu*-carouse means simply three days' oblivion, during which he is apparently dead though really alive and aware of all that is going on. But the powers of human belief have their limits. In spite of the fact that the addresses of the druggist and cataleptic are given in full, the story is incredible—unless indeed we emulate the example of the Red Queen, in "Through the Looking-glass," and get so skilful as to be able to believe "six wholly impossible things before breakfast."

THE FORTUNES OF THE MINS.

THE Söul correspondent of a Tokyo contemporary states that the Korean Mins, for so many years the autocrats of that vexed Peninsula, are now in great straits for the want of ready money. They have landed estates in various parts of the Kingdom but in view of the unsettled state of affairs there are no purchasers, at least none who offer a tithe of the real value of the property. This once proud and great family now appears humbled to the dust, though while the Queen is alive they are always certain of one powerful friend at Court. Some members of the family resident in Söul sold the other day a comparatively large quantity of miscellaneous art-treasures to a local Japanese merchant, for the paltry sum of one thousand one hundred *yen*. In Japan, the correspondent avers, they would fetch almost if not quite ten times that amount. These *takara* included some extraordinarily fine pieces of jade and soapstone carving; a number of ancient and rare vases and platters; and over thirty pictures and calligraphic scrolls. But all these were not originally the property of any one Min; they were, the correspondent declares, forcibly taken from less powerful people, and represent the heirlooms of quite a large number of one time wealthy Korean families. He goes on to state that the Min faction does not even yet despair of regaining power in the government; that it is their firm and final resolve to repossess themselves of what they have lost, as soon as Count Inouye's back is turned. The only way to deal with these unprincipled political harpies is, he holds, to exile them, or to cause them to settle in Japan under the Argus eye of the law. If this be not done, the Mins will prove a constant menace to whatever Government is in power. And they have so large a following that it is very difficult to deal properly with them. Stripped of their honours, they have by no means lost either their ambition or their hopes.

DECEPTIVE APPEARANCES.

ONE of the finest and best-built bridges in the metropolis is that known as Ochanomizu-bashi, a beautiful and lofty iron arch which spans the canal running between Hongo and Kanda, and connects the two districts by a broad roadway from the top of Surugadai. This used, forty or fifty years ago, to be one of the most noted places in Tokyo, as it is still one of the most picturesque. On the flank of the steep slope there was formerly a famous *unagi-ya*, or restaurant where eels are served up in various styles. One day, some ten decades ago, a visitor came to the restaurant. After having eating sparingly he began to inspect the house and garden with evident interest, and finally made a rough sketch of the place. That same night a thief broke into the restaurant and managed to get off with a large quantity of booty. Suspicion of course alighted on the inquisitive visitor of the foregoing day, so that when a week or so later, he again made his appearance the police were informed and he, to his great astonishment, was promptly arrested. Among the constables was a man who knew the prisoner and recognized him at once as being the celebrated artist Hasegawa Settan. On his suggestion, Hasegawa was asked why he had made his secret sketch and thus brought suspicion on himself? He replied that a friend of his Saito Gesshin, was about to publish a guide to Yedo and that he had been commissioned to make illustrations for the work. The place had struck him as so picturesque that he had taken several views of the restaurant and its surroundings. This statement found full credence; Hasegawa was immediately released from custody and the master of the restaurant overwhelmed him with apologies for his rudeness. The guide-book appeared shortly thereafter, and was for many years a standard work.

SCHOOLS IN TOKYO.

IT is perhaps due to the belief that the end of the war is nigh that the number of applicants for admission to Government schools in the metropolis is unusually large at present. The new term, the first of the academic year, either began on the 1st instant or will begin on the ninth, and hundreds of students from the interior have come up to enjoy the high-class educational privileges of the great city. In the case of the Merchant Navy School—a most praiseworthy and admirably conducted establishment—there have been one hundred and fifty applicants for admission. Of these forty-five only were present on the last day of the entrance examination, all the rest having either been rejected on account of physical disabilities or having found the test too great a one for them. Twenty-two only were finally admitted. The four or five *Yinjo Chugakko*, or private middle schools with special privileges, of which the Meiji Gikwai, Kinjo Gakko, Nippon Chugakko, and Ikubun Kwan are most famous, have all had an unprecedented number of applications for admission: two hundred and over in the case of the Meiji Gikwai alone. The Shikan Gakko, or Military Academy, has had more than four hundred applicants, but of these less than fifty came up to the required standard. Two hundred is, we believe, the extreme limit of the Academy at present. The course is one of three years, open only to such as have graduated from Ordinary Middle Schools or are able to pass an examination equivalent to this standard. The alumni rank as ensigns, and their record in the War has been an enviable one. Several hundred students likewise applied for admission to the Naval Academy. There, however, the physical tests are exceptionally severe, and the majority generally fail in this particular, only the best and strongest lads being selected. The First Higher Middle School has had an increase of nearly three hundred pupils; the School of Technology, in Asakusa, over one hundred; the Higher Commercial School, whose accommodation is limited, more than two hundred applicants, with less than fifty admissions. The Postal and Telegraphic School has done equally well. On the whole, the outlook for the new academic year is distinctly encouraging.

UNITED STATES CONSULATE-GENERAL FEES.

THE following was issued over the signature of the U.S. Consul-General on April 3rd:—Until further notice the following tariff is established for the collection of fees at this office. Invoices should be made out in silver *yen*, which for the purpose of this notice are estimated as equivalent to forty-seven and six-tenths ($0.476) cents. U.S. Currency:—

	Yen.
For Invoice Certificate	5.26
For Extra Copy of Invoice	4.21
For Currency Certificate	2.10
For Landing Certificate	5.26
For Bill of Health	5.26
For Endorsement to Bill of Health	1.05
For Personal Effects Certificate	1.05
For Emigration Manifest	.53

To avoid delay in transacting business at this office, persons paying fees are requested to present the exact change.

YOKOHAMA LITERARY SOCIETY.

A MOST entertaining programme was presented at last evening's meeting of the Yokohama Literary Society. After the opening overture, from "Caliph of Bagdad," by Mr. and Miss Griffin, Mr. A. J. Wilkin read an original paper on the various chemical forms into which carbon enters, under the caption of "The Brightest and Blackest Thing on Earth." Naturally Diamonds and Coal were dealt with at length, and that in a most interesting manner. The musical portion of the evening fell in the second half and consisted of the following numbers; String Quartet, Adagio (Beethoven), Messrs. Ramseger, Kaufmann, Danenberg, and Schmid; pianoforte solo, "Polonaise" (Chopin), Miss Orth; Part Song, "In this hour of softened splendour" (Pinsuti), Mrs. Read, Miss Rice, Mr. Nicholas, and Mr. Walford; String Quartet, "Allegro in F. Major" (Beethoven), Messrs. Ramseger, Kaufmann, Danenberg, and Schmid.

THE "RHEINGOLD" DIFFICULTY.

ACCORDING to Japanese papers, the difficulty concerning the cargo of the *Rheingold*, an attempt to remove which by force led to a somewhat serious affray two or three weeks ago, is in the hands of Mr. Crosse for the captain, and Mr. Sakurai for the sub-charterers, who are endeavouring to come to some satisfactory arrangement.

THE SPANISH CABINET.

THE *Nippon* states that the Spanish *Chargé d'Affaires* in Japan has intimated to the Japanese Government that a new Spanish Cabinet has been organized. Senhor Canovas del Castillo has succeeded Senor Sagasta as Premier, and the Duke of Tetuan has been appointed Minister of Foreign Affairs.

DESTRUCTIVE FIRE IN TOKYO.

DURING the gale on the morning of the 29th inst. flames burst from the house of a carpenter at Kojimachi, Shichome, Kojimachi, and despite the exertion of the firemen soon spread to the adjacent buildings. Sixty-seven houses were destroyed, and 9 damaged. The fire originated through a lamp being upset by an employé.

RAISING THE FIRE TEST.

A BILL has been introduced in the Pennsylvania legislature to raise the fire test of petroleum, naphtha, etc., from 115 degrees Fahrenheit to 150 degrees. This action is based upon the fact that owing to the present low test in Pennsylvania, the poorest quality of oil is dumped there and sold.

THE CHAMBER OF COMMERCE.

AT a meeting of the newly elected Committee of the Yokohama General Chamber of Commerce, Mr. James Walter was elected Chairman, and Mr. E. Flint Kilby, Vice-Chairman, of that body for the current year.

THE LIMIT OF HUMAN LIFE.

Is that limit determinable? It may be assumed that the limit of human life is the life-time of the human being who has lived the longest. In a forest of ancient date there will probably be found a few specimens of trees that have looked down upon their congeners for hundreds of years. The age of these patriarchs is the life-limit of the trees of that wood. In Doré's twelve studies of The Wandering Jew, of which the first design is in illustration of

> "Since thou art pitiless, thy weary way
> Thou'rt doomed to wander till the Judgment Day;

the third is

> Spell-bound, they gather far and near to scan
> The weird senescence of that wondrous man.

Of course the notion that for these eighteen hundred years one has wandered up and down the earth with no rest for the sole of his foot has long been given up by intelligent men.

But in ancient writings, sacred and profane, men are said to have attained extraordinary longevity. In the fifth chapter of Genesis we read of a number of men who passed beyond the limits of nine hundred years. After the Flood of Noah's time, the ages of the patriarchs were much reduced. How are we to account for the wonderful ages of the antediluvians? It is contended that Adam and Eve fed upon the fruit of the Tree of Life, and that in virtue of its life-giving properties, they and their descendants till the Flood lived and flourished well nigh a millenium. But the very text quoted seems to

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

disprove the contention, for Adam had not yet put forth his hand to eat of the fruit of this life-imparting tree. Dr. Delitzsch, in the last edition of his Commentary on Genesis, regards the long periods of over 900 years allotted to Adam and to those who came after him, as "periods of antediluvian history which are named after their chief representatives, and that the period of these epochs is allotted to the individual life of these chief representatives, as though it had extended over the whole period." This is probably about the same method of disposing of the difficulty as that of Dr. Crawford of China. Of several methods of resolving the difficulty allusion may be made to one which attempts to find a way of being at once faithful to the teachings of the Bible and true to the deductions of science. Hensler furnishes reason for believing that before Abraham the year consisted of only three months, and that from then till Joseph's time it was only 8 months, but that in Joseph's time the Egyptian method was adopted by the Jews and the year became 12 months. "This assertion," says Hufeland, a still higher authority, "is to a certain degree confirmed by some of the Eastern nations who still reckon only three months to the year." And he thinks that man can still attain to the same age as ever. On one or other of these theories the age of Methuselah is relieved of difficulty.

Come we now to consider accounts in profane writings of many who in ancient times lived to very advanced years. The Greeks and Romans were wont to chronicle all remarkable cases of longevity, for the simple reason that long life was so far from being the rule that it was only the exception. Pliny tells us that in the year A.D. 76 there were 124 men (living in a limited region) of 100 years and more, three of whom were 140, and four over 135 years. Cicero, in his De Senectute, makes Cato says that Isocrates wrote the Panethenaican in his 94th year and he lived five years afterward; while his master, Gorgias of Leontium, filled out 107 years. He makes mention also of one of the Kings of the Tartessii, who reigned 80 years and lived 120. These are but a few of many who lived to very old age.

In modern times instances of great longevity are very numerous, despite the *dictum* of the late Sir George Cornewall Lewis that the evidence of the past to him sufficed to raise a presumption that a human life under existing circumstances is never prolonged beyond a hundred years. And some one else has affirmed that "when the alleged centenarian is believed to be a centenarian or a year or two more, error may not be unreasonably *suspected*, but when the age is extended beyond, say to 106, error so certainly exists that no trustworthy evidence can be produced in support of it." While Buffon confidently affirmed that the man whose life is not cut short by accident or disease reaches everywhere the age of 90 or 100 years. Faraday also adopted the theory that the natural age of man is 100 years. In Prof. Owen's comparative table of longevity man is put at 100 years. Prof. Humphrey of Cambridge University, who has given this subject much study, has shown that the frequent attainment of the centenarian age is fully established. The *British Medical Journal* in 1887 gave 3 cases of persons who had passed the age of 100 years. The present writer well knew an old lady, Mrs. Mary Bogart, of Adolphustown, Ont., Canada, who celebrated her centenary in a grove in the midst of a large concourse of friends, many scores of whom were her own posterity. Mrs. Bogart lived about a year and a half longer. M. Chevreul, the celebrated French chemist, was unable on his 102nd birthday to receive the friends who desired to do him honour, while Mrs. Rebecca Snyder celebrated her 103rd birthday by a picnic, and danced the Virginia reel with the oldest man in the neighbourhood. Count Jean Waldeck died at Paris in 1875, aged 109 years. According to the census of the United States in 1880 there were 4,016 persons in the country 100 years old or over. Mr. James Easton of Salisbury, England, published a list containing the names of 1,712 persons who had reached the age of 100 years and upwards. In 1826 Mr. Charles Babbage collected 1,750 cases of a like sort. Thus far the evidence is overwhelming in favour of the position of Faraday, Buffon, and Owen against that of Sir George Cornewall Lewis.

But as we proceed to cite cases of much greater longevity the evidence must be closely scrutinized. It is on the authority of Professor Hufeland stated that a Prussian soldier, who served 67 years under both Fredericks, fought many battles, endured much hard campaigning and married successively three wives, died at last at the age of 112. A well authenticated case is that of Madame Hulsenstein, maid of honour to Maria Theresa, who died in 1876 at the age of 119. A list prepared by the late Cornelius Walford contained the names of 208 persons who died at or above the age of 120 years. The next story is a little harder to credit. The Countess of Desmond, born in 1464, in her 139th year was able to go every week on foot 4 or 5 miles to her market-town, and during that year journeyed on foot from Bristol to London to appeal to the King against some injustice. The King granted her suit, and she trudged her weary way home again. In the following year "the frisky old girl," as Tom Moore called her, met her death by falling from a tree into which she had climbed to gather nuts. Jean Noel, a great favourite of the first Napoleon, died in 1829 at the age of 148 years. The story goes that at a masked ball given by Napoleon about 1812, general attention was attracted to an amazon whose splendid costume and graceful movements excited the wondering admiration of all. When the time came to unmask, all eyes were turned toward her, and when the mask and wig were removed the well known features of Jean Noel were brought to light. Another historic case is that of Thomas Parr, of Shropshire, England, a day labourer, who lived to the age of 152 years. He married his second wife at the age of 120, and till 130 he could swing the scythe and wield the flail with the best of his fellow labourers. In his 152nd year he went up to London to exhibit himself to the King, when unfortunately he feasted so sumptuously as to bring on some affection that soon ended in death. Probably the most authentic instance of advanced age in modern times is that of Henry Jenkins of Yorkshire, England, who died in 1670, 169 years old. He was a fisherman, and at the age of 100 easily swam across rapid rivers. We need some evidence for all this, and it is forthcoming. It is said that he declared that in his boyhood he was employed to carry a horseload of arrows from his native place to North Allerton for the use of the Earl of Surrey at the battle of Flodden Field, which was fought in the year 1513. He used also to say that whilst in the service of Lord Conyers, of Hornby Castle, he had often seen the Abbot of Fountains, a very jolly priest, at his master's table. But as this monastery was suppressed about 1537 we have another indication of his age. Surely we are not so incredulous and so wicked as to doubt this disinterested testimony of a very old man! But this is not all. How conclusive is the following testimony borne by an outsider, who went one day to visit him. Finding in the garden a very old man, evidently beyond a century, he concluded that this was the man he was in quest of, but was quickly set on the right track by the old man exclaiming: "It's my fayther, you want; he is yonder," and farther on found the genuine Henry Jenkins. Nor is this all. It is asserted that the registers of the Court of Chancery prove that he gave evidence 140 years before his death. If we are able to believe all this, possibly we can credit the story of the Peteraburg *Gazette* in 1812, of a man who died in the diocese of Ekateroios, at an age between 200 and 205, and the account of Thomas Cam, Shoreditch, England, confirmed by the parish registers, who died in 1588 at the age of 207.

Haller, who has collected the greatest number of instances of longevity, thus tabulates them:—

Of men who have lived from 100 to 110 there have been	1,000
110 to 120	60
120 to 130	29
130 to 140	15
140 to 150	6
169	1

"Hufeland generalizing from these facts, thinks that the organization and vital powers of men are able to support a duration and activity of 200 years!" His judgment was based partly on the general principle that the life of a creature is eight times the years of its period of growth. This is a very modest estimate as compared with that of Roger Bacon, who believed that man could live a thousand years if he only knew how to economize his provision of vital force. And Descartes was equally sanguine for he assured Sir Kenelm Digby that he had reflected long upon the subject, and though he dared not promise immortality, he was certain he had the power of enabling men to attain the age of the patriarchs. How came it to pass that with such amazing power he should himself die at the early age of 54?

One thing seems to be conclusively proven, viz, that the average duration of life is steadily increasing. The records of Geneva, which have been kept for more than 400 years, show that the average has gone up from 21 years in the 16th century to over 40 in the present century. In England two centuries ago the annual mortality was one in thirty-three, now it is one in forty-two. Our ancestors regarded a man as old at 50, now he is not looked upon as old before 70. And as men come to know the laws of hygiene and sanitation better, and observe them more strictly, life will continue to be lengthened. We are safe, then, in saying that 100 years is within the limits of human life, which may be attained by our race in the most favourable circumstances. But 100 years is not the *ne plus ultra*, beyond which we shall not pass; it is merely a scientific frontier to be pushed on by the victorious march of the race toward perfection. The natural term is about a century, but the extreme limit of life may be extended perhaps to 200. Meanwhile, the average term will be pushed on to 75 or 80 and beyond, and the word of the Second Isaiah at last be fulfilled: "There shall be no more thence an infant of days, nor an old man that hath not filled his days; for the child shall die an hundred years old."

MAJOR VON HANNEKEN AND MR. DETRING.

One of the most hopeless acts yet committed by China seems to have been her treatment of Major von Hanneken and Mr. Detring. We have no direct information of our own on the subject, but take our facts from the Shanghai press. A certain mystery has hitherto surrounded the proceedings of Major von Hanneken, but it is dissipated by the details now published. Last October, after China's second failure to save herself by foreign intervention, the Pekin Government sent for Major von Hanneken and sought his advice. He availed himself of the occasion to expose the whole faults of China's military system, and to urge that nothing could save the empire except the organization of an army of 100,000 men, on a European or a Japanese model, officered by 2,000 Westerners—the Major naturally suggested Germans. The Pekin folks asked him whether he would undertake the task, and he replied in the affirmative, under certain conditions which were accepted. But no sooner did he commence preparations for carrying out this task, than the weight of Chinese officialdom was thrown into the scale against him. Reforms, such as he proposed, meant the closing up of innumerable roads to peculation and corruption. The Pekin Government found itself inundated with representations, the authors of which offered, in some cases, to carry out the proposed scheme at one-third of von Hanneken's estimate; in others, accused him of contemplating treachery such as had been practised in former years by General Burgevine, and in all, strongly opposed the idea of entrusting such work to a foreigner. The Government weakened in the face of this opposition, and Major von Hanneken, after waiting three months, found that none of the conditions upon which he had insisted were ful-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

filled. He accordingly resigned. Mr. Detring, a man of rare ability and the highest probity, had been cooperating throughout with Major von Hanneken, and both had the earnest support of Sir Robert Hart, who saw in their project the only sound hope of regenerating the Chinese military service. The better to push the scheme, Sir Robert temporarily detached Mr. Detring from the Customs Service. But it was all in vain. Major von Hanneken's army has perished in the embryo stage, and Mr. Detring is quietly seated once more at his desk in the Tientsin Custom House. If China can not raise herself from the conservative rut under the pressure of such calamities as she has recently suffered, what hope is there for her after peace is restored?

SHIPPING BUSINESS IN JAPAN.

No other Japanese business has been recently subjected to such varying fortunes as shipping. Changes in the rate of freight have been considerable, and these can be divided into three stages. The first stage covers the period commencing with the winter of 1893 and ending in the spring of last year, when, in consequence of active exportation of coal to Hongkong, Shanghai, and Singapore, the demand for ships became unusually great, causing a gradual rise in freights. The second period began when the war broke out, and lasted for several months. Freights rose extraordinarily owing to the sudden requisition by the Government of a large number of steamers. The third period was the time when, in consequence of the purchase or charter of a large number of foreign vessels, the supply began to exceed the demand, resulting in a reaction and in the fall of freights.

The *Shogyo*, from which paper we quote the above remarks, dilates thus upon them:—The increase of the demand for Japanese coal in the East was due to the strike of coal-miners in England, and also to the gradual depreciation of foreign exchange. The freights of the coasting trade were so much influenced that while the freight for 100 *koku* of rice on the occasion of the last voyage from Niigata in the winter of 1893, was 40 *yen*, it rose to 55 *yen* by the time of the first voyage from the same place in the following spring. The rise in freights during the few months subsequent to the commencement of the war was even more extraordinary. This was felt most in Hokkaido, as it was the season for the shipment of herring guano. The freight for 100 *koku* of guano rose to the unprecedented figure of over 150 *yen*, while that for the same quantity of beans was only 10 *yen* less. A reaction soon set in owing to the purchase or charter of a large number of steamers and also to the decline of the coasting trade. The latter is very marked in consequence of the war, especially in Hokkaido. A steamer destined for Hokkaido is never laden up to its full capacity. A ship capable of carrying 1,000 tons usually gets less than 100 tons of goods; sometimes only 70 tons or so. The terms at which foreign steamers have been chartered is very high, about one shilling per ton, and for vessels of good dimensions as much as five or five and a half shillings per ton. The fall of silver has also affected the interests of charterers of ships, so that, driven to extremities by such adverse circumstances, they began to undersell each other in their eagerness to procure cargo. The result was that the freight of 100 *koku* of fish guano fell to less than 40 *yen* and that of the same quantity of beans to 35 *yen*. Subjected to such losses, some of the charterers of steamers gave up their charters before the expiration of the prescribed term. Only the Yusen Kaisha, that is under an obligation to undertake certain lines, kept up its contracts with the owners of chartered ships. The balance between the demand and the supply has been gradually restored and freights have again risen somewhat. Thus the price of a shipment of coal, that at first stood at 3 *yen*, then fell to 2 *yen*, has now risen to 2½ *yen*. The *Shogyo* warns shippers to be prepared for a great change in their business when the war is over, as the supply is then likely to exceed the demand.

THE NEW AID TO MEMORY.

We spoke in a recent issue of a system for developing powers of memory, the invention of a Japanese, and we have now to add that an exhibition was given on the 17th ultimo the Imperial Hotel in the presence of representatives of the Tokyo and Yokohama press. The inventor, as we recently mentioned, is Mr. Wadamori Kikujiro, who was confined for about three years in the Kajibashi prison on a charge of implication in the money affairs of M. Tanaka Heihachi, and was only recently released. To occupy his endless leisure the prisoner devoted his time chiefly to reading books. A work on divination, written by Mr. Takashima Kayemon, was one of those eagerly perused. A chapter in that famous book led him to turn his attention to the development of some efficient system of strengthening the memory, and subsequently, for about two years, he became absorbed in attempting to discover the best mode of making the memory retentive. After numberless failures and indescribable difficulty he at last succeeded, as he thought, in developing a successful method. His own memory was not in any way excellent, but, assisted by his new method, he found that he could remember anything with ease astonishing to himself. Thus, he committed to memory the whole first book of the "Bunshokihan" (a collection of typical Chinese essays), a work extending to about 400 pages. The first thing that he told his friends, on being liberated from prison, was about his discovery. His friends, however, laughed at what he had to say; and well they might, for so called aids to memory are one of the most fruitful fields of imposition by charlatans. Mr. Wadamori then insisted on being subjected to a trial, and to that they were obliged to consent. The first experiment gave them food for reflection, and subsequent tests more and more astonished them. It was thought that the method should be disseminated to the public at large, and Messrs. Maruyama Meisei, ex-P.M., Nomoto Honnosuke, and Shioiri Tasuke, all members of the Tokyo bar, acted as projectors and invited the representatives of the Tokyo and Yokohama press to the Imperial Hotel. There were about 30 newspaper men, our representative being one of them, and the experiments began. At the outset everybody present wrote upon given sheets of paper 5 or 10 words, nouns, adjectives, verbs, or phrases, all entirely unconnected in meaning with each other. The papers were of course kept strictly concealed from Mr. Wadamori. A hundred words were thus written out. To show how totally devoid of continuity of meaning they were, we may quote a few of them. They ran in this way; *mukimi* (shell-fish), baby, running stream, Rothschild, marshal, to study, men-of-war, whereas we witness, Tomsk, and so on, till the whole amounted to 100. This done, Mr. Wadamori sat beside the table and one of the visitors read the words aloud one by one. Mr. Wadamori listened with his hands pressed on his head, as if he were trying to push what he heard into his brain. The words were not to be read in rapid succession but at intervals varying from 5 to 20 seconds, the reader to pause after each until Mr. Wadamori directed him to proceed to the next. After 20 words or so had been read, Mr. Wadamori would make a short pause of about half a minute's duration, apparently to arrange in some systematic order what he had thus far heard. In that way the hundred words were recited, and he was ready at once to answer any question put to him about them. He was asked to give the 11th word as counted from the first, the 20th as counted from the other end, and so forth, and he gave the correct answer at once in every case. He then repeated all the words from the beginning in due order as easily as if he were reading them from a written list. The next experiment was then tried. This was somewhat more difficult than the first. One of those present read a number, say No. 79 or No. 18, and another then read the name of a person out of a list. The list used was that of the members of the House of Representatives. When from the numerical list No. 79 was read, Shimada Saburo was read from the nominal; No. 20 from the numerical gave Awaya Shinzo from the nominal, and so on. The numbers were not in any kind of order. In such fashion the names of about 30 members were given out, and that being considered enough for purposes of experiment, the reading was stopped. Mr. Wadamori was then asked to give the name corresponding to No. 79, or any number read to him, and after a few seconds pause he gave the right answer in every case, to the surprise of all in the room. The first characters in each line of a newspaper column were next read in the same way, and the same remarkable result was attained. Mr. Wadamori told the press representatives that he could not forget even such meaningless names as he had committed to memory that evening for about a week. His statement was tested on a small scale that very evening. While the guests were seated at dinner some three hours after the first experiment, questions were propounded to Mr. Wadamori out of the sheets first used, and he replied with the same readiness and accuracy as before. He stated that he had tried the efficiency of his method while in prison. In the same cell was confined an English student who had worked at English for about 14 years. Mr. Wadamori only knew at that time the rudiments of English. He therefore asked his fellow prisoner to teach him that language. The lesson were begun, and it proved so easy for Wadamori to learn, in virtue of his system, that he was able in less than two months to master what an ordinary student would have required at least a year to acquire. In one respect he even surpassed his teacher, for while Wadamori accurately remembered every word he was taught, the treacherous memory of the teacher frequently obliged him to have recourse to a dictionary. Asked whether he thought that his method would not overtax the brain, Wadamori replied in the negative. He had studied English from morning to evening, and he did not feel any particular fatigue. The committing to memory of sentences is done, said he, in a somewhat different manner. When he wishes to memorize any fine passage or essay, instead of proceeding to remember one word after another, he subdivides it into several periods, masters the drift of their respective meanings, and then the whole composition can be remembered with comparative ease. It was thus that he committed to memory several hundred pages of the Chinese book containing selections from noted authors. Would it be possible to make another person's memory as retentive as that of Mr. Wadamori, was another question. He replied in the affirmative, seeing that his own memory had not at first been in any way excellent and seeing that the principles he had succeeded in developing, were very easy. Mr. Wadamori has not yet revealed his secret, though this much he told that evening, namely, that there are four cardinal principles so easy as to be capable of being mastered by any ordinary person in about a week. He further said that he had read all the English books he knew treating of aids to memory, but had found principles contained in them entirely distinct from his own. It is too soon to estimate the true value of the so-called discovery. We must wait to see whether the memory of other folks can be made as retentive as Mr. Wadamori's. If that be so his system must be considered a great boon to mankind. He is still undecided how to convey his secret to the public at large. Mr. Wadamori does not appear to be in any way a man of erudition. He studied law at a private law school in Tokyo, and had become a member of the Tokyo bar at the time he was thrown into prison. He seems to have read a book or two on mental physiology, and what knowledge he possesses on the organization or functions of the human brain was obtained from brief study. He is a little above 30 years of age.

WAR NEWS.

SATURDAY, MARCH 30TH.

The reports of the Viceroy's condition continue most satisfactory. The wound gets better daily, the temperature and pulse are normal, and the appetite is good. There ought to be no further cause for anxiety. In certain vernacular papers we find childish recitals of some expression of pleasure or gratitude uttered by the Viceroy, but we presume that our readers are not particularly interested in such tales.

The *Hochi Shimbun* re-produces a report current in Shanghai to the effect that a Japanese force landed at Haichang in Formosa on the 27th instant. Haichang is on the south-west coast of Formosa, about mid-way between Taiwan and Takow. It is a promontory, said to have formerly been an island. But it is generally believed that no landing in Formosa itself was immediately contemplated by the troops sent against the Pescadores. We must therefore await further intelligence before attaching any credence to the rumour.

The official report of the capture of a part of the Pescadores, as forwarded to the Naval Department, is now published. It says :—"The staff of the united squadron under Captain Dewa, reporting under date of the 24th instant at noon, says that this morning at 5 o'clock, the naval brigade landed. After several attacks, a detachment succeeded, at half-past six, in capturing the fort on an eminence north-east of Heuchue Bay, and the heights to the north-west of that place. The whole detachment then advanced against Makung. The naval brigade took charge of the fort, in which three 15-cent. guns were mounted, and held the enemy in the Yuen-ting peninsula, being assisted in that task by some of the ships. No loss was experienced in the taking of the fort. If Makung is taken to-day, the fort on the Yuen-ting peninsula will be attacked to-morrow."

The *Nichi Nichi's* war correspondent gives the following account of the taking of Newchwang on the 4th instant :—On the 3rd of March the Third Division marched from Pangkang-tsz in the direction of Newchwang, and the Fifth Division advanced in the same direction by a road on the left. The main body, under Lieut.-General Oku, set out at 7 a.m. and by sunset reached Tsuichia-chang, 45 Chinese *li* (15 miles) from Newchwang. The 4th was the day fixed for the attack. Yamaguchi's Battalion, with cavalry and artillery, a portion of the main body, worked independently on the left flank, heading for the enemy's line of retreat to Yingkow. At about 9 a.m. the sound of firing was heard on the right. It came from the Third Division, which had already encountered the enemy. When our advance guard got to within about 2½ miles of Newchwang, it opened fire. Lieut.-General Oku, placing himself on an eminence under a willow to the west of Tszfang-tung, examined the state of affairs in Newchwang, and gave orders to Major-General Oshima, who commanded the van, to attack from the front. The mountain artillery attached to the van now took up a position on the north-west of Tung and opened fire, under cover of which the van pushed forward, Okuyama's Battalion being in front. The ground in front of Tung, through a space of several hundred mètres, was level, and the enemy, taking advantage of this, had erected parapets or cut loop-holes in the walls of houses. They used smokeless powder, and placed Gatlings and six quick-firing guns on elevated positions so that, had their troops been of the same quality as ours, it would have been impossible to cross this level space. But our men, strong in the sense of continued victory, took no heed of the enemy's fire but pushed straight on to the attack, followed by the supports, Mori's Battalion. Other batteries of field and mountain guns now came into action on the south west of Tung, and the Divisional reserves with a company of engineers, advanced on the west. The thunder of the artillery at this stage was terrific. Imada's Battalion now marched through a storm of bullets against the enemy's right flank, and Major Imada was shot through the neck. Simultaneously the main body of the Division advanced. Lieut.-General Oku was in front with the staff. Riding through the snow he established his temporary head-quarters in the first detached building taken from the enemy. The place was covered with dead bodies, to the number of several hundreds, the majority of them Chinese, but many also belonging to our forces. Newchwang being without walls or outworks of any kind, the enemy had thrown up parapets of considerable thickness, and posted their first line of defence there. They had also loop-holed the houses. After 22 hours' hard fighting, the Battalions of Okuyama and Imada managed to dislodge the enemy from the parapets, but those that had taken refuge in the houses and were fighting for their lives were difficult to drive out, they being under cover, while our men were completely exposed. Our losses at this stage of the battle were very heavy, but our troops, nothing daunted, succeeded in getting possession of several of the houses. The most stubborn resistance was made by some troops in a wine shop to the east of Taping Bridge, and by others lying behind a wall near one of the gates. Lieut-General Oku, perceiving the difficulty of dislodging these, ordered the engineers to employ dynamite. A company of sappers under Captain Takeda thereupon fired a charge of dynamite at the foot of wall near the wine-shop, a proceeding so terrible to the enemy that before another charge could be fired, they surrendered, to the number of nearly 300. A large quantity of weapons of war were captured at this point. At the same time half of a battalion of infantry passing by Muten Bridge, opened fire on the enemy near the gate. It was now sunset and the attack was suspended. The Third Division, emerging on the enemy's left so as to cut his line of retreat, fought late on into the night. Meanwhile, orders were issued to the various bodies forming the Fifth Division to assemble at the commanding officer's head-quarters, where they received orders to march toward Yingkow. They moved by the main road, while the First Division advanced from Kaiping, and the Third Division moved between them, this advance being commenced at midnight. The heaviest casualties were in the Okuyama and Imada Battalions : they had 18 killed and 118 wounded. In addition, Major Imada—promoted to be Lieut.-Colonel before he expired—and three lieutenants were killed. Mori's Battalion had 10 wounded, and Colonel Sato of the Third Battalion was badly wounded in the foot, the Battalion itself suffering heavily. As for the enemy, over 1,800 corpses were found in the field after a rough examination, and doubtless had careful search been made 2,000 would have been forthcoming.

MONDAY, APRIL 1ST.

Koyama Toyotaro—for such is his real name, not Koyama Rokunosuke as he at first stated—was sentenced on the 30th ultimo to penal servitude for life.

The *Nichi Nichi Shimbun* reports that Dr. Scriba paid two visits to the Viceroy Li, one at 6 p.m. on the 30th and the second at 9 a.m. on the 31st. But he did not attempt to probe the patient's wound, as it has already healed too far to permit of such an operation. The Viceroy appears to suffer from some species of catarrh of the stomach, but the exact nature of his malady is not clear. His temperature on the morning of the 31st ult. was 37°, his pulse 72, his general health good, and his appetite as usual. It is added that he eats two chickens daily, presumably in the form of soup. From the same authority we learn that Dr. Sato conveyed to the Viceroy on the morning of the 31st ultimo the special message of condolence sent by his old friend Viscount Yenomoto, Minister of State for Agriculture and Commerce, who is a relative Dr. Sato, and that the Viceroy was much pleased. If all the accounts published by correct, the Viceroy must have experienced an unusual number of pleasurable sensations since his mishap.

The *Mainichi Shimbun* says that in addition to the guile with which he committed his nefarious crime, Koyama Toyotaro had in his possession a sixteen-page document called a *Zan-Kanjo*, that is to say, a document relating to the "removal" of wicked folks, and that he also possessed a photograph of Count Itagaki. We must confess that the general tone of the *Mainichi Shimbun* of late has not impressed us with very strong confidence in its moral balance. Count Itagaki's photograph may probably be omitted from the inventory of Koyama's belongings without any serious violence to truth.

The Viceroy is said to have invited Dr. Sato to Tientsin, promising to show him, not indeed such scenery as Japan offers, but at any rate some novel varieties of river views. It is an honest promise. The mud banks of the Peiho can be guaranteed as unique specimens of dirt decay, and dreariness.

It appears that the *Kwang-chi*, which vessel Admiral Ito restored to the Chinese, after the surrender at Weihaiwei, in order that the bodies of Admiral Ting and other high officials who died at Weihaiwei, as well as the liberated officers, might be carried away in her, was again captured at sea by the Japanese sloop *Teuriu*. On examination it was found that the *Kwang-chi* had on board 13 coffins, including that of Admiral Ting, the Admiral's son, 84 civil and military officials, and 96 rank file who had been released at Weihaiwei. She was *en route* for Shanghai, and it appeared that the engagements given by the officers to Vice-Admiral Ito were being faithfully carried out. The Japanese might have held the ship, of course, but they decided to let her go, as that course seemed more consistent with the original intentions of Vice-Admiral Ito.

In the *Official Gazette* we find the following : —"The expeditionary force, setting out from Sasebo on the 15th of March, and experiencing very bad weather all the way, arrived at Tsang Island on the afternoon of the 20th. On the same day the *Yoshino* and the *Naniwa* proceeded to reconnoitre Panghu Island and reported that there was a good landing-place in the Bay of Lichangchue, and that there appeared to be a fort on an elavation to the north-east of Heuchue Bay. It was therefore decided that a landing should be effected at Lichangchue, and that the First Flying Squadron, by way of preliminary, should shell the fort, the result of which operation should be taken as a guide for the approach of the Main Squadron and the transports to the landing place. On the 21st and 22nd an attempt was made to carry out this plan, but the weather proved too tempestuous. At 6 a.m. on the 23rd the ships put out of port, and the Flying Squadron shelled the fort as arranged. The enemy immediately replied, but it appeared that they had not more than two or three 15-cent. guns in position. Accordingly, while this was in progress, the Main Squadron convoyed the transports to Lichangchue, where they anchored. The First Squadron continuing to engage the fort, the landing of the troops was commenced at 11.40 a.m. and by 2.45 p.m. they were all ashore. The Main Squadron then joined the Flying Squadron in bombarding the fort. With a view to capturing Makung and turning its guns on Yufan Island, a force of 42 men with three field-pieces was landed from the fleet, and it was decided to land two companies with three more field guns on the 24th, one of the companies to be employed holding Yuen-ting Bay, while the rest of the force with three field guns advanced against Makung in order to get possession of its guns and use them."

The above report is from Vice-Admiral Ito. It is supplemented by a report from Sub-Lieutenant Hosaka, who says that, on the 23rd ultimo, the Japanese casualties were 8 wounded and one killed ; that on the 24th, the fort on the north of Henchue Bay was taken without loss ; that 3 French men-of-war were in the harbour at Tsang Island, and that the Chinese gunners did not succeed in hitting the Japanese ships once. The First Flying Squadron consists of the *Naniwa*, the *Takachiho*, the *Yoshino*, and the *Akitsu*, but the *Yoshino* does not seem to have taken part in the bombardment on the 23rd. The Japanese transports anchored about 3 miles from the Port, and some shells

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

from the latter fell near the ships but did no damage. The enemy, as soon as they saw that a landing had been effected, sent a force of about 500 to oppose the Japanese advance, and a fight ensued, in which the Chinese had 20 killed and wounded, the Japanese loss being only 1 according to the *Jiji Shimpo*, but 8 wounded and 1 killed according to the report quoted above. The fort was captured by 5 p.m. and the troops bivouacked there. It contained six guns, of which three only had been used in the defence. There were still two other forts on the same island (Panghu). Makung was captured without difficulty on the 24th, and on the following day the Chinese on Yuenting peninsula surrendered. The spoils were 9 large guns, and a great quantity of ammunition and other articles. The enemy's casualties were 20 or 30 killed and 50 or 60 prisoners. The Japanese had 1 killed and 16 wounded, including a Lieutenant. The enemy fired the magazine in one of the forts and fled. The latest report is from Vice-Admiral Ito, under date 2.30 p.m. on the 26th ultimo. It says that the fleet took the last fort on Panghu Island on the afternoon of that day, so that Panghu is now entirely in Japanese possession.

Tuesday, April 2nd.

According to the vernacular press, Dr. Sato has instructions to telegraph daily to the Emperor the state of the Viceroy's Li wound. The doctor does so when he gets back to his inn after his morning visit to the patient, and the telegram, on reaching its destination, is at once handed to the Emperor and Empress.

Every conversation that passes between the Viceroy and Dr. Sato is reported by the vernacular press with a degree of fidelity that seems almost comical. Even the *Jiji* recounts how the illustrious patient stroked the celebrated physician's uniform and asked him whether he knew anything about war; to which Dr. Sato replied that the sword he wore was not to take men's lives but to save them. Of course there are various accounts of the delight with which the news of the Emperor's magnaminity in granting an armistice without conditions was received, but descriptions of such sentiments are clumsy affairs at best.

Vice-Admiral Ito, telegraphing from the Pescadores at 3 p.m. on the 26th ultimo, says:—"This afternoon I caused the ships to pass round to —— Bay, where we found the enemy in full retreat: A reconnoitring party proceeded to the fort and raised the naval ensign over it: Thus the whole of the Pescadores came into our possession. We are now engaged raising the torpedoes at the harbour's mouth. The British ship *Leander* arrived here on the 21st and fired a salute of 21 guns, which we returned."

Another report, also from Vice-Admiral Ito, dated at 11 a.m. on the 26th, says:—"On the 24th instant at 11.30 a.m. the mixed force, meeting little resistance, gained full possession of Makung. We had about 20 men wounded. I have not yet received any report of the enemy's casualties. The Chinese seem to have fled for the most part. Occasional shots were fired from Fisher Island at Makung. A skirmish also took place between a force of the enemy and the detachment of land troops posted by us to guard Yuenting peninsula. Several of the enemy were killed, but not one of our men was seriously wounded. The same evening the Chinese in the peninsula sent word that they wished to surrender to Major Tanji, who commanded the land forces on our side, and on the following day (25th March) the fort, armament and garrison were taken over. The enemy had stated that they numbered a thousand, but as they had no regular barracks, being scattered about the village, it was found difficult to collect them, and up to the evening of the 25th only 300 had been brought together. The officers, to the number of 10, will be sent to Japan in a few days. The men will be taken in junks to the mainland and set free. Yesterday, the fort taken by us at Makung fired several shots at the Fisher Island fort, but the latter did not reply. According to a report received yesterday from the *Naniwa*, which had been sent to reconnoitre, neither on Fisher Island nor in the neighbourhood were any of the enemy visible. From Siaveh' fort smoke was observed to ascend as though the powder magazine had been blown up, and it was presumed that no resistance would be encountered there. From the 20th instant until yesterday I purposely avoided sending any ships to the neighbourhood of Fisher Island, and it is therefore possible that some of the enemy may have taken advantage of the opportunity to escape in Chinese junks. To-day the ships are to steam up to the outside of Panghu harbour. The naval brigade will be withdrawn to-day as soon as the mixed force sends a detachment to relieve it from garrison duty."

Wednesday, April 3rd.

A report was received at Takushan on the 29th of March, from the officer commanding the commissariat station of the Second Army at Yangchiatun, that a force of the enemy was assembled at a place some 5 miles eastward from the Pili river (flowing into the Yellow Sea near Pitsuwo in the Liaotung peninsula), and that they had obtained arms and were secretly drilling the able-bodied men of the neighbourhood. The report went on to say that as yet no appearances of disturbance were visible, but that the eventualities of the situation could not be foreseen. Accordingly, Captain Nagase, of the Gendarmerie, proceeded thither at the head of a small force from Chwangho, and returned on the 30th ultimo, having taken 40 rifles, 13 *fusils de rempart*, 20,000 rounds of ammunition, 55 boxes of gunpowder, 16,000 fuzes, and 2 flags. He also arrested the chief of the insurgents, who is now undergoing examination.

In the *Nichi Nichi Shimbun* we find the following detailed account of the capture of Yingkow (Newchwang):—"The order of the First Army's advance against Yingkow on the 5th of March was that the Third Division should march by the main route and the Fifth by a road on the left. There were said to be about 40 *yings* (20,000 men) of Chinese troops in Yingkow. That night the General and Divisional Head-quarters stopped at Tatsili, the van going into quarters on the south, and the infantry of the main body on the west, of that town. On the 6th the advance was resumed toward Kaokan, but soon the cavalry videttes reported, first, that no sign of the enemy was to be seen in Kaokan, and secondly, that the defenders of Yingkow had retreated to the northern bank of the Liao River, and were now at Tienchwangtai. This intelligence was received with much disappointment. The sound of artillery now became audible in the direction of Yingkow, and the Fifth Division advanced *en masse* to the neighbourhood of Fenghwangtien, where a report was received that the First Division had already captured Yingkow without difficulty. Scouts were accordingly sent forward. From Fenghwang-tien to Yingkow the distance is 11½ miles. The news of the fall of Yingkow not having been received until evening, the General and Divisional Head-quarters were established for the night at Fenghwang-tien. The main body of the enemy had retired to Tienchwangtai, and the garrison left in Yingkow numbered only 3,000. With these the First Division had fought. Whether the 3,000 effected their escape and joined the force at Tienchwangtai, or whether they were killed by the First Division, we have not yet learned. On the following day (7th) the sound of big guns was heard in the direction of Tienchwangtai, and we conjectured that the Third Division had marched to the attack of the place. The garrison at Yingkow had proved exceptionally weak, allowing itself to be defeated by one detachment of the First Division, and the First Army, moving down with all the *elan* of its victory at Newchwang, found nothing to do except to listen to the recital of its comrades. The remnants of the Newchwang Army together with the Yingkow Army and 5 *yings* (2,500 men) of the regular garrison, being assembled at Tienchwangtai to the number of 20,000, and having entrenched themselves there with the evident intention of giving battle, the Commander-in-chief gave orders that the Third Division should take steps to ascertain the enemy's force and his plan of defence. On the 8th Lieut.-Colonel Tanioka, with a battallion of infantry and some field guns and rifled mortars, marched out of Chung-sin-pao and having got within about 2½ miles of Tienchwangtai, heard the sound of firing in that direction. The Lieut.-Colonel pushed on rapidly to assist the Third Division, the troops of which became visible on entering Niuchuentsz. It was then learned that the *reconnaissance* in force made by the Third Division had unmasked the enemy's dispositions, and Lieut.-General Katsura was able to report the facts to the Commander-in-chief. It appeared that the enemy's strength was about 10,000, that he had over 30 pieces of artillery, and that he had made the Liao River his line of defence. The plan of attack was now arranged; namely, that 7 a.m. the following morning (9th) the Third Division, with 50 guns, should attack from the front; the Fifth Division, moving out of Shangchiuntai, was to threaten the enemy's line of retreat, and the First Division, marching from the south-west, was to attack from the enemy's right flank, the assault being thus delivered on three sides. Accordingly, the Third Division camped in the neighbourhood of Changchiaken, and the Fifth in that of Tingtuitsz, both in order of battle. On the 9th, the 22nd Regiment became the van the Fifth Division and advanced to the left bank of the Liao, by which time the First and Third Divisions had already come into action. About 100 guns were engaged on both sides. Lieut.-General Oku now moved to the front, and after surveying the situation for a few minutes, directed that, as the 22nd Regiment, crossing the river higher up, was moving to attack the enemy's left wing and to threaten his route of retreat, the field mountain guns should take up a position on the east and open fire, which order was quickly executed, the enemy's guns replying. At first the enemy's shells were seen to burst at a distance of about 1,000 metres, but they afterwards got the range better and several of the gunners were hit. The infantry of the 22nd Regiment came up at this stage and threatened the enemy's line of retreat, while our artillery also pushed forward. But the enemy did not stand to be attacked. For every 10 paces advanced by us, they fell back 100, showing remarkable alacrity in getting out of the way. The 22nd Regiment finally succeeded in getting possession of the route of retreat, and the enemy, forcing their way through the snow, fled toward the sea-coast, heading for Chinchow. Our casualities were some 20 killed and wounded in the First Division, 40 in the Third, and 19 in the Fifth. The enemy left over 2,000 dead, it is said.

Thursday, April 4th.

From Ninsen, under date 8.08 p.m. on the 31st ultimo, a telegram describes another encounter between a body of about 1,500 Tonghaks and some Japanese soldiers under Ensign Shoi. It is unnecessary to describe the occurrence in detail, as the names of places mentioned can not be familiar to our readers. It would seem, however, that the Tonghaks showed more power of resistance than usual. They separated into five parties and occupied strong positions on elevated ground, from which they were dislodged with difficulty. No mention is made of Japanese casualties, but the Tonghaks are reported to have lost 40. They were also driven from a temple that had served as their head-quarters, and were obliged to burn some 200 *koku* of rice stored there, not having time to remove it. Truly it is a weary business this Tonghak rebellion.

We published yesterday a telegram saying that a meeting had taken place in the Conference chamber in Shimonoseki, Viscount Mutsu and Chief Secretary Ito Miyoji being present on the Japanese side, and Lord Li on the Chinese. The *Nichi Nichi* says that Messrs. Inouye, Secretary of the Foreign Office, Nakada Private Secretary, Mutsu, Interpreter, and Narahara, employé, were also present, as were the Chinese members of the Mission, Messrs. Lo

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Fung-lo, Wu Ting-fang, and Ma Chien-chang. The conference lasted from 10 a.m. to noon.

The *Choya Shimbun* says that the telegrams and letters of condolence addressed to the Viceroy Li since the occurrence on the 24th ult., from all parts of Japan, number over ten thousand.

The accounts of the Viceroy's condition continue most favourable. His complete recovery is evidently only a matter of days. Various details are published by the vernacular press—as that the two nurses sent by the Empress being quite unneeded, have returned to Hiroshima; that Dr. Sato has been showing the Viceroy some photographs of an operation of amputation, and of an artificial leg given by the Empress; that the Viceroy has a Chinese translation of a book on international law beside his pillow, and so forth—but we do not suppose that such minutiæ can have much interest for our readers.

There is an absolute dearth of War news.

Friday, April 5th.

The presence of the Viceroy Li in the Conference Chamber on the 3rd instant was not in any way connected with a renewal of the peace negotiations, according to a telegram published by the *Hochi Shimbun*. The Viceroy went there merely for the purpose of expressing his thanks for the concession made by Japan in the matter of the armistice. But we may presume that this demonstration of his Excellency's ability to visit the conference chamber was intended as a prelude to the resumption of the negotiations, which was to take place yesterday morning.

The *Jiji Shimpo* has a paragraph saying that the Viceroy is much startled by Japan's demands and that it greatly exceeds his powers to accede to any such terms. But we do not see how the *Jiji* can have sufficient grounds for the statement. In the first place, the Viceroy can not yet be fully acquainted with Japan's terms. The assertion that he learned them at the third meeting of the Plenipotentiaries is now known to be incorrect. The business discussed at the second and third meetings was that of the armistice only. Besides, the Viceroy must have had a very shrewd idea of what Japan would ask for before he left China. He knew that an indemnity and a declaration of Korea's independence would not suffice, and he must consequently have been prepared and empowered when he set out to make some territorial concessions. But as soon as an indemnity and territorial concessions are admitted to form part of the basis of negotiation, Japan's remaining demands can contain nothing to "startle" the Viceroy. It is to be expected, just now, that a great many curious items of intelligence will be published for the purpose of influencing the share market, which is in a decidedly sensitive condition.

In the *Jiji Shimpo* we find the following with respect to the relations between the Japanese troops and the foreign residents of Yingkow:—"The foreign residents of Yingkow consist entirely of American citizens and British subjects. It is said that there are also two or three French citizens, but the statement is not to be believed. When the First Division of the Japanese Army entered Yingkow on the 7th of March and took possession of the place, messengers were at once sent to convey intelligence of the fact to the foreign residents. The Japanese honorary Consul and the officers in command of the American and British men-of-war in port, gave to these messengers a most courteous reception. Subsequently, learning that there was a Red Cross Hospital in the place, the Japanese officers desired to visit it. They made application in the first place to the British military surgeon, but he would not grant their request, even though twice preferred. His explanation was that if the patients saw the Japanese, they might be alarmed to an injurious extent. Application was then made at the hospital under the control of the Americans, and there they were not only readily admitted, but had explanations of the cases given to them, and were handed photographs illustrating the treatment recently pursued. As for the patients, they showed no alarm whatever." (We, *Japan Mail*, find difficulty in crediting this story. There is only one Red Cross Hospital in Newchwang, and we are not aware that it is under divided control of Americans and Englishmen. Moreover, it is not likely that, even supposing such division did exist, the American physicians would have agreed to an application that had been twice refused by their English colleagues.) "With regard to this procedure on the part of English doctors we have a word to say. In a house near the Chinese camp were found 500 *koku* of rice and 60 boxes of ammunition. Our soldiers took possession of these articles, and bringing up carts, loaded into them 100 *koku* of rice. When they were about to move the carts away, however, an Englishman came up in a great state of alarm, protested that the rice was his, and asked by what right Japanese soldiers seized the property of a neutral. A controversy arose, and finally the officer in charge of the party said that as he was acting under orders from the Commander-in-Chief, and as there was immediate need of the rice, the 100 *koku* already loaded on the carts must be carried away, but that the remainder would be left pending fuller investigation, when if it was found to be really the property of the Englishman, he would be duly remunerated for the portion taken. The matter ended there for the moment, but it seems to us that there are three reasons for concluding that the rice was certainly stored as provisions for the Chinese troops. In the first place, it was stored side by side with the enemy's ammunition. In the second, what could be more unlikely than that an Englishman would have placed 500 *koku* of rice in an uninhabited house just within the gate of the town at a time of war, no one being left to guard it. In the third place, after our troops entered Yingkow, they put a guard over this rice and ammunition, but the Englishman never asserted any claim to it until it came to be removed. As to this last point, his explanation was that he had heard much of the kind conduct of the Japanese troops and that he imagined they were merely protecting the rice against depredators. It was replied to him that he could scarcely have imagined that rice found stored with the enemy's ammunition and having no mark or name on the bags could be considered private property, and that the Japanese would put a guard over it. If he did believe anything of the kind, had he expected to be allowed to carry off 500 *koku* of rice without a word of explanation or thanks to those that had guarded it for him? This is not the only case of such conduct on the part of Englishmen. After our troops entered Yingkow, a project seems to have been suddenly evolved. On the houses of all the Chinese merchants outside the foreign settlement, notices were posted indicating that the house belonged to such and such a British subject. A Chinaman and an Englishmen were then put on watch at the gate, and whenever any Japanese soldiers attempted to enter, the notice was pointed out to them and they were excluded. In contradistinction to that behaviour on the part of Englishmen, the Americans were most kind and courteous. When our forces entered Yingkow, there were a British and an American man-of-war at anchor there. The former took not the slightest notice of our coming, but the crew of the latter assembled on the deck from the morning, and clapped hands and cheered as our men passed along. Again, previously to the entry of our troops, the Chinese officials, as a matter of course, and the greater part of the inhabitants fled, the dregs of the population only being left. These last began to break into the offices as well as into the houses of opulent merchants, and to commit all kinds of excesses. The Americans were so disgusted at this conduct that they put guards of marines at important buildings, handing over the latter to us immediately on our entry, and explaining that although they might be blamed for exceeding their competence, they had found it impossible to stand idly by while outrages were committed that were not only disgraceful in themselves, but would also be assuredly ascribed to the Japanese soldiery. What a contrast such conduct presents to that of the British residents! Meeting our troops in the streets and cheering them, the Americans have been asked whether they were really so pleased at our victories. They replied that they had in us the same kind of interest as a parent takes in a child; that they watched our growth with interest and were delighted when we achieved big things. When our scouts were sent to reconnoitre Yingkow, they met an American officer named Brandy (?), who told them that there was a large store of American arms and ammunition in the place, and that, if they needed such things as they probably did, they were welcome to use them. This story may have been a misapprehension on the part of our interpreter, but at all events the goodwill of the Americans is not to be forgotten."

Commander Ito Sukeyoshi of the Artillery, telegraphing to the War Department from the *Matsushima Kan*, in one of the bays of Panghu Island, says:—"The ships of the squadron, on the afternoon of the 26th of March and on the 27th, made a thorough search for torpedoes at the mouth of Panghu harbour, but found that none had been laid. Thereupon the transports moved up to the north of Peotien Island and anchored eastward of the wharf outside the south gate of Makung. Steps were immediately taken to land their cargoes of war material. It seems certain that the enemy's total force in Panghu Island numbered some 5,000. With the exception of the troops on the Yuenting peninsula, the Chinese soldiers all effected their escape in junks. Of those that surrendered on the Yuenting peninsula, the rank and file were carried to the mainland and set free, the officers only being retained. The number of large guns captured in the forts is 15. Their breech-closing apparatus is slightly damaged in some cases, but can be rendered serviceable by slight repairs, which have already been commenced. The people of the islands show an excellent disposition towards us, those on Fisher Island having already resumed their regular avocations. The inhabitants of these islands will be very easy to govern."

The apprehension entertained by us from the outset, namely, that the Chinese in the field could not be induced to observe the conditions of the armistice faithfully, and that it would consequently cease to be operative, seems likely to be speedily confirmed. The following telegram from Field-Marshal Nozu to the War Office, dated 3rd April, 11 p.m., shows how things are proceeding in Shinking:—"On the 1st of April Chief of Staff Aoki sent a despatch from Kansienpao by a Chinese bearer to the officer in command of the Chinese forces, intimating that he, Aoki, desired a meeting, indicating the time and place of meeting, and asking for an immediate reply. On the following day another messenger, carrying a despatch in the same sense, was despatched to Nganshan-chan. Each despatch said that the Japanese officers would approach the place of meeting carrying a white flag and blowing a bugle, and asked that due notice of such intention be given to the Chinese troops. The messenger sent on the 1st ought to have returned during the course of the 2nd inst., and the messenger sent on the 2nd should have got back by the morning of the 3rd at latest, but as neither of them had made his appearance at noon on the 3rd, it was concluded that any longer delay would be disadvantageous" (it will be remembered that the terms of the armistice required its mutual intercommunication by the Generals in the field) "and Staff Officer Aoki set out from Nganshan-chan, his escort carrying a white flag and blowing a bugle. When they had proceeded to a distance of about 2½ miles north of Naganshan-chan, three troopers and five or six infantry soldiers of the enemy appeared and opened fire on them. The party of Japanese thereupon halted and waved their white flag, but the Chinese, paying no attention, approached to a distance of some 300 metres, and kept up a hot fire, by which a Chinaman that was with Captain Aoki's party was severely wounded. It being evidently useless to try and advance peacefully, the party

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

returned to Nganshan-chan. The enemy's utter ignorance and disregard of usage make it hopeless to try and communicate with him. Captain Aoki has therefore resolved to remain in Nganshan-chan and await the coming of a messenger from the other side." To the above account Field-Marshal Nozu adds:—"Whether the Chinese Peace Plenipotentiary has communicated to his Government the fact of an armistice having been concluded seems doubtful in view of the fact that the Chinese troops in this district are behaving just as they did before."

The following report from the Pescadores to the War office in Tokyo is published:—"The detachment, landing from Lichang-chue on the 23rd of March, after a short skirmish, proceeded to the attack of the enemy's littoral forts on the north-east of Heuchue and took possession of them. By 11.30 a.m. on the same day, they had taken Makung. The enemy's forts on Fisher Island kept up a cannonade against Makung until sunset. On the 25th they blew up their magazine and made their escape. The men of the Yuenting peninsula surrendered to the number of 13 officers and 560 men, and the Pescadores came entirely into our possession. Our casualties are 1 officer and 18 men wounded and 2 men killed. The enemy had 70 killed and wounded, and 80 taken prisoners. Great quantities of war material were taken and are now being catalogued. The inhabitants are gradually returning to their peaceful avocations."

CHINA'S FOREIGN EMPLOYÉS AT WEIHAIWEI.

The Chinese Government is said to have dismissed all its foreign *employés* that were connected directly or indirectly with Weihaiwei. There is one very obvious reason for this step. Weihaiwei has been demolished and the Peiyang Squadron no longer exists; therefore China has no special need of the services of men engaged originally for the sake of her ships and forts. But it seems that her method of dismissing them has not been generous. A month's pay and a passage home are the *solatium* meted out to the most fortunate, and many complain that they have not received, and can not obtain, large arrears of pay due to them. We do not believe the latter allegation. The Chinese Government has always honourably discharged its obligations of that nature, and unless unimpeachable evidence be furnished, no one will credit its sudden lapse from a standard so invariably observed hitherto. But there appears to be some dissatisfaction among the dismissed *employés*. A new band of hostile critics has come forward to abuse China. Her *ex-employés* begin to publish sweeping accusations as to the cowardice, incompetence, and insubordination of her soldiers. They say, in effect, that the garrison at Weihaiwei was in a perpetual state of semi-mutiny. The soldiers, unless they were driven almost by force, could never be induced to make any effective preparations for defence. From the moment that the landing of the Japanese expedition took place, they became utterly demoralized, and schemed only to get the foreigners away in order that there might be no outside witnesses of their disgraceful behaviour. Of the sailors, on the contrary, the foreign *employés* speak in high terms. They say that the common seamen were braver and more intelligent than their officers. In the forts on Zhih Island the troops, on two occasions, abandoned the guns, refusing to fight any longer, but were shamed into resuming their posts by the resolute behaviour of a squad of 25 blue-jackets.

A severe hailstorm occurred at Haoi, Kita-Saitama District, Saitama Prefecture, on the night of the 30th ult. The hail-stones accumulated to the depth of a little over two inches, and some were as large as a 5-*sen* nickel coin. Great damage was done to the barley.—*Shogyo Shimpo.*

CHINESE NEWS.

The *North China Daily News* is publishing a series of essays on "The Origin of the War." They are cleverly written and for placid perversion of facts and radical one-sidedness, they "take the cake."

Naturally the "searching" operations undertaken by Japanese vessels in the northern part of the Gulf of Pechili were at first interpreted as indications of a landing at Shanhaikwan. The Japanese are said to be very courteous but very thorough in the art of searching.

A correspondent from Shansi writes:—

One really would on many accounts prefer to live among a people with a little more fire in their blood. To work among a people that can look on with perfect composure while their country is being bolted whole by a foreign invader seems like a shaking of dry bones. We expect to be able to work here with little or no visible changes even should the Japanese take the Capital and the dynasty be changed. As to whether a change of dynasty or a partition of China would be beneficial, there seems to be a difference of opinion, but the majority of us are probably on the side of a thorough-going change.

The *Pekin and Tientsin Times* of March 6th says:—

On the 6th inst., a Special Meeting was held at which all the foreigners at or near Tong-shan were called upon to attend. Seventeen employés of the Chinese Railway Company, Mining Company, and Imperial Railways were present, Mr. Kinder acting as Chairman. The result of the meeting was that the foreigners decided to remain at their posts until the Japanese have effected a landing or are certain to do so before many hours. In case the Chinese troops became mutinous, or rather more so than usual, it may be dangerous to proceed to Tientsin, especially if the line is cut. The foreigners then decided to remain in Tong-shan and if necessary defend themselves in the strongest compound available for the purpose, and which is now being rapidly got ready for a possible seige. A document binding each one to abide faithfully by this determination was then signed by all present so that the foreign staff will act together whatever may occur.

Fugitives from Kinchow are streaming into Shanhaikwan. They report Japanese rapidly advancing, driving Sung and Wu before them. Fugitives state they have left their families behind because the Japanese take rice from the Chinese troops and feed the people with it. The men fly because many of them have been soldiers and fear the Japanese will shoot them. From this it appears the Japanese intend to advance overland, clearing the Chinese entirely out of Southern Manchuria. Mukden is quite cut off and probably lost. Four so-called "Korean priests" were taken as spies at Shanhaikwan and are now in prison.

The snow fall in Tientsin during the week has been exceptionally heavy. It must have been at least six inches deep where it had not drifted.

In our War News columns during the past few days we have published translations of official report showing with what ease the Pescadores fell into Japanese possession. It will interest and amuse our readers to compare these with the following extract from the leading Shanghai paper:—

Considerable excitement of a pleasurable nature—long unknown since the disastrous day of Pingyang—was felt by the local mandarins on Saturday evening by the receipt at 5 o'clock that afternoon of a telegram from the Formosan authorities announcing that a cablegram had been received from the General commanding at the Pescadore islands reporting, "On morning of the 23rd inst. a fleet of twelve Japanese vessels attacked Pênghu, the principal harbour of the islands. The forts made very good practice with their 32 centim. guns driving the enemy away, with actually very small damage to the former." Shortly after the receipt of the above, another despatch, sent later by the Taipehfu authorities, was received by the same parties containing the following:—"Cause of enemy's retreat and repulse was the destruction of two of their ships and a like number badly damaged; the former ran ashore and were literally pounded to pieces by the heavy guns of the Pênghu forts. Strict discipline prevails amongst the fort gunners and troops covering the forts, many of whom are veterans of the war of 1883-4. Good spirits exist and warlike enthusiasm is felt amongst the troops."

The Chinese synopsis of the state of affairs in Shinking on the 24th of March is as follows:—

Shanhaikwan, March 24th.

Governor Wu Ta-cheng's army has retreated to Shisanshan, about twenty odd miles north-east of North Kinchow on the left bank of the West Shaho river, where the army commissariat had been transferred from Tienchuangtai. General Sung's army is now marching through the hill country called P'anshan, about eighteen miles east of Wu Ta-cheng's army. The enemy's advanced posts are known to be in the vicinity of the East Shaho river and are expected to march against the Chinese army within a few days, as the recent snowstorms have been too severe for active movements of any dimension. A battle will probably take place for possession of North Kinchow in the vicinity of Shisanshan. The Hunan troops of Governor Wu will form the centre; the Generalissimo, Liu K'un-yi's army the right wing; and the Huai army under General Sung Ching, the left wing of the Chinese forces. Governor Wu will probably be unable to taken part in the expected battle as he has been ordered to leave for Pekin, although Liu K'un-yi has asked that his departure should be deferred. Cavalry reconnaisances of the coast to the south of N. Kinchow have been made every day, despite the weather, and this morning it is reported that Japanese ships and troops have been observed at Taohua island, about 140 *li* south of N. Kinchow. The island has been taken possession of by the enemy but no attempt on the mainland has, up to date of despatch of telegram, been made by them.

The Pekin correspondent of *North China Daily News* writes a most interesting letter to that journal under date March 4th. We make some extracts:—

The most important Imperial utterance perhaps ever delivered, and one which if carried out will create a new Chinese world, when the present order of things which has now reigned for several thousands of years will give place to a better system, and which may, and doubtless will have important and far-reaching issue for the world at large, was communicated to the Viceroy Li this morning at his last audience with the Emperor previous to his departure to-morrow morning for Tientsin *en route* to Japan in a third attempt on the part of China to secure peace. The Emperor plainly and emphatically declared that reforms of an extensive and comprehensive nature must at once be undertaken when peace is secured, and that these reforms must not be confined to Pekin only but extended to the whole empire. This impression is also beginning to take hold of the official mind. Reform is in the air. With the view of helping to initiate and carry out these contemplated changes in the administration of the empire, the Viceroy it is believed will be retained in the capital. He has now had all his honours restored and stands to-day stronger than ever, the strongest man in China, despite the memorials of Censors and his enemies which keep pouring in upon the Dragon Throne. Foreigners have always looked forward to some such result of the present war. The universal belief in view of the widespread corruption of the officials has been that no change was possible from within, that the officials who live and fatten on the country would resist reform to the death and that without the intervention of foreigners, China's position was hopeless. The present war has opened their eyes to their weakness and to the urgent and dire necessity of doing something to improve their position. The progress of their despised neighbour is at last going to react upon China. That the task set before his Majesty is herculean no one can doubt, his youth and weakly constitution must tell against him; his uncle Prince Kung is now over sixty years of age and the Viceroy Li is over ten years his senior. The Empress-Dowager has reached her three score and it is said is now so indisposed that she was unable to grant an interview to the Viceroy. It is all nonsense the belief that she sits behind the Dragon chair and hears all that passes. Prince Kung when he returned to power stipulated, doubtless, that the Empress-Dowager should retire as she has nominally done since the Emperor's marriage, into the background and content herself in her own palace by the lake. The youthful Empress has not yet made any figure in the councils of the Emperor and must so remain so long as the Empress-Dowager lives. By the way in *The Times'* obituary for 1894 the death of the wife of the Emperor of China is noted. The name given *Ye-wo-na-la*—her Manchu name, should read *Ye-ho na-la*. There was a rumour of her death here about the time of the 60th birthday celebrations last autumn but it had, we are happy to say, no foundation in fact.

The Viceroy arrived here on Thursday the 21st. He saw the Emperor the following morning, again on the 23rd, then on the 25th, and for the last time this morning. On the morning after his arrival he paid his first visit to the Russian Lega-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

tion, then crossed the street to the United States Legation, and afterwards passed the German Legation to visit the French Minister. The order and objects of the visits caused considerable speculation here. On the second day he paid visits, of two hours duration, to the British and German Ministers. On Sunday afternoon he was again at the French Legation where it was arranged he should meet the Russian Minister. On Monday evening, the 25th, he was once more at the French Legation. On Tuesday morning he visited the Inspector General and Italian Minister. The foreign Ministers returned his calls at the temple where he puts up when he comes to Peking.

The great question of the hour is—Will peace be secured? The general opinion here, and we believe also at Tientsin, is that peace will not be obtained, and that the Japanese will not stop short of dictating terms in the capital of China. The Japanese, it is thought, do not yet believe that the humiliation of China is complete. The insolent term from the vanquished "dwarf pirates," still disfigures Chinese official documents. A memorial from the Viceroy, the new peace envoy, even contains this language. The officials and people buy and sell, marry and are given in marriage, feast and resort to the theatres as if nothing were taking place. The officials, outside the Foreign Office, are as haughty and conceited and detest the foreigners as much as ever. They still believe China cannot be conquered by the "dwarfs." * * * The Chinese say the Viceroy will not accept Japan's terms. Japan however, has to guard against foreign intervention in the war and this seems almost inevitable if she declines to accede to peace which on this occasion at any rate seems to be sought sincerely, but whether with sufficient humiliation is for the Japanese to judge. The Viceroy will, of course, at the outset admit freely and fully that China has been beaten and cannot resist Japan. He will then remonstrate with Japan upon the delay in coming to terms and her refusal to treat with the former missions and finally inform them that if they still refuse peace on reasonable terms, Japan must take all the consequences of the proposed march on Peking, the possible overthrow of the dynasty and widespread anarchy which will cause intervention by the foreign Powers. This seems to be the *rôle* he intends to play.

The Korean correspondent of the *N.C. Daily News*, in a letter published in that journal on March 26th, says that the Bank of Japan has at length agreed to lend Korea three million dollars. This is on a par with the proverbial inaccuracy of all that gentleman's statements—statements that have furnished many a hearty laugh to readers on this side of the water. Our Shanghai contemporary, too, should know more of what has really happened than to publish such an assertion.

Some accounts of the Viceroy Li's mission represent him as by no means restored to Imperial favour, and say that he will have a heavy reckoning to pay hereafter. If that be so his success in the negotiations may be doubted.

The *Pekin and Tientsin Times*, after noting how each account, given by Weihaiwei warriors now in Tientsin, is contradicted immediately afterwards, says:—

There seems however to be unanimity about the heroism of the three old British Tars, Messrs. Thomas, Walpole, and Clarkson. These three were very early deputed to take charge of the small island E-kung-tao, which was armed with Armstrong disappearing guns. On arrival there they found some forty men with three loaded shells for the big guns and 300 rounds for the quick-firing guns. Immediate application was made to the General for rifles, ammunition, &c., but no attention was paid; and it was only after the matter had been submitted to Admiral Ting that men, rifles, ammunition, and all the other necessaries were supplied. Although exposed to the continuous fire of the Japanese fleet, and the Eastern forts, the three men worked their guns indefatigably and harassed the Japanese very considerably. When the guns were finally disabled, and retreat became a necessity, the three, with true British Tar facetiousness decorated the disabled fort with the saying, "Do you use Pears' soap?" and a warning to "Mind the wet paint."

Another paragraph in the same journal says:—

We hear that nothing demoralized the sailors of the Chinese Fleet at Wei-hai-wei so much as the capsizing of the man-of war *Lai Yuen*. This ship turned completely over with her whole crew within about ten minutes after being struck by a torpedo, and nearly all hands were drowned. The sailors of the fleet got it into their heads that, if any of the other ships were torpedoed, an immediate capsize would be the result, and it is said that most of the crews there and then refused duty. This ship, it will be remembered, was condemned by Admiral Lang as being too crank to be seaworthy, and by his orders ceased to carry her boats on the usual davits.

The *North China Daily News* has the following two telegrams about the Pescadores:—

Taipehfu, March 25th.

General Wang, chief in command at the Pescadores, was killed by a bullet yesterday morning and this caused demoralisation amongst the troops. The three forts were later on captured in succession, although brave defence was made against large odds. Prefect Chu and his division of 2,500 men have retreated to the hills four miles to the rear of P'ênghu harbour. The enemy is reported to be preparing to attack him. Large quantities of grain and ammunition have been lost with the P'ênghu forts. The Japanese lost two ships. They were disabled at first by torpedoes and then sunk by fort guns. Chinese loss, 1,365 men killed.

Amoy, 28th March, 3.37 p.m.

The Pescadores were taken on the 24th with little fighting, one Japanese war vessel being badly ashore.

Takow will be taken on the 29th.

As to the destruction, or running ashore, of any Japanese vessels, we have heard nothing whatever from Japanese official sources.

The Shanghai morning journal says that "with that ineradicable propensity for perversion of truth which disgraces Chinese officials, members of the Viceroy's suite have telegraphed to high authorities in this country that the Viceroy is in imminent danger and that his life is despaired of." Our contemporary adds that "telegrams from Pekin announce that the news of the attack on the Viceroy created the greatest consternation in the capital."

There is a report in Shanghai that a force of Japanese has been carried over-sea to the neighbourhood of North Chinchow. A telegram from Shanhaikwan, dated March 25th, and published by the *North China Daily News*, says:—

A telegram was received from N. Kinchow this morning reporting that some of the enemy's ships had anchored in a cove or harbour near Tienchiaochang, about twenty miles south-east of N. Kinchow, and that about 2,000 men were landed yesterday obviously to attack the right flank of H.E. Liu K'un-yi's forces on the banks of the West Shahu river. There is considerable activity at this place and the troops have all received extra rations and ammunition with orders to be ready to march to the assistance of Kinchow whenever called upon to do so. General Sung's forces are expected to fall back on this place leaving the Hunan troops to fight at Kinchow.

We do not attach credence to this news, inasmuch as the movement described would be intelligible only on the hypothesis of cöoperation with an over-land march of the First Army from Tienchwangtai, and such a march could scarcely have been effected by the 25th of March, Tienchwangtai having been captured on the 9th of that month, and the distance then to North Chinchow being 90 miles.

China, it has been said, is an extraordinary mixture of childishness and senility. Too old to undertake any useful national enterprise, she is still young enough to take a childish delight in toys. Thus a Mongol Duke, having voluntarily contributed the sum of 5,000 Tls. to the war fund, has been authorized, by Imperial Decree, to wear a double-eyed peacock's feather, and use purple reins for his riding horse. But a Chinaman might with justice retort that in the West great public merit is rewarded by the privilege of pinning a disk of metal and a coloured ribbon on the breast of one's coat.

We take the following from the Tientsin correspondence of the *North China Daily News*:—

It appears that the reported removal of the Viceroy's family to Paotingfu some time ago was a mistake. Instead, they went up the Grand Canal a week ago in a dozen or more boats in tow of two small steam launches. At or near Tehchou a grandson of the Viceroy became seriously ill, and Dr. Mai, one of Dr. Mackenzie's former students, was called from the hospital here to attend the case.

Placards have been posted in Shanghaikuan, and in Tientsin, very likely in other places as well, offering rewards for Japanese captured or killed, and for property belonging to them destroyed. These posters are issued by Liu Kun-yi. This is another case of zeal without knowledge, and will greatly damage the cause of China, not only in the negotiations now pending, but before the whole world. The essential barbarism of the Chinese character is here again brought to the front, wholly unmodified by their connection with the civilisation of the West during these many years. Another incident which recently occurred at Shanhaikuan illustrates in a different way the same point. Four Korean priests were found one day looking at some of the temples, and were seized at once as Japanese spies. Their protestation that they were Koreans, and in full sympathy with and loyal to China, and other favourable circumstances, had no effect whatever. They were taken into custody and each received 1,000 strokes of the bamboo, from the effects of which it seems likely that they will not recover. About this same time, the *hsien* magistrate and the Niehtai made a sudden descent in force on the American Methodist Mission premises, searched every nook and then turned out the contents of all boxes, etc., and carried off several tens of taels of sycee, under pretence of having heard that some Japanese spies were secreted there. Although they found absolutely nothing of a suspicious nature they dragged the native preacher, chapel keeper, and other men on the premises off to the *yamên*, and detained them till about midnight trying to elicit something from them to justify their conduct. "Kill the spies" often greeted the ears of the innocent men as they passed along the street. The women and children of two families were left, frightened and defenceless, against any outrage the rabble might attempt, while this was going on. The next morning the preacher hung out the signboard and opened the doors as usual for morning service as if nothing had happened, to the surprise of all the neighbours, many of whom took occasion to express to him their opinion of the officials. It remains to be seen whether any satisfaction for this outrage can be obtained. All the officials sought could have been secured in a quiet and respectful manner for the asking. Such men have yet many lessons to learn.

"Our readers will remember," writes the *N.-C. Daily News*, "having read a telegram from Shanhaikuan which appeared in these columns last week stating that the Generalissimo Liu K'un-yi had memorialised the Throne requesting that Wu Ta-cheng should be allowed to retain his place at the head of his own army corps instead of being ordered back to Pekin in disgrace. This memorial has apparently been successful, as an edict of the 25th instant orders Wu Ta-cheng to retain his post, but strips him of his rank and honours, until he shall have regained them by future success. For the loss of Newchwang, the foreign settlement at Yingkow and Tienchwangtai, the penalties proposed by the Pekin Boards upon General Sung Ch'ing and Wu Ta-cheng were that they should be cashiered and transferred to some other place. The Emperor has shown leniency once more and has now ordered both Sung and Wu to retain their places at the head of their respective army corps, with the loss of rank and honours. These two officials will thus have an opportunity to redeem the vows made to Liu K'un-yi after the loss of Tientchwangtai, of their determination that the enemy should walk over their dead bodies before they be allowed to enter Shanhaikuan.

A correspondent of the *Shanghai Mercury*, writing from Chefoo under date of March 25th, says:—

Some weeks ago I had an opportunity of witnessing the behaviour of Chinese troops in the presence—in this instance probably imaginary—of their foes. On the night of February 12th, about 7 o'clock, I was on the hills east of Chefoo, star-gazing, &c., when suddenly the forts to the south and east began to pour forth volley after volley of rifle shots, and the big guns opened fire, but in what direction the shells were thrown I could not see. Between the volleys I could hear the yells proceeding from the throats of hundreds of excited soldiers, and instinctively drew a mental picture of the scores of wounded and dying men which I conceived to be lying weltering in their blood, with none to help them!

The roads leading to Chefoo were crowded with all sorts and condition of men and women, fleeing for their lives. Soldiers threw off their uniforms

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

and rushed from their quarters, and the whole population were in a state of the most abject fear.

The following morning I looked for the Japanese flag flying over the Chinese forts, but was surprised to see the *dragon* still wagging his tail and opening his jaws defiantly at all enemies. Now what was all that fun about?

Such was the question I put to many who were supposed to know, but they all seemed inclined to give evasive answers.

The military men declared that a party of Japanese scouts had been seen, but the majority of the witnesses declared that the supposed enemies were only farmers, returning from a wedding feast, and giving vent to their joyous feelings by sundry shouts and falsetto songs!

Any way, the Chinese were thoroughly scared, and I was told that one battalion of recruits broke camp, and fled to Foo-san, ten miles away, for refuge. What chance can a country have in time of war, whose defenders are made of such soft metal? * * * * The Japanese who occupied the city of Ninghai seem to have behaved kindly toward the poor, and left a good impression behind them. Most of the inhabitants would gladly have become Japanese subjects, for their own officials treat them very badly.

TROUBLE IN NINSEN.

The *Niroku's* correspondent sends a very minute account from Talien of a rupture that occurred in Ninsen on January 1st between a French missionary and a number of Japanese. We give the following *résumé* of the letter, although we cannot vouch for its strict accuracy. On January 1st of this year three Japanese postmen employed at the Ninsen Post Office were out walking in the neighbourhood of the French Church that stands in a certain quarter of the city. At the south of the building a number of Korean boys were flying kites. One of the Japanese asked a boy in jest to let him have his kite for a little while, upon which the lad addressed abusive language to the postman. The three Japanese then feigned anger and pretended to pursue the boys, who fled in the direction of the church. A Korean seeing this, came out of the church and struck one of the men. While another of the postmen was hastening to the spot to find out what was the matter, a French missionary ran behind him, collared him, and slapped him in the face. The Japanese thereupon clasped his hands and begged the missionary to pardon him. The Korean servants in the church next began to appear upon the scene and to cause great disturbance. They threw stones at the three Japanese, one of whom was so much frightened that he ran away. A Japanese constable and a clerk of the Ide Shokai, seeing what was going on from a distance, went to the spot, and the clerk asked the missionary in Korean why he had assaulted a Japanese, while the constable caught hold of the Korean who had been the first to strike one of the postmen, and handed him over to a Korean policeman. By that time quite a number of Japanese had collected, and the constable, fearing that some trouble might occur if he were to discuss the matter in their hearing, went with the priest into the church. As he could not speak Korean, however, he called out to the Japanese still standing outside, asking any one who could talk Korean to come in. The clerk at once volunteered his services, but when he made his appearance the missionary became greatly excited and even went so far as to take out a pistol and level it at him. The constable checked him, and with the clerk's aid, questioned him as to the particulars of the incident, but the Frenchman had apparently lost his presence of mind, and behaving like a madman would not answer any questions. Seeing that a conference was out of the question, the constable and the clerk left the church, dispersed the Japanese outside and caused the Korean who had been handed over to the police to be released, calling at the Local Office of Ninsen for the purpose. The affair did not end there, however. The missionary submitted a complaint to the French Consul to the effect that the Japanese constable had trespassed into the church followed by a number of Japanese whom he had instigated, that he (the missionary) had had his beard rudely pulled, and his clothes torn, while a nun had been kicked and wounded, and that stones had been thrown at the window, breaking three panes of glass. On receiving the above communication, the Consulate at once opened negotiations with the Japanese Legation, even threatening to ask the Commander of the French Squadron to send a band of marines on shore for the protection of the church. The Japanese Consulate in Ninsen received instructions from the Legation, to enquire into the affair, and Inspector Ogawa was sent to ascertain the precise nature of the trouble. The inspector met the missionary, but failed to to elicit any satisfactory information from him, as his remarks were obscure and difficult to follow. He admitted that his report about the wounding of the nun was incorrect, and said, moreover, that the throwing of stones at the windows of the church occurred after the constable had left the premises, thus impugning his previous allegation that it was due to the instigation of the constable. The missionary said that the panes had been mended at once, so that no damage could be visible to the inspector. The latter noticed that a brick wall, more than a foot higher than the window stood at a distance of 4 or 5 feet away, so that a missile thrown from outside would be very unlikely to reach the window. The inspector reported to the Consulate that he thought that the allegations of the missionary were not sufficiently substantiated. The Japanese Vice-Consul next asked a sergeant of gendarmes stationed in Ninsen to institute enquiries into the matter, but he, too, arrived at no satisfactory result. The Vice-Consul and a Police-inspector specially despatched from Sŏul for the purpose, held conferences on the affair and are said to have decided to punish both the constable and the clerk. The latter was charged with having attempted to discuss in a church an incident that happened outside, and with having neglected to disperse the mob collected in the vicinity—or in other words, with not having discharged his duty properly. The clerk was accused of having overstepped his competence in cross-examining the missionary, as such matters are under the control of the Police, and not of ordinary civilians. The *Niroku's* correspondent does not say clearly whether the two were really punished, but he seems highly dissatisfied with the steps taken by the Vice-Consul and the Sŏul Police.

THE PEACE CONFERENCE.

It is plain that the peace conference has been resumed, Lord Li acting as the Chinese Plenipotentiary. A meeting of an informal character is said to have taken place between him and Viscount Mutsu in the Shunpan-ro (place of conference) at 4.30 p.m. on the 28th instant. Doubtless the Viceroy telegraphed at once to Pekin, urging the advisability of not delaying the negotiation until his recovery. To wait for that would have involved a delay of fully three weeks, and the Japanese could not have kept their troops idle during so long a period at the commencement of spring, however unwilling they might be to launch 70,000 men at Shanhaikwan and Taku just as peace was about to be concluded. Lord Li, who during his brief term of office as Chinese Representative in Tokyo, won the friendship of many foreigners and became a *persona gratissima* with the Japanese, is a man of great ability, tact, and liberality, He has an intimate knowledge of the English and the Japanese languages, and is eminently fitted to negotiate. But of course his responsibility will not be great. The conference chamber is only 600 yards from the Viceroy's lodging. Thus although the Viceroy will not be present in person at the negotiations, he will be within consultation distance, and nothing will be concluded without his consent. China, by sanctioning this arrangement, gives evidence of earnestness. Japan, of course, was under a moral obligation to agree to anything that might mitigate the effects of the terribly disgraceful Shimonoseki incident.

LETTERS FROM SHIMONOSEKI.

(From our Correspondent.)

Shimonoseki, March 26th, 1895.

The commonly circulated statement that the would-be assassin of the Viceroy Li stood quietly in front of a house and fired as the palanquin passed, is not correct. What really happened was this:—Just at the corner of the street in front of the Viceroy's lodging, a man clothed in the garments of a labourer, sprang out of the crowd, and laying his left hand on the shoulder of one of the carriers of the palanquin, discharged with his right a pistol at the Chinese delegate, aiming at his heart. As to the course taken by the bullet, your readers are doubtless well informed already. The Viceroy at once applied a white handerkerchief to his face, which was bleeding profusely. The palanquin-bearers turned the corner rapidly, and when they reached Injo-ji, the Viceroy immediately stepped out of the conveyance and proceeded to his own apartments, the vigour shown by him being regarded by the onlookers as a sign that the wound was not very serious. The ruffianly firer of the pistol was seized on the spot. Indeed, when he emerged hastily from the crowd, a policeman and a gendarme on duty in the vicinity sprang upon him and seized him. It was only a question of a second or two whether he succeeded in discharging his pistol at all. Rumour says that he arrived here on the morning of his nefarious attempt from Chofu, a small sea-side town about three miles to the east. The sincerest sorrow is manifested by everybody here, and the would-be assassin is execrated and denounced in the bitterest language. The incident is all the more regrettable in view of the fact that the police and gendarmerie had adopted every possible precaution against the influx of men of suspicious character. I myself will not easily forget the uncomfortable ordeal to which I was subjected on first landing here from my steamer. But there are cases that lie beyond the limits of human precaution and vigilance.

Concerning the suspension of the conference on the 22nd and 23rd instant, various rumours are in circulation. Some say that the Chinese Envoy having asked for an armistice, the Japanese Delegates stated the conditions on which this country would be prepared to suspend military operations, and that the Viceroy Li then asked time for consideration. Other stories, of an incredible character, are told, but the above appears to be the rational explanation.

Shimonoseki, March 30th.

A local armistice has just been agreed upon by the Plenipotentiaries of the two Powers. At eleven this morning the Japanese Plenipotentiaries, Count Ito and Viscount Mutsu, proceeded to the place of conference, Fujino Hotel, and in the presence of Lord Li signed the document, which was then taken by Mr. Ito, Secretary General of the Cabinet, to the Injoji Temple, where it received, in his presence, the signature of Viceroy Li. I need not refer to the particulars of the armistice, as they must have been made public before this letter reaches you. It will be more interesting to describe, as far as my information permits, the steps that led to this unexpected event. I say unexpected, because it had been generally believed that Japan would insist upon certain important conditions before the suspension of military operations. At the second meeting, namely that on the 21st March, the Chinese Ambassador asked for an armistice. Thereupon the Japanese Plenipotentiaries declared the conditions upon which they were ready to accede to that request. Those conditions were, first, that Shanhaikwan, Tientsin, and Taku, with their forts, armaments, ammunition, etc., should be delivered up to the Japanese army; secondly that the railway between Shanhaikwan and Tientsin should be placed under Japanese control; thirdly, that China should pay the expenses of maintaining the Japanese armies of occupation during the period of the armistice; and fourthly, that, in the event of peace not

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

being restored, the above mentioned places should continue to be held by the Japanese as prizes of war. The Viceroy Li was evidently not prepared for these terms. He requested a week for consideration, but his request was not granted. The Japanese Plenipotentiaries finally agreed, however, to allow three days for a reply. The answer was given at the meeting on the 24th, when the Viceroy declared his inability to agree to the terms proposed by the Japanese Plenipotentiaries, and withdrawing his request for an armistice, asked for the immediate opening of peace negotiations. It was then agreed that the negotiations should be commenced at 10 a.m. the following day. On his way home from this meeting on the 24th, the deplorable attack on the Viceroy took place. Had it not been for the act of a dastardly *soshi*, the negotiations would in all probability have been brought to an end by this time, one way or the other. The lamentable incident placed Japan in a very awkward position. It is true that the request for an armistice had been withdrawn by the Chinese ambassador. But it would have been manifestly unfair and unmanly for Japan to push on her warlike operations while the Viceroy Li was incapacitated by the lawlessness of a Japanese to conduct negotiations that might possibly have been satisfactorily concluded in a few days. The Japanese Plenipotentiaries took due notice of these circumstances, and decided voluntarily to grant a local armistice without imposing any conditions whatever other than those inseparable from transactions of the kind. While the drawing up of the necessary documents and the communications with the Chinese Ambassador was going on under the direction of Viscount Mutsu, the Minister President, attended by Secretary-General Ito and a few other officials, left for Hiroshima by a transport on the 25th instant, to make a report to the Emperor on the unhappy incident of the preceding day, and on the progress of the negotiations. At Hiroshima a Council of War was at once convoked, and the measures consequent upon the contemplated suspension of military operations were discussed. Meanwhile, Viscount Mutsu had a meeting with Lord Li at the Fujino Hotel on the 28th. Count Ito returned here yesterday afternoon at five, in company with Admiral Count Saigo, on board H.I.M.'s ship *Yayeyama*, and the formal signing of the papers took place to-day, as stated above. The point to be specially noted is that this armistice has been granted by Japan voluntarily in consideration of the regrettable incident that took place on the 24th of March.

When the negotiations for peace will be commenced, I am not in a position to state. Viceroy Li's condition promising speedy recovery, it may be presumed that the date is near at hand. The question asked here by everybody relates to the issue of the negotiations. On that point, it is obviously dangerous to venture any prophecy. There does not exist sufficient ground for hope one way or the other. It may, however, be stated that thusfar nothing has taken place to warrant a gloomy view of the situation. That is the utmost I can say now. Perhaps in a few days, it may become possible to hazard a more definite opinion one way or the other.

THE VERNACULAR PRESS ON THE ARMISTICE.

The vernacular papers express in strong terms their admiration and respect for the step taken by the Emperor in granting an unconditional armistice of three weeks to China. The incident of the 24th ult., writes the *Nichi Nichi*, caused the Imperial Court profound pain. The Emperor despatched a special messenge to convey his condolences to the Chinese Plenipotentiary, and sent two Surgeons-General to attend to the wound. Nor was the Empress less horrified at the incident. Her Majesty prepared bandages with her own hands and sent them to the Viceroy, together with two experienced nurses. Further, the sympathy that the Emperor feels with the unfortunate sufferer led His Majesty to take a remarkable step, namely, that of granting an unconditional armistice to China for the space of three weeks. Such a measure announces to all the world that Japan is not averse to terminating the war, and that she is free from the imputation of being in sensible to the calamities of her foe. This act of Japan should suffice to impress China with respect for her antagonist, and convince the neutral Powers of Japan's magnanimity and generosity.

"It is not to be doubted," writes the *Kokkai*, "that the wounding of the Chinese Plenipotentiary by an unpatriotic fanatic has conferred more or less advantage on China by enabling her to plead, with some justice, for a modification of the terms prescribed by Japan. The present armistice, however, completely removed all ground for such a plea. By the receipt of this great boon China is precluded from advancing any excuses when the negotiations are renewed. Japan will be under no obligation to make any concession, and should China refuse to comply with the just demands advanced by Japan, the latter, with perfect justice, may suspend the negotiations, and after the expiration of the stipulated three weeks, may renew hostilities with more vigour than before." (The *Kokkai* does not seem to have read the text of the armistice carefully, or it would know that failure of the negotiations warrants the immediate resumption of hostilities.)

"Thus the situation has been completely reversed by the timely decision that Japan adopted at this crisis. Whether the armistice prove preliminary to the opening of the second stage of the hostilities, or whether it prefaces the termination of the war, entirely depends upon China's conduct during the three weeks of grace. Should China, emboldened by this act of exceptional leniency, show herself simply insolent, and should she be guilty of a display of ingratitude, then Japan will be obliged to subject her to very severe chastisement. If, on the contrary, struck by the liberality and special favour shown by Japan, she is induced to appreciate the real aspect of the situation and repent of her former perversity, then the armistice may pave the way to the conclusion of peace. The result depends entirely upon the presence or absence of conscience on China's part."

The tone of the *Kokkai* reminds us of the mood of Dinah Shad's lover after his first kiss—he could have plucked the sun from the sky to make a coal for his pipe "he was that magnificent." It must be admitted that Japan has reason to assume a defiant mien toward China, but as a mere question of art, it is miserable that an act of grace, like the granting of an unconditional armistice, should be marred by supercilious loftiness like that of the *Kokkai*. Generosity to be real must be neither contemptuous nor self-advertising.

THE "RHEINGOLD" CASE.

With regard to the case of the German steamer *Rheingold*, referred to in our issue of the 29th ultimo, we understand that the action of the German Consul in Kobe in sanctioning the preliminaries for the sale of the ship's cargo, was based on a provision of the German Commercial Code, which he had to apply, the steamer being under his jurisdiction. The German Commercial Code, in accordance with a universally acknowledged principle of maritime law, gives to the owners of a chartered ship a lien, or perhaps we should say a right of pawn, on the cargo as security for the payment of their charter money, and allow them to administer that right by a simple administrative order of the Consul, without obliging them to sue the owners of the cargo for their assent. In consequence of that provision, it would seem that the shippers of the cargo have to sue the captain of the ship after the sale, if they think that they have a claim for damages. As to the particulars of the dispute between the parties concerned in this case, we are informed that the statements of the vernacular press are totally one-sided, and consequently do not supply material for forming a clear view as to the merits of the question.

THE KYOTO EXHIBITION.

The Kyoto Exhibition was duly opened on the 1st instant at 9 a.m. His Imperial Highness Prince Yamashina, representing the Emperor, read the following Imperial Message:—

The Fourth Domestic Industrial Exhibition having been organized, We hereby declare it duly opened. We believe the Exhibits to be much better than those at the last Exhibition, and we enjoin you to promote the business of production, thereby strengthening the foundations of the national wealth and power, and furthering the country's prosperity.

His Imperial Highness Prince Yamashina, President of the Exhibition, had previously made to the Emperor the following report, which was read out by H.E. Viscount Enomoto, the Vice-President:—

I, Akihito, with all reverence, beg to state that the preparations for the Fourth Industrial Exhibition are now complete, and that the opening ceremony is to day performed. As for the number of exhibits, it exceeds anything witnessed at previous Exhibitions. Abroad the naval and military forces have conquered in every fight, and have raised the country's prestige in the eyes of the world; at home, the best and most beautiful of the various products of progressive industry have been selected and brought together, so as to encourage the people's industry and increase the wealth and strength of the country. These evidences of success and prosperity are sources of the utmost satisfaction. With all humility, I venture to offer a plan of the arrangements for exhibiting the various exhibits in their sections, as forwarded from the whole country, together with a catalogue of exhibits, and I humbly solicit Your Majesty's gracious consideration and pray for the prosperity of the country.

THE SENTENCE UPON KOYAMA TOYOTARO.

The following is the verdict rendered in the case of the Viceroy Li's would-be assassin:—

In the case of Koyama Toyotaro, *Heimin* of Oora District, Oshima Division, Gumma Prefecture.

In consequence of the finding of the Tribunal of Examination in the case of the above Toyotaro, charged with a crime of unaccomplished murder, the case has been duly heard and the depositions taken. It appears that the said Toyotaro, believing that the rupture between this empire and China and the War that followed, were due to the unfortunate policy of the Viceroy Li Hung-chang (here follow Li's titles), and that unless the said Viceroy's life were brought to an end, the peace of Eastern Asia could not be preserved for any lengthened period; and learning further that the said Viceroy, by order of his Sovereign, was about to visit this empire and conduct negotiations for peace at Akamagaseki in Yamaguchi Prefecture, determined to kill him there; and with that purpose, on the 11th day of the 3rd month of the 28th year of *Meiji*, purchased from one Kanamaru Kenjiro, in Yokohama, Kanagawa Prefecture, a five-chambered pistol and some ammunition and set out from Tokyo on the 12th day of the same month, travelling overland to Akamagaseki, which place he reached on the 24th of the same month; and, watching his opportunity, at about 4.40 p.m. on the same day, encountered the said Viceroy riding in a palanquin in Sotohama-cho of the same town, took aim at his heart and fired at him with the said five-chambered pistol, striking, him at a point about one centimetre centrally below the hollow of his left eye, but not inflicting a mortal wound.

The above facts are fully established by the said Toyotaro's confession, by the statements elicited at his examination before the Tribunal of Examination, by the testimony of 1st class Gendarme Abe Tsunejiro, and 2nd class Assistant-Surgeon Kuroda Nobuchika, and by the pistol and ammunition. The Criminal Code (here follows recital by Articles) provides that in a case where the killing of a man is premeditated and the crime is carried to perpetration, but owing to some unexpected miscarriage is not consummated, the punishment of death shall be reduced by one degree, the weapon shall be confiscated and the other articles taken from the culprit shall be returned to him;

Therefore, the said Koyama Toyotaro is hereby sentenced to penal servitude for life; the pistol and ammunition found on his person are confiscated, and the other articles taken from him are restored.

(Dated) 30th day of 3rd month of 28th year of *Meiji*.

(Signed) Here follow signatures of three Judges, and a Clerk of Yamaguchi Local Court.

CONCLUSION OF AN ARMISTICE.

A TEMPORARY and local armistice has been concluded between Japan and China. This chapter of the war is certainly one of the most interesting and at the same time picturesque of the whole record.

The first meeting of the Peace Conference took place on the March 20th, and the business was limited to mutual examination of credentials. These being found perfectly satisfactory, the Plenipotentiaries separated, agreeing to come together again at 2 p.m. the following afternoon. So soon on the second meeting opened, the Viceroy LI proposed that an armistice be declared as a step preliminary to negotiating terms of peace. Such a proposal had, of course, been anticipated. The Japanese Plenipotentiaries replied that they were not averse to an armistice, but that, before agreeing to it, they should require China to comply with certain conditions. Those conditions were, first, that Japanese troops be placed in occupation of Tientsin, Taku, and Shanhaikwan; secondly, that all the forts, barracks, and armaments at those places should be handed over; thirdly, that China should withdraw her troops from their positions there; fourthly, that Japan be given control of the railway from Shanhaikwan to Tientsin; and fifthly, that China should pay all expenses incurred by Japan in carrying out the above conditions. The Viceroy took exception to these terms as too stringent, but asked permission to consider them maturely, which request was of course complied with. An interval of two days consequently ensued, and when, on the 24th ultimo, the Plenipotentiaries met again, the Viceroy urged that Japan should modify her demands. Receiving a firm refusal, he declared, after some further expostulation, that under such circumstances he desired to withdraw his proposal for an armistice and to commence the peace negotiations at once. It was therefore decided that the Conference should re-open for the latter purpose the following day. But on the way back from the place of meeting, a fanatic attempted to take the life of the Viceroy, and succeeded in inflicting a wound so serious as to incapacitate the aged statesman for a considerable time. The Emperor of JAPAN then took a remarkable step. In consideration of the fact that the Viceroy had been wounded by a Japanese, and that the progress of the peace negotiations had thus been suspended by an incident for which Japan was responsible, HIS MAJESTY directed his Plenipotentiaries to withdraw all the conditions previously advanced by them, and to agree to an unconditional armistice for a fixed period. The necessary agreement was at once drafted, and on the 30th of March it received the signatories of both sides. Lord LI, acting on behalf of the Viceroy, proceeded to the Conference chamber, and there received the signatures of their Excellencies Count ITO and Viscount MUTSU, and Mr. ITO MIYOJI, Chief Secretary of the Cabinet, repaired to Injoji and there received the signature of the Viceroy LI. The convention itself and the proximate cause of its conclusion are thus given in the *Official Gazette*:—

His Majesty the Emperor of Japan, in consideration of the fact that the progress of the Peace Negotiations has been interrupted by an untoward incident, issued instructions to the Empire's Peace Plenipotentiaries to agree to a temporary armistice. Consequently, His Imperial Majesty's Plenipotentiaries, Count Ito, Minister President of State, &c., and Viscount Mutsu, Minister of State for Foreign Affairs, &c., have concluded the following Convention with Earl Li, Viceroy of Chihli, &c., the Plenipotentiary of His Imperial Majesty the Emperor of China:—

Art. I.—The Governments of Japan and China hereby agree that the land and sea forces of the two countries shall observe an armistice in the districts of Mukden, Chihli, and Shantung, in accordance with the stipulations of this Convention.

Art. II.—The forces required to cease fighting in virtue of this Convention, shall be entitled to retain possession of all the places now in their occupation. Provided that, under no circumstances whatever shall any advance be made beyond the aforesaid places during the period covered by this Convention.

Art. III.—The Governments of the Empires of Japan and China hereby agree that, during the period covered by this Convention, neither party, whether for offensive or defensive purposes, shall augment its armies now in the field, or shall send re-inforcements, or shall in any other way increase their combative capacity. It shall, nevertheless, be within the competence of the Government of either empire to make redistribution or transportation of its troops provided that such redistribution or transportation be not intended to augment the armies now actually engaged in the field.

Art. IV.—With regard to the maritime transport of military necessaries or other contraband of war, seizures made in accordance with the laws of war, shall be permissible.

Art. V.—The Governments of the two Empires of Japan and China agree to carry into effect the armistice agreed upon by this convention for a period of 21 days counting from the day of signature. With respect to positions now occupied by the troops of each Empire and not within reach of communication by telegraph, rapid methods of transmitting the order to cease hostilities shall be employed, and the officers in command of the forces of the two Empires, upon receipt of such order, shall mutually convey information of the fact to each other, and shall make arrangements for an armistice.

Art. VI.—It is agreed that, without any further intercommunication, this convention shall cease to have binding force at noon on the 20th day of the fourth month of the 28th year of *Meiji*, namely, the 26th day of the third month of the 21st year of Kwang-su. But should the Peace Negotiations be broken off before that date, this convention shall simultaneously terminate.

(Dated) Shimonoseki; the 30th day of the 3rd month of the 28th year of *Meiji*; namely, the 5th day of the 3rd month of the 21st year of Kwangsu.

(Signed) Here follow the signatures and seals of Count ITO Viscount MUTSU, and the Viceroy LI.

It will be observed that the above Convention does not effect any regions other than those of Chihli, Shinking, and Shantung. Japan's operations at the Pescadores and Formosa will not be interrupted. For the rest, it is a complete armistice, and the manner of granting it reflects great credit on Japan. From the conditions that she insisted on imposing when the Chinese Plenipotentiary originally asked for a truce, we can infer with certainty the price she set upon such a concession. It was a high price. Perhaps no serious apprehensions need have been entertained about any preparations for defence that China might make during an interval of truce. But it was believed by many that one of the devices employed by her plenipotentiaries would be to ask for a cessation of hostilities with a view to such preparations, and the Japanese on their side, were resolved to make the granting of her request a means of testing her sincerity. Thus the abandonment of all conditions is a sacrifice of considerable magnitude. Japan was under no obligation to make such a sacrifice. The world would not have held her nationally accountable for the mad crime of a solitary fanatic. But she has evidently been deeply pained by the incident of the 24th of March, constituting, as it did, a violent breach of the laws of hospitality and international good faith, and has voluntarily resolved to impose upon herself a penance that shall leave no room to doubt her sentiment of abhorrence for deeds like that of KOYAMA TOYOTARO. She is to be congratulated on the course she has taken. It establishes a standard of inter-state morality rarely to be found in any page of history, and its effect will be to completely remove the disgrace of KOYAMA'S crime.

All this, however, drives us to conclude that the armistice must not be interpreted in the sense attaching to such a measure under ordinary circumstances. Had it been accompanied by the conditions originally demanded by Japan, peace might have been considered certain. But as things stand now, it is a special step which Japan has been impelled to take in deference to considerations that have no connection whatever with the anticipated sequel of the peace negotiations.

A CONTRAST.

IT can not be denied, we think, that Japan's conduct in connection with the Shimonoseki outrage has been very creditable. The whole nation was moved to indignation by KOYAMA'S deed. He found no sympathisers in any class or party. Naturally, the inclination of many critics, ourselves among the number, was to infer that the unhappy fanatic represented the military section of the people, and that his purpose was to interrupt the peace negotiations in order that warlike operations might not be suspended. He seemed, in short, to be a delirious representative of the class of men whose constant cry is "to Pekin," and who hold that China will never credit her defeat until the Japanese flag floats over the walls of her capital. But KOYAMA'S magisterial examination does not bear out that view. According to his account of his own motives, it was LI HUNG-CHANG, not China's Peace Plenipotentiary, that he wanted to kill. The Viceroy of Pechili has for many years been virtual King of

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Korea. YUAN, the exceedingly anti-Japanese Resident in Sŏul, was the Viceroy's nominee. Korea's foreign affairs were practically controlled from Tientsin. Thus, for the Korean complications that plunged the two empires into war, LI HUNG-CHANG seemed primarily responsible, and so long as he lived there could be no real peace in the Orient. That was KOYAMA'S creed. He wanted to kill the Viceroy not in the interests of prolonged war but in the cause of permanent peace. It is possible, of course, that the story told by him to his judges was insincere. But we can detect no valid reason to suspect its sincerity. Had he desired to evoke the sympathy of the military class, he would have represented his crime as an attempt to prevent any interruption of warlike operations. But in the light of LI'S murderer he could not reasonably hope to win the approval of any section of his countrymen, for all regard the Viceroy with respect, and credit him with a friendly disposition toward Japan. Inherently, therefore, the analysis given by KOYAMA himself of his motives appears more credible than that formed by the public at first. What is certain, however, is that he has found no sympathisers or apologists anywhere. Every political party has denounced him; every journal of whatever complexion, execrated him. On the other hand, condolences have poured in upon the wounded Viceroy from all quarters; he has been the recipient of the whole nation's regret, and in deference to his misfortune the Government has made to China a concession that will cost the country many millions, and that could not have been purchased, under ordinary circumstances, without the fulfillment of very onerous conditions on China's side. Japan, in short, has washed her hands generously and astutely of KOYAMA'S crime. She probably stands better in public estimation to-day than she stood before the 24th of March. But many foreigners are now asking why she did not exhibit a similar temper with regard to the Port Arthur excesses. Stripped of all sensational hyperbole and selfish exaggeration, the stories recorded about the doings at Port Arthur still contain a large residuum of facts discreditable to Japan. Why did not the country emphatically disavow all disposition to condone such practices? Why was not the stigma upon Japan's reputation removed as vigorously and unanimously in the case of Port Arthur as in that of Shimonoseki? It appears to us that these questions are easy to answer. In the first place, the Port Arthur incident was a military affair. The responsibility of dealing with it rested primarily with the Commander-in-chief of the Second Army. So long as he, with the fullest and most trustworthy evidence before him, did not consider that the circumstances called for any exceptional measures, the Government could not have been expected to disavow him by ordering a court of inquiry or adopting any other disciplinary procedure. Civil interference with troops in the field is always avoided as far as possible, and it could scarcely have been expected that, in deference to foreign criticism, the Japanese Government would have imperilled its relations with its generals and damped the ardour of its troops by a too severe scrutiny into acts dictated by a spirit of retaliation against ferocious and brutal foes. The attitude of the nation and the utterance of the press are, however, distinguishable in such a case from the acts of the Government. As to the nation at large, we doubt very much whether to this day it believes that any real excesses were perpetrated at Port Arthur. Those that do believe constitute a small minority, and it is easy to understand that, while regretting and condemning the incident, they have not attempted to employ it as a means of agitating against the fair fame of their country. Finally, with regard to the vernacular newspapers, we have to ask ourselves whether any journals would be likely to add their voices to foreign censure of the nation's soldiers. As a matter of fact the Japanese newspapers were not informed of the circumstances by their own correspondents, whose letters were subject to censorship. They had no independent knowledge of their own. What they saw was that the country's troops were scathingly censured and the country itself relegated to the ranks of barbarism by foreign journals notorious for hostility to everything Japanese. Was it not natural that they should adopt a defensive tone and attempt to minimize or extenuate instead of exposing and condemning? No newspapers in any country, however devoid of patriotism, however subservient to foreign opinion, would be willing to follow alien leadership in an outcry against their own nationals who are fighting the country's battles and winning a succession of victories. There are ample reasons to differentiate the attitude of Japan toward the Port Arthur affair from her attitude in the recent crisis.

THE CHAMBER OF COMMERCE REPORT.

THE interest attaching to the unexpected conclusion of an unconditional armistice compelled us to leave unnoticed for a moment the exceptionally excellent Report of the Yokohama Chamber of Commerce for 1894, but we trust that the compiler of the elaborate tables accompanying the Report as well as the writer of the Report itself will not construe our silence as an evidence of want of appreciation.

It is unnecessary to speak of the arithmetical results recorded in the document: they have already received attention. Japan's foreign trade is growing vigorously, and there is no reason to anticipate that its development will be checked. From 1880 to 1884, the general cry used to be that the foreign commerce of this country had no margin of elasticity, and that the country itself had neither a tradal nor a national future before it. That, indeed, was one of the favourite arguments of the opponents of Treaty Revision: they maintained that no good could come of opening the country completely, since its partial opening had yielded such insignificant results. If they ever look back now, the error of their contention must strike them forcibly. Japan's foreign commerce quadrupled during the decade succeeding their predictions of evil, and speaking nationally, she now indisputably holds the position of the leading Power in the Orient. Our own writing, in a sense contrary to the verdict of the pessimists, was always treated with contempt in those days, and we must frankly confess that, confident as we were, we did not look for so speedy a vindication of our faith. Another point already of interest at that time but receiving little attention was the prospect unfolding itself for Japanese industries. There can no longer be much doubt on the subject. The Report now before us contains some instructive statements. Perhaps the most remarkable is the cotton-spinning industry. The importation of raw cotton increased by forty thousand piculs in quantity and nearly 3½ million *yen* in value in 1894 as compared with 1893, and the sale of Manchester yarns that come into direct competition with Japanese spinnings, showed a decrease of 50 per cent., while the market for those as yet without rivals in Japan was not affected. The Report notes that several cotton mills were enlarged and several erected during the year, and that the same is true of woollen spinning and weaving industries. Then again it is noted that the Japanese are now making their own boilers. They have still to import plates and sheets for the purpose, but seeing that their production of pig iron has become much larger and that they are on the eve of establishing a steel and iron foundry, there can be no doubt that in this direction also the foreign importer will suffer. Very noteworthy, too, is the development of the export trade in manufactured silk goods, especially those of plain, light type. More than twice as great a quantity of these was shipped away in 1894 as in 1893—568,160 pieces valued at 8,399,494 *yen*, against 255,199 pieces valued at 4,074,993 *yen*—and with regard to fancy silks, as brocades and so forth, the Report says that "with proper organization and under better conditions for manufacturing, the Japanese looms would soon became formidable competitors in Europe and America for the trade in such goods." Altogether it is no longer possible to doubt that the great staples of

Japan's export trade in the future will be manufactured goods in cotton, silk, and wool. But although the changes thus effected may disturb existing arrangements in some respects, we see no reason to apprehend any elimination of foreign middle-men from Japan's trade. Business naturally gravitates to the best agents as goods do to the dearest markets. That the Japanese, for sentimental reasons, should be anxious to discharge all the functions of their commerce without foreign aid, is perfectly natural. But a long interval must elapse before they can organise machinery so perfect as that presented by foreign agents, who pay ready money in Japan for Japanese staples; who take upon themselves all the risks of finding a market for them; who understand thoroughly how to deal with them to the best advantage, and from whose mutual competition Japan derives the benefit of getting the highest possible prices for her goods. We do not suppose that any foreign merchant pretends to have laid Japan under the smallest obligation to him for the part he has played in developing her trade. He frankly admits that his work has always been prompted by the desire of obtaining profit for himself. None the less is it indisputable that without the intervention of foreign agents and without the remarkably favourable conditions created by their share in the task, Japan's foreign commerce could never have attained its present dimensions in so short a time.

The observations made by the compiler of the Report under the heading of "Treaty Revision," seem in the main just. We should hesitate to say confidently that life at the treaty ports has been a very useful object lesson to the Japanese as an epitome of Occidental civilization; or that the writings of an "untrammelled foreign press" have proved large "factors in the development of freedom and enlightenment." But it may be conceded that these things have had their uses, and it certainly must be admitted that without the low tariff imposed by the old treaties the country's foreign trade would have been most unlikely to develop as it has done. From the point of view of justice, we have always been in favour of restoring tariff autonomy to Japan, but the imposition of increased duties upon a growing trade that greatly enriches the country, seems to resemble the killing of the gold-egged goose. We could wish that the Report had added one comment which must now have become evident to all, namely, that if the treaties had been revised in the days when the inevitability of revision became apparent, terms might have been obtained which would not only have been incomparably more satisfactory to the foreign residents than the basis now adopted, but would also have worked very greatly to Japan's advantage.

GREAT BRITAIN AND JAPAN.

BLUE BOOKS are supposed to be the driest of all publications, but certainly the volume recently issued on the subject of Treaty Revision presents one feature of interest that deserves to be brought prominently to the attention of the Japanese nation. We allude to the evidence it offers of unvarying patience, courtesy, and goodwill on the part of Great Britain. Four times within seven years the Japanese Government changed the basis of negotiations. In the first instance the negotiations had been carried within sight of completion, but their result had assumed a form so complicated that its acceptance by Japan would have been most ill-judged. Nevertheless, the breaking off of the negotiations at such a stage must have created a feeling of umbrage on the part of any Power not thoroughly well disposed. A little more than a year later, the Japanese Minister for Foreign Affairs re-opened the question, and approached the British Government with a scheme of Revision much more liberal to Japan than that laid before the previous negotiators. Great Britain might well have hesitated to consider these new proposals, not merely on account of their nature, but also because the method of bringing them forward involved a radical departure from the traditional policy of combination hitherto maintained and promoted in the East by HER MAJESTY'S Government even at the cost of considerable sacrifices. Instead of negotiating with all the Treaty States simultaneously, Japan now contemplated independent conference with each. It was a wise change, for experience had amply proved the utter hopelessness of bringing 17 Powers to a unanimous attitude toward a subject in respect of which their several interests varied materially. Still, were such a change to be made, Great Britain, about whose claims to prior consideration there could not be a shadow of doubt, and who, also, acting in concert with Germany, had put forward the first project of Revision, based on the restoration of Japan's Tariff and Judicial Autonomy, might reasonably have expected to be consulted before all others. Such, however, was not the order chosen by Japan. She approached the United States and Germany in the first place, and when she came to England the American Government had already signified by telegraph its acceptance of the new basis. Thus Great Britain had two valid seasons for hesitation. Yet she did not hesitste. When Count OKUMA submitted the proposals to HER MAJESTY'S *Chargé d'Affaires*, the Honourable P. LE POER TRENCH, the latter declared that "the sentiment of the British Government toward Japan remained unchanged," and that "they would always give their friendly attention to any proposals on this subject that might emanate from Japan." Far to any Japanese publicist to consider ther, when Lord SALISBURY, at the end of January, 1889, received the draft proposals, he immediately gave them favourable consideration, and five months later transmitted to the British Minister in Tokyo a draft of counter-proposals differing so little from the original that a satisfactory adjustment of the two could be confidently foreseen after a little negotiation. But within three months of the arrival of the counter-draft in Tokyo, the Japanese Cabinet fell to pieces, and once more the subject of Treaty Revision was allowed to lapse. Very shortly afterwards, however, a new set of proposals were put forward by the Government in Tokyo; proposals differing very essentially from those forming the last basis of conference. Still Lord SALISBURY'S friendly and patient tatitude was not affected. He agreed entirely with the Japanese Government in deprecating the abandonment or indefinite postponement of the results already obtained by the negotiations "that had gone before," and he once more caused a convention to be drafted, such that the Japanese Minister of State for Foreign Affairs was constrained "to express, in very warm terms, his sense of the liberality and friendliness which HER MAJESTY'S Government had evinced both in the character of their proposals and in the language of the covering despatch." It will be observed, therefore, that the British Government had now gone to the trouble of drafting no less than three separate bases of Revision, all dictated by a desire to meet Japan's wishes. The first, put forward conjointly with Germany, had formed the subject of the negotiations broken off by Japan in 1887. The second had barely reached the stage of discussion when again the subject was dropped by Japan in 1889. The third, sent out to Tokyo in 1890, after another change on Japan's side, was not seriously discussed owing to political complications in Japan. Finally, in 1893, the Japanese Government, through their Representative in London Viscount AOKI, submitted to the Foreign Office a fourth set of still further modified proposals, and these, the never wearied and always friendly Foreign Secretary of the QUEEN, received as urbanely as ever, the result being the conclusion of the Revised Treaty signed last July, restoring to Japan her Tariff and Judicial Autonomy on terms more favourable than the most sanguine could have anticipated five years previously.

It is justifiable, we think, to call this a very remarkable record. Without Great Britain's consent, Treaty Revision could never have been amicably secured by Japan. In February of last year, Viscount MUTSU, at an interview with the English Representative in Tokyo, "repeated his conviction that no treaty negotiation could be satisfactory from which England stood aloof." Has it ever occurred, we wonder,

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

what a test of friendship Great Britain was subjected to by these re-iterated changes of front on Japan's part, and to ask himself whether Japan would have behaved with equal good-will had the positions been reversed? Japan owes the Revision of the Treaties, in other words, owes her admission to the comity of Western nations on equal terms, to the unvarying friendship and imperturable magnanimity of Great Britain. Yet almost before the ink on that charter of her international liberties is dry, we have a section of her people—happily a small section—chafing about imaginary obstructive movements on the part of a few British vessels, and we have some of her most intemperate journals speaking as though war with Great Britain might at any moment become a welcome undertaking. Such a want of discernment, such a marked lack of the sense of proportion, argues ill for the successful discharge of the functions of empire that the Japanese nation is now essaying to undertake. We have nothing to say about Great Britain's strength. Japan may estimate that as she pleases. Neither do we make any professions of Great Britain's friendship. If Japan chooses to be the first nation that has ever despised it, that is her misfortune. But as sincere well-wishers of this nation, with its vividly striking past and its eventful future, we would say that the first element of national greatness is the faculty of distinguishing between actual friends and potential foes.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sence responsible for the sentients or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

WOMAN SUFFRAGE.

To the Editor of the "Japan Mail."

Sir,—It is not I, as some one seems to think, but a pronounced woman suffragist, who is the author of that senseless quotation about a "troublesome amount of affection in woman's composition," and about her power to "drive man into a corner of the universe," which appeared in my letter in the *Japan Mail* of January 26th. I quoted it only to ridicule it. I had hoped, too, that not many of those intelligent, politically-minded women were capable of writing anything so silly as that is, but on reading the proceedings of the recent annual convention of the American Woman Suffrage Convention, I come across about as big a display of unstrained bosh as one can find in a day's reading anywhere. The following, for example, is found in an address by Miss Susan B. Anthony, President of the Convention:—

THE DEGRADED WOMAN.

The women, she said, were entirely dependent upon the men and would be degraded in her own estimation until she was given the ballot.

That little adjective male in the constitutions of different states says that every man, whether foreign or native born, rich or poor, black or white, drunk or sober, is the equal of every man, but the women, it matters not how good and gentle and noble, are their inferiors. She never saw a poor, unlettered man, a foreign born one, may be, clad in ragged clothes going to the ballot box in her own city but she rejoiced to think that on this one day of the year his opinion was worth as much as that of any man in the land if he was a millionaire. That word male says to every woman that her opinion is not worthy to be counted.

"Shame, shame!" cried Miss Clay, of Kentucky, at this. Miss Anthony said she only wished she had the spiritual power to stand before the people another forty years and work for this great cause.

She closed by telling the women not to be frightened by the bugbears set afloat, that they wanted to be men, for it was not true—they did not want to be men.

Another "Miss" made a telling speech. And by the way, four out of the six leading officers of the Association are "Misses," on which fact, however, I will not attempt to make any "out-loud" comments for simple prudence's sake. The speech referred to above is reported to have began as follows:—"She held up a photograph and said it represented woman and her political peers. In the centre was a picture of Miss Francis Willard, in the upper left hand corner was an idiot, in the upper right hand corner was a convict, in the lower left hand corner was a painted Indian, and in the lower right hand corner was a lunatic. The picture, and its explanation, created quite a flutter of excitement among the delegates."

Now any ordinary ignoramus knows that neither an idiot, a convict, a painted Indian, nor a lunatic is allowed to vote in the United States or to have any voice whatever in the affairs of government. And a woman that is capable of trying to gull an intelligent audience with such sophistry would not have far to go to become a political demagogue that would be a rival to a Tammany boss. And the mischief of it is that this woman was perfectly honest and sincere in what she was doing.

And again one could easily imagine the following wail to come from some "poor unfortunate weary of breath" in an Indian *zenana* or a Turkish *harem*, rather than from the famous blue-grass regions of America where women have such supreme homage and precedence from men as no other women in the world have:—

THE WOMAN WITHOUT A COUNTRY.

Mrs. Josephine K. Henry, of Kentucky, was the next speaker. In a voice that showed the deepest grief she said, as if at any moment she might burst forth into tears, that she believed that she had been born a patriot, and although she was a southern born woman, who loved her people and all they had accomplished, she felt cast down at times to the lowest depths to think that she had no country. It affected her beyond expression to read that word male in the constitution of the country, and to realize that it was a crime for her to be born a woman. All these things wounded her deeply, and she had often asked her husband why it was that she had been born a woman and on this account had been put down below the meanest and most degraded man on earth.

The arguments and methods of attack used by certain classes of women in assailing that little word "male" in our state and national constitutions are both amusing and pitiable.

The following editorial in one of our leading American daily papers expresses my own opinion so well and strikes the truth of the woman suffrage question so squarely that I must beg space for it:—

WOMAN'S SUFFRAGE.

The New York *Advertiser* scores a good point when it says that the advocates of woman's suffrage are wide of the mark when they contend that men oppose the movement because they do not consider women mentally fit to exercise suffrage. No intelligent man holds that opinion. Women have proved that they are fully qualified intellectually to receive the ballot. Women have become eminent in almost every department of intellectual labour, and in every-day life we see convincing evidences that women need not fear comparison with men from an intellectual standpoint.

The objections to woman's suffrage are based on very different grounds from an alleged mental inferiority of the gentle sex and a fact which must not be overlooked is that the most determined apponents of this idea are women themselves.

If it were left for women alone to decide the question, woman's suffrage would be defeated by an overwhelming majority in nearly every state, and the vote of the women in the United States, as a whole, would be tremendously against it.

In none of the older states has this subject been agitated to such an extent as in Massachusetts, and nowhere have abler champions of woman's suffrage been found. Yet we are told by the Boston *Herald* that not ten per cent. of the women of Massachusetts would vote for the proposition if they had the opportunity.

When the late New York constitutional convention was considering the proposition to submit this question to the people, the strongest protests against it went up from women. The woman's suffragists are merely wasting their ammunition when they fire at those imaginary enemies who oppose their idea on the ground that women have not sense enough to use the ballot.

In these modern days a certain class of people are holding up Joan of Arc as the highest type of a true woman instead of Mary the Mother of Jesus, because the former, by riding astraddle a prancing war-steed at the head of a victorious army, demonstrated that a woman can do anything a man can.

The well known New York preacher, Dr. Charles H. Parkhurst, has recently coined a new word—"Andromania," which means "a passionate aping of every thing that is mannish. It is an attempt on the part of those affected with the disease to minimize distinctions by which manhood and womanhood are differentiated, whether as regards their culture, their interests, or their activities." He also says a few wise things to those ambitious women who think the millenium will be near at hand as soon as that little obnoxious word "male" is erased from our national constitutions:—"Any civilization that transforms or tends to transform a woman into the female duplicate of a man is a false civilization. If women want to retain the supremacy which belongs to their sex they will have to keep it by making more and more of their womanliness, and not in trying to be mannish. If they succeed in convincing men by the quality of their ambitions and interests, by the mode of their training and by the character of their pursuits, that the only difference between them and man is an affair of physical structure, there is an end to their queenliness and to masculine respect for it."

Most women suffragists seem to believe that all things will be righted when all women are allowed to vote. And on this point Dr. Parkhurst drives home another truth to be written on the walls of every home in the world:—"If our homes were all right everything would be right, and until our homes are right nothing can be right. A more glaringly erroneous idea never took possession of a reformer than this modern belief that all evils are to be rectified through the ballot box and legislative halls."

On this question Mrs. Katrina Trask in *The Forum* for January sets forth some argument that cannot be refuted until God creates a new Adam and a new Eve different from the first. In reference to the statement that "men are not wise enough, nor generous enough, nor pure enough to legislate fairly for women," she says:—"Every man who legislates has been conceived of woman, has been influenced by her life, her thoughts, her spirit, during his pre-natal existence; has had her impress on his dawning soul: has been led and guided through the first unfolding of his life by her hand; has had his susceptible young heart first in her keeping, his awakening thought first beneath her sway. And if, at last, he grows up to make laws which depress and degrade her, there must be some lack of grace or wisdom, some error of nature or of life in woman, which had better be met and overcome as the first step toward her emancipation; that when it comes it may stand upon a firm foundation, upon the impregnable rock of her own fitness and character."

Again the same writer says:—"The discussion that echoed through the land a few months ago failed to touch the vital point,—it lost the reality of woman's mission and high destiny, which she herself has helped to minimize. Much of the complaint that is poured forth as argument for woman's enfranchisement is a tacit admission on her part of inappreciation of her own present opportunities. * * * * To woman is given the mission of maternity, the basic fact of mortal life; not the mere bearing of children in an accidental, incidental way, but the mission of the perpetuation of the race; the directing and shaping of the race; and, until she understands and studies to fulfil her trust to the utmost, she has failed in her obligation and privilege. As long as men are unjust to women, carelessly selfish and cruel as they too often are, woman is sending forth proofs to the world of her own incapacity and failure."

Again Mrs. Trask writes:—"Many women have asked with scorn, 'Is the whole duty of woman that of child-bearing?' Some women have even been heard to ask, 'How much better am I than an animal?' Little better, if she can ask this question. The physical burden laid upon woman in the economy of nature must be a factor in the argument that woman's mission is distinct and separate from that of man; for it hampers women with limitations, which increase with the delicacy and fineness of their organisms, setting them in a measure apart; but it is only a detail of the larger function of maternity. The full, wide, spiritual mission of motherhood is the dignity and the opportunity of the sex."

Then she makes this wonderful admission concerning the modern education of women:—"How do women fulfil the mission of their lives, which—be it welcome or unwelcome—has been divinely ordered? By a false and foolish sophistry and a shallow prudery, it is some times too often approached in ignorance, concealed and veiled as they draw near to it;—this mighty mystery which

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

is the portal for the race. The whole education of women is often a tissue of half-truths, ever the blackest of lies. Girls trained by mothers for wife-hood are kept in ignorance of the real design of their lives. The preparation for marriage in an equipment, greater or less, for all things worldly and unworldly; but instruction or mention that marriage 'was ordained for the procreation of children' has seldom been given. If the young woman has not been too busy with the bridal garments, and the preparation for the feast, she may have read the old and solemn form of the Holy Ordinance, and wondered vaguely what these words meant; or she may have had an embarrassing secret knowledge gathered from unwise sources—of the wonderful economy of nature, and is half ashamed of knowing what she should have investigated with more zeal, and with as pure interest as she had studied the flowers, or followed the courses of the stars."

Now concerning all these questions, I can sum up my own opinions and convictions in one sentence. If all mothers were wise enough and free enough from a pernicious false modesty to teach their sons and daughters those great and vital lessons in the "economy of nature" as regards their own physical beings,—lesson which they learn sooner or later from unwise and sometimes damnable sources,—this world of wickedness, of unhappiness; of lunatics imbeciles, drunkards, deformaties, and diseases, would blossom into a paradise a thousand years before it would through universal woman suffrage.

WILL PATTILLO.

March 22, 1895.

THE RING OF SILVER IN THE AIR.

To the Editor of the "Japan Mail."

Sir,—The American Bimetallic League has given voice to the sentiment of the silver advocates in the United States, and will remain so until settled rightly. Other questions, however important, must wait for this, which, to a greater or less extent, involves all others. The issue is between the gold standard, gold bonds, and bank currency on one side and the bimetallic standard, no bonds, and government currency, on the other.

"First.—On this issue we declare ourselves to be unalterably opposed to the single gold standard and demand the immediate return to the constitutional standard of gold and silver, of the restoration by this Government, independent of any foreign power, of the unrestricted coinage of both silver and gold into standard money at the ratio of 16 to 1, and upon terms of exact equality, the silver coin to be full legal tender, equal with gold in the payment of all debts and dues public or private.

"Second.—We hold the power to control and regulate a paper currency inseparable from the power to coin money, and hence all the currency intended to circulate as money should be issued and its volume controlled by the general Government only and should be legal tender.

"Third.—We are unalterably opposed to the issue by the United States of interest bearing bonds in time of peace, and demand the payment of all coin obligation of the United States, as provided by existing law, in either gold and silver coin at the option of the Government and not at the option of the creditor."

This is a clear and direct issue, there is no equivocation or fence-straddling in the propositions set forth. Other political issues are avoided as being secondary in importance. The rehabiliation of silver is the grand question that will be the theme of discussion from now until the election for President takes place. As the advocates of free silver coinage are republicans as well as democrats, this new silver party will cause both the old national parties to rearrange their platforms, causing them to declare in plain and unmistakable terms their position in regard to silver coinage. In general terms both the democratic and republican parties have placed themselves before the people as the friends of silver in their party platforms prior to election and both have failed to act up to their declarations.

The present movement, by placing a third party in the field pledged to the free coinage of silver and gold at a ratio of 16 to 1, independent of any foreign power, will necessitate the adoption of a clear cut declaration in both the republican and democratic platforms regarding the policy the parties will pledge themselves to adopt in relation to this question. Neither party can afford to ignore the situation, the peril of defeat would be too great. The South is largely in favour of free coinage of silver, so also is the Western portion of the union. The Southern States are overwhelmingly democratic, while the Western are correspondingly republican. The new party will, if the present national parties do not face the situation by declaring for free coinage, cause a complete disintegration of old party lines. The ticket the new party will place in the field will be non-partizan so far as all old issues are in question, the only issue upon which its candidates will be presented being that of the free coinage of silver and gold, all other questions being of minor importance upon which the members elected to congress will be guided by their several proclivities.

The writer has ever been the advocate of the proposition that the United States would eventually settle the question of free silver coinage at the old ratio of 16 to 1, and that the time would come when the people would demand that the gold standard nations be left to their own devices and the old order of things should be restored despite all the gold interests that have wrought such wide spread disaster in the United States.

The action of the American Bimetallic League presages momentous consequences to the financial and commercial worlds. The movement inaugurated will gather force as the months roll by. The proposed international congress, to be convened to consider the relation of gold and silver, will take note of the situation, and the gold standard advocates will possibly conclude that their day is passing away. American grit and determination will solve the problem regardless of what other nations may determine.

Yours, &c., X.

Yokohama, April 4th, 1895.

AUSTRALIAN NOTES ON JAPANESE TOPICS.

By John Plummer, M.J.S.

Sydney, Feb. 20th, 1895.

As might have been expected, several of the leading Australian newspapers have commented unfavourably on the proceedings in connection with the capture of Port Arthur, and the forcible language employed by the Melbourne *Argus* induced Mr. Marks, the Japanese Consul in that city, to publish a short but remarkably effective reply, pointing out that British soldiers in India and elsewhere have acted, under gross provocation, exactly as the victorious Japanese troops are reported by the correspondent of the London *Times* to have done at Port Arthur. Human nature, after all, is human nature, no matter what may be the colour of the skin. What Australians do not seem to fully comprehend, is the apparent sudden development of naval and military ability on the part of a people hitherto treated by them with a feeling akin to contempt. Indeed, it is doubtful whether even in the Mother Country the great mass of population have learned the full significance of the rapid emancipation of Japanese thought and action from the enervating influence of ancient tradition and antiquated customs. To a thinker watching from afar, the progress of events in Korea and China, nothing can be more clear than the fact that a new chapter in the history of the world has been commenced, and that among the possibilities of the future is the return of a large share of its long-lost power to the awakening East. Political philosophers have long contended that when the peoples of the Orient became possessed of the knowledge to which the nations of the West owe so much of their strength and power, the seeds would be sown of one of the most stupendous revolutions the world has ever beheld.

The practical collapse of Chinese power was wholly unexpected in Australia, not only by the colonists, but also by the Chinese and Japanese residents. It has come as a surprise to everybody. The general opinion, when trouble arose between Japan and China, was that the latter nation, with its enormous wealth and teeming millions, would speedily vanquish its presumptious opponent, and that Japan would become, as it were, only a tradition. "Yet," says the Melbourne *Age*, "in six months of a single campaign little Japan has so completely doubled up her big adversary that the boastful giant has had to sue for mercy and peace. The country whose internal wealth was greater than all the rest of the world, dollar for dollar, has put a paltry loan of a couple of millions on the London market and been refused. Such are the opinions of the experts regarding Chinese strength a few months, or at most, a few years ago. Such the collapse of to-day. When great generals and statesmen are thus bamboozled concerning the forces under their ken, Oxenstiern may well be excused for his reflection—'My son see with how little wisdom the world is governed.' The Sydney *Daily Telegraph*, alluding to the return of His Excellency Li Hung-chang to Chinese Imperial favour, sarcastically says:—"Things are assurredly in a very bad way with the Chinese as a fighting nation. By the appearance of the situation as presented to us at this distance, the Emperor of China seems to be working hand and glove with the truculent Mikado to assure the defeat of his own cause. He has messed things up to such a degree with his bedizenings and denudings of high officials to begin with, that it is said those under them can never be sure whether it is the right thing to obey their orders or call them Raca or its pagan equivalent. Only the other day, Li Hung-chang hadn't an article of official attire fit to be seen in left to him. He had been stripped of all the properties that made him a ruler of men and was bidden to prepare his head for the executioner's sword if he could not use it to bring confusion upon the enemies of China. Since then he has been rigged out in the Yellow Jacket again, reinvested with the Peacock's Feather, and set once more in the highest place next the Emperor, who has disrobed and beheaded lots of his other prominent subjects. The Admiral, after surrendering Weihaiwei, knew he would, at least, have some of his clothes dragged off, so he committed suicide, as did several of his best men. And by way of showing the survivors what to do in future, the Emperor has ordered that all officers who are left are to be executed without further reference to him. With the Japanese winning every battle, and the Chinese Emperor executing all the officers they don't kill, his own army doesn't seem the kind of one to attract recruits and make them work hard for promotion."

The capture of Weihaiwei has created a deep impression throughout Australia, illustrating, as its does, the invincibility of Japan and the almost helpless vulnerability of China. Commenting on this further success of the Japanese forces, the *Sydney Morning Herald* says:—"The total prostration of China is now placed beyond peradventure, and people may legitimately indulge in conjecture on what the ultimate result will be to the East. That enormous levy will be made on the wealth of China goes without saying, and that this will go to enlarge the powers for offence of the Eastern Empire may be as surely expected. With the possession of all that remains afloat of the Chinese fleet, with the arsenals and material of war converted to the use of Japan, with the power to squeeze the life blood out of an empire that is really one of vast richness, it is difficult to set limits to the growth of strength of an energetic, intelligent, and ambitious Power like Japan. The difficulties that surround actual intervention on the part of the Western Powers, whatever moral influence they may seek to apply, are sufficiently great to prevent them from interfering except as a last resort; and when the hour of necessity seems to have come, Japan will probably have so established itself over the prostrate Power, and turned its resources so to account, that the active intervention of the Western Powers would involve a struggle from which they might reasonably shrink. Everything at the present hour seems to point to the East as passing through a crisis that will leave a memorable mark in history; and it is quite conceivable that this sudden uprising of Japan and its ultimate possession and control of the enormous resources of China may affect the fortunes and the destinies of the whole world."

The reported determination of Britain, France, and Russia to prevent any annexation of Chinese territory by Japan, has been received with disfavour in Australia. The Melbourne *Argus* thinks that such a decision, if really arrived at, would be calculated to cause serious uneasiness and misgivings as to the wisdom of Lord Rosebery's foreign policy. Says the *Argus*,—"It is not easy to see how British interests call for any such intervention. The Japanese have incurred an immense expenditure of men and money in their war against China, and they will certainly not be satisfied with a pecuniary indemnity and the permission to retain such Chinese war-ships as may fall into their hands. They aim at extending their rule over a considerable portion of the mainland, certainly Korea, and probably Manchuria, or part of it. It is easy to see why Russia should desire to prevent a formidable power like Japan from gaining a foot on the mainland, but why England should thus play into the hands of her most dangerous rival in Asia passes comprehension. China has proved her entire inability to develop the resources of [illegible] or raise the [illegible]

ed condition of the people, and the only hope of improvement for them lies in the introduction of the enterprise, capital, and skilled administration of Japan. For England to step in and, in conjunction with Russia and France, forbid her to retain possession of the country she has conquered means not only to make a deadly enemy of Japan, but to condemn Korea to a condition of anarchy and misgovernment worse than the state she was in before the war—a condition that must sooner or later invite, if not necessitate, Russian aggression. England has hitherto shown a well-grounded jealousy of Russian encroachments on the North Pacific, and it seems therefore incredible that she should suddenly reverse her old policy. To many Englishmen the prospect of the extension of Japanese power to the Asiatic continent has seemed a veritable interposition of Providence by providing a strong barrier against the dreaded advance of the Muscovite, and it is very difficult to believe that any British Government will be allowed to deliberately prevent the erection of a bulwark so advantageous to the empire. Fortunately many things may happen before any occasion for the threatened interposition arises, and as the Imperial Parliament is now sitting a policy so momentous is sure to meet with opposition and give rise to discussion."

The possibilities of a large export trade with Japan continue to engage the attention of Australian producers, but the colonists are somewhat slow in availing themselves of the facilities for opening new markets. Each seems to prefer waiting while the initial work is done by somebody else. The Sydney *Evening News* says:—That Japan might present a good field for Australian trade was a suggestion rather strongly urged even before Japan's position and prospects had become matters of so much general interest as they have of late. The suggestion derives tenfold force from some particulars recently given with respect to Japanese requirements in the commercial and industrial way. It is said that the country would afford a splendid market for Australian horses. Our mutton, too, should be in ready demand in that quarter, as well as many other things which Australia possesses in abundance. The opportunity should not be lost. In any case Australia is certain to hear more of the Asiatic power which in so surprising a manner has availed itself of the resources of western civilisation. It is only to be hoped that our future relations with it will always be as friendly, as they are tolerably sure to be intimate. But if a market for Australian produce is to be found in Japan, it can only be with the assistance of Japanese merchants, and for the energy and enterprise of these there is unlimited scope in the Australian Colonies.

If any friction occurs in the near future between Australia and Japan, it will probably be in connection with the Treaty between great Britain and Japan, a possibility pointed out by the London *Times* when its advised Australia not to do anything to imperil Oriental trade "for the sake of race prejudice." The *Sydney Morning Herald*, alluding to the warning uttered by *The Times*, not only endorses it, but also says that the great London journal "takes a singularly inadequate view of the situation," and then goes on to observe.—"That so-called race prejudices, or rather prejudices against alien labour, do affect a certain section of our population is true. But if this were all, it might with safety be said that the difficulties in the adoption of the Treaty by Australia would sooner or later be overcome. But to those who look at great public interests from a higher plane a much more serious aspect present itself. The United Kingdom, with its densely populated area, and its distance from the East, the possibility of being swamped by the populations of Oriental countries is a remote one—so remote that it need hardly be taken into account. With the vast area of Australian territory, at present barely fringed with settlements, lying over against the teeming populations of Eastern Asia, and in comparative proximity, the case is different. With us it is not a mere matter of sentiment or of racial prejudice, but the grave question of whether we shall preserve our existence as an Anglo-Saxon people, and prevent the Australian continent from being swarmed over by races that do not assimilate, but might in their multitudes alter or sweep away the institutions we are so carefully building up for ourselves and our children. We have seen the difficulties created in the United States by the presence of a race that cannot amalgamate, and which, with its rapid increase, presents a social and political problem for the future that causes the gravest apprehensions. The presence of the negro race in America is but a bagatelle compared with the possibilities of a migration of Asiatic races into the continent of Australia, and [illegible] the London *Times*, no commercial [illegible] can conceive would be commensurate with the evils that might come upon Australia from an unrestricted influx of Asiatics, such as would be rendered possible by the acceptance of the Treaty as it stands. That the Japanese are actively migratory we know. There are already 20,000 of them in the little group of the Hawaiian Islands. Any treaty concluded with Japan might have, for reasons explainable, to be extended sooner or later to embrace China, and it might practically mean free entrance to all Asiatics. That a treaty with different conditions and limitations may sooner or later be concluded with Japan, by which all the advantages of commercial interchange may be obtained by Australia without the evils incident to the present Treaty, is possible, even probable. But in the meantime it cannot be too distinctly understood that Australia is not actuated in this matter by mere race prejudice, but by a profound desire to retain the whole continent for planting there the institutions of Western civilisation, and for building up Anglo-Saxon rule in the Southern hemisphere.

LETTER FROM PEKIN.

(From our Correspondent.)

March 12, 1895.

It is just a week since Viceroy Li Hung-chang left here on his mission of peace to Japan, and today he is reported as leaving Tientsin, taking a steamer direct.

What will be the outcome? That is the question being asked now, with a predominance of faith in the possibilities of peace, mingled with slight fear that failure will be the result. It is certainly a more favourable outlook than either of the other missions. That Japan had reason for spurning the Detring attempt, blazoned with so much self-importance, we can understand; though even in that case, if Japan really wanted peace, and Mr. Detring would have remained, an informal conference might have been granted as a preliminary effort. Concerning the second attempt of Chang and Shao, we can easily understand why objections were made to the form of their credentials. For any mistake in this matter, blame may be placed on the Chinese Imperial Government, but not on the United States Minister, if he is really acting, as he represents, the part of intermediary and adviser. We understand that the form prepared by him was faultless, but the Chinese simply pigeon-holed it. But whether this or that, the Envoys were willing to have their credentials modified, and full powers were telegraphed them from here.

This third mission seems to be starting out with better credentials and a better understanding. The arrangements have been made by the transmission of despatches through the United States Ministers in Pekin and Tokyo. It seems as if the Chinese were acting for themselves in this case, listening to suggestions from others, but shaping their own plans by these prior arrangements. Viceroy Li has full powers to negotiate, and decide, and what he grants will include the independence of Korea, cession of territory, and a money indemnity. On the other hand, it is understood that he will be allowed to communicate with his government. Li, however, is a man very much accustomed to decide for himself, where given the power; and, not caring to be bothered with the objections of his secret enemies, he will go straight through the business and act for himself, leaving it for his return to bring the Central Government to terms.

The return of Viceroy Li to power is a marked feature of Chinese capabilities to turn a somersault, when emergency requires. With all the enemies which he had he would not have again risen to the top wave of glory and authority, if he had not secured a few important backers. While the smaller officials, some of whom he had aided, were turning against him, owing to the growing power and favour of the war party surrounding the Emperor, he was gradually growing again into favour with a few of the most powerful. These were none other than the Empress-Dowager and Prince Kung. Probably all along they were inclined to settle up on the best terms possible, and so agreed with Viceroy Li. He futhermore had been associated with one or both of them as a strong ally in many another perplexity, and naturally they thought of him as the best and only man, when the second mission failed and some other higher official should be appointed. There were only two persons of international reputation who stood high and had arranged treaties, Prince Kung and Viceroy Li, and it is quite reasonable to suppose that Prince Kung preferred Viceroy Li. Whatever doubts either the Empress-Dowager or Prince Kung had held concerning Viceroy Li were also removed. A quiet work had [illegible] to restore the confidence of Prince Kung, and so when the right moment came, he and the Empress-Dowager united in again ordering through the the Emperor his immediate presence in Pekin, and to secure this he was restored his honours and was told he was needed to go as Special Envoy. His enemies had all along been trying to bring him to Pekin to be either reproved, degraded, or punished even more severely; hence they could not very well object to his coming now.

On reaching Pekin, Li arose to his full strength and courage, and faced his enemies—the whole Court, and the Emperor—as to the charges brought against him for the failure of the war. By one catastrophe after another, while at first sight tending to discredit him as military leader all these years, he managed to silence those who had maligned him. The failure of the war, he set out to prove, was not due to him, for he had favoured more preparation, but to the Pekin Court which had hindered him time and time again and through whose backwardness China was now humiliated. As another attempt at peace seemed desirable, as military victories seemed impossible, as none of Li's objectors cared to go themselves to sue for peace and submit to shameful loss, they quietly nodded assent, and even united in hearty approval of Li's appointment. The Empress-Dowager and Prince Kung now came forward to favour and aid him, and so the somersault was completed. Some of these opponents of Li are among the most upright and patriotic men that China has; but by the force of events they are again meekly dwelling in obscurity and passivity. The thousands of soldiers who have gone to the front have been suffering through the winter; hundreds of wounded have been left to die; others have now and then made an assault on the Japanese forces; Weihaiwei has been lost; the Northern Squadron and its faithful Admiral are no more; and now let peace be arranged by him who has sat quietly in his viceregal *yamin*, requiring an immense payment of money from the already poverty-stricken country; and we will then hear the first mutterings of discontent and even of indignation, intensified when the soldiers are disbanded and ordered to return to their distant homes.

Peking is still as dull and secure as ever, and yet foreign marines have come, and missionaries from other places are advised to come to a place of safety. When the new treaty is signed in Pekin we will have excitement.

THE YOKOHAMA GAS WORKS.

It will be agreeable news to gas consumers of the Settlement to hear that the Yokohama Gas Works have decided to reduce the price of gas to per cent. from the rate at present charged, and it may interest our readers to know something about the considerable repairs and extension works lately undertaken by the company. A new gas holder of 100,000 cubic feet capacity made by the Bartonfield Iron Works (late Laidlow and Sons) of Scotland, which arrived on September last has now been completed and will be in working order in a few weeks. The Gas furnaces have been entirely reconstructed and all the appertaining apparatus either renewed or enlarged. The principal main, which is of 8 inches diameter, has been supplemented by a new 10-inch main, and the old branch mains both in the native town and and Settlement are now in process of being relaid, which will be completed at the end of April. The plan of main extension on the Bluff Settlement, and some parts of the native town, which has been under the consideration of City Municipal Council of late, has been adopted and the work will be commenced in a short time. The extension on the Bluff will include a main through Honmoku dori from the British Naval Hospital to the front of No. 157. Another line will extend from the front of the Public Hall along the Bluff Main road to Jizozaka and a branch main along Daikanzaka. The portions of the native town where the main extensions will be made are Moto-machi, Kamenohashi-dori, Horai-cho, Furu-cho, Isezaki-cho, and Noge-cho.

The insufficient capacity of the gas-holder, scarcity of demand in daytime, and the insufficient number of valve arrangements in the street-mains have, up to the present, prevented the Works from supplying gas in the daytime, but as the above mentioned inconveniences have now been rectified and of late there have been many applications, the works have decided to turn on gas both day and night from about June next, which, accompanied with the reduction in gas rates, will offer gas consumers a fine opportunity of utilizing gas for other purposes than lighting, such as gas engines for motive power, gas stoves, and gas cooking apparatus for domestic purposes, so widely in use in Western countries.

REPRESENTATION RELATING TO AID TO COMPANIES UNDER THE SPECIAL PROTECTION OF GOVERNMENT.

(As passed by the House of Representatives.)

Though the necessity of granting aid from the Treasury to the Nippon Railway Company, the Japan Mail Steamship Company, and the Hokkaido Colliery and Railway Company, is recognized, the process pursued does not appear to be quite satisfactory. Further, the rate of interest paid on the war loans borrowed from the 15th National Bank is considered exceedingly high. The Authorities should therefore amend the charters of each of these companies and the agreement with the Bank in accordance with the following principles:—The subsidy granted to the Nippon Railway Company by way of supplementing its profits is determined with reference to each separate section, so that while such sections as the 1st and 2nd, which yield an annual profit of above 20 per cent. are omitted from the account, others, the net earnings of which do not amount to 8 per cent. per annum receive a subsidy sufficient to bring their profit to that sum. This should be amended. The net earnings should be supplemented on the basis of the whole line, and no grant in aid should be made by the Treasury unless the profit on the whole line fall short of 8 per cent. As for the subsidy to the Nippon Yusen Kaisha, with the exception of the Hokkaido and Okinawa lines, it should be discontinued in respect of voyages undertaken along the coasts of Japan, and should be granted with respect to foreign voyages only, the number of miles being taken as a basis of computation.

With regard to the subsidy to the Hokkaido Tanko Tetsudo Kaisha, the profit does not reach 5 per cent. because the freight charged for the transportion of coal is exceptionally cheap. Should the freight be raised to a rate commensurate with that charged by other companies, the profit would be increased and the subsidy from the Treasury might be diminished. The Company should therefore be made to revise the rate of freight to a proper figure.

The interest on the War Loans borrowed from the 15th National Bank being exceptionally high, it should be reduced to 5 per cent. a year on the amount remaining unpaid according to the original contract.

Introduced by HIRASHIMA MATSUO, and 5 others.
Supported by HONO HIRONAKA, and 31 others.

REPRESENTATION RELATING TO THE PURCHASE OF WAR MATERIAL.

Our land and naval forces are carrying on warlike operations at different places undeterred by difficulties of whatever kind arising. The Imperial Diet, despite the fact that it maintains the necessity of retrenching official expenditures, has given its consent to the spending of a vast war fund, being desirous of the accomplishment of the original object of the expedition. So deeply imbued are the people with a warlike spirit that they are striving to outdo each other in sending contributions to the War or Relief Fund, or by sending gifts in kind, and in various other ways manifesting their sympathy with the soldiers fighting abroad. The responsibilities of the Authorities in purchasing war material and provisions must therefore be all the more weighty and serious. They should exercise great care in purchasing war material and provisions, and for the better control of this department certain fixed rules should be rigidly enforced. They should not suffer the so-called "official merchants" to indulge their cupidity and to reap undue profits from the war. Yet, with respect to this branch of the war, various strange rumours are circulated, and the Government has, to a certain extent, even acknowledged that these rumours are based on fact. Now, to meet the demands of the occupied districts and to keep the market price of the various stores and provisions at a proper level, transportation and the means of communication should be free. Yet this does not appear to have been provided, as witness the Regulations issued some months ago on this subject to merchants going to the occupied districts for the control of mercantile transactions there. These Regulations are entirely at variance with the spirit of the people and are not unlikely to produce a bad result. Then again, the use of cunning artifices by coolie agents and other fraudulent practices—employed with the selfish object of obtaining undue profits—are already matters of flagrant scandal [illegible] longer to be disregarded. It is the earnest desire of the House of Representatives to promptly amend any law that is found defective and to enforce a strict control over the operation of any law or regulation, to the end that no waste may attend the War expenditure; and to efficaciously stamp out all abuses due to the selfish designs of dishonest merchants.

QUESTIONS RELATING TO EXHIBITIONS.

1.—It requires no lengthy argument to demonstrate that an exhibition is an important medium for giving impetus to the development of industry and for bringing about means of promoting the prosperity of a country. Yet inspection of national exhibits appears to be chiefly based on a standard of fine arts, and the practical side of the subject, which relates to the national economy, appears to be more or less neglected. What policy does the Government contemplate adopting with regard to the inspection of goods send to Exhibitions?

2.—It not infrequently happens that persons who are not professional manufacturers, manufacture certain articles with the object of gaining a prize at an Exhibition, and, by specially raising the quality of their goods they obtain prizes of a higher grade than those won by the legitimate manufacturer. What course does the Government intend to pursue in such cases? Professional manufacturers also expressly manufacture articles of a high quality merely for the purpose of exhibiting them at an exhibition, and by marking them at an uncommonly low price strive to cause a temporary surprise. Is not that of the nature of a fraud upon society? What restraint does the Government intend to impose upon such exhibitors?

3. The inspection of exhibits should be conducted with the utmost impartiality, so as to lead the way to the true encouragement of art and trade. Yet with respect to the inspection of goods sent to exhibitions, strange rumours are frequently circulated as to the partiality exhibited by the judges. How are the Commissioners selected by the Government, and what methods does it intend to pursue in providing against such abuses in the future?

Presented by KOMURO SHIGEHIRO and MATSUDA KICHISABURO.
Supported by NOGUCHI KEI and 31 others.

THE GOVERNMENT'S REPLIES.

1.—In regard to the first question, the main essential is to see that the inspection of exhibits is carried out in strict accordance with the Inspection Regulations. These Rules are of many descriptions and vary in accordance with the class and nature of the exhibit. In each section an Inspector is appointed, who examines the exhibits and the explanatory documents accompanying them, and by inquiring into the cost of production and the price obtained by the sale, he always keeps in view the prime essentials of inspection. Each section of the exhibits must of course be differently treated. Thus, in the 2nd section, which is connected with fine arts, the inspection should be carried out from an artistic point of view. Similar artistic judgment is required for a portion of the 1st section; but for the 3rd section (agriculture and botany), the 4th section (marine industry), the 6th section (mining and metallurgy), and the 7th section (machinery), the chief thing to be kept in view is the promotion of national economy, and the practical benefits to the country. No special predilection to the artistic side of exhibits, as referred to in the question, has been shown.

2.—To provide against the abuse mentioned in the second question, provisions have been drawn up for the present exhibition so that exhibitors may be confined to professional manufacturers, or to those who, though not professional manufacturers, have made or caused others to make articles by employing special designs. In the present Exhibition, exhibitors must either be professional manufacturers or else have devised special designs, and those who intend to obtain higher prizes by making special articles of refined quality will find no room in the present exhibition. Again, for professional manufacturers or producers who only make an article of a specially refined quality for the purpose of exhibition, the minimum limit of exhibits has been changed with a view to put a stop to such abuses. For instance, the minimum limit of quantity of grain to be exhibited was increased from one *sho* to one *to*, while table salt was fixed at six *sho*, the quantity having previously been optional. In this way, in the case of articles for which special selection or artificial improvement is possible, abuses are provided against by increasing the quantity to be sent to the exhibition. In order to provide against the abuse of placing an unusually low value on goods simply to win temporary fame, the utmost care has been exercised in selecting the Committees. In short, the rules governing exhibits to be displayed in the present Exhibition are all based on the Exhibition Regulations framed for the guidance of exhibitors. All exhibits intended for this exhibition were first inspected and carefully selected by the Local Governors in accordance with Art. XX. of the Exhibition Regulations, and their relative merits were next determined by Committees of thoroughly experienced men.

3.—As provided for in the Official Organization, the Committees are selected from among persons distinguished either for scientific attainments or practical experience, and they make inspection and deliver judgment only on the particular exhibits assigned to them. No instance of partiality has ever been found in their awards. The most rigid supervision is exercised so as to effectively stop any abuses, as, for instance, the exclusion of selection committees from the prize conference on exhibits placed under their care, and the adoption of a system of double inspection in deciding the relative merits of an exhibit where opinion may be at first divided.

(Signed) Viscount ENOMOTO TAKEAKI,
Minister of State for Agriculture and Commerce.
March 18th, 1895.

QUESTIONS RELATING TO HOKKAIDO.

THE ADMINISTRATION OF HOKKAIDO.

Owing to the vacillation displayed in the Government policy with regard to the administration and opening of Hokkaido the system is greatly out of order, and public works are not undertaken according to the order of their relative importance. Nor are inquiries into and the control of public works carried out as they ought to be. Local economy is deranged, and great differences exist in the relative burdens imposed upon the people; the mode of leasing land to immigrants is very partial, and the relative advantages enjoyed by immigrants are said to be widely divergent according to localities. What is the Government's proposed future policy in regard to these affairs? In answer to a question put by a member of the House in the fourth session, the Home Minister replied that thenceforth, with regard to the system of opening Hokkaido, he would pay special attention and would fix the system on a definite basis by carrying out necessary investigations. Is the system of opening up Hokkaido now fixed on a definite basis?

FOREIGN POACHERS.

Rumours of foreign poachers entering the territorial waters of this country and carrying on poaching operations have been very prevalent of late years. Recently the number of poachers has increased, so that, the year before last, with Vancouver, Victoria, San Francisco, and other Pacific ports as a base, the poachers carried on their clandestine business at Omura-jima in the Bonin group, off Inuboye and Kinkasan, and as far as Cape Erimo, Daikoku jima, and the Kuriles, and caught a considerable quantity of seals and sea-otters. This is a fact that cannot be denied. Nay more, some of these poachers went a step further. The *Walter P. Hall* anchored at a place only 1½ miles off Iturup jima in the vicinity of Nemuro, and carried on poaching; while another ship did the same thing in Volcano Bay. Such actions on the part of foreign poachers are attributable to the contempt with which these foreigners regard international laws; their operations now present a grave problem affecting the sovereignty of this Empire. Yet, how is it that the Government appears to neglect this important question and suffers poachers to carry on their lawless operations with impunity? Does the Government intend to take up the matter?

HOKKAIDO PENITENTIARIES.

To the question put in the fourth session of the Diet, as to whether it is disadvantageous to the successful opening of Hokkaido, if the number of convicts liberated from the penitentiaries increase, the Government replied that the matter, together with others of like nature, was in course of investigation. What is the result of this investigation? According to inquiries carried out during the year before last, the number of convicts set free from Hokkaido penitentiaries by the 27th year of *Meiji* will amount to 4,512. Does the Government intend to set them

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

in Hokkaido? Is it the intention of the Government to regard Hokkaido as a field of penal service where the provisions set forth in Art. XVII. of the Criminal Code are to be put into operation, and will criminals be transported thither as before?

It is said that out of the total convicts employed in coal mining by the Hokkaido Colliery and Railway Company, *from* the 19th year of *Meiji* to January of the 24th year of *Meiji*, 82 were killed, 32 were afflicted with serious illness, and about 55,000 were wounded by explosions. A convict is a criminal, but as men have not two lives, so in law there should not be a double punishment for one offence. Yet does it not amount to this when convicts are employed in work of such a dangerous nature, and are likely at any time to meet with a terrible fate? Moreover, as the jailers simply carry out their duties of superintendence outside the pits, and can not exercise control over what happens within, it follows that any precision in awarding rewards or dealing out punishments is out of the question. As it is, convicts in the pits are said to intermingle with free labourers, and, to obtain liquor, tobacco, and other articles from the latter; and moreover, the stronger oppress the weaker and compel them to work for them. Are not such acts entirely at variance with the spirit of judicial punishment? The daily wage of a convict employed in this dangerous business is only 11 *sen*. Now, according to an inquiry carried out the year before last, the number of convicts employed in the Poronai Colliery was 1,300. Should these convicts be employed in agricultural pursuits it would be easy for them to obtain a daily wage of 20 *sen*. May not the action of the Government in neglecting to impose proper supervision over the convicts be regarded as wilful inattention to the country's interests?

THE HOKKAIDO COLLIERY AND RAILWAY COMPANY.

In answer to a question put in the 4th session as to the Hokkaido Colliery and Railway Company, the Government replied that the sale of the Colliery Railway was simply a conversion of a Government work into a private concern, and that with respect to promoting the interests of opening Hokkaido and developing its resources no difference in regard to the Government's policy had been occasioned. Should that be the case, it follows that the Colliery and Railway Company should be in duty bound to promote the opening of the land and the development of its resources. Nor was it on any other ground that the Government guaranteed the profits of the Company. Yet, if the present proceedings of the Company be inquired into, it appears that the Railway is entirely engaged in conveying the coal of the Company; while there are many indications which go to show that the Company does not attend to the important duty of promoting the opening of Hokkaido and the development of the island's resources. One train only is run per day, thereby subjecting emigrants to no small inconvenience. About the 23rd year of *Meiji*, owing to the high freight charged on goods conveyed by railway between Sapporo and Otaru, attempts were made to ship goods as far as Zenibako by sea, and thence to Sapporo overland; but the company did not regard this as any grievance but charges as high rates as ever. Owners of good are in fact at the mercy of the Company. The freight charges of the Company for the exclusive use of a goods waggon is virtually prohibitive. A certain Mr. Fujimura secured a Government license to undertake the trial extraction of coal in a bed in the vicinity of the Yubari Colliery. The Company is now secretly endeavouring to decline the conveyance of this coal, as the applicant is unable, it is said, to carry out his original plan of trial coal mining. In view of these facts, does the Government still maintain that the original purpose of promoting the opening of Hokkaido and developing the resources is maintained?

The Government has declared that in regard to the alterations of routes in the Railway line extending from Mororan to Sorachibuto, and the branch from the Yuban-Sorachi coal beds, the Company did not apply for Government sanction until after the completion of the works,—a misdemeanour for which the President of the Company should be held responsible—still as the alterations were considered necessary and proper the Government granted retrospective sanction. But to effect an alteration in a programme of an authorised public work without previously securing the sanction of the Government, is a violation the provisions of Art. XXVIII of the Private Railways Construction Regulations, and must not be considered as simply due to a fault of the President. Is it not provided in the written orders which the Government gave to the Company that when the provisions set forth therein are violated, the Company shall be liable to incur a penalty and have the Government's subsidy—the guaranted profits—withdrawn?" Yet the Government simply confined its action to discharging the President and did not subject the company to punishment. Is it the idea of the Government that although a violation of a law occurs, no action need be taken in the matter so long as the public interests are not violated. Even if the alteration in the two branch lines to Sorachi and Yubari be admitted as justifiable, what can be said about the shortening of the trunk line between Mororan and Sorachi by 2 miles in order to save the trouble of constructing a bridge over the Sorachi river, thereby subjecting the people going toward Kamikawa to serious disappointment? The alterations in the route can not therefore be considered justifiable even from the standpoint of practical requirements. The Government should withdraw the guaranteed profits for the 2 miles, to say nothing of suspending the guarantee altogether. How was it that the Government did not take this step?

In answer to a question as to whether the freight charges of the company for the transportation of coal are not out of proportion to the charges of freight on other kinds of goods, the Government replied that "the freight on coal could not be said to be unduly light. It is true the Nippon Tetsudo Kaisha charges 1.925 *sen* per mile for a ton of coal; but this is because the company has not much occasion to transport coal and is only required to carry a small quantity now and then. That its freight on coal is comparatively high is therefore not to be wondered at. On the contrary, the Kyushiu Tetsudo Kaisha fixes the rate at .8 *sen* per ton when the coal is to be carried less than 100 miles, and at .55 *sen* when the distance is above 100 miles. Now the Hokkaido Tanko Tetsudo Kaisha carries continuously an enormous quantity of coal, and it is only natural that the rate of freight should be low." With regard to the freight of the Kyushiu Tetsudo Kaisha the foregoing citation must be considered as a misstatement of an already perverted fact. The introducer of the question made inquiries of the Company specially upon this matter, and has received the following authentic statement of the rates charged by the Company on the transportation of coals.

For a distance of above 20 miles and under 45 miles 2.5 *sen* per miles per ton.
For a distance under 100 miles 2 *sen*.
For a distance above 100 miles 1.5 *sen*.

Special reductions are made when the quantity is very large.

From Omuda to Moji (91 miles). 55 *sen* per ton under special contract.
From Omuda to Moji (18 miles) 20 *sen* per ton under special contract.

In the above table the freight on coal from Omuda to Moji is relatively low. This is because Omuda enjoys shipping facility, and competition is very keen among ship owners to obtain cargoes. Even under such special conditions the rate per mile is above .6 *sen*. How can the Government explain that freight is fixed at the rate of 55 *sen* per ton?

The Tanko Tetsudo Kaisha has gradually reduced the freight on coal since the 23rd year of *Meiji* (1890), though no such reduction has been effected in freight for other kinds of goods. This is in short an abuse attributable to the combination of railway and colliery interests in the same Company. Other abuses too numerous to mention are traceable to the same cause. The Government, it is true, gave permission to the Company to combine the two businesses, perhaps in the interests of Hokkaido. The Company, however, does not appear to attend to the public benefit or attempt to develop the resources of Hokkaido. When the Company was organized the Government gave written orders to the Company to keep the accounts of railway and of colliery seperate, and not to mix the two. This was a plausible provision, only observed on paper, and really disregarded altogether. It is therefore considered that unless the spirit of the Railway Regulations be strictly enforced and, by severing the accounts and interests of the railway and colliery—the two to be kept rigidly apart, and not allowed to encroach one upon the other—the profits of the whole of Hokkaido are in danger of being monopolized by one private Company. Does the Government think that the combination of railway and colliery businesses is not contrary to the spirit of the Railway Regulations, and that no evil result has arisen from the combination?

THE GOVERNMENT'S ANSWERS.

THE ADMINISTRATIVE POLICY OF HOKKAIDO.

The Government's policy with regard to the administration of Hokkaido is carried on in accordance with a fixed plan, and no deviation from the lines laid down has ever been made with regard to the system of colonization and the order in which public works are undertaken. However, more or less alterations are unavoidable, according to time and circumstance. A question on this subject was asked in the 4th session of the Diet and was duly answered by the Home Minister. By reflecting on the results thus far obtained in Hokkaido, and also by prosecuting inquiries into the actual state of affairs, the present Minister has decided to establish a system in accordance with measures to be hereafter pursued in Hokkaido, as set forth in the accompanying document (a long memorandum on the future policy of Hokkaido was transmitted to the House at the same time); to arrange each measure more precisely, and then to take steps for carrying out these measures in due order. Especially with regard to the local government system of the lowest grade, the necessity for prompt amendment is recognized, and already a draft set of regulations is drawn up. It is the intention of the Home Minister to conduct the administration of Hokkaido in conformity with the system established in this manner. The system being yet only roughly sketched, when it comes to be applied to practical purposes, more or less alterations may be unavoidable. Moreover, its practical application must be in harmony with other State affairs and should be adapted to the financial condition of the country; and therefore the measures based on the system will be gradually carried out and in conformity with the requirements of the times. Thus public works expenses, drainage expenses, and harbour investigation expenses in Hokkaido asked for by the Diet in the 28th fiscal year are some of the contemplated measures considered of urgent importance.

HOKKAIDO PENITENTIARIES.

As to the relative merits or demerits of transporting convicts to Hokkaido and the increase of their number in that island, a clear exposition of the system is given in an accompanying document. With regard to the convicts whose terms have expired, it was decided to transport them back to penitentiaries in the interior, prior to the expiration of their terms; and then to set them free. The practice is already carried out. In April of last year 91 convicts were sent back to the penitentiary at Tokyo.

The employment of convicts in the mines of the Hokkaido Colliery and Railway Joint Stock Company has been abandoned and the convicts employed in that business were all recalled on December 20th of last year.

THE HOKKAIDO COLLIERY AND RAILWAY JOINT STOCK COMPANY.

Not only does the Colliery Railway carry free of charge all emigrants and their affects vouched for by Government, but it also reduces the freight on agricultural products (Agricultural products were carried free till 1894, but from this year quarter rates were charged), but it also has decided from this year to reduce fares by one-half when the distance is beyond 60 miles. Thus the facilities which the railway affords for the improvement of industry in Hokkaido and for emigration business generally must be said to be considerable. As to the other points raised—the furthering of the public benefits by works of colonization and industry, the Government has already specified them in the written instructions given to the Company and it maintains a vigilant superintendence over the Company in regard to the fulfilment of its promises. The Government is not aware of and does not recognise the facts alleged in two or three other points mentioned in the questions. The alteration of the route of a railway to be constructed by the Colliery and Railway Company was brought about through a further survey. This new route was discovered to be superior to the old one, and the reason why the Government gave a retrospective approval to this alteration was because its own experts thoroughly inspected the two routes and the change was unavoidable. In short, in such an affair as the survey of a railway route it is not a rare thing for a subsequent survey of a selected route to bring defects to light and thus cause changes to be made. It would not have been right for the Government to have made this change of route a cause for withholding the promised guaranteed subsidy.

(Signed) Viscount NOMURA YASUSHI,
Minister of Home Affairs.

REPLY TO THE QUESTION REGARDING FOREIGN POACHERS.

The Government does not neglect to exercise a suitable espionage of all foreign ships that come to the vicinity of the Japanese coast to carry on hunting operations. Each year, as the season approaches, a man-of-war is ordered

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

to cruise along the eastern coast of the main island as far as the coast of Hokkaido and the Kuriles, in order to prevent foreign ships from pursuing seals within the territorial waters of this country. With regard to the cases mentioned in the question, not only has the Japanese cruiser not noticed them, but no report regarding such cases has ever been received from any other quarter. It is therefore impossible to answer them. With regard to the superintendence of hunting-at-sea, the distinction to be made between territorial waters and the open seas depends upon the nature of the physical configuration, and can not be decided in any positive way. Moreover, as to the pursuit of game beyond territorial waters, the only mode of exercising effective control upon foreign ships coming to hunt, is to contract special treaty with foreign countries. The only alternative is to encourage our fishermen to compete with these foreign ships in order to prevent the latter from enjoying the sole benefit of the trade. And in regard to this, it may be stated that since the establishment of the Marine Products Investigation Institution in 1893, sealing-vessels have been fitted out from the eastern coast of the main island as far as the Kurile archipelago to study the hunting grounds, test the mode of hunting, and thus to develop seal hunting in the open seas, and to leave no space for foreign sealers to creep in.

(Signed) Viscount ENOMOTO TAKEAKI,
Minister of Agriculture and Commerce.

REPLIES TO QUESTIONS 3 AND 4 ABOUT THE COLLIERY RAILWAY.

The freight of 55 *sen* per ton of coal for a distance of 91 miles between Omuda and Moji, on the line of the Kyushu Railway Joint Stock Company, amounts to 6 odd *rin* per mile. It is therefore less than the 8 *rin* per mile for freight for a distance less than 100 miles, mentioned in the reply to questions asked in the 4th session of the Diet. The freight of 5½ *rin* per mile mentioned in the same reply referred to a section that is above 100 miles in length and not to that under 100 miles, as set forth in the questions.

As to whether or not a private railway company may combine another business with its railway work, there is no provision bearing on the point. As to whether it is not injurious to combine railway work and coal extraction in one company, it is not easy to positively decide the point, for the cases would vary according to circumstances.

(Signed) Count KURODA KIYOTAKA,
Minister of Communications.

QUESTIONS ABOUT THE COMMISSARIAT CORPS.

Since the commencement of the Japan-China War letters from the seat of war published in various newspapers report that great difficulties have been experienced with respect to the transport and supply of provisions and clothing. What arrangements does the Government intend t pursue hereafter about these matters?

Apart from the articles supplied by the commissariat, are the needs of the troops in the occupied territories to be supplied by the system of free competition, or by companies, or by specially privileged private individuals?

What mode is followed in purchasing provisions, clothing, and other war necessaries, and what is the nature of the agreement made with contractors?

What mode is pursued in engaging military coolies, and what form of agreement is made with the contractors?

Presented by SUYEHIRO SHIGEYASU.
Supported by OZAKI YUKIO, and 31 others.

January 19th, 1895.

THE GOVERNMENT'S REPLY.

With reference to the Questions regarding the provisioning of the Expeditionary Army,—such matters as pertain to future arrangements or that touch upon military strategy excepted—the present Minister of War is desirous of setting the facts before the public. The following answers are therefore given to the three points raised in the questions:—

The first point refers to the difficulty of transporting provisions and clothing, and seeks for information as to the plans which the Government intends to adopt in the matter. Refraining for the present from dwelling on the distinction between the Government and the various organizations which conduct the respective transport work; or upon the relation between the Government and the commissariat, the organization of the Commissariat will be first explained in order to make the answer lucid. The Commissariat is divided into four organisations, 1st, the Commissariat attached to Battalions; 2nd the Commissariat of Divisions, 3rd, Commissariat of Armies; and 4th, Commissariat under the direct control of the Commissariat-General. In the Battalion Commissariat the command is vested in the Commander of the Battalion; in the Division Commissariat in the Commander of the Division, in the Army Commissariat in the Commander-in-chief of the Army; and its management in the Commissariat Superintendant of the Army, and in the fourth department to the Commissariat-General and its management in the Chief of Transports and Communications or in a Commissariat-Superintendent specially appointed. As to limits of transport, in a Commissariat under the control of a Commissariat-General, distribution of stores commences at the store-houses situated in various districts and extends to the Central Commissariat Station of an Army, while in a Commissariat under the control of the Commander-in-chief of an Army transport commences from the Central Commissariat Station and extends to the terminal point of an advancing Commissariat line of a Division. The limit of transport of a Commissariat under the control of a Division distribution of stores commences at the terminal point of the line and ends with the Commissariat of each battalion. In this way there is regular system at work among the divisions of the Commissariat throughout the occupied localities, and the distribution of stores being so regular no hitch should occur in the arrangement of the Commissariat corps. And yet in the Commissariat arrangements along the route tending from Söul to Fenghwan *viâ* the Yalu river, many indescribable difficulties were encountered for which no precedent can be found in war waged in the interior of Japan nor in the annals of modern warfare elsewhere in the world.

The difficulties can be grouped under various heads; such as bad roads, defective implements used for transportation purposes, and lack of men and horses. These are the essentials requisite for properly carrying out the work of transportation, and if one of them is defective the operation of the others are impeded. The lack of all these essentials was experienced in Korea, and it was entirely on this account that the troops experienced no small privations. Moreover, another reason why those privations had to be experienced was that the movements of the enemy and the condition of the localities for military operations did not admit of any delay in the manœuvres of the Army. The introducer of the questions seeks to prove the complete breakdown in the commissariat by statements published in three or four newspaper articles. But these newspaper articles can not be credited. Even if one or two instances were given in the newspapers which actually did occur, to condemn the whole of the Commissariat system because of these slight mishaps is to judge too hastily. For it is no easy work to provision tens of thousand of troops engaged on an expedition in a foreign country; and when it is remembered that the quantity of clothing to be furnished to the troops numbered tens of thousands of suits, the bad roads to be traversed, the various obstacles presented by seas, hills, and rivers, so that at times the pack of clothing had to be carried upon waggons, or on board ships, or borne on the shoulders of men and the backs of beasts, while the places of distribution were always changing and the number of men to whom commissariat supplies were to be distributed was ever varying—under such circumstances, it is not strange that even during the month of December a portion of the troops was still in summer clothes. That this was a fact will not be gainsaid by the present Minister of War. A recital of these facts will convince any person most forcibly of the hardships experienced by the troops, and the Minister of War can not but feel, as the introducer of the questions does, extreme regret at what has happened. The breakdown in the distribution of winter clothing, however, was due to unavoidable circumstances, and the Minister of War hopes that the members of the House of Representatives impartially judge of the state of affairs at that time and acknowledge that the cause of the unfortunate affair was entirely due to unavoidable causes. The questioner quotes a private letter sent by a certain officer in the Second Army. To this the Minister of War emphatically replies that the transport difficulties mentioned in that letter have never been referred to in the official reports. In fact, the blankets, overcoats, and other articles of winter clothing had already been distributed to the troops, and each division found the supply sufficient to protect all the men from the severity of the season, as was already shown by several official reports. The Minister of War is decidedly of opinion that the state of things set forth by the questioner exists no longer. It is the same with regard to the First Army. More than 80 different articles of winter clothing have been given to each soldier and nothing has been left undone in providing the men with clothes as a protection against the cold.

The second question is a little difficult to understand. It seems, however, that the questioner wishes to ascertain how other articles not supplied by the Government are to be obtained by the army. The perusal of the Trade Regulation Rules relating to merchants entering the territories now occupied by the Japanese troops, given in the *Official Gazette* of the 17th of Jan., will make the whole thing clear. The Rules plainly show that the sale of articles of food or clothing is not to be monopolized by any single firm or individual but is to be left to free competition. It is, however, needless to say that persons without capital or stock who wish to follow the army without any set purpose must be restrained in order to prevent them from causing mischief.

The third question relates to the mode of purchasing provisions, clothing, and such other articles as are needed by the troops. The system adopted in purchasing war necessaries is solely one of free contract. Only when the articles sent in exactly correspond with the samples previously shown, and when both the quality and price are deemed reasonable, is an order given to a contractor. The questioner in explaining the points raised in the questions, observes that among articles so purchased some were defective either in quality or quantity while some articles of diet were so rotten as to be entirely unfit for human food; and that such abuses were due to the artifices of dishonest contractors and to the acquiescent negligence of the authorities. There is no need for saying that could leisure be found and sufficient hands be available to examine one by one all the articles purchased, it would be possible to declare that not a single article of food supplied to the Army was in the condition described. But as it is, articles, amounting to tens of thousands were purchased in a short space of time and examined by only a limited number of commissioners, and many of the articles were of such a nature as to preclude inspection by opening them all. The Minister of War can not, he regrets to say, assure the questioner that the allegations contained in the question are entirely unfounded. Whenever a case of the kind described was detected, steps were at once taken to discover the cause. As to the alleged cases of rotten meat and vegetables, rice and fodder, which the questioner says were defective in quantity and quality—an attempt being made, it is alleged, to pass off horse-flesh as beef, or the packing of canned-beef cases with stones,—these cases are either being inquired into, or due steps have already been instituted in regard to them.

With regard to the fourth question relating to the engagement of coolies; as already stated in the reply given to the first question, there being great differences in the scope and limit of the commissariat system, the coolies employed by different commissariats are respectively engaged by them, those attached to a battalion commissariat are engaged by it, and so forth, coolies, mechanics, fire-men, carpenters, well-diggers, and so forth employed by the advancing commissariat are engaged by free contract by the; Accountants-General of the respective Divisions, by the superintendants of commissariat stations, or military commanders. At first the wages given to such men were not uniform, nor were the various rules framed for determining the relations between coolies and their inspectors the same. At present, however, a systematic set of rules to be observed by coolie contractors and others are kept in view by the different commissariats when engaging coolies, and according to the condition of the localities, the kinds of work and services to be rendered, the remuneration is fixed. More or less differences in pay and work are unavoidable until better modes of engaging such men can be conceived.

(Signed) Count SAIGO TSUKUMICHI,
Minister of War.

February 3rd, 1895.

CONCERT AT THE PUBLIC HALL.

Great as has been the success attendant upon the concerts given by the Yokohama Juvenile Tonic Sol-fa Society in the past, the one given in the Public Hall on Wednesday evening, the fifth of the series, has eclipsed them all. From both instrumental and vocal points of comparison the improvement is most marked, and this notwithstanding the great drawbacks which the Society has had to contend with this season.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Persistent colds and attacks of influenza, which have befallen teacher and pupils alike, retarded the practises up till the last moment; yet the various items were given without a hitch, thus reflecting an additional credit on all concerned, and particularly upon Mrs. Patton and Miss Bloxham. The pianoforte pieces were each and all given with remarkable fidelity, and the degree of expression thrown into the work was very true. Miss Eyton has improved greatly in this respect since the last concert, and gives promise of developing into an artistic performer of no mean merit. Another of the pianists who has also advanced quickly is Miss Batavus. This little player had the great misfortune to cut a finger a day or so before the concert, but notwithstanding the accident, she gave a clever and pleasing rendering of the numbers allotted to her on the programme. The other instrumentalists were the Misses Johnstone, Diack, M. and N. Schwabe, J. Loomis, and C. Sargent: they all merited to the full the applause awarded their various pieces. The Choral March, "Forward gaily together," and the double vocal trio, "Good Night," were sweetly given, and pleased the audience better than the chorus "Doh, me soh," with which the second part opened. The unaccompanied chorus, "O, hush thee, my baby," was very praiseworthy. A genuine treat was afforded by little Miss Sargent in the song "The sweetest Scotch lassie," and so delighted was everybody with the singer that she had to repeat one verse: her reward was a beautiful bouquet.

The greatest interest in the evening's entertainment was manifested, however, in the third part, when the young performers appeared in character. The first of these numbers was the dainty ballad of "The three old maids of Lee." The parts were taken by Misses E. Bennett, Bessie Burns, and E. Kuhn. Dear old souls they looked in the old-fashioned coal-scuttle bonnets of the far back forties: certainly not unlovable, very far from being the unprepossessing creatures they represented themselves to be; the trio was very much enjoyed. The well-known Venetian song, "Funiculi, Funicula," was taken by Master Mollison, with the members of the society as chorus. A very pleasing picture was presented in this item, the lads and lassies being attired in the conventional garb associated with operas possessing an Italian background. "Caller Herrin'," the duet which was so great a success last year, was again repeated by Misses J. Loomis and C. Sargent. This so pleased the house that the last verse had to be given again. The duet on two pianos, a Spanish Dance, by Misses Batavus and Eyton, was accompanied by tambourine, castanets, and triangle (Misses M. and N. Schwabe and Diack); one would have liked to have seen this number danced, so pretty and graceful was the musical effect. The Gensdarmes Duet was again given, by special request, by Masters Mollison and Carsl, and was a great improvement upon the initial performance. An encore was demanded and given. Just before the last number was rung on, Mr. Jas. Troup, H.B.M.'s Consul, rose and addressed a few words of congratulation to Mrs. Patton and the children. He said the concert spoke for itself, and the improvement shown by the performers was something marvellous when one considered the adverse circumstances which had prevailed since the beginning of the year. Mrs. Patton, in returning thanks, spoke of the great work which Miss Bloxham had done during the year in training the children's voices: she also returned her thanks to Mr. Beart for his assistance in preparing the children for the concert. The finale, a solo and chorus from "Les Cloches de Corneville," went splendidly, Miss C. Sargent taking the solo. At its close Miss Bloxham was presented with a bouquet.

A WISH FULFILLED.

I.

The streets were full of white uniforms, and the calling of bugles, and the rumbling of artillery. The armies of Japan, for the third time in history, had subdued Korea; and the imperial declaration of war against China had been published by the city journals, printed on crimson paper. All the military powers of the empire were in motion. The first line of reserves had been summoned, and troops were pouring into Kumamoto. Thousands were billeted upon the citizens; for barracks and inns and temples could not shelter the passing host. And still there was no room; though special trains were carrying regiments north, as fast as possible, to the transports waiting at Shimonoseki.

Nevertheless, considering the immensity of the movement, the city was astonishingly quiet. The troops were silent and gentle as Japanese boys in school hours; there was no swaggering, no reckless gaiety. Buddhist priests were addressing squadrons in the courts of the temples; and a great ceremony had already been performed in the parade-ground by the Abbot of the Shinshu sect, who had come from Kyoto for the occasion: Thousands had been placed by him under the protection of Amida; the laying of a naked razor-blade on each young head, symbolizing voluntary renunciation of life's vanities, was the soldier's consecration. Everywhere, at the shrines of the older faith, prayers were being offered up by priests and people to the shades of heroes who fought and died for their emperor in ancient days, and to the gods of armies. At the Shintō temple of Fujisaki sacred charms were being distributed to the men. But the most imposing rites were those at Honmyōji, the far-famed monastery of the Nichiren sect, where for three hundred years have reposed the ashes of Kato Kiyomasa, conqueror of Korea, enemy of the Jesuits, protector of the Buddhists; Honmyōji, where the pilgrim chant of the sacred invocation, *Namu-myō-hō-renge-Kyō*, sounds like the roar of surf; Honmyōji, where you may buy wonderful little *mamori* in the shape of tiny Buddhist shrines, each holding a minuscule image of the deified warrior. In the great central temple, and in all the lesser temples that line the long approach, special services were sung, and special prayers were addressed to the spirit of the hero for ghostly aid. The armour and helmet and sword of Kiyomasa, preserved in the main shrine for three centuries, were no longer to be seen. Some declared that they had been sent to Korea, to stimulate the heroism of the army. But others told a story of echoing hoofs in the temple-court by night, and the passing of a mighty Shadow, risen from the dust of his sleep, to lead the armies of the Son of Heaven once more to conquest. Doubtless even among the soldiers, brave, simple lads from the country, many believed, just as the men of Athens believed in the presence of Theseus at Marathon. All the more, perhaps, because in no small number of the new recruits Kumamoto itself appeared a place of marvels hallowed by traditions of the great captain, and its castle a world's wonder, built by Kiyomasa after the plan of a stronghold stormed in Chōsen.

Amid all these preparations, the people remained singularly quiet. From mere outward signs no stranger could have divined the general feeling. The public calm was characteristically Japanese; the race, like the individual, becoming to all appearance the more self-contained, the more profoundly its emotions are called into play. The Emperor had sent presents to his troops in Korea, and words of paternal affection; and citizens, following the august example, were shipping away by every steamer supplies of rice wine, provisions, fruits, dainties, tobacco, and gifts of all kinds. Those who could afford nothing costlier were sending straw sandals. The entire nation was subscribing to the war fund; and Kumamoto, though by no means wealthy, was doing all that both poor and rich could help her do to prove her loyalty. The cheque of the merchant mingled obscurely with the paper dollar of the artisan, the labourer's dime, the coppers of the *kurumaya*, in the great fraternity of unbidden self-denial. Even children gave; and their pathetic little contributions were not refused, lest the universal impulse of patriotism should be in any manner discouraged. But there were special subscriptions also being collected in every street for the support of the families of the troops of the reserves—married men, engaged mostly in humble callings, who had been obliged of a sudden to leave their homes and little ones without the means to live. That means the citizens voluntarily and solemnly pledged themselves to supply. One could not doubt that the soldiers, with all this unselfish love behind them, would perform even more than simple duty demanded.

And they did.

II.

Manyemon said there was a soldier at the entrance who wanted to see me.

"O, Manyemon, I hope they are not going to billet soldiers upon us: the house is too small. Please ask him what he wishes."

"I did," answered Manyemon; he says he knows you."

I went to the door and looked at a fine young fellow in uniform, who smiled and took off his cap as I came forward. I could not recognize him. The smile was familiar, notwithstanding. Where could I have seen it before?

"Teacher, have you really forgotten me?"

For another moment I stared at him wondering; then he laughed gently, and uttered his name.

"Kosuga Asakichi."

How my heart leaped to him as I held out both hands! "Come in, come in!" I cried. "But how big and handsome you have grown! No wonder I did not know you."

He blushed like a girl, as he slipped off his shoes and unbuckled his sword. I remembered that he used to blush the same way in class, both when he made a mistake, and when he was praised. Evidently his heart was still as fresh as then, when he was a shy boy of sixteen in the school at Matsue. He had got permission to come to bid me goodby: the regiment was to leave in the morning for Korea.

We dined together, and talked of old times,—of Izumo, of Kitzuki, of many pleasant things. I tried in vain at first to make him drink a little wine; not knowing that he had promised his mother never to drink wine while he was in the army. Then I substituted coffee for the wine, and coaxed him to tell me all about himself. He had returned to his native place, after graduating, to help his people, wealthy farmers; and he had found that his agricultural studies at school were of great service to him. A year later, all the youths of the village who had reached the age of nineteen, himself among the number, were summoned to the Buddhist temple for examination as to bodily and educational fitness for military service. He had passed as *ichiban* (first-class) by the verdicts of the examining surgeon and of the recruiting-major (*shōsa*), and had been drawn at the ensuing conscription. After thirteen months' service he had been promoted to the rank of sergeant. He liked the army. At first he had been stationed at Nagoya, then at Tōkyō; but finding that his regiment was not to be sent to Korea, he had petitioned with success for transfer to the Kumamoto division. "And now I am so glad," he exclaimed, his face radiant with a soldier's joy: "we go to-morrow!" Then he blushed again, as if ashamed of having uttered his frank delight. I thought of Carlyle's deep saying, that never pleasures, but only suffering and death are the lores that draw true hearts. I thought also—what I could not say to any Japanese—that the joy in the lad's eyes was like nothing I had ever seen before except the caress in the eyes of a lover on the morning of his bridal.

"Do you remember," I asked, "when you declared in the school-room that you wished to die for his Majesty the Emperor?"

"Yes," he answered, laughing. "And the chance has come,—not for me only, but for several of my class."

"Where are they?" I asked. "With you?"

"No: they were all in the Hiroshima division, and they are already in Korea. Imaoka (you remember him, teacher: he was *very* tall), and Nagasaki, and Ishihara,—they were all in the fight at Sōng-hwan. And our drill-master, the lieutenant,—you remember him?"

"Lieutenant Fujii, yes. He had retired from the army."

"But he belonged to the reserves. He has also gone to Korea. . . . He has had another son born since you left Izumo."

"He had two little girls and one boy," I said, "when I was in Matsue."

"Yes: now he has two boys."

"Then his family must feel very anxious about him?"

"*He* is not anxious," replied the lad. "To die in battle is very honourable; and the government will care for the families of those who are killed. So our officers have no fear. Only—it is very sad to die if one has no son."

"I cannot see why."

"Is it not so in the West?"

"On the contrary, we think it is very sad for the man to die who has children."

"But why?"

"Every good father must be anxious about the future of his children. If he be taken suddenly away from them, they may have to suffer many sorrows."

"It is not so in the families of our officers. The relations care well for the child, and the government gives a pension. So the father need not be afraid. But to die is sorrowful for one who has no child."

"Do you mean sorrowful for the wife and the rest of the family?"

"No: I mean for the man himself, the husband."

"And how? Of what use can a son be to a dead man?"

"The son inherits. The son maintains the family name. The son makes the offerings."

"The offerings to the dead?"

"Yes. Do you now understand?"

"I understand the fact, not the feeling. Do military men still hold these beliefs?"

"Certainly. Are there no such beliefs in the West?"

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

"Not now. The ancient Greeks and Romans had such beliefs. They thought that the ancestral spirits dwelt in the home, received the offerings, watched over the family. Why they thought so, we partly know; but we cannot know exactly how they felt, because we cannot understand feelings which we have never experienced, or which we have not inherited. For the same reason, I cannot know the real feeling of a Japanese in relation to the dead."

"Then you think that death is the end of everything?"

"That is not the explanation of my difficulty. Some feelings are inherited,—perhaps also some ideas. Your feelings and your thoughts about the dead, and the duty of the living to the dead, are totally different from those of an Occidental. To us the idea of death is that of a total separation, only from the living, but from the world. Does not Buddhism also tell of a long dark journey that the dead must make?"

"The journey to the Meido,—yes. All must make that journey. But we do not think of death as a total separation. We think of the dead as still with us. We speak to them each day."

"I know that. What I do not know is of the ideas behind the facts. If the dead go to the Meido, why should offerings be made to ancestors in the household shrines, and prayers be said to them as if they were really present? Do not the common people thus confuse Buddhist teachings and Shinto beliefs?"

"Perhaps many do. But even by those who are Buddhists only, the offerings and the prayers to the dead are made in different places at the same time,—in the parish temples, and also before the family *butsudan*."

"But how can souls be thought of as being in the Meido, and also in various other places at the same time? Even if the people believe the soul to be multiple, that would not explain away the contradiction. For the dead, according to Buddhist teaching, are judged."

"We think of the soul both as one and as many. We think of it as of one person, but not as of a substance. We think of it as something that may be in many places at once, like a moving of air."

"Or of electricity?" I suggested.

"Yes."

Evidently, to my young friend's mind the ideas of the Meido and of the home-worship of the dead had never seemed irreconcilable: and perhaps to any student of Buddhist philosophy the two faiths would not appear to involve any serious contradictions. The Sutra of the Lotos of the Good Law teaches that the Buddha state "*is endless and without limit,—immense as the element of ether.*" Of a Buddha who had long entered into Nirvana it declares: "*Even after complete extinction, he wanders through this whole world in all ten points of space.*" And the same Sutra, after recounting the simultaneous apparition of all the Buddhas who had ever been, makes the teacher proclaim: "*All these you see are my proper bodies, by kotis of thousands, like the sands of the Ganges: they have appeared that the law may be fulfilled.*" But it seemed to me obvious that, in the artless imagination of the common people, no real accord could ever have been established between the primitive conceptions of Shintō and the much more definite Buddhist doctrine of a judgment of souls.

"Can you really think of death," I asked, "as life, as light?"

"Oh yes," was the smiling answer. "We think that after death we shall still be with our families. We shall see our parents, our friends. We shall remain in this world viewing the light as now."

(There suddenly recurred to me, with new meaning, some words of a student's composition regarding the future of a just man: *His soul shall hover eternally in the universe.*)

"And therefore," continued Asakichi, "one who has a son can die with a cheerful mind."

"Because the son will make those offerings of food and drink without which the spirit would suffer?" I queried.

"It is not only that. There are duties much more important than the making of offerings. It is because every man needs some one to love him after he is dead. Now you will understand."

"Only your words," I replied, "only the facts of the belief. The feeling I do not understand. I cannot think that the love of the living could make me happy after death. I cannot even imagine myself conscious of any love after death. And you, you are going far away to battle,—do you think it unfortunate that you have no son?"

"I? Oh no! I myself *am* a son,—a younger son. My parents are still alive and strong, and my brother is caring for them. If I am killed, there will be many at home to love me,—brothers, sisters, and little ones. It is different with us soldiers: we are nearly all very young."

"For how many years," I asked, "are the offerings made to the dead?"

"For one hundred years."

"Only for a hundred years?"

"Yes. Even in the Buddhist temples the prayers and the offerings are made only for a hundred years."

"Then do the dead cease to care for remembrance in a hundred years? Or do they fade out at last? Is there a dying of souls?"

"No, but after one hundred years they are no longer with us. Some say they are born again; others say they become kami, and do reverence to them as kami, and on certain days make offerings to them in the *toko*."

(Such were, I knew, the commonly accepted explanations, but I had heard of beliefs strangely at variance with these. There are traditions that, in families of exceeding virtue, the souls of ancestors took material form, and remained sometimes visible through hundreds of years. A *sengaji* pilgrim* of old days has left an account of two whom he said he had seen in some remote part of the interior. They were small, dim shapes, "dark, like old bronze." They could not speak, but made little moaning sounds, and they did not eat, but only inhaled the warm vapour of the food daily set before them. Every year, their descendants said, they became smaller and vaguer.)

"Do you think it is very strange that we should love the dead?" Asakichi asked.

"No," I replied, "I think it is beautiful. But to me, as a Western stranger, the custom seems not of to-day, but of the more ancient world. The thoughts of the old Greeks about the dead must have been much like those of the modern Japanese. The feelings of an Athenian soldier in the age of Pericles were perhaps the same as yours in this era of Meiji. And you have read at school how the Greeks sacrificed to the dead, and how they paid honour to the spirits of brave men and patriots?"

"Yes. Some of their customs were very like our own. Those of us who fall in battle against China will also be honoured. They will be revered as *kami*. Even our Emperor will honour them."

"But," I said, "to die so far away from the graves of one's fathers, in a foreign land, would seem, even to Western people, a very sad thing."

"Oh, no. There will be monuments set up to honour our dead in their own native villages and towns, and the bodies of our soldiers will be burned, and the ashes sent home to Japan. At least that will be done whenever possible. It might be difficult after a great battle."

(A sudden memory of Homer surged back to me, with a vision of the antique pain, when "the pyres of the dead burnt continually in multitude.")

"And the spirits of the soldiers slain in this war," I asked,—"will they not always be prayed to help the country in time of national danger?"

"Oh yes, always. We shall be loved and worshiped by all the people."

He said "We" quite naturally, like one already destined. After a little pause he resumed:—

"The last year that I was at school we had a military excursion. We marched to a shrine in the district of Iu, where the spirits of heroes are worshipped. It is a beautiful and lonesome place, among hills; and the temple is shadowed by very high trees. It is always dim and cool and silent there. We drew up before the shrine in military order; nobody spoke. Then the bugle sounded through the holy grove, like a call to battle; and we all presented arms; and the tears came to my eyes, I do not know why. I looked at my comrades, and I saw they felt as I did. Perhaps, because you are a foreigner, you will not understand. But there is a little poem, that every Japanese knows, which expresses the feeling very well. It was written long ago by in the great priest Saigyo Hōshi, who had been a warrior before becoming a priest, and whose real name was Sato Norikyo:

Nani go to no
Owashimasu ka wa
Shirane domo
Arigata sa ni so
Namida koboruru.[1]

[1] "What thing (cause) there may be, I cannot tell. But [whenever I come in presence of the shrine] grateful tears overflow."

It was not the first time that I had heard such a confession. Many of my students had not hesitated to speak of sentiments evoked by the sacred traditions and the dim solemnity of the ancient shrines. Really the experience of Asakichi was no more individual than might be a single ripple in a fathomless sea. He had only uttered the ancestral feeling of a race, the vague but immeasurable emotion of Shinto.

We talked on till the soft summer darkness fell. Stars and the electric lights of the citadel twinkled out together; bugles rang; and from Kiyomasa's fortress rolled into the night a sound, deep as a thunder-peal, the chant of ten thousand men:—

Niski mo higashi mo
Mina teki so,
Minami mo kita mo
Mina teki so:
Yose.kuru teki wa
Shiranuki no
Tsukushi no kata mo
Satsuma gata![1]

[1] This would be a free translation in nearly the same measure;—

Oh? the land to south and north
All is full of foes!—
Westward, eastward, looking forth,
All is full of foes!
None can well the number tell
Of the hosts that pour
From the strand of Satsuma,
From the Tsukushi's shore.

"You have learned that song, have you not?" I asked.

"Oh yes," said Asakichi. "Every soldier knows it."

It was the Kumamoto Rojo, the Song of the Siege. We listened, and could even catch some words in that mighty volume of sound:—

Tenchi no kuzuru
Bakari nari
Tenchi wa kuzure
Yama kawa wa
Sakuru tameshi no
Araba tote
Ugokaru mono wa
Kimi ga mi yo.[1]

[1] What if Earth should sundered be?
What if Heaven fall?
What if mountains mix with sea?
Brave hearts each and all,
Know one thing shall still endure,
Ruin cannot whelm,
Everlasting, holy, pure,
This imperial realm.

For a little while Asakichi sat listening, swaying, his shoulders in time to the strong rhythm of the chant; then, as one suddenly waking, he laughed and said:—

"Teacher, I must go! I do not know how to thank you enough, nor to tell you how happy this day has been for me. But first," taking from his breast a little envelope, "please accept this. You asked me for a photograph long ago:—I brought it for a souvenir."

He rose, and buckled on his sword. I pressed his hand at the entrance.

"And what may I send you from Korea, teacher?" he asked.

"Only a letter," I said, "after the next great victory."

"Surely, if I can hold a pen," he responded. Then straightening up till he looked like a statue of bronze, he gave me the formal military salute, and strode away in the dark.

I returned to the desolate guest-room and dreamed. I heard the thunder of the soldiers' song. I listened to the roar of the trains, bearing away so many young hearts, so much priceless loyalty, so much splendid faith and love and valor, to the fever of Chinese rice-fields, to gathering cyclones of death.

III.

The evening of the same day that we saw the name "Kosuga Asakichi" in the long list published by the local newspaper, Manyemon decorated and illuminated the alcove of the guest-room, as for a sacred festival; filling the vases with flowers, lighting several small lamps, and kindling incense-rods in a little cup of bronze. When all was finished, he called me. Approaching the recess, I saw the lad's photograph within, set upright on a tiny *dai*; and before it was spread a miniature feast of rice and fruits and cakes, the old man's offering.

"Perhaps," ventured Manyemon, "it would please his spirit if the master should be honorably willing to talk to him. He would understand the master's English."

I did talk to him; and the portrait seemed to smile through the wreaths of the incense. But that which I said was for him only, and the gods.—LAFCADIO HEARN in the *Atlantic Monthly*.

* A sengaji pilgrim is one who makes the pilgrimage to the thousand famous temples of the Nichiren sect; a journey requiring many years to perform.

Caycay, a West India island, is inhabited exclusively by turtles, some of which grow to an enormous size. Attempts to establish human habitations on the island have always failed.

Search-lights are such good targets for the enemy's guns that the Germans are arranging to throw the light first on a mirror and thence on the enemy, thereby concealing its real source.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

TRIAL OF KOYAMA TOYOTARO.

The full report of the trial of Koyama Toyotaro, for his attempted assassination of the Viceroy Li Hung-chang at Shimonoseki on the 24th March, is published in the *Nippon* of the 4th inst. The following translation deals only with the salient points of the case :—

The Judge—For what object did you buy that pistol?

Prisoner—I intended at first to kill Li with a Japanese sword, but, on reconsideration, feared that I should be interfered with by the police or his attendants ere I could accomplish my object, so, to my extreme regret, I altered my plans and gave up the idea of letting Li taste the sharpness of a Japanese blade, and substituted a pistol for the other weapon.

The Judge—Why did you conceive this idea of killing Li?

Prisoner—Because I was perfectly convinced that Li was the disturber of the tranquillity of the Orient.

The Judge—When did you conceive this idea?

The Prisoner—About the 10th of March, when I purchased the pistol.

In answer to further questions, the prisoner described his movements from his starting out from Yokohama till his arrival at Bakan.

The Judge—How did not conduct yourself after arriving at Bakau?

The Prisoner—When I reached Bakan, Li had just landed and was proceeding in a palanquin to the Conference. I could not carry out my intentions then. I thought that what I was about to do was a matter of grave moment to my country, and one which did not justify me in taking any hasty step. If I failed in carrying out my intention before I had ascertained the progress and prospects of the Peace negotiations, I felt that I should be held up to decision, besides being a traitor to my country, whose interests alone I was striving to promote. For three days, the 22nd, 23rd, and 24th March, I did not see a newspaper, and being penniless I could not buy one for myself. On the 24th March I went to the office of the Bakan *Mainichi Shimbun* in the hope of getting a peep at the paper, but in this I failed. While I was walking away from the premises I heard a bystander say that Li would shortly leave for home, or at any rate the negotiations, however protracted, would be of no avail. I thought that I must not miss the opportunity, and at once directed my steps to the Post Office. From thence I shifted to a corner near the Insho Temple. I found that this spot was not suited to my purpose, and I moved a little forward in a position about a step on two in front of the Gendarmes' station. I stood in front of a man, whom I subsequently learnt was Yemura Nintaro. I examined my pistol once more.

The Judge—How were you carrying the pistol at that time?

Prisoner—I folded my arms and concealed the pistol under my sleeves. Meanwhile, the palanquin of Earl Li approached. I narrowly examined the palanquin as it drew near, and observed that the side windows were thickly glazed and might prevent the passage of a bullet. The front window, however, was left open, and I determined to aim at Li through the opening. The palanquin came nearer and nearer, and when it was about one *ken* and one *shaku* (6ft. 11in.) away I could clearly see the breast of Li. I thought the moment had arrived, and I fired at Li's breast.

The Judge—Long poles are attached to the palanquin, did you not come into contact with the bearers at this moment?

Prisoner—I do not remember exactly, but I think my left hand did come in contact with a bearer. As I fired I saw Li fall forward, and I also felt a shock in my right hand, then I knew the bullet had left the barrel and taken effect.

The Judge—Were you seized at once, and did you attempt any opposition? Did you see who seized you?

Prisoner—I could not say who arrested me, as I was seized from behind. I allowed myself to be arrested without any struggling. Li's palanquin was at once borne away to his temporary residence.

The Judge—When you obtained 25 *yen* from your father, did you intend to take up some practical business as you pretended; or had you already made up your mind to kill Li?

Prisoner—I had partly resolved to do so, but for the moment I hesitated. Of course, practical business pursuits not being in my line, I never intended to engage in them.

The Judge—When was it that you really came to your resolution?

Prisoner—About 11 a.m. on the 20th inst.

The pistol was then shown to the prisoner and he identified it as belonging to him. The affidavits of the gendarmes who effected his arrest were then read, as well as that of the physician who had examined Earl Li's wound. Prisoner had no objection to urge against any of these documents. He then asked the Presiding Judge if he might be allowed to state his motives for attempting the life of Li Hung-chang.

Permission was granted.

Prisoner—I had been convinced for some time that Li Hung-chang, the Viceroy of Chili, was a traitor, and a persistent disturber of the tranquillity of the East. I thought that his presence was inconsistent with the preservation of the peace of the Orient, and therefore I must get rid of him. This idea was not accidental and hastily formed; it dates from the time when my intellect was sufficiently developed to allow me to think for myself. The conviction has gradually strengthened during the past year. I thought that if I could grow my hair long enough I could disguise myself as a Chinaman, and then if I became sufficiently proficient in the dialect to pass as a native of that country, I might go over to China and finished Li with one blow of a sword. I was highly delighted, therefore, when I heard that Li was coming to Japan in March to sue for peace. I thought, when I heard that intelligence, that the negotiations would bear no fruit; and that to restore the peace of the East and to put a stop to its disturber's mischievous actions, Li must be killed. My resolution thus grew and strengthened. I was actuated by five considerations. 1.—With profound reverence, I may venture to conjecture the will of His Imperial Majesty. Since his dominion has been lightened by his presence it has never been contaminated by aliens nor has it suffered foreign insult. The relations between the Court and the people is as between parents and children; and from the southern extremity of Kyushu to the northernmost point of Hokkaido, not one subject has ever brought trouble to the August mind. The constitution expressly provides that the Emperor is sacred and inviolable. Yet China, or more especially Li and his colleagues, disregarding the magnanimity of Japan keept Korea in a state of poverty and weakness, and looked toward Japan with hostile intent. I heard that since His Imperial Majesty left his castle at Tokyo and temporarily removed to Hiroshima—(here a blank of some 60 characters' length follows, and the reporter remarks that the prisoner wept when he read this part of his plea)—This is entirely to be ascribed to the insolence and unneighbourly actions of China, and Li must be regarded as an inveterate foe of Japan, who has caused our Emperor much trouble. 2.—The disturber of Oriental tranquillity is China and China alone. Recently Japan was put to considerable trouble on four different occasions through the actions of China. Again, China has been at war with England and also with France, and thus, whenever any difficulty occurs in the East, China is sure to be involved in it. This is all due to the actions of Li Hung-chang. My intention was to be avenged upon Li as the representative of the whole Chinese nation. The Formosa affair, the anti-Korean Expedition agitation in 1874, and the rising at Sŏul in 1884, and the present war, have all come about through Li. The civil war in Satsuma was his doing. It was through him that the Japanese people living in Korea had their settlements pillaged and their women dishonoured. Even in the present war, Japanese taken alive by the Chinese were cruelly disembowelled or had their eyes dug out. The survivors of these poor men are consoling themselves by saying that it was owing to their patriotism and loyalty that they met their death. But even the survivors cannot but mourn in tears of blood when they think, in the depth of night when all the world is still, of their murdered husbands and sons. What is the prime cause of the tradal depression which continually subjects this country to great misery? China. In other words, Li and his associates disturb the Peace of the East and attempt to plunge Korea into confusion and anarchy. When I thought of all these things I could not but conclude that, unworthy as I am, I must offer myself as a sacrifice and must destroy Li by any means presenting, in order to console the spirits of those who suffered death on his account. 4—(Another blank of about two lines now occurs in the report.)—In this connexion, I have two causes of dissatisfaction. The first is in reference to the internal administration of the country. Though it may not become me to speak of such things, I venture to say that..... (Ministers of State?) are all statesmen of first class calibre;.....(Premier?) is reputed for his ability and tact.....(Foreign Minister?) is noted for his shrewdness and has earned the nickname of "Razor Minister." It is well that such statesmen were appointed.....(Plenipotentiaries?) though I do not know how the negotiations are proceeding. Another cause of dissatisfaction [illegible] is made of it. is our foreign policy. Such a person as Li, judging from the prevailing disposition of the Chinese and from his personal predilections, is far from suing for peace in a sincere manner. From my own observation and experience in Tokyo and Yokohama, a Chinaman may offer an apology at times, but this is not a characteristic of the nation, and he is sure to use abusive language as he runs away. When extreme pain is occasioned him he remembers the face of the person who has caused him that pain, and characteristically refrains in future from behaving towards that person in any rude manner. So must it be with Li. Therefore I thought it was unnecessary to conclude peace, the proper time not having arrived, and that should Li be killed the negotiations must come to an end, at least for a while. 5.—The present war victories have been gained everywhere through the August virtue of the Emperor and by the bravery of his soldiers. Is not this the time to enhance the prestige of the country? Some say that when one country is engaged in war with another country, it is a national disgrace for the victorious party not to advance its triumphant soldiers to the capital of the conquered people, and to trample it down to the ground. The Japapese Army is irresistible, and to conclude peace before the soldiers are in Pekin is not a commendable step. China does not sincerely desire peace. Should the war be terminated now, not only the contempt of China would be invited, but those countries who boast of being strong Powers would become more arrogant than ever towards Japan. Some say that should the war be continued without listening to the prayers of China for peace, other Powers will step in and interfere, thus making the situation one of great difficulty. Yet, it must be remembered that Japan need never fear foreign conquest. Viceroy in war does not depend upon the size of a nation, but rather upon the stamina of a nation. Should the national feeling be aroused, Japan might, without fear, fight western countories. Therefore, as set forth in the Declaration of War, unless the great objects for which the war was declared be attained, Japan ought not to retreat even by one step. What I have now stated is the utterance of a mere student, but it is the outcome of my sincere convictions and ought not be considered in the same light as the vain talk of others. Mine is a responsible statement.

The Public Procurator then addressed the Court upon the legal aspect of the case, and said that though the action of the prisoner might come under Art. 294 of the Penal Code—for he deserved capital punishment — yet in consideration of the fact that the crime was not consummated, prisoner should be sentenced either to penal servitude for life or for a set space of time, in accordance with Arts. 112 and 113 of the same Code. The Procurator further stated that as the prisoner had murderously assaulted the Representative of China, who had come to Japan on certain official business, and who as such deserved the most hospitable treatment, though the two countries are still engaged in war, and as the prisoner had caused the whole nation extreme grief and pain by his actions, his offence should be commuted by only one degree. He should be sentenced to penal servitude for life.

The prisoner was asked by the presiding Judge if he had anything to urge why sentence should not be passed upon him. He replied that he was prepared to receive any punishment which the Court might inflict.

Mr. Ogawa, who appeared for the prisoner, pleaded for leniency. He was one who personally look upon prisoner's actions with extreme disapprobation and disgust; but the law must not be influenced by outside considerations. He urged that his client's sentence should be commuted by four degrees, and that he receive a sentence of 6 years' penal servitude.

The Court refused to entertain this plea, and prisoner was sentenced to penal servitude for life.

The Hon. G. Curzon lectured on 18th inst. before a considerable audience of the Royal Geographical Society on his recent journey in the Pamirs. The first part of his address was given to a description of the Pamirs, so erroneously described as plains, but in reality nothing other than valleys framed in mountains, and having no resemblance whatever to plains downs, or steppes, or plateaux. The second part of the lecture was given to proving, with some picturesqueness of expression, that the one undeniable source of the Oxus was in the Pamir-i-Wakhan. This source, Mr. Curzon visited. He described to the audience his impression of it, as the river issues out of two caverns in the snout of a great glacier; and he had thrown upon a screen a reproduction of the

6—Kt to K B 3	6—B to K Kt 5
7—P to K R 3	7—B takes Kt
8—Q takes B	8—Q to Kt 3
9—Castles	9—Q takes Kt P
10—Q Kt to Q 2	10—Kt takes Q P
11—Q to B 4	11—Kt to K 3
12—Q to R 4 ch.	12—Kt to Q 2
13—Q R to Kt sq.	13—Q to B 6
14—R takes Q Kt P	14—Kt to ■ 2
15—B to Q 4	15—Q takes Kt
16—R takes Kt	16—R to Q sq.
17—Q takes Kt ch.	17—R takes Q
18—R to B 8 ch., and mates next move.	

Words of Wisdom.

Chess has never been and never can be aught but a recreation. It should not be indulged in to the detriment of more serious avocations—should not absorb the mind or engross the thoughts of those who worship at its shrine, but should be kept in the background and restrained within proper limits. As a mere game, a relaxation from the severe pursuits of life, it is deserving of high commendation.—Paul Morphy, 1859.

Game No. 243.

RUY LOPEZ.

WHITE. Tarrasch.	BLACK. Taubenhaus.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—Kt to B 3
4—Castles	4—Kt takes K P
5—P to Q 4	5—P to Q R 3
6—B to R 4	6—P to Q Kt 4
7—B to Kt 3	7—P to Q 4
8—Q P takes P	8—Kt to K 2
9—P to Q R 4	9—B to K 3
10—Q to K 2	10—P to Q B 3
11—P to Q B 3	11—Kt to K Kt 3
12—Kt to Q 4	12—B to Q 2
13—P takes R P	13—R P takes P
14—R takes R	14—Q takes R
15—B to B 2	15—Kt to Q B 4
16—P to K B 4	16—B to K 2
17—P to B 5	17—Resigns (a)

(a) Black must lose a piece. If Kt to B sq, P to B 6 follows, and that pawn cannot be captured without leaving the K B pinned and attacked by the pawn. Otherwise, 18. P to B 5, Kt to B sq. (if Kt to R 5, P to Kt 3 wins it); 19, P to B 6, B to Q sq.; 20. ■ takes P, attacking R and Kt.

Pawn-Grubbing.

The kind of game which, however masterly, I call radically bad in style, may be simply illustrated by a game in 60 moves, in which the combatants exchange first their bishops, then their knights, and afterwards their rooks, and pass the rest of their time in skulking about the board with their odd rooks in search of each others' pawns.—John Ruskin.

Game No. 244.

NEW ZEALAND CONGRESS.

Appended are two of the games played at the Wellington meeting of the New Zealand Chess Congress.

36—K to B 3	36—R to Kt 2
37—Q takes K P	37—R to Kt 6 ch.
38—K to Kt 2	38—R to Kt 7
39—Q to K 8 ch.	39—K to R 2
40—K takes Kt ch.	40—K takes R
41—Q to R 8 ch.	41—K to Kt 3
42—Q to R 4	42—Q takes Kt ch.,

And Mr. Barnes resigns.

NOTES (CONDENSED.)

BY MR. HENRY HOOKHAM.

(a) It is obvious that Black has lost a move.
(b) Of course, if 8.....Q takes P, then 9 B to Kt 5 ch, &c.
(c) Another case of loss of time.
(d) Apparently failing to note that his Q B P is now *en prise*.
(e) His best course was 22.....P takes P; 23 Q takes P, Kt to B 3.
(f) Overlooking the forced win by 27 Kt to Kt 5 &c.
(g) 29 Kt to Kt 5 would have been a trifle better.

Game No. 246.

LADIES' CHAMPIONSHIP.

The following, from the *St. James's Budget*, is the score of the fifth game in the match between Mrs. J. W. Showalter and Mrs. H. Worrall for the Ladies' Championship of the United States :—

"THE GIUOCO PIANO."

WHITE. Mrs. Worrall.	BLACK. Mrs. Showalter.

51—K takes P	51—K takes P
52—P to R 4	
(130 minutes.)	(205 minutes.)

And Mrs. Showalter resigns.

NOTES (CONDENSED.)

(a) 7 Q B to Kt 5 would have been useful.
(b) The White Knight not having been pinned by the Black Queen's Bishops, what was to be expected from 8.....Kt to Q 5?
(c) To prevent Black from getting rid of the weak Pawn by playing.....P to Q 4.
(d) If now 18.....P takes P, 19 P takes P, and the White Rook would be brought to bear on the Black King's Bishop's Pawn.
(e) Better to keep the Knight, and to play 19 P to Kt 6 at once.
(f) It would have been stronger to capture the Pawn with the Bishop.
(g) A bold and clever assault.
(h) Much better for attack would have been 29.....Q to Q 5.
(i) Weakening the Pawns and hopelessly compromising the game. Black ought to have made an effort to arrest the threatened advance of the White King by way of King's fourth and Queen's Kt.

Bad Form.

Doe not, at no time that thou playest at this game (out of a conceit, as I said, that anything becomes thee well), stand singing, whistling, knocking, or tinkering, whereby to disturb the minde of thy adversary, and injure his projects; neither keepe thou a callinge on him to playe or hastening of him thereunto, or a showing of much dislike that hee playeth not fast enough; remembering with thyselfe that besides that this is a silent game, when thy turne is to play, thou wilt take thine own leasure; and that it is the royall law so to deal with another as thou thyself wouldst be dealt withall,—"The Famous Game of Chesse Play, a Princely Exercise," by Arthur Saul, 1672.

LATEST TELEGRAMS.

[Reuter "Special" to "Japan Mail."]

London, March 31.

The Viceroy of India wires that the position of the enemy in the Chitral is closely invested and attacked nightly.

The Czarevitch, who is now in Algiers, is worse.

London, April 3.

Mr. Balfour, at a meeting of the Bimetallic League, said that the present Indian currency system combined all the disadvantages of every system that had ever been tried in that empire, and that a change was imperative. He said that it was impossible that England could act alone, since she was dependent on the world for food supplies.

["Special" Telegram to "Japan Mail."]

Shimonoseki, April 1, 8.20 p.m.

At the Conference Chamber to-day, Lord Li met Viscount Mutsu and Mr. Ito Miyoji, and a resumption of the negotiations is likely to come about very soon.

(From the "N.-C. Daily News.")

Peking, March 27.

After forty days interval an edict has been issued referring to the war, and condemning General Sung Ching and Wu Ta-cheng. The former retains his post and the latter returns to Hunan as Governor. This policy of leniency shows the hand of Prince Kung.

London, March 27.

At a luncheon given at Friedrichsruhe Castle, the Emperor's toast to Prince Bismarck was followed by a salute of twenty-one guns.

The result of the Lincolnshire Handicap is as follows:—

Euclid	1
El Diablo	2
Amandier	3

The garrison at Chitral was reported safe up to last Thursday, the 21st inst.

(From Japanese Papers.)

Hiroshima, April 4.

A seaman, who returned from Ujina on the 2nd inst. to Ogaki-mura, Saiki district, has been affected by a disease resembling cholera. A resident of Tomoyecho, Numasumi District, who returned there from Ujina on the 3rd inst. has been attacked by cholera.

Shimonoseki, April 5.

A severe epidemic of cholera is prevailing in Formosa.

Mr. Kusumoto, President of the House of Representatives, arrived here to-day.

Hiroshima, April 5.

Some cases of cholera have been discovered on board two transports at Ujina, and these vessels have been ordered to stay outside the port.

Kobe, April 5.

Koyama Toyotaro will reach here to-morrow in a steamer, and will be sent to Aomori by train.

Shimonoseki, April 5.

No meeting of the peace commissioners was held to-day.

The Viceroy Li suddenly summoned Mr. Foster to his residence at 8.30 a.m. to-day, and a private conference is likely to have been held with Lord Li, Messrs. Mr. Wu, and others.

The American steamer *City of Peking*, Captain Wm. Ward, reports:—Left San Francisco the 14th March at 4 p.m.; had strong westerly winds and heavy westerly swell; crossed the meridian March 26th lat. 37° N.; thence to long. 150° E. fresh S.W. and moderate westerly swell; to port variable winds and fine weather.

LATEST COMMERCIAL.

IMPORTS.

The rapid fluctuations in Exchange have much interfered with business generally. Buyers and sellers have both felt inclined to pause and see what would come of it all. After the middle of the week exchange began to decline and everything seems far from settled yet. We leave quotations unchanged, but they are more or less nominal and irregular.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8¼ lb, 38½ yds. 30 inches	$2.25 to 2.90

No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Not much business passing. Plenteous arrivals from the Continent and North of England, but these are said to be mostly contracts on Government and private account. Prices nominally unchanged, although some sales are said to have been made at a reduction through the rise in silver. Exchange has now turned downwards from the highest point.

	PER PICUL.
Flat Bars, ½ inch	$3.60 to 3.65
Flat Bars, ¾ inch	3.65 to 3.70
Round and square up to ¾ inch	3.60 to 3.75
Iron Plates, assorted	3.70 to 3.80
Sheet Iron	4.70 to 4.90
Galvanized Iron sheets	8.25 to 8.80
Wire Nails, assorted	5.80 to 6.10
Tin Plates, per box	5.80 to 6.00
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

No special change to note. There are fresh arrivals of American Oil per ship *S. P. Hitchcock* and a small tank steamer came up from Hongkong. Prices as before: exchange tending to unsettle trade to some extent.

American	$2.20 to 2.22½
Russian	2.22½ to 2.25

SUGAR.

Brown—Arrivals continue to come in from the south, and there is some demand but no very large trade. Some of the patriotic Japanese are eagerly anticipating the day when they will be able to grow their own Sugar in the favoured isle of Formosa. White—No change, but holders are trying to maintain prices.

	PER PICUL.
Brown Takao	$3.60 to 3.65
Brown Manila	4.40 to 4.60
Brown Daitong (New)	3.40 to 3.50
Brown Canton	3.50 to 3.90
White Java and Penang	6.50 to 6.75
White Refined	8.50 to 9.00

EXPORTS.

RAW SILK.

A quiet week with small doings. Exchange has worked against shippers, and holders are averse to making concessions believing that there will be a turn in their favour yet. So far they seem to be right, as quotations for silver are now declining again.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir Samuel Baker, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In I short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughou World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Store keepers in the Colonies, India, China, Japan, South America and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

YOKOHAMA: SATURDAY, APRIL 13TH, 1895.

BIRTH.

At 144, Bluff, Yokohama, on the 8th inst., the wife of M. ENGERT, of a daughter.

DEATH.

On the 10th inst., the infant son of Mr. and Mrs. RAYMOND POLLOK.

SUMMARY OF NEWS.

THE Viceroy Li's wound is reported completely healed.

THE construction of a railway between Söul and Ninsen commences on the 20th.

THERE has been an outbreak of cholera at the Pescadores of a severe character.

MR. DOI MICHIO has been elected President of the Osaka Chamber of Commerce.

SEVERAL earthquake shocks are again recorded in Tokyo and Yokohama for the past week.

DIPHTHERIA prevails at Kojimachi, Shiba, Shinagawa, Susaki, Fukagawa, and Honjo, Tokyo.

UP till the 6th inst., the Chinese Envoy of Peace had paid *yen* 15,000 for telegrams from Shimonoseki.

A TELEGRAM received by the Italian Legation, Tokyo, states that the ex-Italian Minister to Japan, Cav. R. de Martino arrived at Naples on the 5th inst. and was expected to reach Rome the following day. It is said that he will immediately leave for Brazil.

LI YO-SHUN, the new Korean Minister to Japan, will probably leave Söul about the 15th inst. for Japan.

MR. KOMATSU SANSEI, M.P., proposes to start a newspaper in Osaka in the interests of the Radical Party.

SOME Japanese silk merchants are said to be entertaining a project for the direct export of silk to Russia.

THE Japanese Government has decided to establish a Consulate at Tacoma, United States of North America.

MR. KURINO, Japanese Minister to the United States, is negotiating a special emigration treaty with Guatemala.

HONGKONG papers allege that the torpedoes laid down by the Chinese in the harbour of Tamsui were filled with peas!

THE Mitsu Bishi Company's *Suma Maru* on her trial trip made 11¼ knots. She was in command of Captain Tornoe.

THE President of the Lower House, Mr. Kusumoto Masataka, visited the Viceroy Li in the early part of the week.

SOME influential residents of Yamato and Osaka propose to construct a private railway between Totsugawa and Gojo, in Yamato Province.

THE Peace Conferences at Shimonosekt have not yet reached any definite result. The Chinese Plenipotentiaries have asked for a few days to deliberate.

THE cherry blossoms in Tokyo, Yokohama, and neighbourhood have been at their best this week, and the more famous resorts have been crowded with sightseers.

THE occupied districts in North China have been declared infected regions, and all ships and persons coming from thence to Japan have to submit to quarantine.

THE Bible House, No. 26, Yokohama, has sent two hundred thousand pocket gospels to the seat of war, with a view to distributing them among the Japanese soldiers.

VESSELS will not be allowed to anchor closer than 600 yards to the new pier at Yokohama, unless they wish to avail of the privileges afforded by discharging at the pier.

THE Kokura-Yukihashi Section on the Kiushu Railway was opened for traffic on the 1st inst. The section between Soga and Yezaki on the same line will be completed by May next.

THE total catch of the Imperial Marine Products Co. last year was 815 seals. All the skins were exported to England, where they were sold at an average price of 13 *yen* each.

LORD LI, the adopted son of Li Hung-chang, and formerly Minister to the Court of Japan, was formally acknowledged as a Plenipotentiary for Peace by the Japanese plenipotentiaries this week.

TWO important railways are being promoted in the capital. One is to be called the Tobu Railway. This will start from Honjo, Tokyo, and run to Ashikaga, *viâ* Tatebayashi, Kawamata, Haoi, Kuki, and Senju. The length is 52 miles, and the capital will be *yen* 1,500,000. The other line will start at Mita, Shiba, Tokyo, and run to Odawara, on the Tokaido.

TENDERS for the contract to supply 3,000 tons of cement to the Yokohama Harbour-works Office were received and opened on the 5th inst. at the Harbour-works Office. The following offers were made:—*yen* 61,407 by the Asano Cement Factory, *yen* 51,400 by the Japan Cement Co., *yen* 61,410 by the Suzuki Cement Factory, and *yen* 50,984 by the Aichi Cement Co. The contract was given to the last company.

REUTER Telegraphs:—The charge brought by Mr. Oscar Wilde against the Marquis of Queensberry has been tried, and the defendant acquitted, but the evidence produced was of such a damning nature that Mr. Wilde was taken to Bow Street Police Court and charged, the case being remanded till Thursday next and bail refused. The Chitral Garrison is well and amply supplied and is safe. Señor Canovas has stated that the situation in Cuba is grave, and that two thousand further troops will proceed there. He also stated that the country was prepared to send a hundred thousand men if it was found necessary. Sir Edward Grey, Parliamentary Secretary to the Foreign Office, has made an important statement as to the relations between Great Britain and France. In reviewing French actions in the course of the events of the last two years in Africa and Siam, some uneasiness was created; but Sir Edward Grey stated that Britain has striven, and will continue to strive, to maintain good relations with France. The recent Armenian atrocities have been confirmed from all quarters. Speaking in Committee of Supply, Mr. Sydney Buxton, Parliamentary Colonial Secretary, stated that he regretted the friction regarding Military contributions by the Straits Settlements and Hongkong. He said that a Departmental Committee was now sitting, and that he believed the enquiry they were making would result in an arrangement, satisfactory alike to the Government and the Colonies.

THE Import trade continues to be affected by the rates of Exchange, which have been on the upward grade for several days past, rising a point or more each day. Thus both buyers and sellers appear unwilling to make contracts, and the consequence is that quotations all round are almost nominal. This applies to nearly all commodities in the Fictile and Metal trades, and no business on an extended scale can be looked for until something like stability can be infused into the factor of disturbance. When this will be it is impossible to indicate with any degree of certainty, though were peace with China concluded, and an agreement with Japan arrived at whereby the war indemnity is payable in silver, an increase in the value of that metal and a consequent rise in the rate of exchange would be sure to follow. Later, when exchange has reached its maximum, trade will boom for several reasons, not the least of which is that there are buyers in plenty who at present are compelled to keep out of the market. Manchester Goods, Metals, and Kerosene are in good supply at this port, and two cargoes of the latter—one case and one bulk—arrived from Batoum this week. Sugar keeps coming in faster than it is sold, and stocks accumulate, although this trade does not appear to be so much affected by the Exchange trouble. It has been almost a blank week for the principal Export, the dealings in Raw Silk having been of the most meagre description. Waste Silk is in similar plight. The weather has been favourable to the Tea crop, but nothing has been seen yet but a few hand musters, which give no clue whatever to the quality of the crop. Exchange has risen day by day, and everything points to a further rise in rates. With prospects

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The action of the Chinese soldiers that fired on a Japanese flag of truce at Ngan-shan-chan has evoked strong and indignant comment from several of the vernacular papers. The *Nippon*, of course, says that the incident ought to be regarded as an unpardonable act really tantamount to a violation of the armistice, and that China having thus nullified the convention, Japan would be fully justified in resuming hostilities. Generosity extended by Japan to China is never acknowledged. On the contrary, she often, as in the case under consideration, requites it with deeds of a vindictive nature. In short, acts of grace are out of place in dealing with China. The only method efficacious with her is to resort to force.

* * *

The *Mainichi* regards as very weak the explanation of the Viceroy that the firing must have been the doing of soldiers ignorant of international laws and usages. If military ignorance of laws and usages may be pleaded as a valid excuse for breach of a treaty mutually binding, where is the use of concluding any such convention?

* * *

The vernacular press strongly urges the Government to take decided steps for controlling the spread of the epidemic diseases that have already made their appearance among the troops now occupying the Pescadores. Cholera or dysentery is a more terrible enemy than the Chinese, says the *Kokkai*, but Japanese soldiers, who have strength and ability to easily overwhelm Chinamen, must show to the world at large that they are equally competent to cope with this other enemy. Strict enforcement of quarantine regulations is attended by divers inconveniences in time of peace, but the state of things at present existing particularly facilitates the enforcement of radical measures.

* * *

Two or three months hence, says the *Jiji*, the troops in Manchuria are not unlikely to be attacked by the fearful diseases from which their comrades in the Pescadores are now suffering. There is, consequently, urgent necessity that Japan should settle the negotiations as promptly as possible, so that, in the event of their rupture, the Army may have time to enter the field of final action at Pekin, before the epidemic season sets in. To lead the Army to the Capital of China and to bring it back in triumph to Japan about the month of June or July at farthest, its strength, supposing it now aggregates 100,000, should be increased to 150,000 or even to 200,000. The nation is willing to provide funds to any extent necessary for accomplishing such a programme.

* * *

The spread of cholera in the Pescadores, says the *Kokumin*, may be ascribed, according to correspondence received from persons with the troops occupying that archipelago, to the absence of good medical arrangements. Three things indispensable for the successful treatment of such a disease appear to be wanting; namely, surgeons, medicines, and nurses. The Government is bound to make good those defects so as to provide against the loss of Japan's brave soldiers.

* * *

A rumour that the Chinese Plenipotentiary is hesistating to give his assent to the terms demanded by Japan because he considers one out of the eight conditions specially hard, has awakened great curiosity among metropolitan journals as to what may be the nature of that condition. The *Nippon* and the *Kokumin* surmise that it is very likely to be the cession of territory on the continent, Manchuria being specially precious in the eyes of the Manchu Dynasty as its cradle. To say the truth, writes the latter paper, the Chinese Plenipotentiary thinks it conducive to the interests of the country he represents, to delay the negotiations within the limit of time covered by the armistice, as a telegram from Bakan says. He hopes to secure, in the interval, various devices calculated to serve the interests of China, and he also wishes to strengthen the defences of Shanhaikwan and so forth.

* * *

One of the devices on which Li and the Court of Pekin may be secretly relying, says the *Jiji*, is foreign intervention, for which China, contrary to her wonted arrogance toward foreign Powers in time of peace, is said to be agitating, her solicitations being accompanied by the offer of certain tempting conditions. This appeal is said to be specially addressed to a certain Western Power, to which the cession of certain territory has been promised—so the story runs—as the reward of interference. Rumour goes even a step farther, and says that a secret alliance has been arrived at between the two Powers. The *Jiji* declines to place credit in such tales. Even supposing, for the sake of argument, that a certain Western Power had been appealed to; that the appeal had been supported by a strong temptation, and that, deluded by so attractive an offer, the Power in question were inclined to interfere, could it be indiscreet enough to provoke the enmity of Japan merely for the sake of a bribe, and to side with worn out and decayed China, especially when the bribe is no genuine bribe at all? Is not China already doomed to be the prey of Western Powers and to be partitioned among them, and under such circumstances would it not be an altogether losing venture to incur Japan's enmity merely in consideration of an offer of territory, which, sooner or later, will become the property of the Power in question. The *Jiji* considers that the rumor of a secret alliance between China and a certain Western Power is entirely incredible.

* * *

The various proceedings that England has taken since the commencement of the war, says the *Mainichi*, have not been prompted by a desire to promote the tranquillity of the East or to display goodwill towards China, but solely by jealousy of triumphant Japan, and because she thinks that the rise of Japan's power is inconsistent with the preservation of the prestige and interests that she now possesses in the East. This idea, which the *Mainichi* has held from the first, is confirmed, it says, by recent utterances of the London *Spectator*, a journal conducted in the interest of the Conservative Party. Such a sentiment is considered by the Progressionist's organ to be entirely unreasonable. What Japan is now doing is simply a natural outcome of the progress she has made. She wishes merely to assert her rights and to promote her interests. If that is to be blamed as unprincipled, is not the attempt of England to exert her influence in the far East, from a distance of thousands of miles, still more unprincipled and selfish? The law of the survival of the fittest determines every human action, and if Japan can not properly interfere with the expansion of England, the latter must be equally considerate toward Japan. Jealousy is out of place in such matters. No country ought to interfere with the rise of another country, when that rise is due to the justifiable and proper exercise of the latter's power and right.

* * *

In another article the same paper deals with a similar topic, especially in connection with the annexation of Formosa by Japan. The principal reason why England enjoys such influence in the Orient is because she has the most powerful fleet there. Suppose that Japan annex Formosa, what would be the consequence to the ascendency of England? Undoubtedly, she would cease to exercise the same maritime supremacy north of Formosa that she enjoys at present, and she would be superseded in that respect by Japan. That is the reason why she regards Japan's successes with such jealous eyes. England is best informed as to the true value of Formosa, and hence she is afraid and jealous beyond any other country of the annexation of that island by Japan.

* * *

The *Kokkai* maintains that the entry of the whole expeditionary army into Pekin should be one of the most important conditions for the conclusion of a treaty of peace. This it considers necessary not merely for the purpose of dealing a death stroke to the vital part of China's frame, in case, true to her wonted perfidy, she does not carry out the terms of peace, but also to impress the arrogant and perversely ignorant Chinese with a just idea of the real strength of Japan, and to convince them of their incapacity to oppose their once-despised antagonist. As a sort of moral chastisement, that condition of peace is at least as essential as any other.

* * *

In this context the *Kokkai* is surprised to find that a section of the public appear to hold the above condition too severe to China. Was not, it asks, the ultimate aim of the expedition to chastise China out of the supercilious arrogance that she used to display toward Japan, and to permanently maintain the tranquillity of the Orient? To attain those ends, it is absolutely necessary to lead the Japanese expeditionary army in triumph to Pekin. The French are also a proud and self-asserting people, though those defects are greatly redeemed by their sagacity and cleverness. Yet the victorious Prussians thought the triumphant entry of their troops into Paris an indispensible condition of peace, by way of chastisement. How much more must that be necessary in dealing with the Chinese, who are not only the very embodiment of arrogance and perversity, but also lack any other qualities to redeem these defects?"

* * *

The *Nippon* has a long article addressed to Viceroy Li. The article recounts the former greatness of China, so great, indeed, that her influence was felt all over the world; describes her present insignificance, and the total eclipse under which the East has long been suffering by the rise of the West. Then it dwells on the affinity of race and literature of the only three Asiatic countries that still enjoy independence, Japan, China, and Korea; and on the mission devolving on them in common —the mission of recovering the position that the Orient once enjoyed. Thus, it is the will of Heaven that the three should be united cordially and should exert themselves for their common greatness and benefit, any artificial estrangement among them is sure to be followed by the punishment of Heaven, as shown significantly in the present case. It was unfortunate that this, the deeply seated desire of Japan was not recognized by China, so that nothing remained but for the two to confront each other in actual warfare. If, therefore, on the consummation of the mission for which the Viceroy is sent to Japan, he will meet Japan's statesmen with amity and frankness, he will have his suspicions and doubts entirely cleared away. Why does not the Viceroy pay attention to the general tendency of the world and exert his ability in that more important cause, the raising of the Orient from its present insignificance? He ought not to complain of the hardness of Japan's demands, for is not Japan now in a position to conquer and absorb the whole of China if she pleases? What Japan asks for lies within the limits of the preservation of Oriental tranquillity, and the Viceroy must therefore acquiesce in her terms, so that, while Heaven grants him time, he may initiate the grand work of restoring the prestige of the East to its ancient place. Prince Kung is said to have declared that the collapse of China was ascribable to the conservative policy hitherto pursued by her. If so, the war must be considered to have afforded a rare opportunity for the progressive policy of the Viceroy and for augumenting his influence. But if by conservatism is meant imperfect military equipment, nothing can be more fatally erroneous. For was not the Peiyang Squadron perfectly equipped, and were not Port Arthur and other strongholds also complete in the matter of equipment. Yet they were destroyed or taken by Japanese in a summary manner. The disasters that invariably overtake Chinese troops are not due to want of modern arms or other engines of war, their cause lies far deeper.

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

The system of administration pursued by China has led her people to respect their individual interest above anything, and has rendered them entirely unconscious of the existence of the nation. The State system must be entirely re-organized, and unification of the national interests must be brought about. Military reforms are altogether secondary. In this regeneration of China the Viceroy will find in Japan a most suitable model, because Japan has assimilated whatever is excellent in Western institutions, rejecting the accompanying evils, and because the direct adoption of Western money-worshipping principles would simply make the Chinese worse than ever, and would end in anarchy and the splitting up of the country. China regenerated as here indicated, and consolidated by a sentiment of common patriotism and common interests, it would not be difficult for the two Oriental States to recover the power and influence that Eastern Asia once enjoyed.

EDITORIAL NOTES.

PROVISIONAL MILITARY QUARANTINE.

THE Department of War has decided, says the *Jiji*, to enforce provisional quarantine in various places, and is now busily engaged in purchasing materials required for the practical carrying out of the scheme, and also in despatching the necessary officials to places where quarantine is to be enforced. It has been decided to establish quarantine offices at Moji (Fukuoka Prefecture), Nijima (Hiroshima Prefecture), Tempozan (Osaka Fu), and Otaru (Hokkaido), and the expense is estimated at about one million *yen*. The station at Nijima will be the largest, and will require fully six months to properly equip. The matter, however, requires the utmost promptitude, and the building of the station will be pushed forward as fast as possible. Steam engines will be erected at all the stations and the disinfecting processes will be most thorough. The clothes and personal effects of persons arriving from any infected region or from the seat of war will be steamed, while individuals themselves will have to take a bath in which disinfectants of a special quality are held in solution. The enforcement of such a quarantine should surely prevent the introduction of any germs of the dreaded maladies. The system has been followed by other countries with success, but lately great improvements have been effected, especially in the system of bathing. Steam disinfection would not be complete unless ablutions were enforced up on individuals. It is said that one steam-engine can disinfect 60 to 70 persons per hour, and each quarantine establishment will be able to purify from 3,000 to 6,000 persons in 24 hours. The organization of a quarantine corps is contemplated.

* * *

The *Jiji* speaks of the project in warm terms in a leading article. The outbreak of dangerous epidemics has usually followed upon the termination of a great war. One of the principal reasons of this perhaps was that no efficient system of anticipating and combatting the epidemics was devised, while the world was also but imperfectly acquainted with the principles of hygiene. Recently, however, medical science has made considerable progress in Japan, and more especially in the field of bacteorogical researches has greater precision been attained. This system of steam disinfection will be more particularly enforced when the Japanese troops return home in triumph. Should it prevent the outbreak of dangerous epidemics in this country, the *Jiji* contends that Japan will again have taught a lesson to the rest of the world of which she may be proud.

CURIOUS TRADES AND GUILDS.

TOKYO, like all other great cities, has its shady side. But unlike the capitals of other lands, there is absolutely no part of the Japanese metropolis in which one may not walk with impunity at any hour of the day or night. There are a few, a very few, street-walkers, but they frequent the suburbs, and their solicitations are nearly always mute, a gentle touch on the arm or pull of the sleeve being the extent of their suggestive invitations. There are *bimbo-ba*, or "poor districts," where the people live in tumble-down houses, in abject poverty and, for Japanese, unusual filth; but all such places are under strict and efficient police control, and the pedestrian is never molested. There are gambling-dens, but these forever change their place, detectives being always on the watch to discover them. Despite the stringent laws against gambling, unquestionably a good many men make their living in that way. And here is one of the most curious occupations of the metropolis. Certain districts are apportioned to well-known gamblers, by mutual consent of the law-breakers; these then act as the heads of the gambling "guilds," if such a term is permissible, there being one or more "guilds" to each district. Every gambling-house within the quarter in question must pay a percentage to the local headmen, who generally lives in a good deal of comfort on the proceeds. These headmen will sometimes sell their "parish," the price of a good district often running as high as four or five hundred *yen*. Of course this is all absolutely illegal and in every way discouraged by the police, who are at great pains to root out the evil. The beggars, too, have their guild; the chief, or *oyakata*, of such an institution is often a man in comparatively comfortable circumstances. He allots the stations to the various mendicants and pockets a tithe of the receipts. Any intruder is soon made to feel the force of the guild's resentment. Another strange institution is that of the *atoshi*, or men who help to push up kurumas on a number of the longer and steeper slopes of Tokyo. Such *atoshi* are to be found on Ando-zaka, in Koishikawa District; Kiku-zaka, in Hongo; and especially on Kudan-zaka. Each of these men is registered at the District Office as a regular *atoshi*; those on Kudan wear coats bearing the ideographs *ai-rtiki fu*, or "strength-adding coolie." The charge to push up the long slope is only one *sen* per man, a very small sum for a hard if short job. On Kudan alone there are five of these men, and they have their own guild, to prevent the entrance of unauthorised outsiders. Their earnings are from 30 to 50 *sen* daily, and no matter how much or how little they receive they must each pay five *sen* per diem to the *oyakata* of the guild, who is thus in receipt of a monthly income of nearly eight *yen*. The *oyakata* does nothing but look after the interests of the guild; he is not himself an *atoshi*. Vegetable, fish, and other mongers all have their respective guilds. Each hawker has certain streets allotted to him, outside of which he is not permitted to sell his wares. And he must pay quite heavily for this privilege. Well-to-do "beats" sometimes fetch as much as fifty or even one hundred *yen*. It thus comes about that residents deal year in year out with the same hawkers, so long indeed as they do not move elsewhere. The *amma* are distributed in the same way and under similar regulations. All these guilds are, of course, private affairs, *i.e.* they are not recognised by the authorities. The *oyakata* are very often rich people. They may, it is true, live, for obvious reasons, in a very mean style; but they are well supplied with funds for all that. Indeed, to be an *oyakata* is considered a most enviable thing, no matter of what guild so long as its members are law-abiding. And these headmen are autocrats; their word is law; their decisions are final. Of course all of these strange customs are the result of centuries of similar observances. In former times the guilds were even more numerous and powerful than they are to-day.

THE CHERRY-BLOOMS OF YEDO.

As had been expected, the cherry-trees in the metropolis and suburban resorts have blossomed this year nearly ten days earlier than is their wont, a fact ascribable to the exceedingly mild and pleasant weather of the last two or three weeks. On Tuesday, the 2nd instant, it was rapturously announced that "no less than forty-five in Uyeno Park were in bloom." On the 3rd instant, despite overcast sky and occasional drops of rain, a large portion of the good people of Tokyo wended their way to Uyeno and Mukojima, the latter place proving somewhat of a disappointment. Exceedingly pretty and well worth a visit is the little park surrounding the Yasukuni Shrine, at the top of Kudan-zaka. Back of the shrine the *kobai*, or "red plums," have not yet ceased to bloom, and several gorgeous peach-trees are running riot with deep-red blossoms, the whole presenting a most attractive sight, while the air is redolent with flowery scents. One of the largest magnolias in the capital is there also, and is at present covered to the topmost boughs with flowers of unparalleled fragrance. About the middle of this week Koganei and Horiuchi will be at their best, and the Kobu Railway announces a constant succession of extra-trains until long after dark. One can take the train from Ushigome and reach Kokubuji (changing cars at Shinjiku, where one generally has to wait nearly half an hour), the station nearest Koganei, inside of an hour. Thence to Koganei is about thirty minutes' walk. Tokyo is at its best now, and will so remain for another ten or twelve days. At Kameido the wisterias are opening tentatively, as if in doubt as to the proper date for blooming; while Asuka-yama is clad with young budding maples that run through all the gamut of colour from a tender shade of green to a blush-red. By taking the cars at Uyeno one may reach Omiya in less than an hour; and the wistarias in the great and beautiful park there will be in full blossom by the 15th inst. The vicinity of the *Fuji-no-ta*—a most picturesque little inn—is indescribably attractive.

HORINOUCHI AND KOGANEI.

As mentioned in our issue of Saturday, the Kobu Railway Company announce a special service between Iidamachi, Shinjiku, Kokubuji, and Hachioji for ten days, the idea being to provide additional facilities for visitors to Horinouchi and Koganei, where the cherries are said to have blossomed with unusual splendour this year. Koganei, an ancient pleasaunce of the Shoguns, is really a sight worth seeing, both sides of a limpid and rapid stream (afterwards the Yedo-gawa), being lined with cherry-trees of great age, unusual girth, and countless millions of faintly odorous blooms. The following is the time schedule:—

DOWN TRAINS.

Leave Iida-machi.	Leave Ushigome.	Leave Shinjiku.	Arrive Kokubuji.
6.17 a.m....	6.21 a.m....	6.42 a.m....	7.28 a.m.
7.00 a.m....	7.04 a.m....	7.27 a.m....	8.10 a.m.
9.08 a.m ...	9.12 a.m....	9.37 a.m....	10.22 a.m.
9.55 a.m....	9.59 a.m....	10.32 a.m....	11.14 a.m.
12.00 m. ...	12.04 p.m....	12.32 p.m....	1.18 p.m.
12.49 p.m....	12.53 p.m....	1.15 p.m....	2.00 p.m.
2.58 p.m....	3.02 p.m....	3.27 p.m....	4.12 p.m.
3.48 p.m....	3.52 p.m....	4.14 p m....	4.58 a.m.

There are two other still later tains, leaving Iidamachi at 5.55 and 8.32 p.m.:—

UP TRAINS.

Leave. Kokubuji.	Shiojiku.	Ushigome.	Arrive Iida-machi.
6.14 a.m.	7.10.....	7.28	Four minutes after leaving Ushigome.
8.30 a.m.	9.19.....	9.37	
9.09 a.m.	10.02.....	10.24	
11.29 a.m.	12.14.....	12.32	
12.04 p.m.	12.56.....	1.18	
2.18 p.m.	3.09.....	3.27	
2.59 p.m.	3.57.....	4.19	
5.13 p.m.	6.06.....	6.24	
5.57 p.m.	6.52.....	7.10	
8.38 p.m.	9.26.....	9.48	

The trees will be at their best between the 10th and 13th instants.

A LIFE FOR A LIFE.

THE *Miyako Shimbun* has a sad story of heroic devotion to tell. It appears that on the evening of the 16th ultimo a fire broke out, in consequence of an overturned *kotatsu*, in the house of a villager residing at Amatsu-mura, Niigata Prefecture. The master of the house and his eldest son were unfortunately absent from home, where remained the old mother, an invalid of 71 years of age, the wife, Yae, and five children between the ages of four and thirteen. The house was already filled with

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

smoke when Yae discovered that it was on fire. Panic-stricken she at once sprang to the bed of her venerable mother-in-law and carried the sick woman out of the now blazing house. She then ran back through the flames for her children, but while she was searching for them in the blinding smoke the house collapsed, the devoted wife and her little ones thus being burnt to death. After the flames had been extinguished the charred remains of Yae, clasping her youngest boy, were found, and close beside her lay the almost unrecognisable corpses of the other children. The old grandmother was also severely burned while being carried out of the house and it is feared that she will not survive her injuries. The grief of the father and the eldest son, on their return, is said to have been terrible to behold; while the villagers talk of erecting a monument to the memory of the brave though unfortunate wife.

THE JUVENILE TONIC SOL-FA CHORAL SOCIETY.

At a meeting held in the vestibule of the Public Hall on Thursday afternoon, the President made the gratifying announcement that after paying all expenses, the concert realized the sum of $137.30 for the benefit of the Society. The Hon. Treasurer also "reported a fair balance in hand from members' subscriptions; therefore the Society may be said to be in a flourishing condition. In a few words, Mrs. Patton congratulated the members upon the concert having been financially, as it certainly had been musically, a success, and remarked that every concert they gave only tended to prove more conclusively the value and importance of the Tonic Sol-fa system of musical education. She regretted having to announce the approaching departure of Master Mollison, but said there would shortly be several additions to their numbers. Mrs. Patton then proposed a vote of thanks to those whose kind assistance and liberality had materially aided the efforts of the young people—namely, Miss Bloxham for voice-training, Mr. Beart for directing rehearsals, Mr. Brown of Moutrie & Co. for the hire of two pianos—one a grand, on extremely liberal terms, Mrs. Jarmain for floral decorations, and the four daily journals for large reductions in their advertising rates. This was seconded and carried unanimously. The Hon. Secretary then proposed a vote of thanks to Mrs. Patton, which was heartily responded to, and the meeting terminated.

ATTEMPTED ESCAPE OF THE "AUSTRIAN COUNT."

The Austrian Lloyd's steamer *Marie Valerie*, which arrived from Kobe this morning, says the Calcutta *Daily News* of the 6th ult., brought an Austrian prisoner, *en route* for Trieste. At Hongkong the prisoner made his escape but was recaptured. After leaving Colombo, between Trevandrum and Quilon, and in close proximity to a fleet of fishing boats, the prisoner jumped overboard. A cutter was at once lowered, but before the man could be reached, he had been picked up by a fishing-boat, whence he was taken back on board. The man could not swim, but before taking a "header" into the briny deep he had concealed a life-buoy round his waist. This is doubtless the gentleman who posed as an Austrian Count, and was accused at Yokohama of robbing a passenger who came up with him from Hongkong on the same steamer.—*Chronicle.*

NOTICE TO MARINERS.

The following notice to mariners in reference to the Buoyage of Hainan Strait, in the Kiungchow District of the China Sea, has been issued from the Coast Inspector's Office of the Imperial Chinese Maritime Customs:—Notice is hereby given that the Riversdale Rock, which lies to the south-eastward of Hainan Head, with Single Palm bearing S. 69½° W., magnetic, distant about $18\frac{6}{10}$ cables, and which has a depth of 3¼ fathoms on it at low water of spring tides, is now marked by a *black* conical Buoy, surmounted by a black triangular cage. The Buoy is moored in 9¼ fathoms, about 1½ cables to the north-eastward of the rock, and must be left on the port hand by vessels entering the Strait from the eastward. The Magpie Rock Buoy has been removed. Directions.—With the Riversdale Rock Buoy in the position above described, and the Hainan Head Bank Buoy and Hainan Reef Buoy in their advertised positions, vessels using the South Channel should steer to pass the two former Buoys at about 3 cables, taking care to guard against being set towards the shore, and remembering that it is safe to borrow towards the banks on the starboard hand—of which the lead, which should be kept going, will give warning—while on the other side the bottom is rocky and uneven and the lead gives no warning. The Hainan Reef Buoy may be rounded at a distance of 1 cable or more at discretion.

THE "MIYAKO SHIMBUN."

On the 7th instant the *Miyako Shimbún*, probably the cleanest and most carefully edited of all the metropolitan journals of the second rank, issued its three thousandth number. During the eight years of its existence the paper has flourished exceedingly, and it is now very popular not only in Tokyo but in the interior as well, the circulation being said to be considerably over twenty thousand. In accordance with Japanese journalistic custom, our contemporary issued a very pretty lithographic supplement, composed of a number of poems, in the *waka* style, on the subject of the "Great Victories in the Japan-China War." These were followed by a score or so of congratulatory odes, all of them being very prettily worded and sincerely complimentary. Among the names of the contributors we noticed several of the best writers of the day, notably those that stand in the first rank of modern Japanese poets. The *Miyako Shimbun* is certainly to be congratulated upon the success hitherto achieved, and we wish it a prosperous future.

THE WAR FROM A CHINESE STANDPOINT.

The *Yomiuri Shimbun* translates a number of paragraphs from Chinese papers published in Shanghai and elsewhere. They give an excellent idea of the way in which war news is placed before the Chinese reading public. We select a few of the most striking paragraphs:—

March 24th.—Twelve Japanese men-of-war to-day attacked Makung. Two of them were sunk and two others badly injured, the rest of the fleet making their escape in great confusion. Though the fighting was very hot and severe, we are glad to announce that no harm was done to our forts. Our forces have won a complete victory this time. We have no doubt that our brave soldiers will annihilate the Japanese hereafter, and that we shall receive the news of a long succession of victories.

March 25th.—The inhabitants of Tientsin have ever avoided lighting signal-fires in the vicinity of the foreign settlements, which is considered as a "Cave of Peace." Nearly all the houses in the British settlement are now filled with people who desire to avoid anything connected with the horrors of war. In the French Concession rents have gone up to double what they were. Many people have left Chihli for the southern provinces, and all passenger-boats on the canals and rivers are crowded. Fares have risen considerably in consequence.

March 26th.—Our Envoy Plenipotentiary to Japan, Viceroy Li, who has been consulting daily with the Japanese Premier about the terms of peace, has been shot by one Koyama. Li was wounded severely in the face. Koyama is said to be a young man of about twenty-one years of age. He was instantly arrested by the Japanese police. From the fact that so young a man should commit such an atrocious crime we can easily see how unrighteous are the acts of the Japanese people. We do not yet know whether our Ambassador will recover, or whether indeed the conferences will continue.

March 27th.—Koyama, the would-be assassin of the Viceroy, is, we now learn, a *soshi*. We suppose what the Japanese call *soshi* are similar to the "vagabonds" of Shanghai, only the former are plainly worse than the latter, for they openly violate the laws in the name of righteousness. It was a member of this class who attempted the life of the present Czar of Russia while His Majesty was in Japan.

We all joined in a joyous shout on hearing that two Japanese war-vessels had been sunk by the Makung forts. But now news of an alarming nature has been received. A telegram from a foreign resident in Amoy states that Panghu Island has been occupied by the Japanese. The plan of attack adopted by the Japanese was a very deceptive one it appears. At first their ships steamed to and fro at a great distance from the island, and so managed to make our forts exhaust all their ammunition at an impossible range. Then, suddenly approaching the coast, they made a heavy attack, and it was at this moment that two of their ships were sunk, as we have already informed our readers.

Several hundred female soldiers have recently passed through Cho-ka-wan. They were all very tall and each had copper rings in her ears. They were divided into bands of ten each, and marched steadily in the direction of Shantung. People say that this is an Amazonian regiment led by the widow of General Sa-ho-ki, for the purpose of taking vengeance on the Japanese for the death of her husband, who, it will be remembered, fell in the battle of Phyöngyang. We cannot vouch for the truth of this report.

March 28th.—The Pescadores are in the hands of the Japanese. The defence of Formosa is now of the most urgent importance. Those who are charged with the responsibility of defending our southern littoral, must check the invaders in time. Tientsin and Taku are, of course, safe; but not so Foochow and Amoy.

A NUMEROUS FAMILY.

We read in the *Miyako Shimbun* that a wealthy farmer of Matsuye, in Shimane Prefecture (Izumo), the other day celebrated his eighty-eighth birthday—which is one of the few birthdays in a life-time that the Japanese do think worthy of special observance. The old man is in robust health and accustomed to work daily in the fields, though he is far beyond any possibility of want. On the day in question no less than sixty-three direct descendants of the veteran were present: seven children, thirty-eight grandchildren, and eighteen great-grand children. The whole neighbourhood turned out to make the celebration as effective as possible. A special feature were some *no*-dances got up by the old man's family, representing various scenes in the life of their progenitor. The aged farmer himself took active part in all that was going on; indeed "acted more like a young man of forty than an octogenarian," remarks our contemporary in conclusion.

THREE PORTUGUESE ARRESTED.

During the course of Friday, as the result of investigations, three well-known members of the Portuguese community of Yokohama were arrested for alleged swindling in conjunction with Japanese, and lodged in Tobe gaol, where their case is awaiting investigation. The parties charged with the alleged fraud are A. C. Barradas, an *employé* of the Hongkong and Shanghai Bank, V. C. Barradas, a clerk in the employ of Mr. W. J. S. Shand, and J. A. da Fonseca, doing a small curio and commission business. The brothers Barradas were arrested at their own residence shortly after eleven o'clock, Fonseca in the afternoon at 3 o'clock on his return from a tiffin party.

THE WRONG PARTY.

That great confusion can result from near-sightedness is amusingly illustrated in a story told by a vernacular paper. In a certain household in Tokyo there are two sisters both rather good-looking, though the elder is described as being a bit *passée*. The younger sister, a month or so ago, plighted her troth to an eligible young man, and a few days ago the wedding ceremony was celebrated, at the bride's house, contrary to custom. The *nakodo*, or middle-man, to whose adept agency the marriage was due, was of course present on the occasion, in all the glory of success. Unfortunately, he chanced to be extremely short-sighted, and so when the time came for the bride to empty the *san-san-ku*, or thrice-three mystic cups of *saké*, with the bridegroom, he called up the elder sister instead of the younger. The bridegroom was considerably mystified at this proceeding and went on with the ceremony, while the elder sister, nothing loath, smilingly filled the goblets and proceeded to play the blushing bride to the life. The real bride looked on a few moments in horror and then sprang to her feet in a rage. What! was she to be discarded for her elder sister? Had not the bridegroom promised to marry her and no one else, and was she to see another chosen before her very eyes? But enough! she would at once leave this heartless world; and then her spirit should come back to torment her faithless lover and treacherous

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

supplanter. This brought everybody to their senses. The bridegroom emphatically declared that he would wed none but the lady of his choice, and was about to give the middleman striking proofs of his real predilection when the latter, consumed with shame, said that it had all been a mistake of his wretched eyes. The mutual resemblance of the sisters had misled him; there was no attempt on his part to deceive. He begged that the real bride might be substituted at once for her deputy, and that the ceremony should proceed. It took some time, however, to smooth the ruffled feathers of the younger sister; she finally did consent to take her proper place. The nine cups of wine were once more filled and emptied, and the episode was over.

THE NATIONAL MARINE INSURANCE ASSOCIATION, LIMITED.

THE following is the Report presented at the twelfth ordinary General Meeting, held on 13th February last:—The Directors beg to place before the Shareholders the Accounts for the past year, duly examined and certified by the Auditors. Underwriting Account, 1892.—This Account was closed on 31st December last, with a balance of £14,167. 6s. 0d., and after making the usual adjustments, for Interest and charges, there remains a Credit balance of £6,015. 18s. 7d. Underwriting Account, 1893.—The Claims paid in the second year have amounted to £70,707. 14s. 1d., leaving a Credit balance of £28,640. 14s. 10d. on the 31st December, 1894. Underwriting Account, 1894.—The Net Premium were £137,999. 5s. 3d., and the Claims paid amounted to £43,124. 6s. 0d., equivalent to 31·25 per cent., leaving a balance of £94,874. 19s. 3d. The Board recommend a Dividend of 5 per cent. to the Shareholders, free of income tax.

POWDERED AND PAINTED.

THE *Mesamashi* complains that students nowadays are not what they used to be. They think too much of personal adornment and too little of their books. Quite recently, says our contemporary, the pupils of a certain high-grade establishment in Tokyo have taken to the use of cathamine and face-powder. So prevalent has the fashion become that the directors have had to issue a stringent order against the use of cosmetics, threatening with expulsion those who, in future, enter a class-room with rouged lips and whitened complexions. This sounds incredible, yet may be true; but so far as our (*Japan Mail*) experience goes we have found the average Japanese student anything rather than dressy or mindful of his personal appearance. On the contrary, a decided disorderliness of dress is the rule rather than the exception.

TWO EASTER HYMNS.

THE Rev. E. Champneys Irwine, M.A., Rector of Christ Church, Yokohama, has composed two Easter Hymns of exceptional devotional charm. One is set to Ralph Harrison's tune, "Warrington," and is based on "The resurrection of life"—John 5.-29. The first and last verses are as follows:—

O Christ, arisen from the tomb
With light and life immortal crowned,
Returning from the realms of gloom
We hail Thee, Traveller renowned.
* * * * *
O Risen Saviour! hold us fast,
That we may conquer in the strife:
Waking or sleeping find at last
The Resurrection and the Life!

The second Hymn, entitled "The Garden of God," is set to the tune "Amaranth." The poetical similes are peculiarly appropriate both to the season of the Church's year and the subject treated.

THE EDUCATIONAL MUSEUM.

WE understand that unusual activity prevails at present in the Educational Museum at Uyeno Park. The various cabinets and specimens are undergoing a thorough inspection, while new and much more complete catalogues are shortly to be issued. The Museum is rich in the possession of a fine site and buildings capable of exhibiting three or four times the number of specimens now on view; it does not, indeed, attract the attention it deserves, for several of the departments are unique in their way and admirably classified. Besides this, the staff is exceptionally energetic and the management leaves nothing that could be desired. Under the circumstances, an average of two hundred visitors daily is comparatively small, and ought to be increased. And here again the entrance-fee is disproportionate to the interest of the Museum. It ought either to be double or even treble what it is, or free to all.

DEATH OF A NAGASAKI RESIDENT.

THE death is announced of Mr. William Hooper, of the Medical Hall, Nagasaki. He only arrived at Kobe a few days ago to be treated in the International Hospital there. It is almost twenty years since Mr. Hooper came out to Yokohama to join the firm of Brett & Co., and seventeen years since he went into business for himself at the southern port, where by industry and care he succeeded in building up an excellent connection. His funeral was conducted on Saturday according to Masonic rites by Wor. Bro. Enslie.

THE BELGIAN VICE CONSULATE IN TOKYO.

WE are asked to state that Mr. Alexander G. Mosle has been appointed Belgian Vice-Consul in Tokyo.

VICEROY LI AND THE PRESIDENT OF THE HOUSE OF REPRESENTATIVES.

The Viceroy Li is represented as having declared, on the occasion of the visit of Mr. Kusumoto, President of the House of Representatives, that the prospect of the latter's coming had been a daily source of pleasure to him. Very likely it had. In the eyes of Li Chung-tang a Parliament is probably a kind of legislative toy, very apt to get out of order and to defy the controlling efforts of its manufacturer. There is no doubt that one of the mistakes made by China in the days preceding the war, one of the misconceptions that betrayed her into allowing matters to drift beyond the range of peaceful management, was a notion that political dissensions disabled Japan from showing a united front toward any foreign nation. Many foreign observers shared that error, forgetting the most emphatic lesson taught by the history of Parliamentary institutions in Japan, namely, that nothing except the fire of a common animosity seems capable of fusing party differences into a homogeneous whole. The one aim of every political leader seeking to organise an effective opposition, has been to find a nexus that could bind together the heterogeneous elements of the anti-Government wing, without requiring them to make any sacrifice of their mutual antipathies. A foreign war was absolutely certain to still the voices of party dissension, but China failed to appreciate the fact. However, the Japanese Diet presents a curious spectacle to an old Oriental Autocrat like the Viceroy of Chili, and since he could not hope to see the Lower House in session, he must have been pleased to interview its President at all events. The Viceroy is proverbial for the directness of his methods. He exercises the privilege of greatness to the full by propounding to his visitors questions of the most horribly embarrassing character, not so much perhaps, with the intention of eliciting information, as for the purpose of observing their adroitness or clumsiness of evasion. According to the *Yomiuri Shimbun*, he inquired Mr. Kusumoto's opinion about the Oriental Problem, not an unnatural question to address to the President of the House of Representatives. Mr. Kusumoto, however, unwilling to be interrogated on such a subject, replied that the time was not opportune for its discussion, an answer betraying more bluntness than tact. Then the Viceroy went on to ask what sentiment the Japanese nation entertained with reference to the declared purpose of the would-be assassin, Koyama, and there, of course, Mr. Kusumoto was at liberty to be diffusive. The interview is described as having ended with a suggestion from the Viceroy that the President of the Lower House should take a trip to China, the old statesman's covert notion being, perhaps, that Mr. Kusumoto might derive some instruction and profit from observing, at firsthand, the usages and customs of a huge empire where the "useful trouble" of parliaments has never obtruded itself upon the hoary-headed traditions of government, and where, none the less, individual liberty is enjoyed on a tolerably large scale. It was altogether a one-sided interview. We do not read that the President of the House of Representatives put any questions to the Viceroy or attempted to elicit any opinions from him. Li always does contrive to play the *rôle* of questioner, and apparently he found no difficulty in adhering to his habit in Mr. Kusumoto's case.

COUNT SOYEJIMA ON CHINA'S CAPACITY TO AVENGE HERSELF.

A Representative of the *Hochi* waited upon Count Soyejima to hear what that much respected authority on China had to say about the situation.

Among other things, the Count observed that from what he knew of China and the Chinese, he did not think it possible for that country to attempt any effective revenge for the miserable defeat sustained by her in the present war. People say that China is a big country, a rich country, and a country having at its command plenty of fighting men. But the Count does not think so. In his opinion China is neither big nor rich, nor has she command of any great quantity of fighting material. Years ago he told Earl Li that there is no unity in China; that each province is, as it were, an independent country, the whole forming a congeries of States within one frontier, and nothing has since occurred to change that view. China, therefore, cannot be called a big country in the ordinary sense of the expression. Then again, the Chinese Government does not enjoy the people's confidence. No one steps forward to offer assistance when a domestic loan is floated. Can such a country be considered rich? She is populous, certainly, containing from 300 to 400 million souls. But not being joined together by any common interest, these multitudes are merely a congregation of people each intent on pursuing his individual interest, which too often conflicts with that of others. They are not one mass, inspired with fidelity to one ruler and love of one country. It is on account of their want of common interest and common sentiment that the Chinese soldiers, numerous as they are, sustain miserable defeats wherever they fight. Should China, by any possibility seek to wreak vengeance upon Japan, she must first change all these divided sentiments, and bring the country and the people into one homogeneous whole. Then arises the question, is such a unification of China possible? Count Soyejima does not think so. He does not believe that there is now in China a man capable of accomplishing the gigantic task. Li Hung-chang alone might hope for success did he inaugurate the grand work, but there is none to succeed him. The Chinese have studied the ethics of Confucius wrongly. What they know of the cult tends rather to injure than to benefit the country. Stubbornly adhering to the ancient teaching of Confucius, and without any idea of adapting it to present requirements, the Chinese can never be made to learn what the civilization of the West has to teach, unless acquaintance with Western science becomes a qualification for appointment to high and lucrative office. Thus, all things considered, the Count is decidedly of the opinion that it is impossible for China to attempt any formidable revenge upon her foe.

Major-General Black was directed to start on 28th ult. to take up the command of the troops in Hongkong, in succession to Major-General Barker.

WAR NEWS.

Saturday, April 6th.

All reports agree that the Viceroy's wound is now sufficiently healed to permit of his resumption of business. The *Kokkai* reproduces a conversation said to have taken place between Surgeon-General Sato and the wounded Statesman, in which the physician described the character of the Emperor's residence at Hiroshima and the noble acts of the Empress on behalf of the wounded, both Chinese and Japanese. The Viceroy expressed great admiration of such conduct and said that he now for the first time understood the cause of the bravery shown by the Japanese troops in battle.

We have already re-produced, from correspondence appearing in the vernacular press, tolerably full accounts of the First Army's operations against Newchwang, of its subsequent march to Yingkow after the capture of the latter by Yamaji's force, and of its participation in the battle at Tienchwangtai. From the *Nichi Nichi Shimbun* we now take an account of the First Division's (Second Army) advance against Yingkow on the 6th of the March :—"At 5 a.m. on the 6th of March, Yamaji's Division, with the Second Brigade under Major-General Nishi and a Battalion of Cavalry, set out for Keuchiayin-fang, Major-General Nogi being in command of the left wing. The First Brigade, reaching Chiangchia-fang, formed order of battle and advanced towards Yingkow. Colonel Oki commanded the van, which consisted of the First and Second Battalions, a force of Suppers, and Field Artillery. The army as it proceeded reconnoitered the enemy's position, and the Division went into quarters for the night at Keuchiayin-fang, Nogi's Brigade halting at Kanchiakio-fang. The following morning (7th) a junction was to be effected with the First Army for the purpose of a general attack, but so soon as our advance guard reached Kanchiakio-fang, the Yingkow garrison, training the littoral guns on us from the west, opened fire. Their shells fell wide, but as it was not known what force held the place and what the plan of defence was, Colonel Oki halted the Kanchiakio-fang force, and sent Lieutenant Shiki with a company to reconnoitre Yingkow. The Lieutenant had advanced five or six hundred metres when three of the enemy's troopers appeared, but without firing a shot they rode off at full speed in the direction of Yingkow. The Lieutenant's party pursuing these men, forced their way into the eastern gate of Yingkow. Immediately on seeing this, Takenaka's battalion and Kagawa's force advanced against the eastern front of the place and effected an entry. Takenaka then dispatched Captain Hongo to take possession of all the gates and of the telegraph office, and causing the rest of his troops to advance in front of the eastern gate, posted them so as to command the road leading to Tienchwangtai. The enemy seeing their line of retreat thus cut off, had to choose, as it seemed, between attempting to force a passage through the Japanese troops or simply acting on the defensive. What they did was to make their way out on the northern side, and crossing the Liao River on the ice to fall back upon Tienchwangtai. Major Takenaka, perceiving this manœuvre, sent two companies to cross the river higher up and open fire on the retreating Chinese. The distance was from a thousand to 1,500 metres, but several hundred of the enemy were killed or wounded. It was now noon. The numbers of the enemy escaping from the west or north by the bank of the river were constantly increasing. Major Takenaka therefore pushed his men farther on so as to bring the fugitives under closer range, but their speed in retreat saved them from effective pursuit. Kagawa's troops were by this time within about 5,000 metres of the east gate of Yingkow. They received orders from Colonel Oki to attack the Yingkow forts on the Western shore. Pushing on at once to the forts, they found them abandoned, not a Chinese soldier being in sight, and occupied them without firing a shot. The attack was now directed against the northern face, but the gate being shut and securely fastened, the Japanese troops made their way into the enemy's barracks and opened the gate. Encountering no resistance, and seeing only uniforms of the enemy thrown away here and there, our men advanced against the fort but when they got within about 50 metres, two mines burst, and blew two of the assailants to fragments. Another exploded in the neighbourhood and wounded one man. At the same time the five pieces of artillery in the litteral fort opened fire on our men, but the shells flew harmlessly over us. The guns were soon silenced by Kagawa's battalion. A search having been instituted at this stage by the Suppers, a number of mines were found before the fort. Captain Saito of the Engineers undertook to remove these and render the route safe. Kagawa's battalion, seeing the disadvantage of delivering an immediate assault, and waiting until 5.30 in the afternoon, delivered their assault from the rear. Kagawa's battalion operated against the fort on the west coast, and Major Takenaka, perceiving that the task of subduing it was difficult, added his forces to those of the assailants, intending to concentrate a number of guns on the enemy, but owing to the lateness of the hour, they waited until the next day. (Here follow some details of the work of the several battalions.) Our total loss was only two men. The Taotai Shan and the two Generals Fu and Chiao took refuge in the Western fort, but when our men came to attack it the following morning, the enemy had retreated and not a single brave was in sight. The spoils taken that day by the First Regiment were :—45 large guns ; 580 stand of rifles ; 73 barrels and boxes of gunpowder; 4 boxes of lead balls ; 500 suits of military uniforms ; 200 caps ; over 5 bags of rice ; 1 vessel-of-war, and 2 small steamers.

Monday, April 8th.

Lord Li has been appointed Plenipotentiary for the purposes of the Peace Conference, and his appointment has been formally recognised by the Japanese Government. This arrangements sems to have been contemplated by the Viceroy soon after he was wounded, but a certain time was of course necessary to effect such an important change. From the medical bulletins daily received in the capital, it would seem that the Viceroy himself should very soon be able to resume the negotiations in person, but as to that there is probably no certainty.

The *Nichi Nichi Shimbun* publishes a telegram sent from Bakan at 2.25 p.m. on the 6th instant, to the effect that, although the conferences have not yet been resumed, Japan's terms of peace have been made known to the Viceroy, and that an answer from him as to the re-opening of the conference, was expected that day. The *Yiji Shimpo* undertakes to give the terms, but explains that its information has no better basis than a telegram sent from London to a certain merchant. The terms are :—(1) Recognition of Korean independence ; (2) surrender of Formosa and the Pescadores ; (3) surrender of a portion of Shinking ; (4) payment of an indemnity of 300 million Taels ; and (5) grant of certain trading privileges, which are to form the subject of a special convention. These terms coincide, in effect, with those given recently by the London *Times* and telegraphed to the East. The interest of the indemnity depends, of course, on the amount, since the fact of an indemnity's being exacted is a foregone conclusion. Three hundred million Taels is equivalent to about 420 million *yen* in round numbers. It is not conceivable that China could pay such an amount at once. Certain speculators, whose names we hesitate to refer to however indirectly, are said to be eagerly watching the turn taken by the negotiations, their project being to act as China's financial representatives on the London market. Doubtless the opportunity, should it come, will be golden for them, but London will not respond largely to a loan placed for such a purpose by China in her hour of defeat. There must always remain a considerable residuum unpaid, and the manner of securing its payment will be keenly scrutinized by the world. Evidently when the London telegram speaks of a portion of the province of Shinking, it means the Liaotung peninsula and Port Arthur. As for the tradal advantages referred to, since all the Treaty Powers must profit by them in an equal degree with Japan, their inclusion in the terms made by the latter will be a general boon. We do not pretend to confirm or deny this information published by the *Yiji Shimpo*, but merely comment on it as it stands. It is to be noted, however, that an idea prevails pretty generally at Hiroshima that the Viceroy Li will return to China *re infecta*.

Two cases of cholera have occurred in the gendarmerie barracks at Hiroshima. Stringent sanitary measures have been adopted, and it is hoped that the spread of the feil disease may be checked. But accounts—non-official—from the Pescadores indicate that the malady has made its appearance on a large scale among the troops at Makung. If the numbers of deaths and seizures stated by telegram—100 of the former and five or six hundred of the latter—be correct, it will probably be necessary to put the troops into the transports and take them out to sea, a sure method of checking the spread of cholera. Probably the water in Makung is radically bad. In the *Nichi Nichi Shimbun* we find a statement that the force sent ashore at the Yuenting peninsula has been relieved by a guard of infantry, but no mention is made of cholera. The prisoners that surrendered when the peninsula was invested, were in process of being conveyed to the mainland and released, at the time (March 26th) when Captain Dewa despatched the telegram from which we quote. The same message says that although the search for topedoes at the entrance to the harbour revealed nothing, and although no torpedo station or connections were found, there were nevertheless discovered in a store-house at Makung 27 electric torpedoes of Russian manufacture, and 20 submarine torpedoes with their various appliances.

The act of the Chinese soldiers in firing upon Captain Aoki, of the Japanese Staff, has naturally caused some excitement in Japan. Captain Aoki, it will be remembered, despatched two messengers, at an interval of 12 hours, to intimate to the Chinese Commander-in-chief that an armistice had been concluded, and that a meeting between the commanders in the field for the purpose of arranging details, being included in the articles of the convention, he desired to have a convenient time and place fixed for such a meeting. No answer being received from the Chinese, though ample time was allowed, Captain Aoki set out with a flag of truce flying and a bugle sounding, the result being that at a distance of about 2½ miles from the point of departure, his little party was attacked by the Chinese and compelled to beat a retreat, one of the number being severely wounded. The conclusion first arrived at by the Japanese press was either that the Chinese Government had failed to comply with the conditions of the armistice by giving notice to its forces in the field, or that the notice having been duly given, the troops had not been sufficiently disciplined to obey it. If the former, then of course the Pekin Government stood convicted of failure to carry out the convention which, therefore, *de facto*, ceased to be binding ; if the latter, then Japan was entitled to demand the punishment of the offending officers and soldiers. There was also, however, the contingency that sufficient time had not elapsed for conveying the stipulated information to the Chinese troops in Manchuria. The armistice was signed on the 30th of March; the Aoki incident happened on April 2nd—an interval of three days. One of the articles of the convention stipulated that in cases where telegraphs were not available, the swiftest alternative means of communication should be availed of. Nganshan-chan, whence Captain Aoki set out, is on the road from Liaoyang to Newchwang and Tienchwangtai. There is a line of telegraph from Pekin to the Chinese positions on the coast road westward of Tienchwangtai, and there is also a line *via* Mukden to Liaoyang. That there should have been any difficulty in conveying the necessary

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

intimation from Pekin is, therefore, somewhat incomprehensible. It appears, however, that on the 4th instant, the enemy sent a reply to Captain Aoki's communication, in the sense that they knew nothing about an armistice, but that a definite answer would be sent after consultation with General I. Later on, a squadron of cavalry came from the officer in command of the Heiranchan force, and asked that Captain Aoki should accompany them. But since they still professed ignorance of the armistice, Captain Aoki declined to go with them. About the same time a communication arrived from the Governor of Liaoyang. It was couched in rude language, and declared that the writer knew nothing of an armistice. As soon as these facts were telegraphed to Shimonoseki, from the Commander-in-chief of the First Army, the Minister President of State and the Minister of State for Foreign Affairs, communicated them to the Viceroy and asked him to telegraph again to Pekin. The Viceroy explained that there was no telegraph at the place where the incident had occurred—a singular assertion as it seems to us, seeing that both Liaoyang and Tienchwangtai are in telegraphic communication with Pekin—and that, consequently, it must have been necessary to forward the intelligence by horsemen from the nearest telegraph station. Doubtless at the time when Captain Aoki started from Nganshan-chan, no news of the armistice had yet reached the Chinese in that district. As to the firing on a flag of truce, Li could only say that it was the act of Tartars ignorant of the modern usages of war. He expressed sincere regrets. The *Nichi Nichi*, from which we take these particulars, denies the story that the messengers sent by the Japanese were made prisoners by the Chinese.

It is stated that H.I.H. Prince Komatsu, Commander-in-Chief of the Forces in the Field, will set out for the Liaotung peninsula on the 10th instant, and that he will be accompanied by Vice-Admiral Viscount Kabayama, Lieut.-General Kawakami, and the rest of His Imperial Highness' Staff.

Tuesday, April 9th.

The Viceroy Li, in an interview with Lieut.-General Kawakami on the 9th instant, is said to have expressed admiration of the fighting qualities shown by the Japanese Navy and Army, and to have added that he longs to see peace restored. He also asked the Lieut.-General to convey to the Emperor and Empress his profound thanks for their Majesties' solicitude on his behalf and for the medical assistance that they had caused to be given to him—assistance to which he attributes his speedy recovery.

Telegrams from the Pescadores say that since the capture of the islands, the inhabitants are gradually resuming their occupations, and seem quite reconciled to their change of rulers. Eight Chinese officers and three assistants have been sent to Japan by the *Kagoshima Maru*. We learn from the same telegrams that the spoils taken in the islands are 18 cannon, 2,463 rifles, 1,990 rounds of large-arm ammunition, 103,300 rounds of small-arm ammunition, 797 barrels of gunpowder, 550 *koku* of rice, and over 530 articles of sorts.

The *Kokkai's* account of the taking of Tienchwangtai on the 9th of March is as follows.

On the night of the 8th of March, Field-Marshal Katsura issued the following General Orders:—

1.—To-morrow the First Army, joining forces with the First Division, will attack the enemy at Tienchwangtai. The Fifth Division will form the right wing.

2.—The First Division will advance by the main road.

3.—At 5 a.m. to-morrow morning, the Independent Cavalry will set out from its quarters and, working in combination with the Fifth Brigade on the right wing, will reconnoitre Tienchwangtai.

4.—The Advance Guard, mustering on the south-east of Lakwo, will reconnoitre the enemy's position at Tienchwangtai.

5.—The various forces composing the main body of the First Division will muster at 4.30 a.m. in the fields at Newchwangtsz.

6.—The Field Artillery, composing the Third Battalion of the Third Regiment and the Sixth Battery of the main body, will muster at 2.30 a.m. on the west of Heiyingkow, and will be under the orders of Major-General Nishi. The Mortar Battery will muster at 5.30 a.m. at Lakwo.

Here follow directions relative to the various Trains, and the Orders conclude by stating that the General Staff will assemble at 4.30 a.m. with the main body.

The arrangements resulting from the above Orders were that the Third Division became the central attacking body; the First Division, the left wing, and the Fifth Division, the right wing. The van of the Third Division reaching Lakwo at 5 a.m., drew near to the left bank of the Liao river. The Main Body, mustering at Newchwangtsz, followed toward Lakwo. The First Division, forming the left wing, also pushed forward to a considerable distance. Meanwhile, the Artillery of the three Divisions, joining forces, formed one body, the number of guns, including the reserve artillery and the mortars, being 92. By 8 a.m. the guns had taken up a position on the left bank of the Liao. The enemy's artillery having already opened fire from the intrenchments, our batteries came into action, and before long the roar of the cannon reverberated like thunder. While this fierce artillery duel was in progress, our van, the Sixth Brigade of Infantry, deployed into fighting order, the First Division performing the same manœuvre, so that the attack commenced from two faces. The Sixth Brigade of Infantry, advancing along the left bank of the Liao, confronted the enemy and a hot exchange of rifle fire ensued. This had not long been in progress, when a portion of the Seventh Regiment under Major Suzuki and the Nineteenth Regiment under Major Fujimoto, each pushing to get ahead of the other, crossed the right bank of the Liao river, and leaping down on the ice, advanced over it against Tienchwangtai. The enemy at this point, demoralized by such an onset, broke and fled, heading at first for the town of Tienchwangtai, whither own troops, pursuing hotly, shot down the greater part of them. Turning now to the Fifth Division, the right wing—it had crossed the river higher up on the preceding night, and advancing in the morning, reached the north east of Tienchwangtai. There the enemy, to the number of several thousands, assembled previously at Tsaichiatien, stood on the defensive. The Fifth Division attacked vigorously and after a brief struggle the enemy retreated toward Tienchwangtai. Just at that time, the Eighteenth Regiment of the Main Body was advancing against Tienchwangtai from the north, so that the enemy found themselves caught between two fires. Thrown into great disorder, they well nigh lost all line of escape, but finally fled westward. It was now 11 a.m. Tienchwangtai was entirely in our possession. The troops entered it cheering. It had been one of the stoutest fights of the war, General Sung having put forth his whole strength to defend the place. The force under his command was 15,000 men, with 50 field-pieces—Krupps of the latest type. The infantry were armed with Mauser rifles, the greater part of which were repeaters. As for the enemy's casualties, it is difficult to ascertain them exactly, but about 1,000 corpses were found in the town of Tienchwangtai, and on the side where the First Division's attack was delivered, 250 or 260 were killed. Probably several thousands were wounded. Our casualties were 50 wounded, including a Captain and a Lieutenant, and 5 killed. Twenty or thirty thousand *koku* of rice were taken, but of the large store of arms in the town our troops did not take any, the place having been burned to the ground. Fourteen Krupp guns represented our total capture. After a rest of some hours, the troops marched back, the First Division to Yingkow, the Fifth to Haicheng, and the Third to Newchwangtsz, amid shouts of victory.

It will be observed from the above that the fighting was all over by 11 a.m. Evidently the greatest slaughter took place within Tienchwangtai after the rush made by the Seventh and Nineteenth Regiments down the Liao river on the ice, and after the pêle-mêle flight of the enemy at this point. But the *Kokkai's* correspondent leaves much to be desired in his account. He tells us nothing as to the cause of the burning of the town, nor anything about the unfortunate inhabitants. Frankly speaking, the accounts sent by Japanese correspondents to the papers they represent are the baldest and most unsatisfactory work conceivable. No one could begin to draw a map of the attack on Tienchwangtai by means of the above translation only. To this day we remain ignorant of the details of a battle that took place a month ago. The spirit of Xenophon in his most intolerable mood has possessed all the Japanese correspondents since the commencement of the war. Very remarkable, too, is the silence of the foreign correspondents. There was at any rate one foreign correspondent in Haicheng when Field-Marshal Katsura commenced, at the close of February, the series of brilliant operations that ended, on March 9th, with the battle of Tienchwangtai. But that correspondent remains silent. It is an inexplicable situation.

Wednesday, April 10th.

Public interest now centres on the cholera and the Peace negotiations. As to the latter, satisfactory progress seems to be made. Nothing official is yet published, but the general opinion appears to point to a satisfactory settlement pretty much on the basis mapped out a few days since by the *Jiji Shimpo*. The 9th instant is named by the *Yomiuri Shimbun* as the day when an agreement between the Plenipotentiaries may be looked for, but we are not disposed to credit such a hard and fast estimate. It may, however, be accepted that the negotiations are advancing, though formal conferences between the Plenipotentiaries have not yet been re-commenced. The Viceroy is now quite competent, physically, to conduct the negotiations himself. Dr. Scriba returned to Tokyo yesterday, and reports that when he left Shimonoseki, the Viceroy's speedy restoration to complete health was assured.

With regard to the cholera, there are grounds to apprehend that China may send Japan such a dose of the scourge as will avenge all the defeats suffered by the former. The Pescadores are the great source of danger. Up to the 3rd instant, according to a Hongkong telegram published by the *Nichi Nichi Shimbun*, there had been a thousand cases and about four hundred deaths there. Doubtless the two transports reported as arriving at Shimonoseki on the 7th instant with several cases on board, had come from the Pescadores. Japan's troops suffered terribly from cholera when they invaded Formosa over twenty years ago. The most drastic measures are being adopted to check the spread of the malady, and as the Japanese authorities are now thoroughly well equipped for such work and fully experienced in carrying it out, they may succeed. There has been no recurrence of the malady at Moji, and the cases that have occurred at Hiroshima are as yet only sporadic. The *Nichi Nichi* says that the Government was prepared for much sickness among the troops when it despatched an expedition to the Pescadores.

Thursday, April 11th.

Beyond the fact that the peace negotiations are evidently reaching their final stage, we are without information from Shimonoseki. But the tendency to believe that the conclusion of peace is near at hand grows stronger daily among the general public. The armistice, although the circumstances under which it was granted divested it, to a great extent, of the character usually attaching to such truces, and forbade the hope that it might be regarded as a tolerably sure precursor of peace, has nevertheless been of service by accustoming the nation to gradually wean itself of the craving for warlike excitement created by the events of the past eight months. Then, again, we have the satisfactory certainty that Japan is not attempting to withhold her terms from China. Many persons supposed that, since the integrity of the

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Viceroy's mission was open to grave doubt; since there was reason to suspect that his object might be merely to arrive at a knowledge of Japan's aims in order to employ them as the ground of another appeal to Occidental interference, the Plenipotentiaries of this Empire might hesitate to show their hand until they could extract some assurance of China's honesty of purpose. For ourselves, we never entertained any such apprehension. So soon as the Japanese Government consented to receive the Viceroy in the character of a peace envoy, it was bound to treat him with frankness, and not to place in his path any difficulties other than those inseparable from his function. To receive him as a Peace Plenipotentiary and then to conceal from him any part of this country's demands would have been unworthy of the Cabinet, and above all of men like Count Ito and Viscount Mutsu. Such a course would also have given colour to the falsehoods circulated by Japan's enemies in connection with the Chang mission, namely, that the reception of the Envoys was a mere farce and that even though their credentials had been in due form, instead of being palpably faulty, the Japanese would have found some other excuse to send them home unsuccessful. In truth, Japan was just as ready to conclude peace when Chang came to Hiroshima, as she was when, a few days later, she consented to receive the Viceroy Li in the same capacity. One very childish critic inferred that because certain baskets of coal littered the Kobe wharf when Chang and his suite embarked for Hiroshima, Japan was determined to reject his overtures of peace. But apart from that silly person, there were certainly some rational observers who thought that no peace mission could have succeeded at that time. The best evidence that could be furnished of their error is the fact that Japan has frankly and fully submitted her demands to the Li mission, and that they have also been communicated to all the Foreign Powers. She would have done precisely the same in Chang's case had he come duly accredited. It is significant, also, that we hear nothing of interference on the part of any Western State. There has been great talk among irresponsible journalists about the extravagance of Japan's pretensions and the certainty that they would provoke a vigorous protest from Europe, or at least from one or two European Powers. But it seems that these prophets were entirely mistaken, both as to Japan's excessive ambition and as to European interference. The Powers appear content. In fact, it might easily have been inferred that if they shrank from stepping between two belligerents during the progress of the war, they would leave them equally uninterrupted to settle the terms of peace. No Power appears to have taken any step in the slightest degree objectionable to Japan except that "north-European State," alluded to by the *Nichi Nichi Shimbun*, which alone has revealed the terms to the press, all the rest regarding the communication as confidential. To China this tacit acquiescence must mean a great deal. If she learns from Europe's attitude that the consequences of rejecting the terms now formulated by the Japanese Government must be on her own head, she will hesitate to isolate herself from the sympathy on which she counted so much in the last resort. Thus, on the whole, everything seems to make for peace. Japan's action about the armistice undoubtedly produced an excellent effect in Europe, as witness the telegrams of congratulation sent to her by various Powers—telegrams, we may note *en passant*, that ought to have effectually silenced the foolish suspicion that the armistice had been granted by Japan involuntarily, in consequence of a peremptory demand from the European Powers collectively. That effect has certainly been increased by learning that one of Japan's terms is the granting by China of additional tradal privileges, by which all the world will benefit, and that the terms—which we believe to be pretty much on the lines recently indicated by the *Fiji Shimpo*—are, on the whole, temperate. A good deal is said about the fact that Japan is moving large bodies of troops toward her basis of operations against the coast of Pechili. But it is perfectly plain that until peace is assured, Japan must not relax her warlike preparations. Failure of the present negotiations would mean that an army must be directed against Pekin at once. Already invaluable time has been lost—nearly a month of the very best season for campaigning in Pechili. If peace is not to come yet, Japan must not lose another week in pushing on. Nothing could be more thoughtless or unjust than to infer that because she shows ordinary wisdom in preparing for very possible contingencies, she has no serious intention of making peace now.

The departure of His Imperial Highness Prince Komatsu and his staff has been postponed for three days—from the 10th to the 13th instant. It looks very much as though these postponements had some connection with the Peace Negotiations.

The *Fomiuri Shimbun* says that China's purchases of war material from a certain foreign state—presumably Germany—since the commencement of the war, have amounted to 70 millions of dollars, and the fact has been clearly indicated by some circumstances—of which no explanation is vouchsafed—in connection with the spoils taken by Japan. The figure is too large to be accepted unhesitatingly.

The arrest of Tonghak rebels continues in Korea. The *Nichi Nichi Shimbun* reports that a hundred were made prisoners on the 6th instant, and that a further capture was expected the same night.

We have no further intelligence as to the cholera in the Pescadores. There *is* hope that it is abating.

THE PROSPECTS OF THE TEA MARKET.

According to a certain authority on the tea industry, the tea market is likely to present a brisker appearance this year than last, on account of the steady widening of the channel of disposal. This is chiefly due to the greater attention that the producers have devoted to the processes of their industry and to their earnest desire to cater for the tastes of foreign customers. The various tea guilds, for instance, have striven to ascertain the opinions of important foreign tea markets, and have, with that object, sent samples of various descriptions and even despatched special committees. All such exertions have had satisfactory results, says the *Mainichi*, and the orders from foreign countries for tea have steadily increased within the last few years. The happy idea of opening tea shops at the World's Fair in Chicago did much towards bringing Japanese tea to the notice of foreign customers. Japanese tea has come to be greatly talked of and its flavour highly relished by the higher classes. This is specially the case in America, and in Russia also, to a certain extent. What is now desirable is that stricter attention be paid to the production and preparation of the leaf in Japan, and that the exportation of inferior tea be carefully avoided. Last year, owing to the unusual fluctuations of the silver market, tradal depression was felt all over Europe and America, but now that the disturbance is fairly over, and trade has more or less regained its former activity, the tea market will also feel the improvement. The chief thing to be apprehended in this connection is want of cōoperation among the wholesale merchants, and between them and the producers, tending, at times, to hostility. It is to be regretted that the efforts of the Central Guild last year to restrain the rivalry between wholesale merchants, and its advice to local manufacturers and goods owners, more or less embittered the tea men and only resulted in trouble. If the matter continue unremedied, prices will become irregular, and the shrewd foreigner will step forward and take advantage of the rivalry between Japanese tea men. It is feared, therefore, that although the prospects of the tea industry are, thus far, very bright, want of cordial cōoperation on the part of the tea men may lead to disastrous results.

THE KOREAN LOAN COMPLICATIONS.

The trouble between Japan and Korea in connection with the loan that the former offered to furnish out of its War Fund, has been compromised. The exact facts are as follow, according to a telegram despatched by the *Shogyo's* correspondent in Sōul at 5 p.m. of the 1st instant:—

The negotiations about the loan were concluded by mutual concession and the agreement was signed on the 31st ult. Of the loan of three million *yen*, one half is to take the form of silver coin and the other of convertible notes, and the interest is to be 5 per cent. per annum. The sum is to be repaid in yearly instalments from the 6th year, and Japan's security is to be the Korean land tax. Customs duties are excluded. The much discussed question appears, therefore, to have been settled favourably for Korea. The particulars of the failure of the first negotiations, as sent by the Sōul correspondent of the *Asahi*, are worth translating, as they are interesting in many respects.

The participators in the negotiations were Count Inouye and Mr. Suyematsu, on Japan's side, and the Home Minister and Vice-Minister of the Treasury on the part of Korea. The chief terms offered at first by the Japanese Commissioners were that they should hand over the loan of three million *yen* entirely in convertible notes and that their security should be the customs duties of the three treaty ports and the land tax of certain provinces. The Korean Commissioners asked that the loan should take the form of silver coin only, and that, as the Customs duties were already hypothecated for a foreign loan, the land tax of all the eight provinces of Korea should be pledged to Japan. Repeated conferences ensued between the representatives of the two countries, and at last, on the 23rd ult., the following resolutions were arrived at: (1) that half of the loan be paid in silver and the other half, in notes; (2) that as long as the Customs duties are security for another foreign loan, the land tax of all the eight provinces of Korea shall be pledged to Japan; (3) that, as an act of special concession, expenses incurred in handing over the sum of three millions to the Korean Government be borne by Japan; (4) that the loan be left unpaid for three years, but be redeemed within two years from that time. The two Korean Commissioners declared themselves satisfied with the generous terms offered by Japan, and promised to give a definite answer after deliberation with the other members of the Cabinet. The Japanese Commissioners were therefore greatly surprised and displeased when, on the evening of the same day, the Minister of the Treasury sent his subordinate with a letter to Mr. Suyematsu, retracting the consent to the terms given by himself and his fellow Commissioner only a few hours previously. The letter said that the Korean Cabinet desired to have two-thirds of the loan in silver and only one-third in notes, and also that the term of repayment be prolonged to 10 years, if Korea, on the expiration of the period prescribed by Japan, should find it difficult to redeem the loan.

Mr. Suyematsu replied by letter to the effect that he could not comply with the demands of the Cabinet. The Minister of the Treasury then sent a remarkable despatch to the Japanese Minister, saying that as the Cabinet could not arrive at any other resolution, Mr. Suyematsu should, after consultation with the Japanese Ambassador, return home and acquaint his Government with the wish of the Korean Cabinet, so that Japan might exert herself on Korea's behalf and procure the funds necessary for the accomplishment of Korean reforms, on more favourable terms. Mr. Suyematsu replied briefly that he did not understand the Korean Government, and that, as there was no further reason for him to negotiate with the Finance Minister on the subject, the latter should do so in future with the Japanese Ambassador. Mr. Suyematsu left for home on the morning of the 24th ult. and the negotiations were broken off. The extent of the gratitude of the Korean Government

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Japan for the aid extended to it may be judged by its action on the occasion of Mr. Suyematsu's departure. On his arrival in Korea, he was heartily welcomed, ostensibly, at least, but when he set out on his return journey, not one of the Ministers condescended to see him off. The sudden change in the attitude of the Korean Cabinet in connection with the loan is attributed to the artifices of the Home Minister, Boku, who, although himself a Commissioner, did not take part in the important conferences, but is said to have busied himself in taking over the other members of the Cabinet, so that the negotiations might fail. He was not displeased with any special condition in the terms, but was opposed to the whole scheme, for his policy appears to be to reject, as far as possible, anything that might lead Japan to interfere in Korean affairs. Even he, however, was convinced that money must be obtained from Japan in order to reform the administration of his country, but he seemed to think that more favourable terms might be obtained if Korea held aloof a little. Boku considered that Japan was bound to assist Korea for the sake of maintaining her own dignity in the eyes of the world, and was, therefore, obliged to furnish the funds required for Korean reform. Count Inouye also is supposed to be eager to get the money for Korea. Be that as it may, if the *Shegyo's* telegram is authentic, and we see no reason to doubt it, Boku's cunning policy seems to have been more or less successful, for the terms given are more favourable to Korea than those at first offered by Japan.

* * *

Mr. Hoshi Toru is again in Sōul. Opinions differ as to why he has been called there, some saying that he is to become a legal adviser of the Korean Government, others that he is to relieve Count Inouye of his post of Japanese Representative in Korea. At any rate, it seems probable that he will not return home for some time, and the Tokyo papers report that Mr. Hoshi intends to resign his seat in the Lower House.

THE SHIMONOSEKI INCIDENT.

It is interesting to read how the news of the Shimonoseki affair was received by the Cabinet Ministers of Japan or by others of equal importance. It is said that when the intelligence reached the Premier, who had parted with the unfortunate Chinese Plenipotentiary only a few minutes before the occurrence of that regrettable incident, he became highly indignant, and exclaimed to those around him that had the culprit been dissatisfied with the negotiations, he should have shot him, the Premier, not the Chinese Envoy. For did not the issue of the negotiations depend almost entirely upon the Japanese Plenipotentiaries who were in a position to dictate terms of peace, and not upon the Chinese Envoy, who was a suppliant for peace? The Premier then hastened to call upon the wounded Ambassador, and returning from the latter's residence, said, with profound dejection, that though the affair was simply the act of a fanatical individual, the stain inflicted upon the nation's honour and reputation would assuredly be great. Had the bullet entered Count Ito's body and not that of the Viceroy Li, the matter would have been comparatively trivial, for the death of the Premier under such circumstances would inflict no particular loss on Japan.

When the news was telegraphed to Field-Marshal Count Yamagata, Minister of State for War, he happened to be in his study perusing some important documents. The telegram at once plunged him into the greatest sorrow and indignation. He hurridly rose from his desk, and cried out in a voice choked with anger:—"The scoundrel has undone the great achievements of the nation." He then called for his carriage and proceeded to Head-quarters. On receipt of the news Viscount Kabayama, Commander-in-chief of the Navy, left his hotel in haste for Head-quarters, and when he came back he seemed to be harassed with painful thoughts, for he sat up all night absorbed in meditation. We take these details from the vernacular press.

KOREAN NEWS.—CONFESSION OF KIM'S ASSASSINS.

At last the assassins of the late Vice-Minister of Justice have made a clean breast of their doings, and the particulars of their nefarious scheme have been revealed. Everybody supposed, writes the correspondent of the *Asahi* and the *Kokkai*, that the assassins of the late Vice-Minister of Justice must be common murderers, tools of the Machiavelian old statesmen of Korea who sought to remove, in that summary way, obstacles standing in his path. Sōul has therefore, been taken by surprise on learning that the assassination of Kim was merely a preliminary, and that underlying the act was a grave plot of treason. The particulars have been obtained by strict examination of two of the gang, and as the accounts independently given by them tally with each other, there are no good grounds for doubting their authenticity. Kan Kiyo, one of the two assassins now in prison, when closely questioned, confessed that in October last he was forced into the secret confederation. The plot must have been already concocted at that time and its main object, as disclosed with all reserve to Kan and his associates, was to discrown the King. This was to have been accomplished in the following manner. A secret messenger was to be despatched to the Tonghaks to induce them to advance as far as Kang-hwa. When they had reached that point, Li Shunyo, Commander of the Bodyguard, was to be despatched, ostensibly to oppose their progress. A sham encounter would then take place, and Li, feigning to be defeated, would retreat to Sōul hotly pursued by the Tonghaks. The latter were then to set fire to the Southern Gate of the Castle so as to facilitate their attack against the Japanese troops. A body of picked insurgents was to lie in ambush at Puk-sŏng, with the object of rushing into the palace as soon as they saw the flames rise from the gate. Li would then hasten to the Palace as if to rescue the King and the Court from danger, and would induce His Majesty, the Queen, and the Heir-Apparent to fly to Chhun-Chhŏn. When the Royal family had thus been induced to leave Sōul, the Tongaks were to declare that the Government must not be without a ruler for even a day, and were to force Li, ostensibly against his will, to undertake the function of supreme ruler of Korea. The sovereignty thus provisionally assumed was to be enjoyed permanently, the Royal family having been disposed of by means common among Korean politicians. The list of men that should fill important posts under the new Government has been already prepared, and Kan himself was promised a certain high local position. The mission to the Tonghaks was at first entrusted to Ko Sochu, but he declining, another messenger was appointed in his place. Ko was then asked to undertake the task of getting rid of such members of the Korean Government as were considered obstacles to the consummation of the revolution. More than ten of these "obstacles" were to be assassinated. Kim Koshu, the Premier, Kim Kokun, the late Vice-Minister of Justice; Kin Kachin, the acting Minister of Public Works; and An Keiju, the Vice-Minister of Finance, were to be the first batch of victims. The murder of the late Vice-Minister of Justice was successfully perpetrated on the 30th of October; but though another section of the assassins told off for the work intended to mete out a similar fate to the Premier and the acting Minister of Public Works, they encountered so many difficulties that they dared not consummate the scheme.

When Ko Sochu was first subjected to examination, he simply declared that he had been tempted by promise of pecuniary reward to undertake the assassination of the Premier and of the late Vice-Minister of Justice, the sum to be paid to him being 1,000 *ryo*. He was, however, re-examined after Kan had disclosed the particulars of the plot, and, in the face of the evidence furnished by one of his associates, he could not but confess what he had at first concealed. His confession did not differ in essentials from that of Kan. He was at first asked to undertake the mission of persuading the rebels to move towards Sōul. When he declined to go on that errand without being more fully admitted to the confidence of the plotters, Li laid before him in a secret chamber a brief account of the conspiracy, and promised that if success were attained, he, Ko, should be made a Minister of State. He asked for time to deliberate, and left Li that day. On his way home, he concluded that the mission was beyond his capacity, and that it would be wise for him to decline. A few hours later, having imbibed a large quantity of liquor, he called on Li once more, and made known his resolution, adding that if he were pressed by Li, he should prefer to die then and there by taking poison rather than be sent on such a mission, with the certain prospect of being seized and put to death by the Japanese. Li had no choice but to rescind his mandate, but he strictly enjoined Ko to keep silence about what he heard, otherwise he would be instantly put to death. Such was Ko's confession. The mission to the Tonghaks ended in failure. On the 9th of November, the letters that the Tai Wŏn-kun and his son intended to send to the Tonghaks came into the possession of Count Inouye, who, on the strength of such undisputable evidence, severely censured both father and son. Of course Count Inouye did not then know the full extent of the grave crime in which the old statesman was implicated. He therefore simply rebuked them for taking measures to incite the rebels. Conscious of the grave plot in which they were involved, they seem to have arrived at the hasty conclusion that the whole affair had reached Count Inouye's ears, for they appear to have thenceforth abandoned the conspiracy.

The examination of this case is far from being ended. No one can tell whither its ramifications may lead or what they may involve.

LETTER FROM SHIMONOSEKI.

(From our Correspondent.)

Shimonoseki, April 1.

This morning a conference took place at the usual place of meeting, the Fujino Hotel, or, as men of letters call it, the Shumpan-ro (Spring Sail House). It lasted nearly two hours, from ten a.m. to twelve, and was attended on the Japanese side by H.E. Viscount Mutsu, Secretary-General Ito, Private Secretary Nakada, Secretary Inouye, and Translator Mutsu; and on the Chinese side by Lord Li, and Messrs. Lo Fung-lo, Go Wei-ho, Lo Ko-rei, and Ma Ken-chu. The nature of the consultation is, of course, kept secret, but it is evident that at to-day's meeting no negotiations can have taken place about the question of peace, for Lord Li is not invested with full powers to treat on that subject. It seems, as far as I can gather from the information that has thus far reached me, that to-day's conference related to arrangements essential to the future conduct of negotiations between the Plenipotentiaries of the two Powers.

This places beyond all doubt what has indeed been evident from the moment the treaty of armistice was signed, namely, that the Chinese Ambassador has decided to stay and resume negotiations for peace. Two courses were open to him to pursue at the time of the recent regrettable incident—either to bid farewell to these shores, and, returning home, make strong appeal to the European Powers for intervention; or to stay and continue the negotiations, trying to make the most of the genuine sympathy which the cowardly attack upon him had excited in the hearts of the Japanese from the highest to the lowest. Had he been so inclined, there could have been no better opportunity for him to resort to the former course of action. It was indeed apprehended at the time that such might be his decision. Evidently the conjecture was not without a basis, seeing that China had more than once endeavoured to procure the interference of foreign Powers. We may be sure

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

not resolve to forego such a unique opportunity without good hopes of ultimately succeeding in the mission on which he has come to Japan. What is certain is that by adopting the second line of procedure, he obtained what he had failed to get by means of negotiation, namely an armistice on the easiest of terms, or rather without any conditions whatever. This must be regarded entirely in the light of a voluntary concession by the special grace of the Emperor of Japan.

It would, however, be a serious mistake to suppose that, because the whole nation has as one man manifested spontaneous and genuine sympathy with the distinguished Chinese statesman on account of the recent attempt upon his life, further concessions will be made by the Japanese Plenipotentiaries in the impending negotiations. The sagacity of the Chinese Ambassador is too well known to suppose that he is capable of building any hopes on such grounds. However much the nation may sympathize with his misfortune, the empire cannot be expected to sacrifice public interests to personal sentiments.

It is, however, idle to argue this question, seeing that speculation will be replaced by certainty on the re-opening of the negotiations within a few days. Viceroy Li has so far recovered as to justify the expectation that he will be able in two or three days to attend to business.

THE KYOTO EXHIBITION.

Although the number of exhibits to be seen at the Kyoto Exhibition cannot yet be ascertained accurately, as alterations will be unavoidable for some time to come, writes the *Nippon's* correspondent, the total number of articles counted on the last day of March was 208,713, exhibited by 86,060 persons. The following table shows the numbers of exhibits and exhibitors at the three preceding Domestic Exhibitions:—

	Exhibits.	Exhibitors.
1st Exhibition	14,455	16,174
2nd Exhibition	85,370	27,523
3rd Exhibition	271,673	77,432

Of the exhibits, 109,995 are arranged in the Industry Hall, 33,896 of which belong to the class of textile fabrics. Kyoto occupies the first place in this branch, then come Tokyo, Gumma, and so on. There are 22,350 articles pertaining to dress in which Osaka comes first, then follow Tokyo, Kyoto, and Nara, the exhibits from each of those places exceeding 1,000. Stone ware and kiln productions amount to 9,616, Aichi, Saga, Kyoto, Ishikawa, Hyogo, and Miye having sent the most exhibits of this kind. Chemical wares and medical stuffs in which Osaka, Tokyo, Kyoto, and Tokushima predominate, number 7,781 items. Metallic wares in use in work-shops total 6,785, chiefly produced in Kyoto, Osaka, Niigata, Gifu and Tokyo. Of lacquer wares there are 5,276, mostly from Ishikawa, Tokyo, Fukushima, Shizuoka, and so forth; of wooden and bamboo wares, 5,174, from Osaka, Kyoto, Aichi, and so forth. There are 4,727 exhibits in the paper line, from Kochi, Ehime, Osaka, Tokyo, &c.; 2,234 metallic articles from Osaka, Kyoto, Toyama, &c.; of yarns and threads, 2,116 items, from Kyoto, Osaka, Tokyo, Nagano, Yamagata, &c.; of weights and measures, 1,717 from Osaka, Tokyo, and Miye; of leather and bone wares, 562, from Osaka and Tokyo; of glass wares, 478, mostly from Osaka; of rifles, saddlery, &c., 316 items, chiefly from Tokyo, Osaka, and Fukuoka; and of engineering works, 39, from Osaka, Tokushima, and Fukuoka. The exhibits connected with education, science, and art, number 2,507, in which those from the three cities and from the Department of Education predominate, while of exhibits connected with mining and metallurgy there are 2,056, chiefly from the three cities and the Noshomusho.

The total number of articles in the Agricultural and Dendrological Hall is 80,492. Of these, cereals, vegetables, and plants for special uses amount to 49,663, Ehime occupying the first rank, after which come Tokushima, Shiga, Osaka. Manufactured articles of food number 15,187, chiefly from Kyoto and also from Osaka, Hyogo, Kagawa, Tokushima, and Aichi. Other exhibits arranged in the same hall are as follow:—Animals, birds, and insects, 7,048, chiefly from Nagano, Gumma, Saitama, Shiga, &c.; agricultural implements, 2,369, from Fukui, Niigata, Osaka, &c.; horticultural exhibits, 2,473, from Tokyo, Osaka, Hyogo, &c.; manures &c., 1,487, from Hokkaido, Chiba, Awomori, &c.; timbers, &c., 1,835, from Miyazaki, Kochi, Nara, &c.; agricultural designs, 145, from Tottori, Fukuoka, Akita, &c.; tools for use in forests, 75, from Kochi; forestry designs, 51, from Gifu, Hiroshima, Nagano, &c.

The exhibits in the Machinery Hall number 818, mostly from the three cities and the Departments of State.

The exhibits in the Fishery Hall number 12,390, consisting of articles of food (10,432), chiefly from Aomori, and also from Iwate, Hokkaido, Tokushima, Kagawa, &c.; implements used in fishing and curing (1,258) mostly from Hyogo, Kochi, Hiroshima, Iwate, &c.; miscellaneous exhibits connected with fishery amounting to 552, chiefly from Osaka, Okinawa, Kochi, &c.; fish produced by artificial fecundation of the ova, shell-fish, and seaweeds numbering 51, from Miye, Nara, and Niigata, and designs connected with fishery totalling 81, from Tokyo, Hokkaido, Nagasaki, &c.

In the Fine Arts Hall, pictures occupy the first place, then come art wares, and finally engravings.

A commendable step has been taken with regard to the Exhibition. Hitherto officers connected with the exhibitions have been apt to make bargains with exhibitors for articles remarkably cheap, before the opening of the affair, thus precluding the general public from buying such exhibits. It has been decided not to allow any such practice in the present case, and private instructions to that effect have been issued under the signature of Mr. Kaneko, Vice-Minister of Agriculture and Commerce and Head of the general business of the Exhibition.

THE GOVERNMENT OF THE CONQUERED TERRITORY.

It is difficult to determine a precise English equivalent for the term designating the officer appointed to the supreme place in the districts conquered by Japan. The Japanese word is "*Sotoku*," which we have been accustomed to translate "Commander-in-chief." Thus the title of H.I.H. Prince Komatsu, who has been appointed Generalissimo of the forces in the field, is "*Dai-sotoku*," or "Great Commander-in-chief." Since it is evident, however, that the "*sotoku*" of the Liaotung peninsula and the territory lying along the coast of Manchuria from Tienchwang-tai to Kwantien, is not to have active command of the troops campaigning there at present, we must adopt some other translation for the name of his office. Probably "Governor-General" is the most correct equivalent to be found. The Regulations just published with respect to his office show that although all military matters relating to the defence of the district under his jurisdiction are to be directed by him, as well as all military matters connected with civil jurisdiction, and although he is himself to be a military man—either a Field-Marshal or a Lieutenant-General—his civil functions are at least as important as his military. Doubtless inferences of more or less sweeping character as to Japan's intentions of permanent occupation, will be drawn from this appointment, but as a very brief period must suffice to interpret Japan's purposes precisely, it is idle to conjecture at the present stage.

The first Governor-General is Lieut.-General Baron Sakuma, hitherto Commander-in-chief of the Second, or Sendai, Division; an officer reputed to possess not only high military skill but also administrative capacities of an exceptional order. The Governor-General's office will be at Chinchow; and civil offices, under his general control, will doubtless be established at Antung, Newchwang, Haicheng, Chienlung, and so forth. It seems to be concluded by some of the vernacular papers that his sway is to extend to the Pescadores and Formosa, also, should the latter island come into Japanese possession. But that hypothesis seems to us unlikely. It is said that the civil and military officials forming the staff of the Governor-General's Board and sub-offices will aggregate seven hundred. Major-General Fukuhara is to be his Chief of Staff; Major-General Ibaraki, his Chief of Civil Administration; Colonel Sezaki, his Commander of Artillery, and Lieut.-Colonel Kokuni, his Commander of Engineers. We may add here that the Command-in-chief of the Second Division falls to Major-General Nogi, who becomes a Lieut.-General, and that Major-General Nogi's command—the First Brigade—has been given to Colonel Oki, hitherto in command of Thirteenth Regiment, who becomes a Major-General.

COUNT OKUMA ON THE SITUATION.

The other day, writes the *Nippon*, a certain gentleman called on the "Oracle of Waseda," to hear what he had to say on the situation. The Count replied in his usual affable manner that the peace negotiations would be satisfactorily concluded and that peace would be restored to Japan and China. The conclusion of peace must not be thought due to the conference between the Premier and the Viceroy: the time was already ripe for it when the two statesmen came together. The moment had really come to restore the light of peace to the clouded sky of the Orient. The negotiation at Bakan was a mere formality. Had it not been for the regrettable act of a ruffian, the conference would have been completed by this time, and the voice of joy would be ringing through the Empire. The wound of Li was now completely cured. He could resume the negotiations suddenly interrupted by that most untoward incident. The Count was, therefore firmly convinced that the conference would terminate successfully, and that the demands of Japan would be accepted in about a week, simultaneously with the conclusion of peace between the belligerents, an alarming piece of news would appear in the press of Europe; news of a character to take the public at large completely by surprise. That the Count could say without any hesitation, but as to the nature of the news, he thought it prudent not to speak fully. Then again, there were many topics to deliberate about on the conclusion of peace, the most urgent having reference to the policy to be pursued by Japan in the occupied districts. The Count thought it very easy to govern the Chinese living in those districts, chiefly because they are absolutely devoid of what may be called national ideas, and because there is much identity between them and the Japanese in race and literature. The first administrative step taken should be to institute a rigid police system. For that purpose gendarmes should be employed, as is the case at present. But it would be necessary to go a step further in the organization of these military-police; they should be entirely re-organized on the footing of cavalry. Such a change would make them more efficient in the discharge of their duties, and would, at the same time, render it possible to reduce their number. The Count enumerated in the end some of the points that he thought essential in administering the occupied districts. They were as follow:—1. To introduce Japanese; 2, to make the people employ the Japanese language; 3, to put into force the Japanese system of education; 4, to forbid communication with the Chinese living beyond the occupied districts, or to allow communication only with certain limited places, 5, to devise means for afforestation, 6, to facilitate communications; 7, to open a regular service of big steamers between important ports at the rate of about once a week.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE ARMISTICE AND ITS JOURNALISTIC CRITIC.

THE *Japan Gazette* has again published one of those malevolent articles, the statements contained in which are intrinsically so impossible that their endorsement by any newspaper editor, however giddy and ignorant, can not be associated with the smallest sentiment of respect for truth. The statements have reference to the recently concluded armistice and are contained in the following paragraph :—

> This armistice then is not unconditional, and we have very good reasons indeed to believe it was not voluntary. On March 30th we wrote that pressure was being brought by the Powers to compel Japan to grant an armistice. We see no reason, from subsequent information we have gleaned, to doubt the truth of that statement. We understand, though we do not guarantee absolute authenticity, that pressure was immediately applied, on the news of the attempted assassination being made public, and when that pressure was resisted the demand became peremptory. To satisfy the Powers interested Japan granted the alleged armistice. The facts largely substantiate this statement. Had the Emperor of Japan been so benevolent as some sycophants would have us believe, the armistice would not have been tardy but immediate.

Now, in the first place, the assertions that the Powers of Europe commenced by exerting pressure on Japan to induce her to grant an armistice, and that when she resisted, their demand became peremptory so that she had no choice but to accede, are obviously irreconcilable with possibility. The Shimonoseki incident occurred on the evening of March 24th. Shimonoseki is a day's steaming from Hiroshima, whither the Minister President of State had to proceed to consult with the SOVEREIGN and with the other members of HIS MAJESTY'S Cabinet. The consultation involved a question of the most vital character; the preparation of the convention of truce demanded careful thought; its final drafting had to be preceded by reference to the Chinese Plenipotentiary. Yet, within the brief space of 5 days all these preliminaries were concluded, and on the 30th of March, the convention received the signatures of the Japanese and Chinese Plenipotentiaries at Shimonoseki. It was a remarkably rapid piece of work. The *Japan Gazette* can not be sincere when it calls the armistice "tardy;" or if it intends to be sincere, must be incapable of the most ordinary process of reasoning.

But although extreme giddiness and superficiality may account for much in a journal so notoriously without moral balance, what are we to say of the glaringly absurd pretence that within the space of five days the Powers of Europe, first, combined to exercise most unjust and unwarrantable pressure on Japan, and, secondly, finding themselves resisted, agreed to convert that pressure into a peremptory demand? Is it conceivable that any writer of the commonest intelligence could honestly advance such a monstrously ridiculous statement? All through this war the Powers of Europe have never once obstruction.

been able to combine for the purpose of intervening between the belligerent states. They have not been without a semblance of plausible pleas for intervention, but one and all they have shrunk from adopting toward Japan a course that the circumstances did not warrant. Yet suddenly, because a solitary Japanese fanatic perpetrates a deed that might happen in any country; a deed repudiated and abhorred by the Japanese nation, the Powers join hands and "peremptorily demand" that Japan shall grant to China an unconditional armistice! The man that credits such a plain impossibility is not fit to be at large; the man that pretends to credit it, plays the part of a buffoon. And the cream of the absurdity is the supposition that between March 25th and March 29th the various Powers could communicate with each other; could agree upon a common course of action; could instruct their several Representatives in Tokyo to adopt that course; could receive a refusal from the Japanese EMPEROR and the Japanese Cabinet in Hiroshima; could then combine to convert their pressure into a "peremptory demand"; could prefer that demand, and could finally secure Japan's consent. Such a series of international proceedings might perhaps, if exceptional celerity were exercised, be accomplished in the space of five weeks. To suppose that they could be crowded into the space of five days would over-tax the credulity of a school-girl. We refer to these points because they indicate the charactor of the *Japan Gazette's* writing. Nothing short of a fanatical mania to strip Japan of all credit, to minimize her good deeds and magnify her bad, could betray a writer into such extravagant silliness. For the rest, we are authorized to state that the grant of an armistice by Japan was absolutely voluntary, and that no scintilla of pressure was brought to bear upon her by any Power, still less by any combination of Powers.

It is almost superfluous to refer to the *Japan Gazette's* ignorant assertions that "Chili is now a vast morass over which it is impossible to move troops with precision," and that, "until about the fourth week in April, further operations must, armistice or no armistice, have been practically suspended." As a matter of fact, March and April are the best months in the year for moving an army in Chili against Pekin. The whole country from the mouth of the Peiho to the capital is then a huge level plain, free from crops or obstructions of any kind, and almost everywhere fit for the passage of infantry, cavalry, or even artillery. If the Japanese want to go to Pekin, the loss of the first three weeks of April is incalculably great. Starting at the end of April, they would have to encounter the summer floods, the summer heat, and the summer crops of millet, a terribly hampering

We do not think it possible to denounce in too strong terms the disgracefully reckless and untruthful attempts persistently made by the *Japan Gazette* to injure this empire's reputation and detract from its successes. Fair and ingenuous criticism, even though couched in trenchant terms, can never be objected to. But a writer that eagerly snatches at every shred of idle rumour to build a cruel calumny; that never has the manliness to correct one of the thousand falsehoods of which he is convicted; that pursues one *métier* and one only, that of blackening the country's fame and libelling its people—such a writer is a public nuisance, and the British community, whose mood towards Japan he so foully misrepresents, may well object to be the objects of the umbrage provoked by such journalism. The armistice in question was undoubtedly a generous and praiseworthy act on Japan's part, as it was also a costly and unwelcome act. The EMPEROR could not have made a finer or more signal *amende* for the outrage of which the Chinese Envoy had been the victim at the hand of a lawless fanatic. That it was also a politic act, we readily admit. Japan did not consult her own conscience or sense of honour only; she consulted also her reputation with the world of the West. But whatever allowance be made on that score, nothing could be meaner, more obnoxious, or less excusable than the miserable devices employed by the *Japan Gazette* to deprive the country of credit fairly belonging to it, and to bring its doings into contempt and disrepute.

ONE LAW FOR ME ANOTHER FOR THEE.

THE denunciation of Japan's claims by foreign local critics, and the assertion of their own country's claims by the same critics, constitute an object lesson at once instructive and amusing. Recently a Japanese newspaper suggested that as China would certainly be unable to pay at once the indemnity demanded by Japan, the latter's best plan would be to temporarily occupy the provinces of Kiangsu and Chêkiang as guarantee for the payment. The leading Shanghai journal found that the most charitable description of that suggestion was to call it "a piece of blatant nonsense." There is certainly no fault to be found with the strength of such language, but its propriety is another question. Why should not Japan occupy Kiangsu and Chêkiang as guarantees for the ultimate payment of the indemnity? If she is to demand an indemnity at all, she must have some security for its payment, unless the demand is to be a mere empty formality. We have not the slightest conception whether the occupation of the two provinces for such a purpose ever entered the brain of any Japanese statesman.

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

men, but as a mere abstract question of right or wrong we ask why on earth Japan should not occupy them? The Shanghai journal responsible for the pretty epithet "blatant nonsense," justifies its language by alleging that the occupation of the provinces "could hardly be regarded as otherwise than a challenge to European interests." That is one of those vague generalities so satisfying to persons lacking energy to think for themselves. What are these indirect "European interests" that are to stand between Japan and her rights of conquest? Whence did Europe derive the mandate to step in without invitation and interfere between two Oriental Powers in the sequel of a war that has not cost Europe a dollar or a life? "European interests" in China have been acquired solely by the sword. Whatever interests Europe possesses in China are based primarily on the right of might. If that right is to be claimed for Europe—and we are not so silly as to imagine that *fin-de-siècle* morality will deny the claim for an instant—then surely the same right must be conceded to Japan. She has conquered China. Embarking boldly in a war from which other nations shrunk, she has beaten her enemy by an effort costly and surprising. Yet now, forsooth, any attempt on her part to reap the fair fruits of her victory, to assert the interests that, as a successful belligerent, she has undoubtedly acquired, is denounced as "blatant nonsense," on the hypothesis that some shadowy obstacle might thereby be offered to the realization of "European interests," similarly acquired in times past by the edge of the sword. If she exacts an indemnity from her conquered foe, as she is unquestionably entitled to do, she must accept China's bare promise to pay—China's promise!—and must not resort to any of the methods commonly employed by Western States to secure themselves against final loss under such circumstances. Evidently, according to the creed of some Western critics, there are never two sides to any question in which an Oriental country is concerned: there is only one side and that is the Occidental. Very strikingly is the fact illustrated by the tone of the Russian journals since the war broke out. Their utterances have been a constant menace to Japan. If she venture to retain any part of the Chinese territory that she has conquered, or to show any intention of permanently occupying the little Kingdom on whose account she has fought this war, then she is warned that she must reckon with a Russia no longer neutral but hostile. But what conceivable title does Russia possess to act as the guardian of Chinese territory or the arbiter of Korea's destiny? It is true that she herself has taken a good deal of territory from China in the past, but does the fact that she has appropriated one slice endow her with a title to regulate the disposition of the whole loaf? From the point of view of abstract morality the thing is wholly indefensible; but if Russia believes that her own tranquillity and safety would be imperilled by this or that transfer of Chinese or Korean territory, the international code of the nineteenth century undoubtedly warrants her interference. If she, however, derives from such considerations a warrant to interfere, why should the same warrant be denied to Japan? We have not observed that the menaces of the Russian press are denounced as wantonly aggressive or extravagant. It seems to be tacitly admitted that since Korea is contiguous with the borders of the great Northern Empire, the latter is justified in attempting to control the occupation of the peninsula. If so, why is not Japan similarly justified? Korea in the possession of a strong aggressive Power might signify Japan's national extinction, and would certainly constitute a perpetual menace to her peace. Has she not, therefore, a practical right to interest herself actively in Korea's fate; to take care that the little kingdom shall not sink deeper and deeper into a condition of helplessness and unrest inviting Western aggression, and to contrive that the development of its capacity for self-defence shall not be fatally checked by the dominance of an Oriental Power opposed to all progress and quite incompetent to protect its so-called dependency? But no: it is the old principle of mediæval times—one law for me, another for thee. Japan acquires Formosa by force of arms, and is immediately denounced as an unscrupulous aggressor, impelled by vain-glorious ambition and pretdatory instincts. But in the same breath her highly civilized judges cry out that if Japan perpetrates the great wrong of seizing Formosa, then Great Britain must have a part of the island—one of its most important parts, too, the Keelung coal mines and harbour. To despoil one's neighbour of his possessions is a grievous deed in the eyes of the righteous man, but since two wrongs always make a right, the righteous man becomes entitled to a part of the spoils. Does not the story read curiously when set down in simple terms?

But what, after all, are these European interests, concerning which we hear so much? They are of two kinds, the interests of aggression and the interests of progress. China has been demonstrated to be a helpless giant. Her huge territories lie at the mercy of any resolute invader. If Europe wants to take advantage of this demonstration by gradually parcelling out the big realm among her own Powers, then, of course, her interest is concerned in not allowing the Japanese to appropriate any part of her projected perquisite. But it is scarcely credible that Europe has framed such a design. She still, in profession at any rate, adheres to her constantly avowed purpose of leading China into the path of progress. Dealing with an inscrutable problem like the mood of the Chinese nation and the possibilities of the Middle Kingdom's regeneration, no one can venture to make any confident assertion. But it does seem fair to conclude that now, if ever, the chance offers of forcing China out of the groove of stagnation. If defeat at Japan's hands cannot awaken her to the advantages of Western civilization, can she ever be awakened? We discover no hope, and therefore we believe that if Europe desired to see the Chinese develop their resources and open their markets fully to the outer world, she should be pleased at the thoroughness of Japan's victory. Here, then, arises the question, how far should that victory be carried? Will it suffice to pause at the present stage, or should the Japanese arms be carried to Pekin? Suffering things to rest as they are now, may mean, and probably does mean, that the very fact of their country's having been attacked will remain wholly unknown to the great bulk of the Chinese nation, and that even the better informed, while admitting that her outworks have been proved vulnerable, will retain their faith in the impregnability of her citadel. The Shantung promontory, the Liaotung peninsula, some remote portions of Manchuria—these, indeed, they will say, have suffered, but Taku, Tientsin, Pekin, and even Mukden have defied attack. Thus, in their eyes, China proper will seem as stout as ever, nor will they discover any sufficient reason to alter the systems under which they have lived safely so long. Some allege that even the capture of Pekin by the Japanese would not seriously move China. If so, China is not to be moved at all. But that, we think, depends greatly on the measures adopted by Japan. It is a profound problem. We do not pretend to do more than indicate its outlines. But we should like to know what prospect is really contemplated by Japan's critics. Do they fear lest she may inconveniently anticipate them by swallowing large morcels of the cake that they would fain preserve for European consumption; or are they jealous lest she should be the means of achieving the task of civilization so long essayed unsuccessfully by the West?

THE JAPANESE PRESS AND THE GOVERNMENT.

IT seems to us that a great deal too much importance is attached to the utterances of the Japanese vernacular press on such a subject as the terms to be demanded by Japan in concluding peace with China. The *North China Daily News*, for example, quoting from our weekly summary of the Spirit of the Vernacular Press, refers to the terms propounded by the *Kokkai* and the *Yomiuri*

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Shimbun, and finds it "somewhat incomprehensible that any journal so long under bondage as the *Kokkai*, and still in the power of the Press Censor, should be permitted to publish sentiments likely to promote difficulties at a time of such great moment to Japan, unless those sentiments are officially approved." The more one scrutinizes this utterance, the stranger it seems. Surely the *North China Daily News* does not imagine that newspapers in Japan can be suspended for causes so slight as it suggests. The Minister of State for Home Affairs has competence to suspend a journal should its writings seem calculated to disturb public peace or to injure good morals, but he can not take any such a step merely because a newspaper states the terms which, in its opinion, ought to be exacted by Japan from a conquered State. Possibly the Shanghai journal imagines that the Press Censor sees the matter intended for publication in Japanese newspapers, and that he is thus in a position to control it beforehand. If that were the system, there could, of course, be no suspending of journals on account of the matter appearing in their columns. The fact is that, if it were desired to check the writings of the vernacular press with regard to the topic of peace negotiations, a special order in that sense would have to be issued by the Minister of State for Foreign Affairs. But why should they be checked? Surely if newspapers have any use at all, it is in their capacity as exponents of public opinion, and the Japanese Government naturally finds it important at the present juncture to acquire the clearest possible information about the views held by the people on the subject of peace. An analysis of the Tokyo journals would show them to be, for the most part, representatives of various political parties. The views they express about the war and its issue are coloured by party considerations and cannot for one instant be regarded as expressions of official opinion. We do not include the *Kokkai* in that category. It is an independent journal, and the terms of peace that it formulates are doubtless in accordance with the views of the editor and of the circle of his immediate friends. But it does not in any way reflect official sentiment, and to infer that it does because it is not suspended for saying that Kiangsu and Chêkiang should be temporarily occupied as gurantees for the payment of a war indemnity by China, is to show very flagrant ignorance of the Japanese press laws and of the conditions existing in Japan. Certainly one of the chief objections to press laws such as those operative in Japan is that, in the eyes of superficial folk, they put the indirect stamp of official endorsement upon every newspaper utterance that does not evoke official condemnation. But when it is remembered that official condemnation can take the form of suspension or suppression only, and that sentence of suspension or suppression can be passed only in the case of matter deemed prejudicial to public peace or morality, there is no difficulty in perceiving that editorial utterances have a wide margin secured against official interference, and that the matter contained in their free margin is not by any means to be regarded as reflecting official views simply because it fails to provoke official interference. The *North China Daily News*, under its present editorship, evidently tries to hold the scales evenly between the two belligerent empires, and we regret that it should fall into an error so palpable as to say of the peace terms published by the *Kokkai*, the *Yomiuri*, and so forth:—"It is difficult to believe that such things can be written without Government approval, if not inspiration, seeing that they are not stopped."

REGULATIONS FOR THE OCCUPIED DISTRICTS.

We hereby give Our sanction to the present Ordinance relating to the Governor-General's Board of the Occupied Districts and order it to be promulgated.

(His Imperial Majesty's Sign-Manual.)
(Privy Seal.)

Dated March 30th of the 28th year of the *Meiji*.

(Countersigned.)

Count YAMAGATA ARITOMO,
Minister of State for War.

IMPERIAL ORDINANCE No. XXXVIII.

REGULATIONS RELATING TO THE GOVERNOR-GENERAL'S BOARD OF THE OCCUPIED DISTRICTS.

Art. I.—For the convenience of controlling the Occupied Districts, the Central Office of the Governor-General's Board shall be located at Chinchow.

Art. II.—The Governor-General's of the Occupied Districts shall be either a Field-Marshal or Lieut.-General, under the direct control of the a General Head-quarters. The Governor-General's Board shall control the various sections of troops quartered in the Occupied Districts, and its chief shall preside over all military matters having relation to the civil administration of the Occupied Districts.

Art. III.—The Board will be held responsible for the guarding and defence of the Occupied Districts, shall maintain the tranquillity of the districts placed under its control, and supervise the various duties arising out of the Guard Regulations. The limit of jurisdiction of the Governor-General's Board of the Occupied Districts will be determined by the General Head-quarters.

Art. IV.—The rights and competence of the Governor-General's Board as to provisioning, sanitation, and the maintenance of discipline in the various sections of the army and the troops under its control, shall be equal to those invested in a Commander-in-Chief of an Army.

Art. V.—The Governor-General's Office shall be under the control of the General Head-quarters in all matters either military or civil. Matters relating to *personnel* are to be dealt with in accordance with the Military Officers' Promotion Regulations and the Promotion Regulations of Military Officers in the 1st and 2nd Reserves. The Head of the Office may be specially invested with the right of promoting officers in accordance with Art. XVI. of Military Officers Promotion Regulations, and Art. IX. of Promotion Regulations of Military Officers in the 1st and 2nd Reserves.

Art. VI.—In accordance with civil necessities, the Governor-General's Office may establish a branch civil administration office and determine its jurisdiction limit.

Art. VII.—The organization of the Governor-General's Board will be according to the appended schedule.

Art. VIII.—The Chief of the Staff will arrange all matters relating to the Board; staff officers and aides-de-camp shall be under the supervision of the Chief of Staff, and attend to the respective duties alloted to them.

Art. IX.—Before submitting matters to the Governor-General's Office the chiefs of the various sections must first obtain the approval of the Chief of the Staff.

THE PARLIAMENT OF RELIGIONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Inclosed I take the liberty of sending you a clipping about which I should be glad to receive more information. I am unable to learn anything among my friends here, either Japanese or foreigners, regarding this proposed competitive exhibition of religions, and, moreover, I doubt it "in toto." But before writing an article requested by Dr. Barrow, the chairman of the Chicago Parliament of Religions, I wish to make sure of what there is to this report. May I ask you to favour me with a line of information regarding it, either in your esteemed paper or privately? You will place me under great obligation.

While I am writing, I will make free to express another wish: could you not give us in your paper a criticism of Professor Ladd's "Mental Characteristics of the Japanese" in the Jan. number of *Scribner's Magazine*? If you do not have this magazine at your disposal I should be glad to send you my copy. I am sure many people, both in Japan and in the West, would be glad to know your opinion of this analysis and characterization of the Japanese mind by Professor Ladd.

With the assurance of highest respect,

I remain, yours,

Doshisha University, GEO. E. ALBRECHT.
Kyoto, April 3rd, 1895.

LECTURE VI. BY JOSEPH COOK.

THE CONQUERING CROSS OF CHRIST; OR, A PEERLESS BIBLE IN THE WORLD'S PARLIAMENT OF RELIGIONS.

I.

Among the echoes of the Word's first Parliament of Religions there has come to us from beyond seas nothing more suggestive and resonant than the news that the Mikado of Japan, a consecrated ruler whose family line antedates the Cæsars, has ordered a competitive exhibition of the religions in his empire. In the list of these he includes Christianity. Each faith is to justify itself by its history, its best books, its characteristic doctrines and institutions, its harmony with conscience, its reasonable expectations for the future, and especially by its acknowledged effects when transmuted into life. The Emperor has caught with large, if not entire accuracy, the key-note of the Word's Parliament of Religions. His scheme is novel and almost startling, but no one fears that Christianity, if fairly represented in this original method of studying its contrasts and contacts with rival faiths,

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

can fail to seem absolutely peerless to educated and conscientious men. Of course, no such exhibition can cause a final verdict to be given, for centuries of experience will yet testify to the merits and demerits of religions, and Christianity fears no rivalry before the court of the ages. This competitive examination of creeds and the resulting deeds is to be held in Kioto, a noble and venerable city, the joy of the whole empire, always spoken of by the Japanese with reverential tenderness and exulting pride. This town is the Jerusalem of Reformed Buddhism. It is crowded with classic and sacred associations. It, or its vicinity, has been for seventeen centuries the residence of the Mikado. Nearly all the members of the distinguished committee in charge of the exhibition are well known in America. (The Boston *Herald*, February 24, 1894.) It was my own fortune, by invitation of officials of Kioto twelve years ago, to stand for three hours, with Professor Ichihara as interpreter, before an eager and crowded assembly in that city, on an afternoon of the Japanese May, fit symbol of spiritual spring-time, and speak on the Relations of Christianity to the Future of Japanese Civilization. (Boston Monday Lectures, Orient, pp. 311-340.) The proposed Japanese exhibition is the first instance in the history of the world in which a large and impartial examination of the merits off competing religions has been ordered by the head of any non-Christian nation.*

This intelligence that the Mikado of Japan is to hold a Parliament of Religions, is almost the actualization of the suggestions made by the distinguished head of Boston University, in the now famous baccalaureate address which he delivered in 1886, and which was soon after translated into Japanese, Chinese and European languages. President Warren, ■ you may remember if you have read that classic, imagined a Parliament of Orientals raising the question, What are the traits of a perfect religion? And the result of their discussions was to show that only a perfect God, maintaining the honour of a perfect law, coming into as perfect as possible relations with men through an incarnation, can satify the demands either of the religious life or of philosophy.

What are we to say was the meaning of Dr. Barrows' entirely justifiable remark that the World's Parliament of Keligions ended at Calvary? It meant that no religion knowo to man except Christianity teaches how we are to be delivered from the guilt of sin. Without denying self-evident truths and really axiomatic propositions, no faith except Christianity shows us how to wash Lady Macbeth's red right hand. (See address on Strategic Certainties of Comparative Religion, Barrows, P. of R., pp. 536-542.)

*On account of the war between China and Japan, and other causes, the Japanese Parliament of Religions has been postponed to 1895, but the calling of such a Parliament by the Mikado remains a significant event.

[We have herrd nothing whatever of this "competitive exhibition of religions." Further, we believe the rumour to be entirely baseless. It is the Japanese Government's policy, openly avowed and adhered to as strictly as circumstances permit, to eschew all interference in religious affairs. Religion being a matter of conscience and individual conviction, is considered by Japanese statesmen to be entirely beyond the pale of official control or influence. Nothing seems to us more unlikely than the step attributed to the Emperor by Mr. Cook. We have not *Scribner's Magazine* for January at hand, but if our correspondent will kindly send the book, we shall be glad to follow his suggestion.—Ed. *J.M.*]

THE TERM "FU."

To the Editor of the "Japan Mail."

Sir,—Sometime ago I asked in your columns whether the term *City* was a suitable rendering for the Sinico-Japanese word *fu*, as it appears in such compounds as *Tokyo Fu*, *Kyoto Fu*, etc. I contended that a section of country larger than the State of Rhode Island, and which stretches from Kyoto to the Japan Sea, could hardly be called a *City* without departing very widely from both British and American usage, especially since in the case of Kyoto Futhere is clearly no such commercial or social unity as would seem essential to a single municipality.

Since the question was discussed, the limits of Tokyo Fu have been extended so as to include Hachioji. Is it not now equally out of place to render the compound *Tokyo Fu* so as to imply that Hachiōji is a part of the City of Tōkyō?

The true solution of the difficulty is to be found in abandoning the attempt to represent the distinction between *fu* and *ken* in our English translations and render both words by the term *prefecture*. The distinction in Japanese is simply historical and represents no essential difference in the make up of the *fu* and *ken*. The sole difference lies in the fact that the *Chiji* of a *fu* is *ex officio* mayor of the central municipality, *i.e.*, the *shi* which corresponds approximately to the English terms *city*, while the *Chiji* of a *ken* has no direct connection with the government of the central municipality under his jurisdiction.

This difference chiefly affects the subordinate organization, the *shi*, and certainly is not sufficient to warrant in a translation the use of a different term to designate the *fu* and *ken*; indeed this sole peculiarity in the *fu* organization is not likely to remained long. It has [illegible] attention of the Diet, and will in all probability soon pass away.

Thanking you in advance for the space I have taken, I remain,

Yours, &c., G.
April 5th, 1895.

To the Editor of the "Japan Mail."

Sir,—I do not wish to be "previous," but the Governor of a *Fu* is called a *Chiji*, whereas the Governor of a *Ken* is known as a *Kenrei*. A *Fu* is a large city in which are many corporations, taking them in the same sense as the City is to London. J.M.B.

Osaka, April 7th, 1895.

The distinction of *Chiji* and *Kenrei* was long ago abandoned. The head of the local administration in either *Fu* or *Ken* is now a "Governor."—Ed. *J.M.*]

THE JAPANESE NEW TESTAMENT TRANSLATION.

To the Editor of the "Japan Mail."

Sir,—That there are many interpolations in the New Testament now in common use is apparent to any casual reader, and I think this feeling is pretty generally felt. I ask permission, however, to make further inquiry of a somewhat different nature in regard to Matt., 28: 19. The Japanese is as follows:—*Kono yue ni, nanjira yukite banboku no tami ni baptisma wo hodokoshi, Kare wo chichi to, ko to, Sei-rei no na ni tote deshitoshi.* The Greek says, πορευθεντες ουν μαθητευσατε παντα τα εθνη, βαπτιζοντες αυτους εις το ονομα του πατρος και του υιου και του αγιου πνευματος. The different English translations are as follow:—King James: Go ye therefore and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost. Revised Text: Go ye therefore and make disciples of all the nations, baptizing them into the name of the Father, and of the Son, and of the Holy Ghost; Living Oracles: Go, convert all nations, immersing them into the name of the Father, and of the Son, and of the Holy Spirit; Rotherham's Translation: Going, therefore, disciple ye all the nations, immersing them into the name of the Father and of the Son and of the Holy Spirit. It will be observed that these four translations, following the Original, are uniform in connecting the teaching, converting, or discipling with "all nations," and connect baptism with "in (or into) the name of the Father and of the Son and of the Holy Spirit," and that the Japanese alone has baptism connected with "all nations" and discipling connected with the last clause "into the name of the Father," etc. The English of the Japanese translation seems to be about this: Therefore you going, to the people of all nations deliver baptism, discipling them in the name of the Father and Son and Holy Spirit. I am not prepared to say this is altogether a mistake; it seems to me however not to be a true rendering.

My only apology for often reverting to these matters is that unless the thoughts of the Spirit are given in adequate language to that the Spirit used we cannot hope that the people among whom we labour will have the mind of the Spirit.

Most sincerely, J. M. M'CALEB.
April 9th, 1895.

QUESTIONS RELATING TO THE MANAGEMENT OF FORESTS.

The following Questions and Replies were presented during the last session of the Imperial Diet:—

(These Questions were put in regard to Replies made by the Ministers of State for Agriculture and Commerce to Questions put by Messrs. Tsunematsu Ryukei and Saito Ryosuke upon the Arrangement of Forests.)

1.—In the Replies it is stated that works connected with State Forests are based upon the estimated receipts, and that the areas and quantity of cutting are determined by the Conservators of State Forests. If so, by what standard are the estimated receipts calculated and how are the areas and quantity of tree-felling determined?

2.—The estimated receipts of State Forests for the 28th fiscal year were 940,150.093 *yen*, or a little above 11 *sen* per one *cho*. At such a time as the present, when national outlays are unusually large, receipts accruing from State Forests should be considered a most important source of national revenue. Is the Minister of State for Agriculture and Commerce satisfied with such a petty yield as 11 *sen* per *cho*? Is these any hope that the receipts will be augmented in the 29th fiscal year?

3.—The Minister issued a private instruction on March 30th, 1894, to the effect that the work of [illegible] State Forests, and State Fields and Mountains should be suspended. Now special sales of State Forests, State Fields, and Mountains were announced in April, 1890, by Imperial Ordinance No. LXIX.; their sale by previous contract in July of the same year by Notification No. 34; the exchange of land in Sept., 1891, by Instruction No. 385; and the Shrines and Temples Trust Regulations in April, 1891, by Notification No. 5. For many years before these dates there were many cases in which State forests had been disposed of, accomplishing, on the one hand, the object of rearrangement, and on the other, augmenting the productive capabilities of the country, so that the people who participated in these arrangements enjoyed the benefits, a result which does not fail to redound to the promotion of State economy. Yet, in March of last year, the Government suddenly changed its policy with respect to State Forests and so forth, and no inquiries and applications made by the people, submitted in virtue of the rights invested in them by Imperial Ordinance and Regulations, have been attended to, nor has any decision been given as to whether their applications will be entertained or not. Some Local Dendrogical Offices have, in compliance with instructions sent by the Central Government, rejected all such applications. The reason assigned for such a step was vague; namely, that an investigation of the whole Forestry system was at present being carried out. Since the suspension of the Notifications and Instructions was announced, a year has passed and the Government's policy is still undetermined, with the result that rights invested in local people by express provisions of law are practically annulled, thereby subjecting them to no small damage. It needs no arguing that so long as the express provisions of law are neither rescinded nor altered the people ought to enjoy the benefits derivable *from* them. By what authority does the Minister of State for Agriculture and Commerce suspend the practical operation of Imperial Ordinances and other rules by private instruction; neglect to carry out proper investigations within limits fixed by Ordinance and other rules; and disregards the rights and interests of the people? Wherein arises this so-called "necessity for investigating the dendrogical system?" It is said that the system of re-arrangement is suspended temporarily; but already a year has passed since the issue of the private instruction. How many more months will be included in that expression "temporarily"?

4.—In the Replies it is stated that an exact discrimination between State forests and private forests is extremely difficult; that it is complicated because more than 10 years have elapsed since the re-assessment of land was carried out, and that a considerable length of time is therefore required for a complete investigation. Yet, what has happened since that re-assessment was carried out more than 10 years ago is not stated; nor is the public allowed to judge whether there-arrangement incidental to that investigation was proper or not. Such matters should not increase in difficulty simply because of the lapse of years, if the first investigation was properly conducted. Was not the great business of the re-assessment of the land-tax, which involved an investigation of the usages and customs of several hundred years, concluded in three years? Yet to rectify mistakes and omissions in investigations carried out at that time, and to determine precise proprietorship, a period varying from three to six years is required for one case. Are not such methods unusually dilatory? It is said that a case in which inquiries have been concluded is still left undecided, while others in which inquiries ought at once to be instituted are left neglected. If so, the Minister must be considered as failing to fulfil his the duties; to hold the rights of the people in contempt, and to disregard their interests. Is this allegation founded on fact? Is the policy hitherto followed to be adhered to in the course of the investigations to be carried out in the future with regard to the proprietorship of forests? If not, what policy will be pursued?

Presented by Nakamura Yaroku.
Supported by Saito Ryosuke and 30 others.

The Government's Replies.

1.—First as to the basis upon which investigations with respect to the compilation of the estimated receipts of the staple products of State forests are conducted: In those localities where works are to be carried out a programme is laid down and the quantity of trees to be felled in a given year is determined in accordance with a fixed routine of periodical cutting, the area of cutting being determined upon the basis of the estimated receipts. In localities for which the compilation of the estimated receipts is still incomplete, investigations as to the felling of forest trees are specially carried out, and the quantity of trees to be felled in the given year is

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

determined by the conservators of the forests. In cases where, in accordance with ancient usages the sale of the staple products of State forests is necessary, to satisfy the demands of the people of the localities, or for the furtherance of mining and other enterprises, the demand is generally satisfied within the limits of the capacity of the forests; the profits accruing from such sales is of course entered in the estimated receipts. The mode of determining areas of tree felling and the quantity of trees to be cut down, varies according to the size of the forests, relative accessibility of localities, relative uniformity of trees, species of trees, and their ages; typical grounds and typical trees are regulated in accordance with their nature and species. On the datum obtained the amount of receipts is estimated.

2.—The inadequate receipts from forests is already regarded with dissatisfaction by the present Minister. Yet as the increase or diminution of the receipts is vitally connected with the relative prosperity of the forests, great prudence has to be exercised with regard to their management. If this consideration is overlooked and attention is only given to the mere augmentation of receipts, the evil of excessive felling would be incurred and the damage done would far exceed the temporary gain. The estimated receipts from State forests in the 29th fiscal year being now in course of compilation it is not possible to state with precision whether the receipts will be increased or not.

3.—The temporary suspension of the system of re-arrangement of State forests and fields by a private instruction issued in March, 1894, was perfectly within the competence of the present Minister. The rights of the people are far from being infringed by it, and it is also untrue to say that the interests of the people are being disregarded, for the precautions taken in regard to the re-arrangement of forests will conduce to the permanent interest of the State. In short, the instruction was issued as a temporary measure to accomplish the object of adjusting the proprietorship of the grounds and to develop the productive power of the land so as to enable the people to enjoy, on the one hand, the benefits accruing from its increased productive powers and, on the other, to promote the progress of State economy. It was to secure these objects with greater certainty that the instruction was issued as a temporary measure. The investigation, however, will, it is hoped, be concluded before long.

4.—The decisions regarding forests—whether State or private—whose titles were not complicated, were duly given within five or six years after the conclusion of the re-assessment of the land-tax, and those now in course of investigation by the Department are mostly cases of re-arrangement petitioned for subsequent to 1890. Forests connected with defective investigations are very rare. Yet documents relating to such cases and reports upon the actual condition of affairs are extremely complicated, while there also exist documents the authenticity of which are difficult to ascertain. Again, there are cases in which two different applications have been submitted from one locality. To satisfactorily arrange such cases repeated investigations are required before a decision can be given. This is the principal reason why the arrangement of forests is not more promptly accomplished. In connection with the policy to be hereafter pursued in investigations of this kind, inquiries are being instituted at present as to the best mode of entertaining such applications and judging them; but so long as the inquiries are uncompleted the policy hitherto followed will be maintained.

(Signed) Viscount ENOMOTO TAKEAKI,
Minister of State for Agriculture and Commerce.

March 18th, 1895.

QUESTIONS RELATING TO THE ADMINISTRATIVE POLICY IN SANINDO.

1.—THE SUBMARINE CABLE TO OKI ISLAND.

The province of Oki, forming a part of Shimane prefecture, is composed of four islands in the Japan Sea. The nearest island to the main land is about 20 nautical miles distant. The number of houses on the islands is over 7,000, and the population consists of 34,000 souls. The islands are far from deficient in marine products, while farming prospects are hopeful. Yet, owing to the want of communication with the mainland everything is in an imperfect state of development. There are excellent anchorages for ships at Saigo, Fukuura, and Nishigo, and should the means of communication be increased, the progress of the little insular province may be attained in a comparatively short space of time. The harbour of Saigo is especially suited for the accommodation of ships. The bay is deep and would furnish excellent shelter for steamers of several thousand tons. A better harbour would be difficult to find in the Japan Sea, while it is of extreme importance for the defence of the northern coast of the main island. The want of telegraphic communication between it and the mainland is a serious defect, both from the point of view of national defence and national economy. The Government introduced in the 6th session of the Diet an estimate for telegraphic communication between the two places. It was carried through the House of Representatives, but owing to dissolution failed to obtain the consent of the Upper House. How is it that the Government has not introduced this estimate before the present session of the Diet? What policy does the Government intend to pursue in regard to this matter in the future?

COMMUNICATION AFFAIRS.

It needs no argument that telegraphs and posts play a conspicuous part in the development of trade and industry. Yet, in those provinces lying along the Sanindo, especially in the two prefectures of Tottori and Shimane, owing to the inconvenience in the means of communication, enterprises and industries are in a backward state. As it is, the additional construction of telegraphs and the establishment of ports are eagerly desired in those prefectures and, for that purpose, petitions and applications have been submitted to the Government, which, however, still neglects them. What policy does the Government intend to pursue?

THE CONTROL OF RIVERS.

Of the rivers in Sanindo the largest are Gogawa in Iwami, Hii-gawa in Izumo, Hino-gawa in Hoki, and Sendai-gawa in Inaba. These are all of large dimensions and measure from 20 to 50 *ri* from source to mouth. The Go river runs through the three districts of Aki, Bitchu, and Iwami, and is the largest of the rivers in Chugoku. Though the above named rivers do more or less facilitate communication, still they often overflow their banks and devaste surrounding plains. The Go river, for instance, rises as high as 30 *shaku* above the normal level, even when the rainfall is of no exceptional character. During the year before last the inundation caused by the Hii, the Hino, and the Sendai rivers were terrible, inflicting indescribable misery. Such accidents are due to the defective management of the forests lying at the head-waters of the rivers, and the want of a regular system for the re-construction of the river-bed. Yet the Government bestows no attention whatever on these rivers. What policy will it pursue in future in regard to them?

Presented by TSUNEMATSU RYUKEI.
Supported by WATANABE SHINTARO and 29 others.

THE GOVERNMENT'S REPLIES.

The financial exigencies of the war is the sole reason why the Bill relating to the estimate for the construction of a submarine cable at Oki has not been introduced in the present session of the Diet.

As to the additional establishment of posts and telegraphs, the Government has hitherto devised suitable arrangements as occasion required and has not failed to ask the Diet for the needed supplies. That this has not been followed in the present Session of the Diet is due to the reasons specified above.

(Signed) WATANABE KUNITAKE,
Minister of State for Communications.

March 20th, 1895.

The Banks of the Go, the Hii, the Hino, and the Sendai rivers are still being examined. The Government intends, on the completion of this inquiry, to carry out suitable arrangements in accordance with the exigencies of the occasion and the condition of the finances of the country.

(Signed) Viscount NOMURA YASUSHI,
Minister of State for Home Affairs.

March 20th, 1895.

QUESTIONS RELATING TO THE HOKKAIDO ABORIGINES.

1.—It is asserted that the School Fund and the Fund for Encouraging Work among the Hokkaido Aborigines received some time ago grants of money from the Imperial Household, the Departments of Education, and of Agriculture and Commerce. Yet it is said that the Hokkaido Aborigines have never derived any benefits from the money and that they are not only ignorant of its disposal but are even unaware of its receipt. Now, if the money was really given, how much did it amount to, and in what way was the money distributed?

2.—The aborigines living along the banks of the Otsu River in Tokachi province of Hokkaido leased or sold to others between the years of 1870 to 1875 fishing grounds which they owned along that river, and obtained for them the sum of over 30,000 *yen*. In order to increase the amount, the money was handed over to the care of the Colonial Department, which is said to have invested it in the shares of a certain steamship company existing at that time. Yet, up to the present date, the aborigines have never received any of the profits arising from that investment and are even ignorant of what has become of the money. Were the shares really purchased and how were their dividends disposed of? A clear explanation is required.

3.—The aborigines of Hiraga-mura, Shinukotsu-mura, and Sarupo-mura, Saru district, Hadaka province, were engaged some years since in agriculture, for which purpose they opened up land to a certain extent. In 1892, when the Regulations relating to the leasing of land in Hokkaido were amended, and a notification was issued by the Authorities to the effect that intending lessees should send in applications in due form, the aborigines living in those villages asked the village officer and a man named Otani Hakuai to submit applications on their behalf, and each family sent in towards the cost of such application the sum of 20 *sen*. The Headman of the time, named Fukushima Koso, conspiring with two or three others, simply endorsed the applications of the aborigines but did not enter them in the office book. He put them aside and then secretly submitted an application and himself obtained a lease of the land which the aborigines had applied for. The applications from the aborigines were then rejected by him on the ground that they were refused by the Central Authorities. Fukushima and his confederates this leased the land and told the aborigines that unless they paid them rent they must surrender the area they had opened, thereby subjecting them to extreme hardship. Now, though it was pretended by the village office that the applications were sent to the central office, it was apparent that the statement was an utter falsehood, for no seal of the village office or of the geographical section of the Hokkaido Board was affixed its the documents. In leasing land in Hokkaido the ordinary procedure is for competent officials to inquire whether such and such applications have been sanctioned. For what reason was the land opened by the aborigines, and upon which they were subsisting, arbitrarily leased to others? Is this really a fact? A clear explanation is required.

4.—A common fund of 1,600 *yen* belonged to the aborigines living in Shiunkotsu and one other village in Saru district, Hidaka province, and was entrusted to a Government office. The official note acknowledging the receipt of the money was kept by the chief of the tribe of that time, named Isanashira. Since the demise of the chief, however, nothing could be discovered about the fund. It is said that only about 300 *yen* remains of the original amount, and that even this sum was arbitrarily used by the Headman of the village and others toward building new houses. If so, the the whole transaction must be considered as extremely unjust. Besides this common fund there are others of a similar nature which are also said to have similarly disappeared. What system is generally followed by the Hokkaido Board when a common fund owned by aborigines is held in trust? A plain explanation is required.

Presented by SUZUKI JYUBI, and 5 others.

Supported by SAKURAI BEN, and 33 others.

THE GOVERNMENT'S REPLY.

The questions concerning the Hokkaido aborigines being now in course of investigation, no explanation can be given at present. Whenever the Government discovers that anything is amiss it will devise means to properly deal with the case.

Minister for Home Affairs.

March 20th, 1895.

The total amount of Australasian revenue obtained in 1893 from Customs, Excise, and other taxation was £29,164,286. Of this amount £10,536,504 was obtained by New South Wales, the remaining £18,627,782 being furnished by Queensland, Victoria, South Australia, Western Australia, Tasmania, and New Zealand, a fact which illustrates the superior resources of the parent colony; the proportion of revenue obtained from Customs alone being lower than in any of the other colonies, with the exception of South Australia.

FORMOSA, THE "BEAUTIFUL ISLAND."

(Translated from the *Kokumin no Tomo.*)

It is perhaps in a measure due to the inaccessibility of the inland mountain ranges as well as to the well-known hostility of the aboriginal inhabitants, that Formosa is, beyond her broad and picturesque western seaboard, hardly known to the outer world. As far as the eastern littoral is concerned one well-known traveller compares it with the dark hemisphere of the moon: we know it is there, but nobody has ever seen it or can, at all events, properly describe it! Despite these evident drawbacks, the island has received the name of *Formosa*, or the "Beautiful," a Latin word which still survives in the modern Spanish *hermosa*, with the same signification. And this appellation has been given to the island because of its luxuriant and remarkable vegetation, its superabundantly fertile soil, and the wonderful semi-tropical climate that is said to be one of the chief attractions of the interior, about which so little is really known.

To judge from the fragmentary history of the island, such as can be gleaned from the works of ancient writers, there seems to be no doubt that Formosa, centuries ago, was inhabited by a race of people very different from the untamed hordes that now infest the interior. They were a race with a high degree of mental development, thoroughly acquainted with the rudiments of the textile and fictile acts, and, above all, adepts in ship-building. The Formosa Channel, that troubled reach of sea between the Chinese mainland and the island proper, has for ages been in ill-repute because of its rapid and perplexing currents, its frequent storms, and the severity of the monsoons. Under these circumstances, it follows that in order to cope properly with the dangers of wind and wave, the early inhabitants of Formosa were compelled to build ships of unusual magnitude for those times. And such indeed was the case. Until three or four centuries ago we read of wonderful pieces of marine architecture: ships more than one hundred feet in length, with two decks, and capable of supporting several scores of people. Nor were these vessels used for peaceful purposes only. Their prime employment was in piracy, in which they and their bold mariners won an unenviable notoriety and became finally the terror of the eastern seas, their raids extending undoubtedly past Cape Cormorin and probably as far west as the Persian Gulf. There may be reason also to attribute the strange appearance of Buddhist symbols and un-American animals—such as the elephant—on the walls of Aztec (*i.e.* ancient Mexican) temples to some very old connection between the Formosans, the Japanese, and the then inhabitants of Mexico. Tumuli have been found on the Mexican coast, in which Japanese armour and weapons were discovered. It is a well-known fact, moreover, that a marine current, which starts south of Japan, sweeps across the ocean to Mexico; in which case it would be a not-too-difficult task for even the comparatively clumsy craft of ancient days to reach the opposite shore. That connection there was, is indisputable.

Formosa, geologically as well as geographically, is an integral part of the Japanese Empire. There can be absolutely no doubt that the Formosa Channel, so shallow and so full of shoals, was once above water. Moreover, it is most easy to trace a distinct geological connection between the whole range of islands that wind northwards from Hainan to the Kuriles. The links in this great insular chain are Hainan, the Pescadores, Formosa, Ryukyu, Ogasawara, the Japanese Archipelago, and the northern isles. Everywhere we find practically the same geological formation, the same fossil shells and fossil plants. Nor was this connection one of very olden times, at least geologically speaking. I have elsewhere endeavoured to prove that the island chain was properly a huge peninsula, or semi-continent, not much over 8,000 years ago. I base this conclusion not only on the discovery of very recent fossils, but also, and principally, on the fact that certain still extant land-shells are to be found in very significant situations. One very beautiful and fragile species is at present to be met with only on the top of a certain hill in Hongkong, in the highlands of Formosa, and near Ashinoyu in the Hakone Mountains. Another small and delicate tree-snail, of the kind popularly know as *kiseru gai* in Japan, *occurs only on two trees near the modern city of Foochow, and on the stone lanterns lining the approach to the shrine of Iyeyasu in Uyeno Park, Tokyo.* Now it is absolutely impossible for the snails to have gone to these two places of their own accord; investigations have rather tended to prove that snails are a sluggish and retiring nature and not at all fond of voyaging. There is no instance, I believe, of a snail having ever been rated as a cabin passenger on any ship of the Yusen Kaisha. Moreover, the genus to which these tree-snails belong, or rather the sub-order, is very ancient, being the prototype or earliest known form of the snail in question. The conclusion forced upon the scientist is that these snails were once widely spread over the Far East of eight or ten thousand years ago; that there was definite land connection between the eastern Chinese sea-board, Hongkong and the adjacent islands, Formosa, and Japan; that in consequence of enormous upheavals of land in some places and deep sinkings in others, the connection was abruptly broken off, including the occurrence of great climatic changes. In consequence of all this, the snails decreased in number, and are only to be found in a few sheltered and particular localities, and have almost became extinct in the fierce struggle for existence with other and stronger rivals better adapted to the new order of things and with special conformations to their environment. I should here like to make a passing reference to the old story of Fuji and Biwa-ko, according to which both the Peerless Mountain and the beautiful lake were formed in one night. There is, it may almost be taken as an axiom, no ancient legend which does not contain some modicum of truth, and does not the conclusion lie near at hand that this ancient tale may have actual reference to some mighty cataclysm of thousands of years ago? Some tremendous natural catastrophe which rent the mountains asunder, caused islands to sink and others to rise, tore Japan and a countless host of islands from the mainland, and made the eastern world very nearly as we now know it? Of course these things may not have happened in a "single night." Such a phrase should be taken in the sense of the "six days" of the Biblical Genesis. I like, however, the term "night" in this connection. It evidently has reference to a period in which the sky was darkened with vast clouds of smoke and ashes, when the orb of day was blotted out, and fearful volcanic action occurred here and there and everywhere. Such things have been, on a less grand scale, even in quite recent times. I need scarcely recall the names of Krakatoa and Bandai, or the dreadful earthquakes in Sicily a few years ago; not to speak of the terrific Lisbon disaster, or even Japan's memorable earthquake of the third year of *Ansei*. Some such forces must have undoubtedly wrested the present islands from the primeval Continent; and concluding from the above scientific data and from reasons that it would be too long to give in particular, I believe that the greatest convulsion occurred about 8,000 years ago, in round numbers.

IS THE ASSERTION THAT THE JAPANESE ARE BARBARIANS TRUTHFUL AND JUST?

By the Rev. H. Loomis.

The one act that has brought a stigma upon the Japanese army in the prosecution of the present war is the conduct of the troops at Port Arthur. That this single event should be made a criterion for an estimate of the Japanese character is entirely unreasonable and a misrepresentation of their spirit and methods of which the nation may well complain.

From a careful reading of the history of the war, and extended observation of the conduct of Japanese soldiers, I have been fully convinced that the impression has been made abroad by the sensational reports of some of the newspaper correspondents was erroneous and unjust.

The Vice-Minister of War has given the following statement in regard to the case; and it is the opinion of one in the highest authority in Japan. The communication is as follows:—

Head-quarters of Army Department,
Tokyo, February 28th, 1895.

Dear Mr. Loomis:—

In regard to the massacre which is said to have occurred at Port Arthur during four days after its capture, I can say a few words, judging from report received from the proper authorities, and from the general state of affairs on the battle-fields which I have seen.

As a general thing the hostile spirit of soldiers is greatly diminished at the end of each battle, much more on the next day, and still more on the next day, and still more on the fourth day; so I firmly believe that such a cruel spirit could not have continued through four days.

As is well known, Port Arthur is a very small place at a point on the sea coast, and as there is no way for the Chinese soldiers to retreat, the number of killed and wounded was of necessity greater than that on an open field: and there is no doubt that those dead bodies were piled up upon one another within the limited space which constitutes Port Arthur. The battle-field ought to have been cleaned up soon; but on the very day of the capture of Port Authur there came a dispatch informing the commander of the commencement of another battle at Kinshu, and also that the defeated Chinese were fleeing from the Port by both the East and West coasts of the peninsula. So our army was engaged so busily in meeting these emergencies that there was no time to remove the dead. In the meantime, the attention of those reporters, who were simply lookers-on, was solely attracted to Port Arthur, so that they hastened to see this most famous place. Under such circumstances those who went on the next day might have seen the sanguinary state of affairs and mistaken it for the cruelty of that day: and so with the others who went there on the third and fourth day. This seems to have been the cause of their misjudgment that the massacre continued for four consecutive days.

Major-General Kodama.

It will be seen that there is no denial that many Chinese were killed on the first day of the fight. At the same time this is spoken of in terms that show a due consideration for what is to be expected from civilized troops in time of battle.

The question then is, was the shooting of so many of the Chinese within the limits of Port Arthur an act of exceptional barbarism, and sufficiently important to make it a test of national character and a matter of universal reproach.

On this point I have been favoured by the opinion of unprejudiced persons of the highest authority; and who were eye-witnesses of what occurred; and they all agree that the newspaper reports were exaggerated and give a decidedly false impression. It was also the unanimous opinion that, *under the same circumstances*, any troops in the world would have probably done the same. The sight of the mutilated bodies of their comrades, and the disfigured heads hanging to the trees as they marched on and through the town, was such a spectacle of horror as to exasperate any body of men and provoke them to deeds of revenge.

As to the continuous slaughter of Chinese soldiers and citizens, this is spoken of as improbable by Gen. Kodama, and one who had equal opportunities with the newspaper reporters to see what took place says that he heard no firing of guns and saw no killing after the first day. He was able to recognize the bodies of the slain which were lying in the streets as those who fell on the first day, and not therefore victims of fresh slaughter as has been stated.

In reading the sensational reports, it is apparently claimed that the Japanese soldiers were exceptionally cruel and their conduct without precedent among civilized people.

But the history of war in all times and under the most favourable circumstances gives instances of actions performed and methods employed that are equally unjustifiable and to be regretted.

I have but to refer to the blowing of the Sepoys from the cannon's mouth at the time of the insurrection in India; and I saw in December, 1863, thirty-five batteries planted just opposite the city of Fredericksburg in Virginia and shot and shell poured into that town with its thousands of helpless and inoffensive people. The same thing was done to the city of Charleston for several weeks or months; and yet such things have been regarded as among the ordinary incidents of war.

I have recently visited most of the Chinese soldiers who were captured in battle, and are now in Japan as prisoners of war, and in every instance the treatment has been exceptionally considerate and generous. While I was able to see only a glimpse of their daily life, I was abundantly satisfied that no other nation would have done any more, and probably not as much, for the comfort and welfare of their foes as has been done here. Not only have the sick and wounded received the same care and treatment as Japanese soldiers, but even artificial limbs have been supplied by order of the Empress to all who were in need of the same.

A captain of one of the Chinese torpedo boats, who was captured at Wei-hai-wei, told me that he and his companions were not only supplied with abundance of ordinary, and even special food, but they were given by their visitors more fruit than they could eat, as well as wines and other luxuries. In consideration of their wishes, four of the officers were retained at Hiroshima, instead of being sent to Tokyo along with their comrades.

I saw also in Tokyo a Japanese sentinel close the temple gate where some Chinese were confined, because the crowd that had gathered in front were disposed to be boisterous and address them in derisive terms.

In the four hospitals and three barracks that I have visited containing Chinese prisoners, I have found the most pleasant and cordial relations existing between them and their attendants. One of the captured officers said: "We have been told that we should be allowed to go out freely, were it not that the Japanese authorities fear that harm might come to us from some rough and irresponsible persons."

I have no desire or purpose to vindicate the unjustifiable killing of any human being, but I

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

do wish to object in the strongest terms to any unwarrantable and injurious discrimination against a people that have shown such a spirit of tolerance and charity towards their foes as to render them worthy of the highest praise.

It has been justly and truthfully said that in a conflict where such horrible cruelties have been practised on the part of their enemies, it is a wonder that the Japanese soldiers have been so well restrained, and instead of a single instance of yielding to the spirit of retaliation, their forbearance should have been so uniform and great.

THE POSITION OF JAPAN.

BY AN EX-DIPLOMATIST.

At the commencement of the present war between Japan and China, the opinion and the sympathies expressed in the press of Europe were, in general, unfavourable to China. The motives of Japan in attacking China were declared in many quarters to be either "insufficient," "discreditable," or "unavowable," or all three together; and her ultimate defeat was proclaimed to be inevitable. She had been "foolish and blustering" in attacking a bigger Power than herself, and would have to pay for it. The predictions of her discomfiture—many of which were pronounced in harsh words and with unhesitating precision and certainty—have not, however, been realised thus far. It happens that, on the contrary, Japan has shown herself, hitherto, to be the more capable and therefore the stronger of the two belligerents; the differences which have been revealed between their respective state of preparation, and especially between their totally opposite conditions of organisation and skill, are staring everybody in the face. The army and navy of Japan have proved that they possess the same sort of qualities and can render very much the same services as European forces; while what are called "the limitless resources" of China have been shown to consist of unavailable materials, which, so far as the present conflict is concerned, can scarcely be got into any organised and utilisable shape. As a natural result, and because nothing succeeds like success, European opinion is turning round, and is beginning to transfer its goodwill from China to Japan.

The moment may therefore, be a convenient one for supplying some additional reasons for this change of feeling, and for showing that Japan has right, as well as readiness, capacity, and success, on her side. The immense number of articles which have appeared about the war in the newspapers and magazines of most of the countries of Europe have, as a rule, treated the subject solely from the point of view of the West; scarcely anything has been published in the interest of the East. There may not be much to say on the side of China, but there is a good deal to urge on the side of Japan; and the intention here is to put together some of the elements of that portion of the subject. With the exception of M. de Blowitz, Sir Edwin Arnold, and one or two others, no one has spoken up, thus far, for Japan. As a mere matter of fair play, it is just that what can be said in her behalf should be brought before the public. It is of course difficult to obtain thoroughly reliable information; but enough can be discovered, by any one who takes the pains to search, to render it possible to judge the general situation.

Three main questions are worth examining:—

Why did this war begin?

Under what conditions is it likely to end?

What will be its ultimate effect on the position of Japan towards other countries, and especially towards China?

Two false ideas are current as to the origin of the war. One is, that Japan is an "aggressive," "precipitate," "conceited" land (these are some of the epithets that have been applied to her), who longed to use her new army and navy, and was delighted to find an opportunity of testing them. The other is, that the Japanese Government have sought to escape from the home difficulties resulting from opposition in the Parliament, by the counter-irritation of a foreign war. It has not occurred, apparently, to any of the writers who have put forward these explanations to examine the real facts of the case; to consider whether they, in themselves and by themselves, do not sufficeto explain and justify the course which Japan has been forced to adopt; and to tell the story on those facts, so far, at least, as they can be learned in Europe.

It has been announced by telegraph that at the opening of the Japanese Parliament in October, Count Ito, the Prime Minister, gave a detailed explanation of the events which led up to the rupture, and read the correspondence exchanged with China. But as the text of his speech has not yet reached us, it cannot be quoted here. The materials for a history of the case must, therefore, for the moment, be taken from less authoritative sources.

There appeared in the *Japan Weekly Mail* of 11th August an article headed "The Korean Imbroglio," which gave the completest and most truthful account of the preceding circumstances which has yet been published. The following statement of those circumstances is based, in part on the article, with additions from elsewhere. It is difficult to suppose that the statement can be read without recognising that, instead of being the product either of pugnacious self-assertion or of a desire to escape from home difficulties by outside distractions, the war was in reality thrust upon Japan by the march of events, which, in consequence of their long and irritating accumulation, left her at last no alternative but to fight. No one but the parties to a quarrel can determine how much they will endure for the sake of peace; no looker-on can measure the exact degree of provocation which others feel: all that can be fairly asked, in the interest of outsiders, is that arms shall not be employed until a good deal has been endured, and until the provocation has become too intense to be borne any longer. In this case Japan endured much and was provoked much.

But before describing the immediate origin of the war, it is essential to draw attention to two general causes which have been operating for some time, and which have prepared the ground for the present conflict, irrespective of the specific motives which have precipitated it.

The first of those two general causes is the decision adopted by Japan a quarter of a century ago to prepare herself, by the aid of Western methods, to take a very different place in the world at large from that which either she or China had previously filled. China has never forgiven Japan for adopting that decision: she has regarded it as a disgraceful abandonment of Eastern Asiatic conservatism, and has looked on at its working out with constantly augmenting scorn and rage. A perpetually widening separation has stretched out between the countries in consequence thereof; each despises the other's convictions; motionless China regards advancing Japan as a traitor to the principles and practices which were once common (in a general way) to them both; advancing Japan regards motionless China as a narrow-minded, antiquated bigot. As the *Japan Mail* remarks, "the struggle in Korea is not to determine China's shadowy suzerainty or Japan's political supremacy, but is a contest between Japan progress and Chinese stagnation." There lies the main starting-point of the actual war, which has, as a matter of fact, been becoming more and more inevitable for years past. From the moment when Japan made up her mind to adopt European theories and systems of action, and to a build a new power for herself upon them, China, despising the means but fearing the results, became the latent enemy of Japan. A struggle of ill-will commenced; that it would end some day in war has long looked certain to everybody who knew the nature of the relations that were growing up between Japan and China. Korea has supplied a pretext; but the war was in the air, and would and must have come sooner or later, even if Korea had not existed. Japan had diverged from the path which the two nations had so far followed with approximate parallelism, and China for that reason regarded her as an apostate and a prospective foe.

The second general cause lay in the ideas and attitude of China towards the small States around her frontiers. She viewed and treated them for a long time partly as vassals, but mainly as "buffers for softening the shock of foreign contact." In her peculiar tactics, however, they were to be buffers without imposing any responsibilities on the country they fenced in; they were to be vassals without the protection of a suzerain behind them; they were to bear the blows, but China was not to shield them, or even to doctor the wounds they received in her service, unless on each particular occasion she happened to think fit to do so. Her shadow was cast prerogatively over them, but they were not to expect that a strong hand held a sword behind the shadow. They were told they were independent of all the world, excepting China herself; but China took no steps to guard their independence when it was attacked from elsewhere. So one by one the border States have been occupied and annexed by others. On the frontier of what used to be called Chinese Turkestan (which is regarded as an inherent part of the empire, and not as a vassal State) China has, thus far, it is true, maintained her claims against Russia; but in Tonquin, Annam, Siam, Burmah, we have seen examples of the fashion in which she behaves towards territories she once pretended to call her own. Her attitude was, until quite recently, equally vague and hesitating towards Korea: no knew what she claimed there, and it was not unreasonable to suppose that Korea would be left to shift for herself, like the others. All this must be borne in mind in judging the growth of the question we are considering, for the effect of this permanent vacillation has been to convince everybody, Japan included, that China had no principles of frontier policy, that neither her declarations nor her action concerning border States could be relied on, and that in reality, she had renounced all further influence over them.

And now as to the specific causes which, out of this general situation, have brought about the war.

While abandoning, one after the other, her so-called border States, and while leading all the world to suppose that she had given up meddling with them, China seems (from what we have learnt of late) to have put Korea apart. It must be recognised that she had a reason for desiring that Korea, more than any other outlying retainer, should remain, in some way, under her control. The reason was that, if Korea passed into foreign hands, the command of the Gulf of Pechili and of the sea-route to Pekin would pass with it, while Manchuria, the cradle of the present Chinese dynasty, would become threatened. As those consequences would be serious, it was desirable to preserve Korea. But, according to the ways of China, she must be preserved, not by plain speaking, not by telling other people what was meant, not by proclaiming and carrying out a stated policy, but by the traditionary ancient methods of reservations, for to this day China knows no others. Korea was not to be declared a vassal kingdom; no exposition was to be made of the exact nature of her connection with China: on the contrary, that connection was to be *left* in entire uncertainty, so as to enable China to behave about it in any way she liked, according to what might happen. But at the same time (as has come out now) she was to be kept secretly, by indirect processes, without anybody knowing anything in the antique position of undefined dependence which has failed on other boundaries. She was to be left free towards others, but to be kept subordinate towards China; she was to be independent in public, but dependent in private; she was to be mistress of her own destinies so far as the world could see, but directed by China as between their two selves. As an outcome of these nebulous tactics, Korea concluded in 1876 a direct treaty with Japan, in which she (Korea) declared herself to be an independent State. The exact words employed were, "Korea, being an independent State, enjoys the same rights as does Japan." Direct treaties implying similar independence were signed successively with other Powers, and Japan became entitled to suppose that, if words meant anything, China had abandoned Korea just as she had abandoned her south-western fringes. But although China kept carefully out of sight, made no objection to the treaties and did not say a word about them, although she appeared to claim no longer any suzerainty over Korea, and almost ceased (externally and visibly) to occupy herself about her, she did not by any means intend, at the bottom of her heart, that the freedom these treaties presupposed on the part of Korea should become an effective reality. Her eternal system of subterfuge, equivocation, and back-stairs intrigue was kept going furtively, but in this case resolutely. Korea was to proclaim herself free to make treaties, but she was not to be free to execute them. To prevent her from executing them a Chinese agent was placed at Söul, with instructions to profit by the disordered condition of the local government in order to organise Chinese influence, and to inaugurate a system of concealed but steady interference in the home and foreign affairs of Korea. Then it happened that, as Japan was the closest neighbour of Korea, as well as by far the most important commercial dealer with her, it was precisely Japan which felt most keenly, in every-day contact, the difficulties thrown in the way of the working of the treaty. And this was not all; those difficulties extended to everybody and everything, but they were far more numerous, persistent, and irritating towards the Japanese in particular, because of the hate of the Chinese for a Government and people whom they regarded as renegades and as unworthy imitators of Europe. In every form, in the smallest details of daily intercourse, in commerce, in matters of administration and police, the Japanese who had come into Korea under the treaty were made to feel that China was doing her utmost, by underhand and clandestine processes, to render the country untenable for them: they were everywhere hampered, foiled, and opposed by Chinese hidden action.

This action operated principally through the family of the Korean Queen. That family had

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

managed to get hold of every department of State, worked them all for its own profit, and thought it clever to support itself in power against local hostilities by the assistance of the Chinese, with whom, in return, it allied itself against Japan. Under the combined pressure of the Queen's party and of the agents of Pekin, the Government of Korea fell into disgraceful disorder; bribery and corruption were the bases of authority; the misery of the people became such that rebellions were frequent, and were suppressed with growing difficulty. In 1882, and again in 1884, the partisans of China attacked the Japanese Legation in Sōul, and the Japanese Minister, Hanabusa (though he happened to be a particularly brave man), had to fly for his life. In consequence of these proceedings Japan claimed and obtained the right to maintain a guard at the Legation, and in 1885, after urgent representations and difficult negotiations, concluded a special convention with China (who had at last shown her hand) for the arrangement of difficulties in Korea, by which, amongst other things, each nation pledged itself not to send troops into Korea without notifying the intention to the other, so placing them both on a footing of equal military rights there.

But notwithstanding this convention, China continued her occult interference in Korea, and went on raising so many annoyances for the Japanese residents that their situation became more and more intolerable. They had no longer before them the independent country which had signed the treaty of 1876, but a country which had relapsed into dependence on China, which took all its orders from China, and which simultaneously had fallen into the most wretched condition of misgovernment. Hearts grew full of rage: the local situation was the external motive of that rage; but underneath the external motive lay festering international hate,—China regarding Japan more and more as a deserter from the common cause of old Eastern Asia, and Japan beginning to ask herself whether any argument other than the active employment of the new forces she had constituted for herself, under the influence of Western example, would convince China that she had been right in following that example. This state of things was visible to every one who was in a position to watch what was passing; so visible, indeed, that it is incomprehensible that no one on this side of the earth has told the story already. The *Japan Mail* alone has narrated it; and few Europeans see that paper.

Again, the interior condition of Korea was becoming such that motives and opportunities were growing up of a nature to render possible the intervention of other Powers, a contingency which Japan could not view with indifference. To leave Korea to drift into such a state of disorder and anarchy that another strong hand might find occasion for putting down its grasp, was not an eventuality which Japan could allow to assume a shape. Korea is the immediate neighbour of Japan, to whom the presence of foreign forces there would have been most offensive. Japan called earnestly, at Pekin and at Sōul, for reforms, in order to avert this contingency; but no real answer was made to her communications.

So things went on, strained and irritating: old deeply-seated fundamental hates and fresh superficial dissensions reacted on and augmented each other. The Korean people got into such misery that, in the spring of this year, a serious insurrection broke out against the Government. The queen's party, trembling for their authority, appealed to China for aid to quell the revolt; 2,500 men were sent at once from Tientsin, and notice of their landing was given to Japan, in conformity with the convention of 1885.

By that time the situation in Korea, as viewed from Japan, had arrived, in substance, at this—so far, at least, as it is possible to define it by the light of accessible information. Here is a country, so close to us that we cannot fail to feel keen interest in it, both politically and commercially; a country with which we have a treaty bestowing on us certain clearly defined rights, which rights we cannot exercise because China stands in the way; a country which is so odiously misgoverned that it is becoming a source of varied dangers to us. It is hopeless, as things stand, to think of introducing reforms into it; for China—who has revived the claims of suzerainty which, a short time ago, she kept so carefully out of sight that, especially with the experience before us of her attitude on other frontiers, we are justified in supposing them abandoned—cannot be expected to allow in Korea administrative changes which she will not apply at home. By sending troops, indeed, to support the present Government, she proves that she means to keep things as they are. Under such circumstances there is nothing left for us but to act for ourselves.

So Japan, following the example of China, despatched regiments to Korea, and laid before the Cabinets of Sōul and Pekin a programme of the reforms in Korea which, for her own safety, she considered indispensable.

From that the war has grown.

Now, after this statement, which is correct and fairly put, will any one deny that Japan had reason on her side, and that she could endure no more? What war in Europe has ever been commenced for more justifying motives? The general attitude of China towards Japan has been for twenty years unfriendly, suspicious, contemptuous; her particular attitude in this matter of Korea has been double-faced, stealthy, wilfully deceptive. However much it may be regretted that the war has begun, it must, at all events, be avowed that Japan was driven to it by a long accumulation of grave causes of complaints. The assertion that she wished for it, that she had been preparing for it, that she meant to have it, is easy enough to make; but it proves nothing. It is probable that she did know it had to come; for all fairly well informed outsiders have been expecting it, though none of them could have known a tenth part of the details which must have been before the eyes of the Cabinet of Tokyo. It may be that, wisely and prudently, Japan got ready. But she was provoked to get ready by the conduct of China alone. If China had had left Japan to travel on her road, had respected the new principles of action she had chosen to adopt, and had allowed her to carry out her treaty with Korea, the war would never have occurred at all; there would have been no reason for it. China has caused the war by her unpardoning jealousy of the progress of Japan, and, subsidiarily, by her tricky deceit in Korea. It is time the European public recognised this truth.

We come now to the second question, Under what conditions is the war likely to end?

If we may venture to base an opinion on what has happened already, and presume that the causes which have hitherto given superiority to Japan will continue to work for her in the future, it may be supposed that, in some degree which cannot for the present be determined, Japan will go on conquering, and that the war will end when China has had enough. If so, and if the two sides are left face to face to make a settlement for themselves, China will necessarily have to yield compensations to Japan. But here comes in the possibility of that foreign intervention which has been so much but so vaguely talked about.

What pretext exists for foreign intervention? We do not know what motives were invoked by Lord Rosebery in his recent unsuccessful proposals to the Powers; judging from the evidence before the public, it looks improbable that—however urgently China may beg for it—intervention will be attempted while the war lasts. The fight between Japan and China, regarded merely as a fight, concerns no one but the parties to it; it is only by its collateral effects that it can touch others. Thus far those collateral effects have been limited to relatively slight inconveniences; neither the persons nor the trade of foreigners have been damaged by the war itself. And even if, in certain cases, some little harm has been done to commerce, that harm has been far more than compensated by the new special and very lucrative business which the war has brought into existence, to the great benefit of neutrals. The risks to foreigners in China arise from Chinese temper, with which Japan has nothing whatever to do, except indeed to point to it as showing how barbarous is the condition of China, and how impossible it is to trust her. She might point, just in the same way and with as much reason, to the brutality shown to Japanese subjects in China when the war began, and might compare it with the decree of the Mikado of September 4, authorising the Chinese to remain in Japan and placing them under the protection of the authorities, which decree has been scrupulously respected by the Japanese people. The necessity of protecting foreigners in China is a regrettable accident, but it can in no way affect the rights of Japan as a belligerent. The difficulties provoked directly by the war must go a long way beyond the local question of the safety of foreigners in China, before Japan can be held responsible to outsiders for any accessory consequences, and especially before outsiders can claim, towards Japan, any right of intervention. It may be presumed that Japan, who has shown intelligence enough in the management of her affairs, will take good care that her naval and military operations shall be so conducted as to supply no valid excuse for intervention.

And if no such excuse should be found while the war is proceeding, is there any reasonable probability before us that intervention would become more justifiable when the moment arrives to discuss terms of peace? That again would depend, so far as reason can furnish an answer to the question, on the effect on the interests of other Powers of the conditions which Japan (supposing her to go on winning) might seek to impose on China. No European can pretend to say now what those conditions would be: Japan herself cannot be in a position to define them yet, for they would of necessity vary with the degree of her final success, and with the surrounding circumstances of the time. We may suppose, if we like, that Japan would ask for a money indemity, for guarantees that China would behave to her thenceforward with the respect to which she is entitled, for the independence of Korea, for the introduction of settled government there, and perhaps for the formal entry of the Japanese army into Pekin (if it were not taken already), and for the temporary occupation of certain districts until the conditions of peace were carried into execution. So far the conditions would be so moderate, and would follow so closely the habitual practices of Europe, that no foreign Power could find in them any plea for intervention. But let us imagine, as mere hypothesis, that Japan asked for territory as well. What then? The newspapers have been suggesting that there would be no objection to her annexing Formosa, but that there would be resistance if she attempted to acquire any continental territory, either in Korea or elsewhere. So, if the papers which have treated the question have judged correctly, the prospect of intervention at the conclusion of peace may by considered to be limited, practically, to the dispositions which Japan might manifest as regards annexations on the mainland.

Now it may be that Japan would not have the slightest desire for any such annexations,—no one knows, or can know, one word about it; but, as the question has been publicly raised, it is as well to ask what right others would have to deny to her the prerogatives of extension which they themselves are applying all over the earth? As all the great European Powers are seizing outlying land, however distant from them, wherever they can lay their hands on it, with what reason could they tell Japan that they would not allow her to incorporate into her empire any portions of the provinces of a vanquished enemy, even if they lay at her very doors? The answer is, of course, the right of the strongest. Which means that if intervention by words did not suffice to dissuade Japan from taking Asiatic territory—on the hypothesis that she may desire to do so, which has been laid before the world, but about which nobody knows anything whatever—intervention by force would be employed to prevent it.

But who would employ force? Not Germany; neither of them would feel any interest in the affair. Not England (unless, indeed, Russia intervened in a manner which would oblige England to act for herself), for it would matter nothing to her, provided the Chinese markets for her goods were in no way affected, if Japan obtained a settlement on the mainland. Russia, however, is in a different position, and it is to Russia that the newspapers point when they talk of resistance.

Just as the objects of England are exclusively commercial, and in no way political, so are the objects of Russia exclusively political, and in no way commercial. Just as England wants no territory at all in Eastern Asia, so does Russia long for every yard of it she can acquire. Russia cannot allow Japan—the newspapers have been insisting on this—to settle herself either in Korea or in Northern China; she can permit no influence to be established there which could in any way interpose a barrier to her own extension when the time comes. The presence on the mainland of an energetic, well-armed Power like Japan would constitute an obstacle; therefore no such obstacle must be constituted.

Of course all this is mere speculation, based on nothing but presumption; but in considering the possibilities of the future, where there are no ascertained facts to guide us, speculation cannot be avoided. And in this case it is all the more excusable because, if there are no facts, there are, at all events, glaring notorieties of intention on the part of Russia, and there have appeared recently most explicit declarations in certain organs of the Russian press. Individual opinion, which may be right or may be wrong, has no need to express itself here: the fixed impression of the greater part of Europe is before us, and that impression is that Russia is waiting for Manchuria, and will take it, with Korea and the northern provinces of China as well, if anyhow she can get them. The majority of people are convinced—and no protestations of injured innocence from Russia will unconvince them—that Russia means to do all this, just as she has pursued for fifty years the absorption of all Central Asia. But, at the same time, everybody is ready to suppose that she will wait patiently until the fruit is ripe enough to pluck. There is "a sick man" at Pekin as well as at Constanti-

nople. This being the general condition of European public feeling in the matter, it is probable that there would be difficulties for Japan if when discussing hereafter the terms of peace with China, she should raise any claim for continental territory, even in Korea. Up to that point, however—and that point may never be reached—there is no sufficient reason, as things stand to-day, for apprehending any interference on the part of European States.

Supposing, therefore—and something must be supposed, because otherwise nothing could be said—that Japan does finally come out the victor, she will be left, in all probability, to make her own terms of peace, provided she asks for nothing on the continent.

The third matter for consideration is the effect of the war on the future position of Japan towards other countries, especially towards China.

It is impossible to doubt that, whatever be the fashion in which the war may finish, its foremost and most permanent effect will be to raise Japan to a very different standing from that she has occupied hitherto in the world. She has supplied such unexpected proofs of her capacity that opinion about her is rising high. Everybody recognises that, suddenly, a new force has come into existence in the East. The campaign on sea and on land has shown that Japan possesses a practical adaptability, a faculty of applying teaching, a spirit of order, of elaboration, of organisation, which puts her entirely apart in Asia, and lift her to a level with Europe.

In the present day the value of nations is counted mainly by their fitness for fighting, and it cannot be denied that from that point of view Japan has shown herself to possess much value. Either as an enemy or as an ally she is now well worth the consideration of other nations. But it happens that her progress has not been towards the power of war alone: it has stretched out simultaneously in almost every other direction. Here are half-a-dozen facts as examples of what she has been doing. Her population has augmented *from* 33 millions in 1872, to 41 millions in 1892. Her foreign trade, the tonnage of her merchant shipping, and the movement of vessels in her ports, have all doubled in the last ten years. Manufactures of varied natures have been established and are prospering actively—some of them, indeed, brilliantly. The national wealth is increasing rapidly, one proof whereof is that the whole of the war loans issued hitherto have been subscribed inside the land. And—more important and more striking than all the rest—education is compulsory, and the schools of Japan are almost as numerous as those of Great Britain, while the level of teaching in them is quite as high. There are 26,000 primary schools in Japan, and, according to the last Statistical Abstract, there are 31,000 inspected schools in the United Kingdom and Ireland.

This universality of advance is an argument in itself. Hitherto it has been ignored, and the oppressive treaties which Japan signed forty years ago, in utter ignorance of their real meaning, have been maintained against her, as if she were still in her former condition. But they can be kept up no longer; this war has killed them. England, to her credit, has been the first to change them without waiting for the evidence of the war; other Powers will be obliged to follow her example. When it is remembered that the total number of foreign residents in Japan, men, women, and children, of all ranks and nationalities (for whose benefit these treaties have been kept up), is, excluding Chinese, only 4,200, it becomes difficult to believe that, in the interest of that little group, nearly all the nations have joined together to grind down such a country as Japan.

But this cannot last. The world is perceiving, with astonishment, that a real Power is arising in the East, and is beginning to claim its place in the sunlight—the sunlight, be it remembered, of which it is called the birth-land. It will be useless, as things are marching, to continue to deny that place to Japan; it will be ungenerous to postpone the frank recognition of it. England has been the first to alter the treaties with Japan; may she also be the first to hold out a hand of confidence and esteem to her.

Towards China the position to be taken up by Japan after the war would, apparently, be something of this sort. If Japan should win finally—and it is becoming every day more difficult to fancy that she can fail to win—she would become the political leader of the Far East, and China would be placed in the second rank. But it appears to be very probable that, however resolutely Japan might claim and occupy the front place, it would be her interest to establish (if possible) thoroughly friendly and co-operative relations with China. If the future international policy of Japan be based, as it is reasonable to imagine it will be, on the ambition that Eastern Asia shall count henceforth as a new living force in the world, and that she herself shall be the guiding spirit of that force, an alliance for mutual advantage and concert between herself and China will almost of necessity appear to her to be a desirable condition thereof. The two would gain by working heartily together towards others. Of the dispositions of Japan in that direction it is difficult to doubt; the line of conduct that would suit her seems self-evident. But would China accept friendly relations with her? And if she did appear to accept them, would she do so frankly, honestly, cordially, without those mental reservations to which allusion has already been made, and to which she is so addicted? Would she—could she—shake off her pride, her jealousy, her corruption, her stagnation, in order to give practical effect to a new policy? Would she enter into a union with Japan in which the latter would be the "dominant partner," and would she fit herself by a totally changed attitude and system, as Japan has done, to serve the general cause of Eastern Asia?

That Japan would desire all this looks clear—so far, that is, as an opinion can be formed from the outside. It is in the nature of things that, after acquiring supremacy over China, she should wish to join hands with her for their common good. But what China may consent to do, and what—even if she consents to anything—she may really do, is a very different matter. She would have an opportunity, under totally new conditions, of emerging from her shell, and of becoming something in the outside world; but she could only attain those ends by imitating Japan as regards working means, and by following her lead as regards political action. Would she—could she—do either? If she refused, or if she were unable (and most of the people who know China declare positively that she would be unable), then Japan would have to continue on her road alone, and to labour for her own hand exclusively; which would mean, so far as the future can be judged by the present, the steady political rise of Japan, and the corresponding political decline of China.

For lookers-on, like ourselves, the situation is deeply interesting. New Powers are not often born into the world of our day: Prussia was the last to bring herself forth; Japan, apparently, will be the next.—*Blackwood's Magazine.*

THE BAPTIST MISSIONARY CONFERENCES.

The annual conference of the American Baptist Missionary Union and the Southern Baptist Convention were held in Tokyo April 5th to 9th inclusive, except Sunday. The conference of the missionaries of the A.B.M.U. occupied Friday, Saturday, and Monday mornings; the joint conference (including, in fact, all Baptist missionaries in Japan) occupied Monday afternoon and Tuesday. The business sessions were held morning and afternoon, in the home of Rev. and Mrs. C. H. D. Fisher, 30B, Tsukiji; a very delightful social meeting was held Friday evening at 30A, Tsukiji, the residence of Rev. and Mrs. G. W. Taft. There were between thirty and forty present at the various sessions; of the visitors may be mentioned Miss Zerfluf, of Sendai; Rev. G. E. Dienst, of Tokyo; Rev. and Mrs. Dr. Partridge, of the Baptist Mission at Swatow, China; and Rev. D. H. Drake, of the Telugu Mission in India. The absent brethren and sisters were kindly remembered, especially Rev. and Mrs. Dr. Rhees, of Kobe; Mrs. Sharland, of Chofu; and Miss Mead, of Sendai,—all absent on account of severe illness.

The annual sermon was preached by Rev. W. E. Story, of Chofu, from Revelations 11:15:—"The Kingdoms of this world are become the Kingdoms of our Lord, and of his Christ; and he shall reign for ever and ever." His subject, "The Kingdom of God," was thoughtfully and earnestly discussed under the following heads:—

1. As a development.
2. In its power.
3. In its relation to individual character.
4. In its universal extent.

The officers of the A.B.M.U. Conference were elected as follows:—

President—Rev. J. L. Dearing, of Yokohama.
Vice-President—Rev. W. E. Story.
Secretary—Rev. S. W. Hamblen, of Sendai.
Executive Committee: Rev. S. W. Hamblen. Prof. E. W. Clement, of Tokyo. Rev. R. A. Thomson, of Kobe.
Statistician—Rev. John L. Dearing.
Preacher (next Conference)—Rev. E. L. Waine, of Fukuoka.
Alternate—Rev. A. A. Bennett, of Yokohama.

The following officers were elected in the Joint Conference of Baptist Missionaries:—

President—Rev. E. L. Waine.
Vice-President—Rev. J. H. Scott, of Osaka.
Secretary—Rev. S. W. Hamblen.

And these three officials constitute the Committee of Arrangements for the next Conference.

It is, perhaps, unnecessary to distinguish further the two conferences, or to give the details of the business of both; it is sufficient to make mention of only those items of the greatest importance or of general interest. It is the common opinion that these conferences were not one whit less, but perhaps even more, interesting and profitable than previous gatherings.

Many reports, especially the statistical ones, are too lengthy to transcribe here, and are difficult to summarize: but from them interesting and important items may be culled. The total number of Baptist missionaries in Japan, counting married missionaries' wives, is 57, of whom 6 belong to the Southern Baptist Convention, 5 are independent (or self-supporting), and the remainder are registered under the American Baptist Missionary Union, including 15 representatives of Women's Baptist Missionary Societies.

From the report of the Committee on Publications, we take the following:—"The Committee also made a special grant of 10 copies of the *Kanamajiri* New Testament to the Okayama Orphan Asylum, and of 1,000 Scripture Portions to the Scripture Union for free distribution in the island of Oshima. Both of these grants were gratefully acknowledged." In connection with this very appropriately goes the following about religious publications in the vernacular: "Some of these [periodicals] have a large circulation. For instance, *Yorokobi no Otozure* is published twice a month, each edition being 3,300 copies; and the *Chiitaki Otozure* has also two editions per month of 4,800 copies each. The total issue of these two papers alone thus aggregates 194,400 copies per annum." The Hymn-Book Committee reported that about 250 hymns, mostly new, were ready for publication, and that the work of printing the revised edition had actually commenced. In fact, a few sample pages of hymns with terms were submitted for inspection.

The publication of the little monthly English sheet, called "Gleanings," and facetiously dubbed the "baby organ" of the Conference was most heartily approved. The editor and business manager is Rev. S. W. Hamblen, Sendai, and the publisher is Rev. A. A. Bennett, Yokohama. It is issued on the 15th of each month; and serves admirably as a means of intercommunication between the different workers, and of communication with friends in the home land. The publication of a Baptist magazine in the vernacular was a question of prolonged discussion, and was finally referred to a committee consisting of Revs. Bennett, Waine, Hamblen, Parshley, and Thomson. The "Baptist Missionary Review," a monthly magazine intended to represent all the Asiatic missions of the Baptist church, was also approved. It is published in Madras, India; its business manager is Rev. David Downie, of Nellore, India; the Editor-in-chief is Rev. F. McLaurin, of Bangalore, India; and the corresponding Editor for Japan is Rev. S. W. Hamblen, of Sendai. This magazine is published, of course, in English.

The reports with reference to the Theological Seminary in Yokohama showed that faithful work had been done there the past year both by teachers and by pupils; and that the new buildings, with improved conveniences of all kinds, are highly appreciated by all. The President, Rev. John L. Dearing, has just closed his first year in that service, and has proven to be the right man in the right place. A plan for the reorganization of the management of the Seminary was carried. By this the Conference becomes an Advisory Board, of which there is an Executive Committee of three members; and there is also established an Examining Committee of three members. The former consists of President Dearing, Revs. R. A. Thomson, and S. W. Hamblen; the latter of Revs. E. L. Waine, J. H. Scott, and C. H. D. Fisher. The duties of the Advisory Board and of the committees are carefully defined in bye-laws.

The various reports of the schools for girls (in Tokyo, Yokohama, Sendai, Chofu, and Himeji) were encouraging. From the report of the school at Surugadai, Tokyo, we take the following interesting item:—"One of our old graduates has finished paying a debt to the school of 36 *yen*. This is so uncommon an occurrence that it seems fitting to notice it thus publicly."

The Boys' School in Osaka, though not a permanent institution, is prosperous under the supervision of Rev. J. H. Scott. In accordance

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

with the report of a committee, the Conference reiterated its request for the establishment of a Boys' School in Kobe.

The preparations already made and still making for the opening of a Baptist Academy for Boys in Tokyo were reported by Principal E. W. Clement. This school will be opened September, and will be temporarily located at 42, Tsukiji. Prof. Torajiro Watase, an experienced educator and an earnest Christian worker (now Vice-President of the Tokyo Young Men's Christian Association), has been secured as Associate Principal. This institution will offer a five years' course, practically the same as that of a *Jinjo Chiu Gakko* (Common Middle School), but with beneficial variations.

Among the resolutions passed is the following: "Resolved, that we record our deep sense of the loss we have sustained in the death of that friend of missions, Rev. A. J. Gordon, D.D., and that we extend our condolence to his bereaved family." This same feeling was more practically expressed by means of contributions toward the A. J. Gordon Memorial Fund for Foreign Missions, for which the sum of 183 *yen* was in a few minutes subscribed. This amount will be somewhat increased by the contributions of the absent members of the Conference.

The papers read and discussed were of an especially practical term, and were unusually interesting and suggestive. These included the following:—"Church Discipline—How Secured and How Stringent?" by Rev. J. H. Scott; "Self-Support—What?" by Rev. W. B. Parshley; and "Self-Support—How Attained?" by Rev. S. W. Hamblen. The time for discussion was, however, so limited, that it was voted to take up these topics again at the next Conference to be held in Kobe, early in April, 1896.

One of the most interesting features of the entire programme of both conferences was the "Sketch of Dr. Nathan Brown," by Rev. A. B. Bennett. To write that biography no man could be found better fitted in all respects than the one who had been associated with Dr. Brown, and who knew him so well and loved him, and yet is too sincere to be a servile Boswell. The biography, couched in strong and beautiful English, pictured Dr. Brown in the light of that one phase of his character that entitled him to be called always "loyal." This element of loyalty to duty was the striking characteristic of Dr. Brown's nature, and was manifested in all places, times and ways, throughout his long and varied life in several lands. And Mr. Bennett's Sketch so impressed the members of the Conference, that it was unanimously voted to request the publication of the paper, not only in the minutes, but also in the *Japan Mail*, some of the Baptist papers in America, and in pamphlet form.

CHESS.

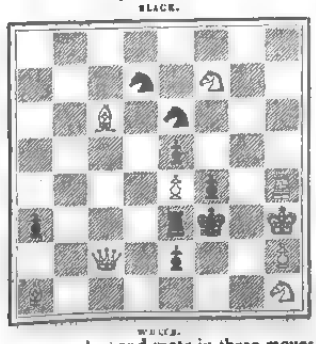
(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

Solution of Problem No. 171.

WHITE.	BLACK.
1—P to Kt 3	1—K to Kt 2
2—Q to Q R sq.	2—K × Kt
3—Q to K R sq., mate	
	if 2—K to B or R sq.



3—Q × B, mate.

Correct solutions received from Digamma, Omega, W.H.S., J.D., and E. J. King.

Problem No. 173.

By S. Loyd.

BLACK.

WHITE.

White to play and mate in three moves.

Game No. 247.

The following game is a local effort. It was played between Mr. J. Davieson, Secretary of the Yokohama Chess Club, and Mr. E. J. King, a Resident of Hakodate. It was begun last November as a Correspondence game, but after Black's 17th move, Mr. King paid a visit to Yokohama and the game was finished in short order over the board.

SICILIAN DEFENCE.

WHITE. Mr. E. J. King.	BLACK. Mr. J. Davieson.
1—P to K 4	1—P to Q B 4
2—K Kt to B 3	2—P to K 3
3—B to Q Kt 5	

White goes astray here, Black's next move forcing him to retreat and thus lose valuable time. 3—P to Q 4 is the customary move.

	3—P to Q R 3
4—B to K 2	4—Q to B 2

Black starts in promptly to lay his guns for an attack on White's position.

5—P to Q 4	5—P takes P
6—Q takes P	

This leads to another inglorious retreat and seems to be plying Black's game.

	6—Kt to Q B 3
7—Q to Q sq.	7—Kt to K B 3
8—Kt to Q B 3	8—B to K 2
9—B to K Kt 5	

Initiating an attack on Black's Queen, which is well met later on.

	9—P to K R 3
10—B to K R 4	10—Castles
11—Castles	11—R to Q sq.

A good move which nullifies the strategy of White.

12—B to K Kt 3	12—P to Q 3
13—Kt to Q 2	13—Kt to Q 5

Black takes up the attack in earnest and has the upper hand from now on to the end.

14—P to K B 4	

Well meant but quite ineffective against Black's forward play.

	14—Kt takes B (ch.)
15—Kt takes Kt	15—P to Q Kt 4
16—P to Q B 3	16—B to Q Kt 2

Black follows up his advantage in good style and White soon must fight for his life.

17—Kt to Q 4	17—B takes K P

From this point the game was continued over the board to Black's glory and White's discomfiture.

18—Kt takes B	18—Kt takes Kt
19—Q to K B 3 (?)	19—Kt to Q 7
20—Q to B 2	20—Kt takes R
21—R takes Kt	21—P to Q 4

Black pounds away; giving his adversary no rest. He is already a pawn and the exchange ahead while White grows weaker at every step.

22—P to K B 5	22—P to K 4
23—Kt to K 6	

White keeps up an ineffectual struggle but there is "nothing in it." He only gets deeper in the mire: and might now resign with good grace.

	23—P takes Kt
24—P takes P	24—B to Q B 4
25—Q takes B	25—Q takes Q (ch.)
26—K to R sq.	26—R to K B sq.
27—R to K sq.	27—Q R to K sq.
28—P to K R 3	28—R takes P
29—B takes P	29—Q to K B 7
30—B to Kt 3	30—R takes R (ch.)
31—K to R 2	

White apparently disdains to cry "peccavi" and insists on getting the *coup de grace*.

	31—Q to K Kt 8 mate.

It is plain that Mr. King is much out of practice; and that in the above game Black had an easy victory. We hope that there will be a further contest or contests, which may prove to be more equal.

Walbrodt, says the *Deutsches Wochenschach* (as translated for the *Baltimore News*), "wears great blue eyes surmounted with dark eyebrows, a small mouth, neat little chin. At Leipsic he made himself a universal favourite. Theoretical study, or the analysis of played games, is not a part of his make-up. He says naively:—'If I sit at the board, the moves go quite another way from the way they stand in the books!' His friends argue that he only lacks study to reach the highest rung. But you cannot set a genius straight, 'He mann e'en gang his ain gait.'"

Game No. 248.

"TWO KNIGHTS DEFENCE."

WHITE. Mephisto.	BLACK. S. Tinsley.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—Kt to B 3
4—Kt to Kt 5	4—P to Q 4
5—P takes P	5—Kt takes P
6—Kt takes B P	6—K takes Kt
7—Q to B 3 ch.	7—K to K 3
8—Kt to B 3	8—Q Kt to Kt 5
9—Q to K 4	9—P to Q Kt 4
10—B to Kt 3	10—B to Kt 2
11—P to Q 4	11—B to Q 3 (a)
12—P takes P	12—B to B 4
13—Q to Kt 4 ch. (b)	13—K to B 2 (c)
14—B to Kt 5	14—Q to K sq.
15—Castles Q R	15—Q to K 3
16—Q to B 3 ch.	16—K to K sq. (d)
17—Kt takes Kt	17—Kt takes Kt
18—R takes Kt (e)	18—Q to K Kt 3
19—P to K 6	19—R to K B sq.
20—Q to B 7 ch. (f)	20—R takes Q
21—P takes R ch.	21—K to B sq.
22—R takes B	22—P to K R 3
23—B to Q 2	23—Q takes Kt P
24—R to K sq.	24—Q takes B P
25—R takes B P	25—Q takes R ch. (g)
26—B takes Q	26—P to Kt 3
27—B to Kt 4 ch.	27—K to Kt 2
28—P to B 8 double check and mate!	

(a) Q to Q 3 was better, *e.g.* 12—Q to Q 3; 13—Kt takes P, Q to Kt 3; 13—Q takes P ch., K to Q 2; 14—Q to B 5 ch., K to Q sq.; 15—B to Kt 5 ch., Kt to K B 3, &c., with an even game.

(b) Prettily played, disdaining the prosaic procedure, P to Q R 3 which wins a piece.

(c) If 13—K takes P; 14—B to K Kt 5, Q to K B sq.; 15—Castles Q R, P to Q B 3; 16—K R to K sq. ch., K to Q 3; 17—B to K B 4 wins.

(d) Weak; K to Kt 3 was better.

(e) Grand play! Black cannot take the R on account of B takes B threatening B to B 6 ch.

(f) Another beautiful and masterly stroke.

(g) Forced, on account of the impending mate with the Q at K 8.

Referring to Tarrasch's apparent inability to show his proper form in encounters with Mieses, Mr. John A. Galbreath remarks that instances of the same kind of thing are shown in the defeats of Bird by Gunsberg in the proportion of 14:2, of Mackenzie by Mason in the proportion of 7:1, and of Tschigorin by Mason in the proportion of 6:1. Blackburne, again, lost a large majority of games to Mackenzie, in playing with whom he never showed at his best, but Mason has been obliged, "almost invariably, to lower his colours to Blackburne. These cross results are unaccountable."

Game No. 249.

(Played in the Brooklyn C.C. Championship Tourney.)

WHITE. Souweine.	BLACK. Bradford.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—Kt to B 3
5—Castles	5—Kt takes P
6—P to Q 4	6—B to K 2
7—R to K sq.	7—Kt to Q 3
8—P takes P	8—Kt to Kt 4
9—P to B 4	9—Kt (Kt 4) to R 2
10—Kt to B 3	10—Castles
11—Kt to Q 5	11—P to Q Kt 4
12—P takes P	12—P takes P
13—B to B 2	13—B to Kt 2
14—Kt takes B ch.	14—Kt takes B
15—B takes P ch.	15—Resigns (a)

(a) Because if 15.....,, K takes B; 16—Kt to Kt 5 ch., K to K 3; 17—Q to Q 3 ch., P to B 4; 18—Q to K Kt 3, Q to Kt sq.; 19—P to K 6, R to B 3; 20—Kt to B 7 ch., K to K 2; 21—Q to R 4 ch., R to R 3; 22—B takes R and wins.—*Brooklyn Standard Union.*

Mr. Mackay, the chess champion of New Zealand, who is now 31 years of age, was admitted a member of the Wellington Chess Club in 1884 and was honorary secretary for four years, during which he rendered the club very efficient service. He withdrew from this position, about twelve months ago, because of his business engagements. As a player, his rise in rank has been gradual but continuous, each succeeding year seeing him occupying a more prominent place in connection with the inter-provincial contests. His nomination as one of the representatives of the Wellington Chess Club at the recent congress was because Mr. Benbow and Mr. Littlejohn were both unable to play; and he justified the confidence of the club by winning the championship with the fine score of seven wins, two draws, and two losses.

Game No. 250.

A bright little King's Gambit with a very curious finish:—

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—B to B 4	4—B to Kt 2
5—P to Q 4	5—P to Q 3
6—Castles	6—P to K R 3
7—P to Q B 3	7—Kt to Q B 3
8—Q to Q Kt 3	8—Kt to R 4
9—B takes P ch.	9—K to B sq.
10—Q to R 4	10—P to Q B 3
11—B takes Kt	11—R takes B
12—P to Q Kt 4	12—Kt to Q B 5
13—Q to Kt 3	13—B to Kt 3

20—Kt to R 3	20—B takes P
21—Kt takes B P	21—B takes Q
22—Kt to Kt 6 checkmate!	

The subject of adding the study of chess to the existing curriculum of the Durham School of Science is dealt with by a correspondent of the *Newcastle Weekly Chronicle Supplement*. He has drawn up an amusing skit, which consists, in the main, of questions designed to indicate the kind of knowledge that he would try to elicit from candidates at preliminary examinations for the degree of master of chess held under the chess board of the council." We give some of these specimen queries:—(i.) Mention any five of the present "chess champions of the world;" and state on what grounds respectively they base their claims. (ii.) "Always avoid a discovery." Cite cases in which chess-players have failed to observe this precept, giving in each case the nature of the discovery and the penalty imposed by the court. (iii.) A chess club comprises 100 actual members, and the annual subscription is one guinea. Estimate the probable gross income from subscriptions. (iv.) If a third-class and a fifth-class player play in consultation against a first-class player, show what are the odds. (v.) What is your opinion of Professor Koch's theory that the chess tendency is caused by the presence of the *Caissa bacillus* in the left ventricle of the brain? What value do you attach to his suggestion that we should adopt compulsory inoculation during infancy of the Halma virus as a protection against the more virulent microbe? (vi.) Discuss the causes which have led during the last few years to a marked increase in the prevalence of the game. Enumerate any measures which you consider likely to have a beneficial effect in checking the further spread of the epidemic. (vii.) If *a, b, c,.....n* represent a series of years devoted to chess by LAD show that his mental states, taken in order, may be expressed progressively by the terms BAD, SAD, MAD.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 11.

Mr. William Court Gully, Q.C., Member for Carlisle, has been elected Speaker of the House of Commons by a majority of eleven. The Opposition proposed the Right Hon. Sir Matthew White Ridley, Bart.

The House of Commons has adjourned until the 22nd inst.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Shimonoseki, April 8, 1 p.m.

Dr. Sato reports this morning that the Viceroy's wound is completely healed. Dr. Sato will soon return to Hiroshima.

Shimonoseki, 10 p.m. April 10.

The Conference to-day lasted from 4 to 6 p.m. The Viceroy Li was present, but Viscount Mutsu was absent owing to illness. The situation is undecided.

(FROM THE "N.-C. DAILY NEWS.")

London, March 29.

Mr. Sydney C. Buxton, Parliamentary Colonial Secretary, in reply to Mr. J. Henniker-Heaton, M.P., stated that it was not deemed expedient to appoint a Select Committee to enquire into the Military Contribution by the Straits Settlements and Hongkong, as an inter-departmental Committee was at the moment studying the whole question of the Contribution to be paid by the Colonies in the East.

(FROM SIAM PAPERS.)

London, March 22.

The Dowager Duchess of Leinster is dead.

An insurrection has occurred in Peru under Senor de Pierola, a former President of the Republic, and the joint head of the revolutionary party which was defeated by the Government troops in September. They have now attacked and taken Lima, the capital of Peru defeating the Government troops after a desperate fight, in which over 2,000 were killed and wounded.

Calcutta, March 21.

The financial statement of the Government of India has been published to-day. The accounts for the year 1893-4 close with a deficit, but the revised estimates for 1894-5 show a surplus of nine lakhs of rupees (Rs. 900,000). The budget estimate for 1895-6 also shows a surplus of Rs. 45,000, even after the provision of a lakh and a half (Rs. 150,000) for the Chitral expedition. There will be no further borrowing excepting with a view to replacing the £2,000,000 sterling loan, which is a purely temporary debt falling due in May. The Indian Government expresses its sense of the difficulties which have to be faced, and of the anxieties still surrounding the financial position.

(FROM JAPANESE PAPERS.)

Hiroshima, April 7.

Their Imperial Highnesses Princes Komatsu and Kitashirakawa proceeded to Kure to-day.

Lord Li was accompanied by Messrs. Ma, and Wu when he visited Count Ito to-day. The conversation lasted for an hour.

Count Saigo paid a visit to Count Ito, but as the latter was then conversing with Lord Li, he proceeded to visit Viscount Mutsu. All the officials of the Foreign Department have been to the residence of the Viscount since this morning.

The Viceroy Li received to-day a lengthy telegram of over one thousand words from China. It is said that this contained an important reply from the Chinese Government.

Shimonoseki, April 8.

Lord Li called on Count Ito at the latter's hotel at 3 p.m. to-day. It is said that he merely announced his appointment as Plenipotentiary.

Hiroshima, April 8.

Lieut.-General Kawakami returned from Shimonoseki this morning, and visited Headquarters at noon.

The authorities have decided to order the inhabitants at Kaigan-dori, Yakocho, and Ura-dori, Ujina, to remove from those places to prevent the spead of cholera. Instructions have already been given to the residents, and they are preparing to leave.

Shimonoseki, April 8.

A case of cholera has been reported in Hikoshima. The patient is said to have lately returned from Hiroshima. Communication between Hikoshima and other places is interrupted. There are no signs of further spread.

Two transports arrived here yesterday from the West. One of the steamers carried 139 men, of whom 16 were suffering from cholera. The other vessel conveyed 130 persons, of whom 8 were affected. Not a man was allowed to disembark, both ships anchoring outside the port.

Nagoya, April 8.

Koyama Toyotaro, escorted by a police inspector and four constables, arrived here yesterday on his way to Miyagi Prison. They passed the night at the Nagoya Police Office, and left for Sendai to-day.

Gifu, April 8.

A somewhat severe earthquake occurred here last night.

Shimonoseki, April 8.

Viscount Mutsu has been confined to his residence by a cold.

Kobe, April 8.

New tea to the amount of ten *kin* (one *kin*=1⅓lb.) reached here from Tosa this morning.

Shimonoseki, April 8.

Our Plenipotentiaries seem to be in a happy state. Busy telegraphic communications were conducted between the Viceroy Li and the Pekin Government. It is said that the negotiations will be concluded this week.

Of eight of the conditions necessary for the conclusion of peace, seven are said to have been settled.

Shimonoseki, April 9.

Mr. Wu visited Mr. Nakada, private secretary of the Minister of Foreign Affairs, at 10 a.m. to-day. The former afterwards visited Count Ito and Viscount Mutsu.

Count Ito called on Viscount Mutsu at 9.30 a.m. to-day, and Count Saigo interviewed Count Ito at 2.30 p.m.

Hiroshima, April 9.

Some high officers of the Head-quarters Staff and the Governor of Hiroshima dined with the Emperor to-day.

Nagasaki, April 9.

The *Admiral Nachimoff*, *Mandjur*, and one other Russian war-ship have left here for Kobe.

Shimonoseki, April 9.

Quarantine inspection commenced here to-day.

Count Ito invited Lord Li to the Premier's residence to-day. It is supposed that the object of the interview was to press the Chinese Envoy to give a definite answer to the demands of Japan. It is said that the Viceroy Li will be present at a meeting to be held to-morrow.

The Foreign Powers are aware of the demands of Japan, but all of them, with the exception of a country in northern Europe, refrain from communicating them to the press.

Hiroshima, April 9.

H.I.H. Prince Komatsu returned here yesterday from Kiushu.

Shimonoseki, April 9.

Lord Li gave an important reply to the Japanese Plenipotentiaries to-day.

Lieut.-Colonel Arisaka has been appointed Chief of the Moji Arms Factory.

Moji, April 8.

Another case of cholera is reported here.

Hiroshima, April 9.

A report from Surgeon Yamanouchi, at the Pescadores, under date 4th inst., states that although 60 or 70 cases of cholera have hitherto been reported there per day, only 30 cases occurred on the day of the despatch of the report.

Saseho, April 10.

Owing to the spread of cholera in the Pescadores, communication between the shore and ships has been interrupted.

Söul, April 10.

Gen Seiyei, Minister of Agriculture and Commerce, has resigned.

Shimonoseki, April 11.

Count Saigo, Minister of the Navy, left here this morning by the *Yayeyama Kan* for Hiroshima.

Hiroshima, April 11.

A case of cholera was reported at Ujina to-day.

Matsuyama, April 11.

The culprit Koyama Toyotaro arrived here to-day, and was at once put into Miyagi Prison.

Shimonoseki, April 11.

The Viceroy Li sent a long telegram last night, and another lengthy message was dispatched this morning.

Kobe, April 11.

The Russian ships *Admiral Nachimoff* and *Corsets*, arrived from Nagasaki this morning.

Six Korean students, including Bin-yei-san, a younger brother of the Queen of Korea, passed through here for Osaka yesterday.

Shimonoseki, April 11.

After the close of the meeting of the Peace Commissioners last night, some important Japanese officials held a secret meeting at the residence of Count Ito.

Two cholera patients at Moji died yesterday.

Hiroshima, April 11.

Since the commencement of cholera over forty persons have been effected by the epidemic in and about the neighbourhood of this town, and four or five cases are now daily reported.

According to the latest report brought by the *Fujigawa Maru*, the three great Chinese General Lieu, Wu, and Sung, have combined to defend North Chinchow.

Shimonoseki, April 12.

Count Ito visited Viscount Mutsu this morning. The condition of the Minister of Foreign Affairs is a little better to-day.

Hiroshima, April 12.

The Emperor has dispatched Dr. Ito, a Court Physician, to Shimonoseki to attend Viscount Mutsu. The Empress has also sent two nurses to take care of the Viscount.

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Sapporo, April 12.

An explosion of gas took place in the Horonai mine on the 9th inst., and three persons were killed, eight others being severely wounded.

Hongkong, April 11.

The following telegram dispatched by Mr. Nakagawa, Japanese Consul at Hongkong, has been received by the Foreign Department.

A few cases of the pest have been reported at Macao, but there is none in this port.

Shimonoseki, April 12.

A telegram, consisting of about five hundred words, and containing the names of the Viceroy Li and Lord Li, was dispatched to Pekin this forenoon.

Hiroshima, April 12.

Count Saigo arrived here last night. He interviewed the Emperor this morning. The Count seems to be much satisfied at the success of his efforts at Shimonoseki.

Moji, April 12.

Many cases of cholera are being discovered on board ships coming from the Pescadores.

Hiroshima, April 12.

The Empress visited Itsukushima to-day.

H.I.H. Prince Komatsu, and several other officers of the office of General Command will embark on the *Ikai Maru* to-morrow at 4 p.m., and leave for Talien at 5 p.m. The residents of Hiroshima have erected a beautiful arch near the wharf at Ujina to bid farewell to them.

All the transports reporting cholera patients are to be disinfected at Wada Point, Hyogo. The *Satsuma*, *Koura*, and a few other steamers are staying there to undergo the process.

Shimonoseki, April 12.

No conference of the Peace Commissioners was held to-day. It is expected that the next meeting will take place to-morrw.

The following three reasons are given as the cause of secrecy relative to the peace negotiations:—first, the Commissioners of both Powers promised at their first meeting to keep matters secret: secondly, it would be a great loss to China were secrets to leak out before the negotiations are concluded, thirdly, despite the fact that various Foreign Powers are cognisant of Japan's demands, they keep secret as they desire the conclusion of peace.

Pekin, April 10.

On the 7th inst. upon the receipt of reports from the Viceroy Li at Shimonoseki, the Emperor invited various Foreign Representatives in Pekin to the Palace, and asked for their opinion in connection with the conditions of peace.

Probably the Pekin Government will determine either to accept or refuse Japan's demands in accordance with the opinions of the British, American, Russian, and other Representatives.

All the chief local officials oppose the payment of a money indemnity. The Commander-in-chief of the forces at Canton is strongly opposed to it. It is stated as doubtful whether the Pekin Government is able to put in force the treaty concluded in consequence of the opposition of the Commander-in-chief.

METALS.

Still more or less in suspense. Exchange seems to be rising once more and buyers think they ought to get some benefit from it. Those who have made contracts in sterling prices should be happy, and clear the goods while they can secure a favourable rate of exchange. The general trade and demand for "spot" cargo is by no means large.

	PER PICUL.
Flat Bars, ¼ inch	$3.60 to 3.65
Flat Bars, ½ inch	3.65 to 3.70
Round and square up to ½ inch	3.60 to 3.75
Iron Plates, assorted	3.70 to 3.80
Sheet Iron	4.70 to 4.90
Galvanized Iron sheets	8.25 to 8.80
Wire Nails, assorted	5.80 to 6.10
Tin Plates, per box	5.80 to 6.00
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

All remains as last advised. Buyers must be in the market ere long, but they will do their utmost to obtain some reduction in figures hoping that a high exchange will induce holders to make concessions. There have been two arrivals with Russian Oil from Batoum, one tank steamer and another with a cargo of cases.

American	$2.20 to 2.22½
Russian	2.22½ to 2.25

SUGAR.

Brown—Some buying goes on, but holders are not very eager. Exchange quotations do not influence this market to any great extent; but there seems a lack of energy (and perhaps of cash) in the trade. White steady at last quotations.

	PER PICUL.
Brown Takao	$3.60 to 3.65
Brown Manila	4.40 to 4.60
Brown Daitong (New)	3.40 to 3.50
Brown Canton	3.50 to 3.90
White Java and Penang	6.50 to 6.75
White Refined	6.50 to 6.90

EXPORTS.

RAW SILK.

Almost a blank week. For several days not a single transaction appeared in the list and even now the dealings are of the smallest description. The fresh rise in Exchange works against shippers and holders will not as yet meet the market. All prices nominal.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but ■ absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

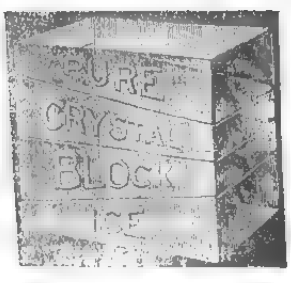
SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT.

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some ■ the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas—and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout World. May 21st, 1890.

"NEW CODES AND OLD CUSTOMS."



BY J. H. W.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, APRIL 20TH, 1895.

BIRTH.

At Grasmere, Dulwich Road, Herne Hill, London, on 24th February, Mrs. WILLIAM HOGGAN, a daughter.

DEATH.

At 73, Innaicho, Shimonoseki, on the 19th inst. at 1.30 p.m., Mrs. E. SHARLAND.

SUMMARY OF NEWS.

FOUR houses were burnt on the 16th inst. at Kojimacho, Asakusa, Tokyo.

IT is said that Lord Li will be the first Chinese Minister to Japan after the peace.

THE mother of Count Higashikuze died in the capital on the 12th inst., aged 84.

THE Emperor and Empress are expected to leave Hiroshima for Kyoto to-day.

COLONEL KUROSE YOSHIKADO, of the Artillery, has been promoted to Major-General.

LI HUNG-CHANG and suite left Shimonoseki for home at 2 o'clock on Wednesday afternoon.

EIGHT of the leading strong Foreign Policy papers in Tokyo were suspended during the week.

THIRTY marines, who have been stationed at the U. S. legation, Soul, were withdrawn on the 28th ult.

A TREATY of peace was signed by the Plenipo[illegible] on Wednesday. The terms have not yet been officially announced.

A RESIDENT of Tokyo has been sentenced to thirteen years' penal servitude for forging bank notes.

ATAMI, Miyanoshita, and Kamakura were crowded with foreign visitors during the Easter holidays.

THE outlook at the Pescadores in regard to the cholera is much more favourable than it was a week ago.

SIX persons were burnt to death in a fire which broke out in Omiyacho, Shimokyoku, Kyoto on the 10th inst.

A NEW station was opened at Nakayama, between Ichikawa and Funabashi, on the Sobu Railway, on the 12th inst.

THE quarantine station at Nagahama is now in telephonic connection with the Kanagawa Prefectural Police Office.

VISCOUNT MUTSU, who has been suffering from influenza, was present at the last meeting of the Peace Plenipotentiaries.

A PRIZE-COURT is now sitting in the case of the Indo-China steamer *Piksang*, captured off Taku with contraband of war aboard.

VIGOROUS measures are being taken to cleanse Tokyo and the open ports, so as to reduce the chances of an outbreak of cholera.

AN employé of the Yokohama Domestic Transport Company has decamped with over *yen* 3,700, belonging to his employers.

THE Japan Railway Co. proposes to plant some 20,000 cherry trees on both sides of the company's track, for a distance of about 20 miles.

THE survey of the occupied districts around Talien, Chinchow, and Port Arthur is proceeding briskly, and will perhaps be finished by July next.

THE College of Engineering in the Imperial University has won the Championship of the river Sumida in the University Regatta held last Saturday.

DURING the ten days ended the 10th inst., *yen* 9,219,559 was received at the War Department from the public, bringing the amount up to *yen* 2,080,197,633.

IT is said that from two hundred and fifty million to two hundred and sixty million *yen* will be required for naval and military purposes when peace is restored.

MR. FUKUCHI GENICHIRO, the famous Japanese dramatic writer, is suffering severely from illness. Doctors Hashimoto and Iwasa are in attendance on the patient.

THE plant of a bank-note forger, including plates, seals, dies, and engraving tools has been unearthed at Osaka. Over 100,000 forged banknotes were also discovered.

THE three Portuguese arrested on Good Friday afternoon on suspicion of being implicated in some fraudulent transactions, are still undergoing examination in the local Court.

THE Kyoto Exhibition is attracting a large concourse of visitors from all parts of Japan, but more particularly from the capital. Railway traffic is in a most congested state.

A meteoric stone, weighing over 19 *kwamme* (one *kwamme*=8¼ lb. av.), which is said to have last, arrived at the Analytical Office in the Agricultural and Commercial Department a few days ago. The stone is like a block of iron.

THE Osaka Railway Company distribute *yen* 90,000 among shareholders as a dividend, and carry forward *yen* 8,266. The working expenses of this line averaged last year *sen* 43.1 per mile.

FROM the commencement of the war up to the end of last year 201 Japanese were allowed to proceed to Korea, and 200 left for the peninsular Kingdom during the following three months.

TRAINING for the Spring Regatta proceeds apace, and several of the crews show decided improvement. The Yokohama crew for the interport regatta have made some alterations in positions and are now shaping well.

MR. JOSE CARO, Acting Spanish *Chargé d'Affaires* in Tokyo, will take charge of the Consulate in Yokohama, until the appointment of a successor to Mr. Luis Torrco Acevedo, who has been transferred to Panama.

THE Osaka local Government lately sent officials to the Railway Station to inquire into the presence or otherwise of cholera patients among the passengers arriving there by train, in order to prevent the spread of the epidemic. The Governor of Osaka has requested the Home Minister to have similar inspections effected at other stations.

REUTER telegraphs:—The first brigade at Chitral has repelled twelve hundred Swatis, killing thirty; the remainder fled to the hills. Jabez Balfour has sailed for England. The river Swat (in Chitral) has been successfully bridged under a heavy fire, and, when completed, the Bengal Lancers dashed across, pursuing the enemy for nine miles. *The Times* states that a joint Commission, accompanied by a small escort, has been appointed to demarcate precisely the frontiers, under the agreement with Russia. Colonel Shervinton, Commander-in-Chief in Madagascar, has quitted the Hova Service on account of disputes with the Malagasy Officers. In St. Petersburg it is semi-officially reported that Russia will strongly oppose the annexation of the mainland of China by the Japanese. The *Novosti* reports that the Russian Minister of Finance is preparing to establish a gold currency.

MATTERS have not improved much in the Import trade, and reductions in quotations have had little or no effect in inducing business. Consequently, Yarns are well as Shirtings and other Piece-goods have been but sparingly taken, though dyed Cottons and Fancies have been more in request. Woollens are very dull, but deliveries of former purchases are on a good scale. There is not much doing in Metals, though prices for all descriptions of Iron are lower. Wire Nails are in small supply and values are fully maintained, while Tin Plates are in abundance and prices easier. Nothing done in Kerosene but delivery, and present stock, though heavy, is held for more money. A fair quantity of Sugar (Brown) has been taken, and the market is now weak for these sorts. Not much done in Whites. Holders of Silk have made small concessions and a few parcels have been taken for the States; in other directions nothing done. Holders of Waste Silk have also given way and a fair quantity of higher grade fibre has been settled. A small quantity of new Tea has been brought to market, but not on a scale to fix prices or give indications of the probable quality of the crop. Exchange has been on the rise all the week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The vernacular press does not explicitly state whether it is contented with the terms on which peace has been concluded. It reserves its comments until the Treaty is ratified and its text officially announced. Nevertheless, there is not much difficulty in inferring from the tone of the Tokyo journals that they are satisfied with the conditions thus far known to the public. Indeed, two papers, the *Kokkai* and the *Niroku*, which are anything but friendly to the Government, declare that they are entirely content with the terms, inasmuch as they correspond in the main with what these journals had repeatedly insisted that Japan ought to demand from China.

* * *

The *Jiji* is not surprised to hear that the negotiations have been satisfactorily concluded. China is now entirely at the mercy of Japan. In consequence of her ignorance and obstinacy the war was needlessly prolonged, but in the end she was constrained to recognise the situation to which she had been reduced, and so soon as the conviction was carried home to her, or, at any rate, to the statesmen shaping her policy, steps were taken to sue formally for peace. At the same time, the comparative moderation of Japan's demands must have largely facilitated a settlement. The *Jiji* does not profess to be thoroughly acquainted with the terms. Judging, however, by the object to attain which war was declared against China, namely, to lead her out of her present darkness and ignorance into the light of progress and knowledge, and also by the vaunted magnanimity of the Japanese nation, which is never so ungenerous as to take undue advantage of the weakness of a foe,- judging by these considerations, the *Jiji* is convinced that the terms must have been comparatively moderate. Suspicious as our contemporary is of the good faith of China, it does not perceive any valid reason why the treaty signed by Li should not be endorsed by the Court in Peking and ratified by the Emperor, seeing that, in the course of the negotiations, Li was suffered to exchange long telegrams with Pekin, and consequently the statesmen of the Tsung-li Yamên must be assumed to have assented to the terms demanded by Japan. The only thing to be apprehended in the future is that troubles may arise between the lawless military rabble of China and the Japanese troops should the two be brought into close contact in connection with the demarcation of the frontiers of the two empires, or the occupation of certain Chinese territories by way of security for the complete fulfilment of the conditions of peace. Prudence, therefore, counsels Japan to be still on the alert against contingencies that may entail serious results.

* * *

The *Nichi Nichi*, writing on the same subject, says that the chief reasons why foreign Powers, refrained from exercising any interference, though more than once appealed to by China, were because the signal success of Japan's arms earned for her great respect in the eyes of those Powers, and because the Governmentacted with ability so as not to furnish any pretext of which European Powers might have taken advantage for the purpose of interfering. Even in the interests of China, the conclusion of peace without the intervention of any third party must be considered conducive to her credit and dignity. The *Nichi Nichi* also argues, much in the same way as the *Jiji* does, that in the present case there is no just cause to anticipate perfidy on the part of China, moreover, in view of the arrangements that have been made for the exchange of ratifications the Treaty as signed by the Plenipotentiaries of both Powers may be considered virtually as valid as though it had already been ratified by the Emperor of China. For the sake of the peace of the Orient and also of the world at large, the satisfactory conclusion of the negotiations is matter for sincere congratulation. What remains to be accomplished is the carrying out of the conditions embodied in the treaty and the utilization of the peace for the purpose of promoting the national prestige and developing the national resources. Unless these ends are attained the victory won by Japan is not a victory at all.

* * *

Reference to what the *Nippon* says on this subject will furnish a sufficient insight into the views of the extreme section of politicians. The *Nippon* is not inclined to place so much confidence in its two contemporaries quoted above in the Treaty signed at Shimonoseki, which it simply regards as a preliminary convention. Japan will have to bring diplomatic and military pressure to bear upon China to effect the carrying out of the treaty, and the real issue of the problem depends upon the procedure adopted by Japan in exerting that pressure. China is blind to the general tendency of the situation. She still regards Japan with supercilious contempt. The maxim, "Know thyself, first and thy neighbour afterwards" is entirely unappreciated by her. Hence it is extremely problematical whether the Treaty will be ratified. The task of the Viceroy Li is still far from being accomplished. It would be altogether too sanguine to conclude that peace has been restored because a Treaty has been signed. The problems that have to be solved hereafter are of a serious and difficult character.

* * *

The *Mainichi* and the *Niroku* bid farewell to Li Hung-chang in leading articles. Now that he has started for home, says the former, it may not be long before the treaty signed by him will be ratified by the Emperor. The *Mainichi* is of course disposed not to place too much reliance on the good faith of China, but when it is remembered that Li now presumably enjoys the confidence of his Sovereign, and when it is considered that the only patriotic action he can hereafter perform is to radically reform the affairs of China, it is impossible to imagine that he came over to Japan simply to impose upon her, and that he underwent painful anxiety during three weeks all for nothing. What the *Mainichi* wishes to know is the policy he intends to pursue towards Japan in future. Will he follow the precedent of France after the Franco-Prussian War, or of Austria after the Austro-Prussia War, or will be obstinately adhere to the old course? Japan does not care which of the three he selects. She is ready to modify her attitude accordingly. The *Niroku* also says that, in spite of the unfavourable precedent of the Tientsin Treaty, many circumstances in the present case lead it to place confidence, comparatively speaking, in the treaty that Li has signed.

* * *

The *Jiji* takes the present opportunity to reiterate once more its advice to the Government that some arrangement should be made so as to bring it and the politicians out of office into more amicable relations, and to remove as far as possible the barrier that stands between the two. For the moment, at all events, the war has completely changed the attitude of the opposition towards the Government. The former has behaved throughout this national crisis as though it had entirely forgotten its old irreconcilable policy. It has supported every measure devised by the Government in connexion with the war. Indeed, the part that the Opposition has played in the present affair must be considered to have contributed largely to the attainment of Japan's glorious success. The question is, can such an extraordinary phenomenon be expected to outlive the war? The *Jiji* feels exceedingly anxious about the matter. Peace being restored on the terms that Japan demanded of China, country ought to be prefectly satisfied with the the result. Yet the *Jiji* does not think it altogether unlikely that, dazzled by the uncommon brilliancy of Japan's success, some persons, entertaining unpractical ideas, may be secretly discontented with the conditions upon which peace has been granted to China. Sooner or later, [illegible] covert dissatisfaction will break out, and [illegible] relations between the Government and the Opposition, so smooth at present, may be embittered as violently as before. Nothing could be more regrettable than such a conjuncture. It is, therefore, exceedingly important that some suitable steps should be taken to provide against that undesirable contingency. Now is the best opportunity for devising some means to that end. Give suitable places in the Government to the leaders of the Opposition, and let them show their ability. Such a course should be followed not with the leaders only, but also with those in secondary positions. The time lends itself to such a measure. Quite a number of civil officials will be needed in the districts newly added to Japan, and as the work to be done there must be greatly different in nature from that carried on at home, it is most appropriate that politicians of ability not in official service should be made to undertake the task. Korea is another field where such politicians may find employment. According to the *Jiji Shimpo*, the elimination of these politicians from the Opposition, would be synonymous with the removal of the obstacles that have hitherto stood in the way of Government measures.

EDITORIAL NOTES.

CAPTAIN KASE'S CAVALRY SQUADRON.

Of the distinguished parts played by the soldiers of Japan in Shantung, that of a squadron of cavalry led by Captain Kase was one of the most conspicuous. As soon as the troop landed at Yungcheng on the 20th of January, it was at once ordered to move forward, though the evening had fallen and snow lay deep on the ground. The road being slippery, horses came down incessantly, throwing their riders, and often injuring the troopers' sabres. It was this squadron that first reconnoitred Weihaiwei, while the main body of the attacking columns was yet far in the rear. When the time came for delivering the assault upon that stronghold of China, another difficult mission was entrusted to the squadron, namely, to guard a flank of the Japanese army. In discharging that important duty the squadron was exposed for a week, between Ninghai and Tungchow, to the attack of the enemy. The greatest difficulty was to obtain provisions. As a rule, the men were obliged to appease their hunger with potatoes and corn flour. Some days afterwards, they were joined by the rest of the battalion to which they belonged, and the little column then advanced towards Ninghai. In front of the citadel of Manglankow its progress was opposed by the enemy, whom, however, it routed on the fourth day, reaching the vicinity of Ninghai on the 10th of February. The enemy had already vacated that town, but the inhabitants proved obstinate at first and were only induced to open the gate when the Japanese were about to blow it in with gun cotton. The battalion did not proceed beyond Ninghai but remained in the town for about week, keeping throughout that time a sharp watch on the enemy's movements and trying to win the good-will of the inhabitants. On the evening of the 18th, the main body of the battalion moved back towards Weihaiwei, leaving two detachments, consisting chiefly of Captain Kase's squadron, to act as rear guard and to observe the movements of the enemy. Apparently emboldened by the retreat of the greater part of the battalion, the Chinese that had been quartered in Chefoo and Fushan, showed signs of an intention to advance. The Captain decided that a feint must be made so as to check the advance of the enemy. He accordingly caused one of the two detachments to menace Chefoo, and directed the other to oppose any forward movement of the enemy quartered in Fushan. The plan was successful, and the Chinese were compelled to give up any idea of pursuing the retreating Japanese. It was, however, necessary for the Captain to lead back his little band as promptly as possible, else the enemy, learning the true strength of the Japanese, might attempt to [illegible] them, as had been done at Fucheng [illegible] the day preceding the fall of Port Ar-

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

thur. The two detachments, numbering only 50 troopers in all, were instructed to carry out a somewhat complicated mode of retreat. They were ordered to retire at night farther and farther away from the enemy, but to undertake some manœuvres during the daytime, so as to keep themselves *en evidence* and delude the foe. Fortunately the Chinese remained entirely ignorant of what the troopers were about, and the latter finally succeeded in reaching Manglanchow on the evening of the 20th. On the 21st, Lieut.-General Baron Sakuma, who commanded at that time the Second Division, reached Manglanchow from Weihaiwei, with the intention of marching towards Ninghai. In that town some 200 Chinese troops were quartered, having returned thither after the retreat above described. They ran away, however, so soon as they saw a body of Japanese soldiers advancing against them. Sergeant Sekiya, who belonged to Captain Kase's troop, was ordered to pursue the flying enemy. While doing so the Sergeant, with only 5 troopers under his command, encountered a body of Chinese about 150 strong. The Sergeant and his men formed line and fired at the advancing enemy, killing and wounding several of those in the van, and so demoralizing the Chinese that they beat a retreat. The intrepid performance of the little band proved of great importance, for it effectually arrested the advance of the enemy and materially facilitated the occupation of Weihaiwei by the Japanese. On the 26th, the detachment stationed in Ninghai again left that place for Weihaiwei, whence the squadron of Captain Kase embarked with others in a transport for the Liaotung Peninsula on the 28th, and reached its quarters on the 4th of the following month. On the very evening of its return a severe form of diarrhœa attacked the troop, striking down 64 soldiers in less than five days, of whom 10 succumbed to the attack. The above is the latest intelligence given of the troop by the correspondent of a vernacular contemporary, but whether the epidemic has been conquered is not stated.

EXAMINATION OF MIDDLE SCHOOL TEACHERS.

On the 13th, 20th, and 24th of next month the examination of applicants for employments as instructors in Middle Schools, will take place. There are this year quite an unusual number of competitors—considerably over eight hundred, we learn. As a rule not more than one in ten can hope to succeed; indeed on several occasions the average has not been over one in twenty, for the examinations being competitive are of exceptional severity. The branches in which the examination will be held are English, Chinese classics, Japanese classics, Mathematics, Geography; History; Chemistry; Physics; Agriculture, both practical and theoretical; Drawing, and Gymnastics. There are over one hundred to compete in the second, third, and fourth departments; those who desire to obtain the position of instructors in English are about ninety all told, and of these scarcely seven or eight can hope to succeed. We have heard complaints that favouritism is sometimes exhibited on these occasions; but as far as our experience goes, nothing could be fairer or more just than the methods pursued. It is true that in one or two instances the possession of a diploma from some third-rate American college seems to have undue weight with the examiners—we could cite a case in point—but in all else the strictest impartiality is observed. The large number of those to be examined is explained by the fact that those who do pass and receive the coveted license or diploma are certain of immediate employment at a salary ranging from fifteen to fifty *yen* per mensem. Some young men are not rebuffed by even two or more failures, but keep on year after year until they obtain the longed-for license, which means a modest competence even it does entail hard work.

A RIDDLE SOLVED.

A few weeks ago the aged mother of a well-to-do Nihombashi merchant departed this life, and was given a splendid funeral. Her death had occurred at a villa which had been apportioned to her own use; so, some day subsequently it became necessary to give the house a thorough cleaning and airing. During this process a cupboard was opened: it was found to contain a number of medicine-bottles, powders, and other medicaments that had belonged to the deceased lady. The question then arose, what should be done with these? It was finally determined to empty and cleanse the bottles, while the powders should be burned over a brazier, out of respect to the manes of the departed. This was done; but hardly had the first powders been laid on the coals and their pungent odour begun to fill the air than the two favourite cats of the deceased came bounding into the room. They began to frolic and gambol in an unusual manner, purring all the while with evident delight. In another moment two or three cats from the neighbourhood came racing into the apartment, and all acted in the same strange way. Loud mews then announced the arrival of a third batch of cats—in a word, to cut a long story short, no less than twenty-four felines collected in the room in the course of ten minutes. The servants, in the meanwhile, had been gazing on this strangely increasing assembly with superstitious awe. Their deceased mistress had been very fond of cats; evidently her spirit had returned and was present, and it was for this reason that so many of her former favourites had gathered together. For quiet a while the cats played about the room unmolested, and then left one by one, only the two felines belonging to the house remaining. These had both fallen asleep beside the brazier, tired out with their unusual exertions. Of course the story of this remarkable occurrence soon reached the bereaved son's ears, and he, like his employés, gave implicit credence to the theory that the departed spirit had paid a brief visit to its former earthly domicile. A day or so later the physician who had attended the deceased in her last sickness called upon the merchant, and heard the strange story from his lips. He was properly astonished at the recital, and then fell into a reverie. Finally he asked if any of the powders they had placed on the brazier were still left? One was; and on examining this the doctor began to laugh and remarked that he now understood why the cats had acted in so remarkable a manner. The principal ingredient in the powder was *matatabi* (*Trochastigma polygama*), a herb of which all cats are inordinately fond. It was this perfume that had enticed them into the room, where it acted on their nerves very much as wine effects a man's brain. The miracle was thus one of very small proportions after all.

YOKOHAMA LITERARY SOCIETY.

The last meeting of the Yokohama Literary Society for the present season was held on Friday evening in the Van Schaick Hall, when there was a large attendance of members. The opening pianoforte Overture, "Galop de Concert" (Ketterer), was played by Mrs. Poole and Miss Wheeler. Mrs. Payne then sang Michael Watson's "All in a garden fair," and was greatly applauded. The next number, a recitation, "Our Ball" (Praed), by Mr. H. J. Sharp, was redemanded, and Mr. Sharp next gave Anstey's clever parody "The Wreck of the Puffin," in splendid fashion. The applause which greeted the performer was long and continuous, and was only stilled when Mr. Sharp consented to give an encore. It took the form of a sparkling little ballad, detailing the love experiences of a little tin Colonel mounted on "a tin gee-gee" in the Lowther Arcade who, slighted when marked at 1/9, felt the sunshine of a mild flirtation with a snub-nosed wax girl-dolly, when raised to 2/3. The item was greatly appreciated. Before the interval, the President of the Society, Mr. J. T. Griffin, said that was the 158th meeting of the Society, which had just reached the end of its tenth year. In a way, it was the parent of three similar societies, which had been started in Tokyo, Kobe, and Nagasaki. The funds were flourishing and their numbers would be greatly increased next season. The concluding items were: Pianoforte Solo, "Spinning Song" (Liszt), Mrs. Doering; Song, "Ave Maria" (Mascagni)—with violin obligato by Messrs. Ramseger and Schmit—Miss Thomas; violin duet, "Piece de Concert" (Dancla), Messrs. Ramseger and Poole; Song, "Anchored" (Watson), Mr. Unite; Pianoforte Overture, "Maurer Schollsen" (Auber), Mr. J. T. Griffin and Miss Griffin. The next meeting of the Society will be on October 4th.

HORSES FROM AUSTRALIA.

Mr. James Anderson, lately of the firm of Anderson and Foster, has, says the *Chronicle*, arrived in Kobe with a number of horses from Australia, his object being if possible to open up a regular trade in horses between Japan and Australia. The horses, which are suitable for cavalry and artillery purposes, were landed from the *Gaelic* on Tuesday evening. Of course it will be understood that, after a long sea voyage, in which much bad weather was experienced, the animals are not in first-class condition just now, but a rest of ten or fifteen days will put them right. It is interesting, by the way, to learn that Mr. Anderson experienced considerable difficulty in getting the horses here, being told in Hongkong, where he arrived in the *Airlie*, that the animals would be seized as contraband of war in Shanghai. Inquiry by cable of the Customs at Shanghai confirming this information, Mr. Anderson had the horses transhipped to the *Gaelic*, by which vessel they arrived, as already stated, on Tuesday.

UNEQUAL ODDS.

The *Yomiuri Shimbun* tells of a remarkable combat between two Japanese and several Chinese soldiers. The battle of Newchwang, as our readers already know, was one of the most hotly contested of the whole campaign in Manchuria. The soldiers had to fight from house to house in the city, and the Chinese kept up the conflict with a stubbornness as unexpected as it was unparalleled. Small detachments of Japanese soldiers were sent through the close narrow streets, to drive the enemy out at the point of the bayonet. Among these troopers were two privates of Captain Hamamoto's company, who had already won for themselves the reputation of unusual bravery. Their names were Shiromachi Shutaro and Nakamoto Uhei, the former being a private of the first class. After fighting shoulder to shoulder through several streets, the two men were about to rejoin their comrades, when Shiromachi was suddenly cut down from behind, and Nakamoto turned to find himself confronted by two burly Chinese soldiers. Maddened by the death of his comrade, Nakamoto did not hesitate to attack the Chinese with fury, and in the course of a few minutes killed both. He then went on, as he was wounded and in imminent danger of being shot himself. Upon entering another street he found himself face to face with a group of seven Chinese, who at once proceeded to attack him. He defended himself as well as he could for a few minutes, when seeing that his adversaries were getting the best of it and thinking it no disgrace to run away from such an unequal number of enemies, he took to his heels. Wounded and weakened he would infallibly have been captured by the hotly pursuing Chinese, when a half-dozen of his comrades made their appearance at a little distance. He gave the alarm, and his pursuers were fiercely assaulted and killed to a man. Nakamoto's prowess and presence of mind in the above desperate affair are favourably commented upon by the Japanese press. His escape was, at all events, little less than marvellous.

THE WRONG WAY ROUND.

It is of course but natural that the movements of the members of the Chinese Mission should be of interest to the country at large, and that every item of news respecting them, and primarily the Viceroy Li, should be eagerly sought for by the thirty odd representatives of Japanese newspapers now at Shimonoseki. Recently however, according to the *Yomiuri*, a number of these special correspondents were just a little too "previous" in getting off their telegrams. The report had been circulated that Viceroy Li

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

was about leaving his residence in his official palanquin, and through the back-gate of the Injo-ji for a marvel. Several incredulous correspondents rushed to view the wonder, if real, and arrived in time to see the well-known palanquin actually come out of the back-gate. In a few minutes more telegrams were flying the length and breadth of Japan to the effect that Li had left the residence assigned him through the rear-gate. But it was not long before the mystery was solved, to the great confusion of a score of crest-fallen "specials." It was quite true that the palanquin had been borne out rearwards, but Li had not been in it. It had been simply to try whether the back-gate was broad enough to admit of the palanquin being carried out in that direction.

HOLIDAY RESORTS.

TOKYO doctors are now prescribing the ozone of the sea-coast for those affected with influenza, particularly where the malady appears to have inflicted a more than slight injury to the respiratory organs. It is perhaps due in part to this fact that we find the sea-side resorts so well patronized at present. A few days ago the inns at Enoshima were said to be overcrowded—an unprecedented phenomenon at this time of the year. Atami also has very many visitors; but it is particularly Oiso that is doing well. New villas are there going up in many places, while the price of favourable sites is advancing by leaps and bounds. Kabayama and several other hills in the vicinity have recently been brilliant with cherry, peach, and pea-blossoms—that stretch of the Tōkaidō between Oiso and Hiratsuka being particularly attractive and visited daily by scores of delighted pedestrians. The influx of pilgrims to Oyama has, it is said, already begun. A proposal to lay a tram-line between Hiratsuka and one of the large hill-villages has been heard of, though nothing seems to have come of it as yet. Farther South, Suma and Maiko have attracted an unusual number of guests, especially those who are visiting the Kyoto Exhibition. The hours between 10 and 5 are spent in the ancient capital, while the rest are devoted to the beautiful scenes about Suma. Okamoto-mura, so celebrated for its redolent plum-blossoms, has this year been visited by more that eight thousand people, it is said, not including residents of either Osaka and Kobe.

* * *

During the Easter holidays Miyanoshita had a large influx of foreign guests, the Fujiya Hotel being full to overflowing. Atami and Kamakura were also exceedingly well patronized. Much grumbling was occasioned by the vagaries of the railway service from Yokohama southward, especially on Thursday, when several residents had the melancholy pleasure of seeing the last evening train glide into the station and then leave without them, because the Authorities refused to issue any tickets.

A LITERARY PROPOSAL.

CERTAIN metropolitan journals report that Messrs. Maruya & Co., the well-known booksellers of Nihonbashi District, recently received under cover to them a letter to Sasanami-sanjin, which is the pseudonym of one of Japan's greatest living writers of fiction, Mr. Iwaya, who is now nearly fifty years of age. The letter is said to have come from the "Whitechapel Publishing Company" at Chicago, the writer being a Mrs. Abbott. The lady proposed in her letter that the novelist should write a tale, of course in Japanese, which would not exceed two or three thousand words in length when translated. She was about to publish a volume containing short stories by the best novelists of America, England, Germany, France, and Russia, and she thought that Japan should also be represented, particularly as this country was now so well and favourably known throughout the world because of its great triumphs over China. The book should be published simultaneously in New York and London, and this would greatly enhance the fame of the writers. Of course no emolument was either spoken of or suggested. It seem strange to us, premising the authenticity of the above details, that Sasanami-sanjin should be chosen to represent Japan in the forthcoming book. As far as we know no work of this novelist has ever been translated into English or any other Continental language. On the other hand, several stories by other equally popular Japanese masters of fiction have been rendered into either English or French, with more or less accuracy. Koyo should be known to readers outside of Japan, and there are others equally deserving of this distinction. Sasanami is, at the same time, perhaps the purest and cleanest writer of fiction now living in this country. His style is extremely simple and unpretentious, but very pleasing, while his language is of the choicest description. But much if not all of this would necessarily be lost in a translation. Japanese idiomatic speech is a hard nut to crack, and some of the beautiful metaphors lose all their point in another tongue. It is, for example, almost impossible to render the preamble of the average Japanese novel into a finished English form—the two languages still lie too far apart. And so Shakespeare can never be rehabited for the Japanese stage unless the whole drama is Japonicized. It is only the plot and not the language that even such playwrights as Mr. Fukuchi (who, we regret to hear, is seriously ill) are able to keep intact or follow with any degree of closeness.

MORE TANKERS.

MESSRS. M. SAMUEL and Co., of London and Japan, the originators of the tank oil trade from Batoum to the East, says an exchange, have ordered four new steamers, each to carry 7,000 tons of oil in bulk. Two of these vessels will be constructed by Messrs. Sir W. G. Armstrong, Mitchell and Co., to be named the *Nerite* and *Cowrie*, and two by Sir William Gray and Co., to be called *Pectan* and *Telena*. The first of these vessels is to be launched in June, and all are for delivery in the current year. The speed will be 12 knots, and the vessels are intended expressly for the China trade. In the meantime, the demand is great, and to meet it Messrs. Samuel and Co. have chartered two other vessels, besides keeping their fleet of other "tankers" fully employed. It may convey some idea of the carrying capacity of the four new boats ordered when we state that, loaded, they are carrying what means no less than 260,000 of the ordinary cases that oil used always to be shipped in.

THE "POLYPHEMUS."

THE Blue-funnel steamer *Polyphemus*, which arrived at Hongkong from Singapore on April 8th, had the misfortune, says the *China Mail*, to run against a small rock west of the Gap Rock. The steamer was under the command of the Chief officer, Mr. Chubb, the Captain having been left behind sick at Singapore. As she was slowly approaching Hongkong in a dense fog about four o'clock in the morning, the look-out man heard the Gap Rock fog-horn, and the engines were at once reversed. Unfortunately, the steamer had sufficient way to carry her on to the rock from which she rebounded. The touch appeared to be slight, but it was sufficient to damage the plates on the forward portion of the steamer, and it was ascertained that water was making its way into the forehold. Upon arrival at Hongkong, she went alongside the Kowloon Wharves to discharge her cargo preparatory to going into dock. The extent of the damage has not been ascertained. The *Polythemus* was under charter to the China Mutual S.S.N.Co.

A NASTY WOUND.

SOME strange operations have been performed on the soldiers in hospital in Tokyo, both remarkable and severe, yet with an almost invariably favourable result. This is, the Tokyo journals urge with justice, not only attributable to the skill of the attendant surgeons and the assiduity of the nurses, but also to the strict and thorough antiseptic precautions observed in every ward. "Hospital fever" is so far an unknown quantity in the capital. A curious operation was recently performed on a sergeant of Pioneers, wounded in the attack on Haicheng. The bullet penetrated to a considerable depth, but had been successfully extracted in the field lazaret. On being sent on to Hiroshima the patient still continued weak and the wound refused to heal. Thinking that a more northerly climate would be favourable to convalescence, the sergeant was brought up to Tokyo and placed in the Red Cross Hospital. Examination here showed that there was suppuration for quite a length beneath the spot whence the bullet had been extracted. A second operation was advised and performed, of course under the influence of anæsthetics. Deep probing revealed the cause of the trouble—a piece of the wounded man's coat, about two inches long by one and a half wide. This was removed, and the wound has since done well. It was the impact of the bullet that had driven the piece of cloth in. The *Yomiuri* remarks that such instances have been very numerous latterly.

SIZE RATHER THAN QUALITY.

THE *Kaika Shimbun* rehearses some of the experiences of a soldier who was wounded in the battle of Newchwang, and is now invalided in Tokyo. He says that, taken as a whole, the common people of Manchuria are not at all hard to get along with. So soon as their suspicions are allayed and their fears dispersed they grow quite confidential. Many told him that they had long been dissatisfied with the local administration and would be very glad to be enrolled as Japanese subjects in future. The amount of unlettered ignorance is appalling, continues the narrator. If often happens that not one man in a whole populous village is able to do more than read a half-dozen ideographs, usually only those comprising his own name and the cardinal numerals. Silver appears to be almost wholly unknown. Cash are the universal medium of exchange. In dealing with Japanese buyers the Manchurians show a marked preference for five *sen* nickels. They hold that the metal is the same as that found in ten *sen* silver pieces, and as the nickels are undoubtedly heavier and thicker, they give them the preference. Some of the local copper cash still in circulation are battered out of all recognition; in such cases they are worth only half their prime value. As a rule, the common people are honest in their dealings, though always willing to charge more than one hundred per cent. above the real cost. The narrator believed there was good stuff in the Manchurians and that they might become useful citizens if judiciously and kindly ruled.

THE LATE LIEUT. HICKLEY.

THE *China Mail* has the following:—Lieut. J. D. Hickley, of H.M.S. *Phœbe*, was drowned at Lourenço Marques on February 17th. The deceased, who was the eldest son of Admiral Dennis Hickley, was one of the Naval Brigade who last year operated against the Chief Nana of Brohemie in the River. For his gallant services on that occasion he was awarded the Distinguished Service Order. Mr. Hickley joined the Navy in 1874, and attained the rank of lieutenant ten years later. He was appointed to the *Phœbe* when she was commissioned at Devonport in December 1892. Lieut. Hickley will be remembered in Hongkong as an enthusiastic rowing man during his service on the China Station. His name appears on the records of the Victoria Recreation Club as the member of more than one winning crew.

A CASE OF FISH.

A VERNACULAR contemporary reports that the fish-mongers and fish-merchants of Shimonoseki recently presented a huge glass box of fish to the Viceroy Li. It contained no less than seventy-five members of the finny tribe, and nearly as many different species. The members of Li's suite took this gift in very good part and proceeded to bait lines and try their hand at fishing. It was excellent sport as long as it lasted, but unfortunately one too enthusiastic fisherman knocked up against the case and broke the glass. The immediate consequence was that every fish, and of course the water, ran in all

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

directions, a scene of considerable excitement and much dampness ensuing. The fish, however, did not make good their escape, but were served in various styles at dinner the same evening. We find this story in only one of the Tokyo journals and leave our readers to determine its character.

TEMPORA MUTANTUR.

"When Harmston's Circus was in Tokyo," says a vernacular contemporary with fine scorn, "the members gave an equestrian pantomime or dumbshow of certain heroic feats performed by our soldiers on Korean battle-fields. The thing took immensely and the circus throve apace. Now the troupe is in Singapore, and a similar show is given, but on a wholly different plan. It is the Chinese and not the Japanese that are depicted ■ victorious, though we should very much like to know where the composer of the scene got his facts. Probably from that all-too-veracious source, the local Chinese Press. Of course, business is business, and if it pays Harmston's folks better to impersonate mythical Chinese warriors and their wholly imaginative triumphs on the field, why no one can blame them. There is a very large Chinese community in Singapore, and patrons from this quarter no doubt find it pleasanter to look at mimic victories than to read of real and crushing defeats. "We should think that with the aid of swift and well-trained steeds, Harmston might give a very fair representation of one of those Chinese 'masterly retreats' about which so much has been said. But what does surprise us is ■ learn that a number of soldiers from the local British garrison took part in this dumb-show, or rather were hired for the occasion. It does not strike us as being a dignified employment for a soldier; but possibly the British species is quite different from that of Japan." What a terrible catalogue of sins is being "writ up" against the unhappy Britisher.

A NATURAL WONDER.

The *Miyako Shimbun* gives an interesting description of a very wonderful cave in Tochigi Prefecture. In the vicinity of Kuzu-cho, Asogori, there is a hill called both Fuji and Asama —probably by way of sarcasm, for it is anything rather than imposing. About half way up the hillside is a cave, in which, according to tradition handed down from ancient times, there used to dwell a huge serpent. The legend has it that quantities of bleached skeletons have been found in the cave, and that certain death awaited the reckless visitor. In fact many years passed since any one ever ventured to place foot within its gloomy recesses, and the interior thus remained a complete mystery until a few days ago. On the 23rd of last month, Messrs. Katayanagi and Dei, both residents of Kuzu, made up their minds to explore the cave thoroughly, despite its repellent reputation. At noon on that day they entered the great hole, accompanied by five assistants, and emerged safe and sound at eight o'clock the same evening. The result of their exploration is as follows:—The cave is about 850 feet in length, the walls consisting entirely of stalactites, which sometimes hang four or five feet long from the lofty rocky ceiling. The stone is beautifully white and often assumes the most bizarre and remarkable shapes. About sixty feet from the mouth of the cave, the road is divided into two, a main and a collateral passage. Between the mouth and this turning-point the ceiling is about six feet high. Some twelve feet from the divided roads, the main passage leads into a spacious and lofty chamber, about sixty feet square. From this issues a narrow passage, hardly wide enough to squeeze through. This conducts again to another large chamber where the most beautiful of the cave's many wonders is to be seen. Pendent from the ceiling is a huge stalactite, say forty feet in length by nine in diameter. Looked at from a little distance it is the exact counterpart of a waterfall and, strange to say, about midway up, there is a perfect image of a carp, apparently swimming up the stony waves. On the left is a stalagmite of eighteen feet in height, looking for all the world like a priest clad in alb and stole. Leaving this chamber, the passage once more becomes very narrow and leads to a pit sixty-five feet deep. On descending into this by means of rope-ladders, the explorers again found a wide, flat space, in which there were innumerable stalactites: some yellowish in colour; others cylindrical in contour; and still others shaped like antlers. Sixty feet farther on is a real waterfall, dashing headlong from a height of over fifty feet. Penetrating still deeper into the cave, the intrepid discoverers heard a loud, dull roar, which they found to proceed from another cataract, over forty-five feet high. Here was another pit. The rope-ladders were again made use of, and a tortuous passage was found leading to a remarkable monolith, perfectly smooth and reddish-yellow in colour, about ten feet in circumference by eighteen in height. Nearly twenty yards farther on the passage opened into another lofty chamber, to which there was no other outlet. Retracing their steps, the explorers then went on to examine the branch-passage, from the point where it separated from the main road. Nothing of particular interest was found here, the tunnel being very narrow and low. Six or seven yards from the dividing-point the passage widened, leading into a pit which opened into the main passage again. The townspeople of Kuzu are greatly pleased with this discovery, and hope that the cave will attract numerous visitors in future. There seems to be nothing like it elsewhere in Japan.

THE NOBLES' SCHOOL.

According to the *Yomiuri Shimbun*, the present fine building of the Nobles' School has been seriously injured by the frequent sharp earthquakes of the last six months. So extensive are these injuries that it is said that simple repairs will not prove sufficient; the building is no longer safe and a shock like the one of last June might cause some tremendous mishap. It has been proposed to tear down the present premises and erect new ones in their stead, but this would cost, it has been found, considerably over one hundred thousand *yen*. Deeming this sum far too great to expend so soon after the completion of the present building, which is almost new, a counter-proposal has been made to rent some other large house in either Tsukiji or Komaba, on the Shinagawa-Akabane line, there being in both places suitable premises. In the meantime, the amount of damage done by the earthquake could be more thoroughly determined, the supporters of this plan believing that extensive repairs would be preferable to undertaking the heavy cost of a new structure. Externally, at all events, the Nobles' School seems in no way shaken; there are no visible cracks or rents in the walls, and it was one of the very few places last June that did not require partial re-roofing or at least new chimnies, although considerable damage is said to have been done indoors. It would indeed be too bad if the present beautiful site and spacious premises had to be vacated.

THEFT OF SUGAR AT THE HATOBA.

Several coolies who were detained at the Settlement Police Station on Monday, in consequence of some suspicious movements of four trucks laden with sugar, which they were hauling, have been since discharged, ■ they have proved their *bona-fides*. It appears that 97 bags of sugar were unaccounted for when the *Strathlyon* discharged her cargo, and these trucks of sugar having been allowed to leave the Hatoba without examination, suspicions were aroused on the part of Mr. Clare, and the coolies were stopped. The Japanese merchant who engaged the coolies declares that he bought the sugar some days ago from a friend who purchased it as sweepings from the mate of the *Strathlyon*. As that ship has left this port under charter for the south, some little time must elapse ere the matter is cleared up.

SUGGESTIVE WALKING-STICKS

The *Yomiuri Shimbun* reports that Iwamoto, the celebrated artist in bamboo, resident in Kobe, recently produced two walking sticks of unusual beauty and skilful carving. The one is surmounted with a conch, in which a wounded Chinese soldier is represented as endeavouring to conceal himself. This is, of course, in satirical reference to the phrase *hora wo fuku*, equivalent to our idiom "to blow one's own trumpet." The other cane depicts a Japanese soldier, with uplifted sword, in hot pursuit of a fleeing Chinaman. The minutiæ of carving have been in both instances carefully looked to, so that the sticks are veritable art-triumphs, says our contemporary. Iwamoto, the carver, was patronised by the present Emperor of Russia during his short stay in Kobe, and is well-known in both Europe and America.

DEATH OF SIR PATRICK GRANT.

Field-Marshal Sir Patrick Grant, who has just died, was in his 91st year. He entered the East India Company's service seventy-five years ago. In the Gwalior campaign of 1843 he served on Sir Hugh Gough's staff and received his brevet majority. He was Adjutant-General in the Sutlej campaign of 1845-6, fought at Mudki and Sobraon, being twice dangerously wounded. For his services in this campaign he received his brevet lieutenant-colonelcy. Again he fought with Gough in the Punjab campaign, taking part in the battles of Chillanwalla and Gujerat. In some minor campaigns he took part between this time and the outbreak of the Mutiny. He was the Commander-in-Chief of the Madras Army, and acted for a brief time as the head of the Bengal Army. On his retirement from the Indian Army he was appointed Governor of Malta, later on Goveror of Chelsea Hospital. In 1883 he was appointed Field-Marshal.

TSUKIJI LITERARY AND MUSICAL SOCIETY.

The Tsukiji Literary and Musical Society met on Monday evening, April 15th, at the residence of Mr. and Mrs. G. W. Taft, No. 30, Tsukiji. There were about thirty in attendance, with Mr. Gardiner in the chair. The following is the programme:—

1.—Piano Solo... {a. Rhinemer, Wanderer. b. Erotik.} ..... Grieg.
Miss True.
2.—"Samantha at the World's Fair" ..... Miss Watson.
3.—Song ..... Mr. Cate.
4.—Reading ..... "The Gustavus Adolphus Tercenteuary." Mr. Taft.
5.—Piano Duet ..... "Waltz" ..... Moszonski.
Miss Thomas and Miss Wallace.
6.—"An Order for a Picture" ..... Alice Carey.
Mr. Cate.
7.—Trio ..... "Lift thine eyes." ..... Mendelssohn.
Mrs. Tyng, Mrs. Smith, and Mrs. Fisher.
8.—"Travels in Egypt" ..... Miss True.
9.—Song ..... "Imogen Donahue" ..... Mr. Cate.
10.—Stories by Messrs. Tyng, Gardiner, and Verbeck.

A RECORD RUN.

The quickest run on record between China and the United States was broken during the second week in March, it is claimed, when the American barque *Amy Turner*, eighty-eight days from Hongkong, arrived in Baltimore. The new record established by the *Amy Turner* breaks the one claimed by the barque *South American*, which was made a number of years ago. The latter made the run from Hongkong to New York in eighty-nine days. The steel barque *Foong Suey*, which was in New York on Dec. 2, also claimed the record between Hongkong and New York, having sailed the distance in ninety-seven days.

FOREIGN CONTRIBUTIONS TO THE WAR CHEST.

In the *Nichi Nichi Shimbun* we find a statement of the number of foreigners that have contributed to the Japanese war chest and of the sums contributed. It seems that the total number is 12, and that their contributions aggregate 742 *yen*. Their nationalities are:—1 Korean (5 *yen*); 2 Americans (75 *yen*); 1 Australian (500 *yen*); 1 Englishman (3 *yen*); 1 Austrian (5 *yen*); 3 Italians (49 *yen*); 2 Frenchmen (55 *yen*), and 1 Swiss (50 *yen*). In addition to the above, a French lady sent 125 bottles of medicated wine.

NAVAL AND MILITARY EXPENDITURE.

Two hundred and fifty, or two hundred and sixty, million *yen* is the amount estimated by the *Hochi Shimbun* as likely to be required for military and naval purposes when peace is restored. Of that total, 200 millions are allott-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ed to the Army for re-armament with improved weapons, for the building of forts, and for an increase of establishment. The millions needed by the Navy are for building ships, dockyards, and harbours. Apparently a big programme of belligerent development is contemplated in some quarters.

TWO GREAT CARPENTERS.

Of all Japanese carpenters or carvers in wood the two most famous, whether of ancient or modern times, have been Shidari Jingoro and Shida-no-Takumi. Of the former marvellous tales are told, how, for example, he carved a jonquil in full bloom out of some bits and shavings of bamboo, the flower being so life-like that thereafter it budded and put forth fresh blooms; and how he carved some carp on the pillars of a gate that were so excellently delineated that they appeared to—or really did, according to another account—swim in a slow and stately circle. Some specimens of Jingoro's work are still extant and highly prized, for they undoubtedly evince artistic genius of a very high order. Less well-known but of much older date are the works of Shida-no-Takumi, of which very few authentic specimens now exist. Quite recently, however, a figure of Daikoku, some eight inches in height, which is an heirloom of a gentleman residing in Yotsuya District, Tokyo, was discovered to be one of Shida-no-Takumi's inimitable carvings. It is described as being exceedingly life-like; the fat, jolly face of the god being wreathed with smiles, and the whole attitude expressive of good-humoured interest. The story goes that this figure was carved in a single night by Takumi, in return for favours shown him by a Samaritan brother craftsman who was ignorant of his guest's real name and fame. For Takumi, like the later Jingoro, was exceedingly improvident and would occasionally spend weeks and even months in utter idleness, being reduced at last to accept the bread—or rice—of charity. It was not until his entertainer's hospitality and patience were were both utterly exhausted that he would rouse himself and in a marvellously short space of time, with only one chisel of the roughest make, produce a work of art that called forth the plaudits of everyone. It the present instance, the Daikoku is said to have been make in like manner and for similar reasons. The artist spent two whole days in thought, gazing on the block of wood in front of him, before he began to work. It was not until after he had left abruptly and with hardly a word of thanks that his host learned that he had been entertaining an angel unawares.

LIEUT. TOMINAGA'S NARROW ESCAPE.

Lieut. Tominaga of the 13th Regiment of the 6th (Kumamoto) Division had a very narrow escape in the assault on the eastern forts at Weihaiwei. On the 30th of Jan., says a letter written by the Lieutenant, the 13th Regiment, forming the van of the attacking column advanced to the assault of the forts. The cold was so severe and the march so arduous that the perspiration running down the men's hair was soon congealed to ice. The Lieutenant climbed the steep hill of Motienling by supporting himself on his sabre, with which he severed two wires connected with mines that the enemy was on the point of blowing up. A sergeant and a private were always by the Lieutenant's side to defend him from danger, for he advanced some distance ahead of the main body of the Regiment that he might cut the wires of the mines. When he came to the vicinity of Luchūetsui Fort, he saw, a short way off, four Chinamen, who not only did not show any sign of retreating, but even proved bold enough to approach. As one of them drew near Lieutenant Tominaga—so near that a few steps more would have brought the swords of the two into contact, for the Chinaman also carried a sword—the private, who had lagged somewhat behind the officer, rushed to the rescue at the top of his speed, and the next moment he had severed the head of the Chinese soldier. Then he devoted his attention to two of the other Chinese, who showed some signs of hesitation on seeing their comrade decapitated. These, also, the private finished with his sword. There yet remained one Chinese. He was taking aim at the Lieutenant with a rifle from a short distance away on the left of the officer. But the sergeant was equal to the occasion. Arriving on the scene at that moment, a bullet from his ready and straight-held rifle hit the Chinaman, who was brought to the ground by the shot, and once despatched by the sergeant. It is related that the face of the private was convulsed while these things were in progress. He looked like a madman, his eyes bloodshot and rolling, and his mouth foaming. "I am not a scholar," he cried, "but I saw your peril, and I ventured to use a sword"—an explanation having reference to the fact that no one below the rank of officer is allowed to employ a sword. By that time other troops came up and an aide-de-camp sought to restrain Lieutenant Tominaga, urging that it was dangerous to approach the fort while the enemy were keeping up such a fierce fire. But the peril that the officer had just narrowly escaped made him insensible to danger. Disregarding the remonstrance of his brother-officer he advanced in front of his men. When he got within about 100 metres of the fort, a terrible concussion shook the ground: a mine had exploded. The Lieutenant thought that it was all over with him. He was hurled to a distance of several yards into a depression by the roadside, where, as he confesses with shame in his letter, human weakness overcame him, and like an ignorant rustic, he prayed to the gods to help him, uncovering his head, raising above it a bag of amulets given him by his relatives at home, bowing to the east and invoking the deities. When the smoke cleared away, he found that not only was he himself unhurt, but that all his men also were safe, the stones and débris thrown up by the mine having fallen for the most part a few yards away from where they stood. The rest was easy. In a few moments more the men in the fort were driven out at the point of the bayonet. It is a pity that Lieutenant Tominaga has not found some historian other than himself.

A RECTIFICATION.

In December last a telegram was received in the East as follows:—"Firm Armstrong issuing loan abandoned because China seeking raise loan higher interest." We have been requested to state that the firm referred to in this telegram was Messrs. Armstrong & Co., of London. Sir W. G. Armstrong, Mitchell, & Co., Limited, of the Elswick Works, Newcastle-on-Tyne, are anxious that there should be no misunderstanding as to the house engaged in this operation, as several Eastern papers have stated that it was their firm which failed to carry through the loan.

SUGAR FROM GAS.

According to a German review of science for the present year, sugar can now be made by condensation and precipitation from the common gas of the street lamps. Already the production of beet sugar on the Continent has ruined the West India Islands, but now the beet growers are to have their turn, for the cost of producing gas sugar is said to be much less than the cost of beet sugar, and the inventors of the process are confident that they will drive all other sugars from the market.

SUDDEN DEATH.

William Human, a tallyman, 46 years of age, was taken suddenly ill at his residence, No. 102, Settlement, on Tuesday evening. He lingered until 11 o'clock, when death supervened. Dr. Wheeler held a post-mortem examination of the remains on Wednesday, and certified that death was due to acute fatty degeneration of the heart, so no inquest will be held.

THE "POLYPHEMUS."

The damage done to the Blue-funnel steamer *Polyphemus*, says the *China Mail*, is believed to be more serious than was at first supposed. There was upwards of 20 feet of water in the forehold, and the damage to the cargo will probably be increased on account of the dye diffused from a quantity of mangrove bark shipped at Singapore. The loss to the underwriters will be considerable.

RECEPTIONS AT THE BELGIAN LEGATION.

We are asked to state that Madame La Baronne d'Anethan, owing to absence from Tokyo, will not be able to receive on Saturday the 20th or Saturday the 27th instant.

THANKS.

We receive some items of information from the *Kobe Herald*. It appears that we "mapped out for ourselves a policy in the summer and autumn of 1891"; that it was "a policy of veiled hostility to the *Kobe Herald*"; that "a favourite method of giving effect to it is to scrupulously refrain from crediting to the *Kobe Herald* anything taken from it, while ostentatiously acknowledging whatever is taken from other Kobe journals;" and that this policy was "mapped out" in consequence of "arrangements being made for the establishment of a daily paper in Kobe for the purpose, if possible, of undermining existing foreign journals." It is necessary that we should express thanks for all this information, but it is also necessary that we should disclaim the omniscience of local doings as well as the policy-mapping abilities ascribed to us by our contemporary. Really we had not the remotest idea that arrangements were made in Kobe some four years ago for the purpose of undermining existing foreign journals. Nor did we ever suspect that the *Kobe Herald* was the outcome of such arrangements. We have been living in a fool's paradise without the remotest notion of all the terrible things going on in the southern port. We were not even aware that we had been subjected to undermining for so many years, and it behoves us to apologise for the unintentional discourtesy of failing to be sensible of such a disastrous process. Besides, we are not hostile to the *Kobe Herald*. We look upon it with very friendly eyes, pleased by the thoughtful character of its articles and above all by its general freedom from the extravagant prejudices that disfigure so many foreign journals in Japan. It has not escaped our notice that the editor of the *Kobe Herald*, who prior to his occupation of an editorial chair, used to be a contributor to, and a very distinctly professed supporter, of the *Japan Mail*, now takes many opportunities to attack us and to charge us with various lapses from grace. But the reason of that change is easily understood, and the fact has not provoked us in the smallest degree. In truth we have never given it a second thought. If the *Kobe Herald* believes that it can make more room for itself by assaulting us, and that it can best attract public notice by a campaign against the *Mail*, why of course let it follow its fancy to the end. We do not suffer, consciously at any rate, and we certainly hold no man an enemy simply because he happens to differ from us. As for the paragraph—11½ lines—reporting the death of Mr. William Hooper of Nagasaki, a few days after his arrival at the Kobe International Hotel, it was taken partly from the *Kobe Herald* and partly from the *Kobe Chronicle*, the reports of both being abbreviated. Moreover, the matter was simply narrative. Under such circumstances, reference to sources of information is scarcely ever made by a newspaper. However trifling be the obligation owed by us to a contemporary, our habit is to acknowledge it scrupulously, nor do we wittingly depart from the rule though whole columns are habitually taken from our own issues by Eastern journals without the smallest recognition. If we are being undermined; if the operation has been going on four years; if we mapped out an anti-undermining policy in the fall of 1891; if veiled hostility to the *Kobe Herald* was a part of that policy, and if the veiled hostility takes the form of literary theft, we acknowledge the presence of a very alarming and disgraceful catalogue of circumstances, but still remain stupidly ignorant of, and indifferent to, them all.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

WAR NEWS.

Saturday, April 13th.

There is naturally an almost complete absence of war news at present. The cholera is the great enemy of the moment. We read in the *Nichi Nichi Shimbun* that since the disease first made its appearance at Hiroshima, the number of cases in that town and its environs has totalled over 40, and that from 4 to 5 deaths occur there daily at present. The *Jiji Shimpo* writes that two men died of the disease in Moji on the 10th instant, and in the *Kokkai* we read that a coolie at Ujina, seized by the malady on the 10th, died almost immediately, and that another case occurred on the 11th. From the Pescadores no intelligence comes, except a rumour published by the *Yomiuri* that the origin of the epidemic was the poisoning of the wells by the Chinese.

In the *Niroku Shimpo* we read that the citizens of Makung are behaving with great friendliness to the Japanese invaders. Many of them have raised placards over their doors, extolling the virtues of the Emperor of Japan and the humanity of his subjects.

An officer now with the expeditionary forces is quoted by the *Niroku Shimpo* as declaring that rather than submit to any foreign interference in respect of the peace negotiations, Japan's 40 millions of inhabitants should make up their minds to die. In the face of such a resolve, what apprehension, he asks, need there be of Japan's failure to obtain her terms.

The *Yomiuri* alleges that Sung has 30,000 men at Chinchow (N); that Sung has 40,000 between Ning-yuen and Shanhaikwan, and that there are 135,000 at Taku. The total force available for the protection of the routes to Pekin thus aggregate 205,000. But who is to guarantee these figures?

Monday, April 15th.

The Conference did not meet on the 12th or 13th the inst., but was expected to assemble on the 14th, which day and the succeeding were indicated by well informed persons as likely to bring forth events of the utmost importance. Meanwhile, the Japanese Military authorities are not relaxing their vigour. A large force is ready to be launched against Pekin at a moment's notice. The Commander-in-chief, H.I.H. Prince Komatsu, left Hiroshima, together with his staff, on the 13th at 2 p.m., and reached Ujina an hour and a half later, whence they started at 4.30 p.m., convoyed by the *Chiyoda Kan*, the *Tatsuta Kan*, and the *Itsumi Kan*.

The *Shogyo Shimpo* ascribes various reasons for the secrecy successfully observed with reference to Japan's proposed terms of peace. The main point seems to be that the Plenipotentiaries promised to be perfectly reticent, and that they have kept their promise.

Viscount Mutsu appears to be mending. Dr. Ito has been sent by the Emperor to attend him.

The Emperor of China is said to have sent more than 200 cases of rare articles as presents for the Emperor of Japan, by way of testifying China's joy at the prospects of peace. The cases are expected to reach Hiroshima in a few days.

Immediately after the departure of H.I.H. Prince Komatsu, the Emperor, says the *Jiji Shimpo*, will probably move to Kyoto, whither His Majesty will be accompanied by the Minister President.

Tuesday, April 16th.

The correspondent of the *Nichi Nichi Shimbun*, writing from the Pescadores, says:—

On the 23rd of March at 7 a.m. the ships, forming in the order previously directed, left Chao Island Bay and steamed toward Panghu Island. They had proceeded only a little distance when two Chinese vessels were sighted. The *Itsukushima* fired a blank cartridge by way of signal, and one of the vessels at once lowered her canvas, but while she was undergoing examination, her consort seized the opportunity to escape. At 9.30 a.m. our First Flying Squadron opened fire upon a fort situated on an eminence to the north-east of Heuchue, and the enemy replied. The firing continued on both sides for some time and was then discontinued. At 11:30 a.m. our vessels drew close to the shore of Lichangchue and anchored. At noon, the Flagship signalled an order for landing the troops. Thereupon armed steam launches from the various vessels, towing pinnaces and cutters, assembled in the neighbourhood of the *Kagoshima Maru*, which was carrying the troops of the van, namely, four companies, from No. 1 to No. 4. These were all landed successfully, under the command of Colonel Hishijima. The troops from the other transports followed, and by 2 p.m. the whole were on shore. About half an hour before the landing, the *Akitsushima* shelled the Kungpohtai fort for a short time. So soon as the enemy's forts observed that our troops were about to land, they opened fire vigorously, eight or nine of their shots falling in the vicinity of the transports, but doing no damage. Immediately on landing at Wonliang in Lichangchue Bay, scouts were sent forward to find out whether any of the enemy's forces were quartered in Wonliang or the neighbouring hamlets, and interpreters were despatched to make inquiries among the inhabitants. It having been found that no Chinese troops were at hand, Colonel Hishijima at once ordered the First Battalion of the First Regiment to push forward and occupy Tsienshan, a place about half a mile from the landing. Captains Yamaguchi and Nakajima moved their companies in accordance with these instructions, and encountering no opposition, reached the eminence indicated. Thence they proceeded to take possession of a hill about 2,000 metres farther inland. But it appeared that the idea of occupying this position had occurred to the enemy also, for some 300 of them advanced simultaneously with the Japanese, and the two parties opened fire upon each other at a distance of about 200 metres. Meanwhile, a Chinese re-inforcement, numbering about 150 was observed approaching. Captain Nakajima thereupon caused two sections of his men to lie down in a hollow road, and these, when the Chinese came up, poured a sudden and vigorous fire into them, killing six of their number and throwing them into confusion. The original body of the enemy still held out, however, though hard pressed by the Third and Fourth companies, which were gradually gaining ground. Major Iwazaki now gave orders that Captains Matsuzaki and Sakuma should move up with their companies to support the attack. These troops, pushing up the slope, charged the enemy, and were joined in the movement by the rest of the little force. The enemy's resistance broke down under this assault, and they retired, leaving the hill in the hands of our troops. It was now 4 p.m. Examining the position evacuated by the enemy, a 10 cent. gun, loaded, was found. Evidently the Chinese, expecting us to advance direct from the sea-shore, had placed this gun so as command the approach on that side, and being attacked, to that surprise, from the direction of the peninsula, were not able either to turn the piece so as to utilize it, or to carry it away in the rapid flight that followed our men's charge. Had they succeeded in using the gun, there must have been many casualties on our side. The piece being too heavy to take to the ships, and not being of any service to us, was dismounted and rendered unfit for use. In this fight we had 10 men wounded, one mortally. The enemy had 34 men killed. The programme for the following day (March 24th) being the capture of Kungpohtai fort and a subsequent advance against Makung, the troops were ordered to parade at the encampments of the First and Second Battalions by 4 a.m., and half an hour later, the general advance commenced. The Second Battalion, forming the van, moved at once against Kungpohtai, and by 6 o'clock reached the neighbourhood of the fort. The enemy, to the number of about 200, opened fire on our men, but Captain Ishii's company replied vigorously, and at 6.30 a.m. the fort was stormed and captured. The greater part of its defenders fled, but some, concealing themselves in the fosse, or at the sides of the gate, attempted to oppose our entry. Thus when Captain Yeto was leaping over the fosse, he received a bayonet thrust in the thigh from one of these men. But a handful of resolute soldiers could not check our forces. Kungpohtai Fort, reputed to be one of the strongest places in the Island of Panghu, fell into our hands 30 minutes after its attack commenced. Meanwhile, a Naval Brigade, with mountain guns, operating on the left of the attacking force, came into action with a body of the enemy that had planted two field guns on an elevation near the fort for the purpose of opposing our advance. The sailors routed the Chinese and captured their two pieces. Meanwhile, the Fourth Company of the First Regiment of the Reserve advanced toward a hamlet on the south of Kungpohtai. The company's orginal orders had been to divert the enemy's attention until the landing of the troops had been completed. At 6.30 a.m. it set out, and firing *en route* on the enemy's fugitives, took possession of its objective point, the above named hamlet, at 6.50 a.m. The place had formed one of the enemy's stations: five hundred men had been quartered there. A part of our expeditionary force was landed there, and entered Kungpohtai fort, where immediately after its fall, the various corps assembled and the Second Battalion of the First Regiment having been placed in the van, a general advance was undertaken against Makung. During the march, the fort on Fisher Island continually shelled our army. One shell fell so close to a gun of the Mountain Gun Company as to be decidedly dangerous, but the force finally reached the neighbourhood of Makung without any casualties. Without a moment's delay the First Company attacked the barracks of the enemy's infantry and obtained possession of it, while the Second Company, at 11.10 a.m., entered the gate of the town, and, dividing into three bodies, advanced by different roads. The garrison retreated for the most part, only some 30 men offering any resistance. These were quickly dispersed. Pushing farther into the town, another force of 20 men opposed us in an open space near the Torpedo Station, but these, too were swept from our path. All fled in the direction of the northern gate and the sea-side forts. The Third company took possession of the Torpedo Station; the Fourth, of the north and west portions of the town, and by 11.50 a.m. no troops except the Japanese remained in Makung. We had two men killed in the attack on Kungpohtai, and 17 men wounded, including a Lieutenant. The enemy's casualties are not known. On the same day, the Naval Brigade, under the orders of Commander Tsuji of the *Itsukushima*, attacked the fort on the Yuen-ting Peninsula. The enemy, numbering 500, made no attempt to resist but surrendered *en masse*. Similarly, on the 26th, when we proceeded against Fisher Island, the Chinese, having despatched a letter of surrender by the hand of a native, effected their escape, and we occupied the place unopposed. Thus, in a very few days from the time of our arrived, the Pescadores, which form the chief outwork of Formosa, were completely in our possession.

It is interesting to note from the above account that despite the general helplessness and demoralization shown by the Chinese, a few men had the courage to stand and fight. At the fort of Kungpohtai we read that although the great body of the garrison fled without offering any resistance worthy of the name, half a dozen soldiers placed themselves here and there, and attempted to make the Japanese pay for their success; while in Makung two little bands, one 30 and the other 20 strong, actually stood up against the whole Japanese force. Men that have nerve to hold their ground and strike stoutly in the midst of a general *débacle* by their comrades, are made of the very best kind of stuff.

As for the cholera among the Japanese troops at the Pescadores, we find the following interesting note in the *Jiji Shimpo*:—"According to a letter, dated the 30th of March and received at Hiroshima, the Mixed Force landed

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

on the Pescadores from 11 a.m. on the 23rd March, and commenced fighting at once, the principal island being completely captured by the following evening. But though the troops had been thus successful, a terrible trial awaited them in the form of cholera, which broke out on the 25th and spread with alarming rapidity, striking down a great number of the men. The origin of the outbreak is attributed to the fact that, after a voyage of several days throughout the whole of which high winds and heavy seas were experienced, the men, tired out with sea-sickness, were given no rest but had to land at once and commence fighting in a climate whose sudden heat augmented their distress. Some landed in a state of considerable fever, and drinking the essentially bad water of the place, and being obliged to eat Chinese rice, were attacked by the disease endemic in those districts. The Authorities, however, at once adopted drastic measures, sending a large force of physicians and nurses, so that the epidemic has been checked, and there are now only 23 patients in hospital."

No conference of the Peace Plenipotentiaries took place on the 14th instant. At 2 p.m. on that day, Mr. Wu called on Count Ito—we quote from the *Nichi Nichi Shimbun*—and a little later Lord Li also visited the Premier. Their object was to ask for a further postponement of the negotiations, which were to have been resumed that day. Our contemporary adds that the Japanese Plenipotentiaries agreed to the postponement, but fixed a limit. We are not told, however, what that limit was.

All these postponements render it improbable that an agreement can be come to before the expiration of the time fixed by the armistice. But, indeed, from the moment that an armistice was granted, there ceased, we think, to be any hope that the Chinese Plenipotentiaries would speak definitively until the expiration of the allotted time. They have everything to gain by deliberation, up to a certain point, and it does not appear to us that any definite inference as to their ultimate attitude can be drawn from their present procrastination. Meanwhile, the Japanese are vigorously preparing to resume offensive operations from the day of the expiration of the armistice. We believe that, unless the Chinese have categorically accepted Japan's terms by the 20th instant, the expedition against Pekin will be off the landing place in the Gulf of Pechili within 36 hours.

His Imperial Highness Prince Komatsu left Ujina on the evening of the 13th instant in the *Ikai Maru*, and passed through the Shimonoseki Straits the following forenoon. The *Nichi Nichi Shimbun* says that Count Ito explained the meaning of this movement to the Viceroy Li, and reminded him that warning had been given of Japan's intention to observe the terms of the armistice with the utmost care, and of the fact that the sending of a number of ships to her base of operations would probably take place, such an operation being provided for in the articles of the armistice. The Viceroy fully understood this explanation, but must have been somewhat perturbed by the evidence constantly afforded of Japan's determination to push the war vigorously from the very moment of the failure of the negotiations for peace. At 5 a.m. on the 14th, Count Ito and Viscount Kabayama left Shimonoseki in the *Miyagawa Maru* and proceeded to Mutsure Island, there to await the coming of the *Ikai Maru*, with Prince Komatsu on board. At 10.30 a.m. the *Chiyoda Kan*, one of the convoying men-of-war, came in sight. She was followed quickly by the *Ikai Maru*, the wake being brought up by the *Inumi Kan* and the *Tatsuta Kan*. The little squadron stopped for a short time at Mutsure Island, and resumed its voyage at 11 a.m. after the Premier and Viscount Kabayama had bid farewell to the Prince.

The *Kokkai*, on the strength of statements said to have been made by Chinese prisoners, attributes to General Sung a very clear understanding of at least one of the causes that have contributed largely to the defeats suffered by the Chinese troops. The Japanese soldiers, Sung says, are under strict discipline and behave so well that their advent is welcomed by the inhabitants. The Chinese soldiers, on the contrary, plunder property and ravish women wherever they go, so that they are a veritable dread to their own countrymen. Such excesses have been habitual with Chinese troops from time immemorial: they cannot be cured in a day. But as they are responsible in a great degree for the disgrace that has befallen China's arms, General Sung exhorted Generals Wu Ta-cheng and Liu Kun-yi, at a recent meeting, to aid him in eradicating these evil habits.

The Prize Court at Sasebo is to be opened for the first time on the 22nd instant, for the purpose of adjudicating on the case of the Indo-China Steam Navigation Company's steamer *Yik-sang*, which was captured of Taku, laden with contraband of war. The Chief Judge of the Court is Judge Atomi, and the Associate Judges are Judge Hatakeyama and Judge Tagami.

Wednesday, April 17th.

The Peace Negotiations have terminated satisfactorily. A virtual agreement was apparently arrived at in the five hours' conference on the 15th instant, and the business of signing was to take place yesterday or to-day. At this moment of writing we have no definite information of the terms obtained by China. The *Jiji Shimpo* says that the concessions of territory and the amount of the indemnity do not differ materially from those recently stated in its columns. The statement, our readers may remember, was the acquisition by Japan of Formosa, the Pescadores, and a part of Shinking (the Liaotung Peninsula), together with an indemnity of 300 million taels. But these details will be very soon known. For our own part, we have never doubted that if the Viceroy Li came to Japan peace would be concluded, and we may, perhaps, be pardoned if we quote a paragraph from a leading article that appeared in these columns on March 2nd:—"Hence the sign to the looked for on the political horizon is the procedure of Li Chung-tang. If he starts for Japan, he will make peace. He knows what Japan wants: he knows how much she will be content to accept; he knows the extent of the concessions to which Chinese public opinion can be reconciled; he knows that he must not fail."

We learn with pleasure that Viscount Mutsu has recovered, and that he probably took part in the last conference. He would have been present at the conference on the 15th instant, but as he had left his bed only the preceding day, he was dissuaded by Count Ito and Dr. Sato from making such an effort.

We are sorry to observe that the *Nichi Nichi Shimbun's* correspondent confirms the statements recently made by the correspondent of the *Jiji Shimpo* with reference to the conduct of the foreign inhabitants of Yingkow. Our contemporary's information is this:—"When our troops entered Yingkow on the 6th of March, the first people to welcome them were the Americans and the French. They led our officers into the town, gave them food and wine, supplied them with warm clothing, and altogether treated them almost as kindly as though they had been fellow-countrymen. Notably the officer in command of the American vessel-of-war, invited our officers and others on board, and behaved most hospitably. He said that he and his men had been awaiting our advent for the past six months, and that it gave him the greatest pleasure to see us. Nor were his words mere expressions of superficial courtesy. For on shore near the place where his ship was moored, a species of parapet had been erected through a length of fifty or sixty yards, its object being to provide a defence against the Chinese troops in case of emergency. The commander, his officers and his men no sooner caught sight of our troops than they cheered us heartily and offered us their congratulations. Moored beside the American vessel was a war-ship of another country"—a British ship is, of course, indicated—"but not so much as a man from it visited us, and moreover, the Consul of the same nationality required that the troops placed by us to guard the custom house and other buildings be withdrawn. It is further stated that although the enemy abandoned some 47,000 bags of rice in Yingkow, British merchants claimed it all, and putting it into store, would not let us touch it."

The *Nichi Nichi Shimbun's* correspondent must of course be perfectly well aware that the conduct attributed by him to the commander and officers of a United States man-of-war was a gross violation of neutrality. We greatly doubt whether anything of the kind took place, and we are quite sure that such a breach of discipline and propriety would never be permitted on board a British vessel. The charge of fraudulent collusion preferred so lightly against British merchants is another matter. Very much fuller evidence is required before an accusation of the kind is believed.

RAILWAYS IN JAPAN.

Railway enterprise in Japan, writes the *Jiji*, which suffered a temporary check in consequence of the war, has again more or less recovered its activity owing to the fact that the commercial and money markets have not suffered so much by the war as was at first apprehended, and also to the expectation that on the restoration of peace, the prosperity of the country will be greatly and rapidly enhanced. Already, therefore, on the desk of the Department of Communications, five or six documents lie, applying for temporary charters. The Railway Council, however, has decided to adopt precautionary measures at this juncture, and, with the view of providing against the fixing of a large amount of floating capital, a result that enterprises like the construction of railways necessarily involve, will not sanction these new applications. It will also suspend the work of construction even in cases where a temporary charter has already been granted, should the line not be considered of urgent necessity. On inquiring how far the railways already opened to traffic have "fixed" the capital of the country, and how much farther such work is likely to be carried, it is found that there are throughout the country 29 companies which have already received charters and become working concerns. The total length of lines owned by them is 2,193 miles and 12 chains, of which 1,549 miles 19 chains are open for traffic. The Government railways actually in working order measure 580 miles and 69 chains, while those now in course of construction represents 398 miles and 14 chains. The total capital invested in railways reaches the sum of 143,197,532 *yen*, Government and private railways combined, in which total the latter stand for 86,643,200 *yen*, and the former for 56,554,332 *yen*. In the system of Government railways the sum of 14,451,080 *yen* has still to be raised, while in the system of the private railways there are nine companies, with an aggregate capital of 4,900,000 *yen*, which have not yet opened their lines for traffic, and nine others a part of whose lines has been opened, though the raising of their capital is not yet completed; the railways of the remaining eleven companies are already completed and their capital is all paid up, namely, 13,265,000 *yen*. Though the total capital demanded for Government and private railways still to be constructed, may not appear large at first sight, it must be remembered that there are a number of other companies to which temporary charters have already been issued, and thus the capital required by railway enterprise altogether must amount to a big figure. Hence the caution observed by the Railway Council.

Few people are aware of the extent to which some of the minor British industries, such as the manufacture of bone handles for cutlery, are dependent upon the Australian supply of raw material. In 1894 New South Wales exported 892,181 bullocks' horns, against 619,543 in 1892, and 712,295 in 1893. The quantity of horns annually required in Great Britain and elsewhere for industrial purposes is

KOREAN NEWS.

We gather the following from the latest correspondence sent to Tokyo papers from Söul. The miseries that the two provinces of Chol-la and Chun-chhon are suffering from the effect of the late Tonghak insurrection are beyond description. A traveller that lately returned from those districts reports, says the correspondent of the *Nippon*, that wherever he went he saw houses burnt down and corpses of people murdered, and that in not a few places he could find no inhabited house for miles. Yet the local officials are as oppressive and merciless as ever. Not only are they totally unconcerned about the sufferings of the people, but they are even so inhuman as to arrest innocent men on the charge of being leagued with the Tonghaks, the object of such arrests being simply the criminal greed of the officials to extort bribes from the unhappy suspects. Thus it results that in every local prison from 50 to 70 of such innocent persons are bemoaning their hard fate. In some districts as many as even one-third of the inhabitants are in confinement, so that the rice harvested last fall is still unhulled and lies stored up in granaries. No wonder, therefore, that the people now detest their officials more intensely than they did the Tonghak insurgents, and that reports of mob agitation reach Söul almost incessantly. Even in the districts bordering Söul "incendiary mobs" have made their appearance, burning houses and pillaging helpless inhabitants.

How to deal with the Tonghaks has now become a question urgently demanding attention. The Japanese residing in Söul are especially clamant about the matter. The central Government, however, as though it were entirely oblivious of the grave problem, wastes time idly bickering over paper programmes of reform, and leaves the local officials to employ summary punishments as instruments to minister to their own cupidity. The Japanese contend that since the great majority of the so-called Tonghaks were really innocent people, compelled by force or other forms of pressure to join a rising fomented by a few genuine malcontents, therefore only the real ringleaders and instigators should be punished and the rest set free. This policy, urgently recommended by a certain Japanese adviser of the Government, is said to have been adopted by the Court, and special commissioners are to be sent to the lately disturbed districts to dispose of the weary business. Meanwhile, the examination of one of the two ring-leaders of the Tonghaks now confined in Söul has been concluded, and when his connection with the Tai Wön-kun, now in process of investigation, is ended, sentence will be passed on him. Though a criminal of his type is liable to death according to the usages of the country, is is surmised that he and his co-adjutators will be treated as political offenders in the sense generally attaching to the term in civilized countries, and that, therefore, they may probably escape decapitation.

The negotiation about the loan was concluded on the 28th ult., the terms being the same as those already given in these columns, and the first installment, half a million *yen*, was handed over to the Korean Government on the 30th. The remaining two and a half million *yen* are to be given to Korea according as she needs the money, and at a place determined by the creditor and the debtor in conference.

A Relief Council has been appointed in the Court, the object of the new office being to relieve provincial folks who are suffering painfully on account of the last insurrection or of famine. The Vice-Ministers of Finance and the Home Office and the Secretary-general of the Cabinet, together with the three Japanese advisers, are commissioners. Their first meeting was to be held on the 1st instant.

The Government intends to strip the the Tai Wön-kun of his power and put an end to the means that he employed to acquire it. One of those means is a guild of peddlers, numbering more than 100,000. They are scattered all over Korea. With these the crafty old statesman had ingratiated himself by various devices, and he habitually employed them as tools for collecting information and conveying a knowledge of his secret plans to the people in the provinces. In order to placate and utilize this big guild, a special office existed in the Court, having branches in each principal town. The Government proclaimed on the 28th ult. that this office and its branches should be closed thereafter, and that the peddlers must conduct their business individually in any way they chose.

The Korean Government, or more especially the acting Minister of Public Works, has conceived an ingenious idea. It is to demand an indemnity from China for the serious damages to which Korea has been subjected by the present war. The Public Works Minister thinks that the despatch of Chinese troops to Korea, the direct cause of the rupture of Oriental peace, was never asked for by the Government but was forced upon it by China through her Representative, the Resident Yuan. He goes on to argue that China's arbitrary procedure in that matter was the principal cause of the misfortunes that overtook Korea and of the calamities under which she is now groaning. Hence she is justly entitled to demand reparation from her arrogant neighbour. Besides, Korea in allied with Japan, defensively and offensively, against China, for the purposes of this war, and if the more powerful of the allies is have an indemnity and an increase of territory from their common foe, why should the weaker he wholly excluded from the enjoyment of similar compensation? When the Acting Minister earnestly argued this point before Count Inouye, declaring at the same time that he was ready to undertake the duty of negotiating and of meeting the Viceroy Li at Shimonoseki, the Count is said to have simply smiled, and made no comment. The *Keisai* considers this idea very excellent and recommends that is be acted upon.

SOME AMENDMENTS IN THE ACTORS' REGULATIONS.

A very minute account is given in the Tokyo *Asahi* of the changes recently made in the Regulations relating to Tokyo Actors. The changes concern the abolition of what may be called distinctions of rank; distinctions that have stood seriously in the way of aspirants who, devoid of family connection and such aids, have vainly attempted to gain a footing on the so-called "*Obutai*" or great stage. The actors of Tokyo were formerly divided into two classes, *Kabuki-yakusha* and *Doncho-yakusha*, the distinction being chiefly based on the scope and standing of the stages where they regularly plied their trade. Though both actors in name, a wide gulf really existed between the *Kabuki-yakusha* and the others in respect of histrionical standing and so forth. The *Doncho-yakusha* were looked down upon by the *Kabuki-yakusha*, just as actors as a body were despised by the upper classes during pre-Restoration days. In fact, the actors who frequented the *Doncho* stages for their livelihood, were not recognized as actors even by the Municipal Office, and licenses were issued to them as comedians only. In 1890 the distinction of *Kabuki* and *Doncho* was abolished, and the two terms of *Daigekijyo* (big stage) and *Shogekijyo* (small stage) were substituted for them. By this amendment of the Stage Regulations the performers at the lower class of theatres came to be legally recognized as actors. In practice, however, the line of demarcation between the two kinds of actors remained as rigid as before. It was laid down by the fraternity of *Daigekijyo* actors that none of their number should perform on inferior stages, on pain of expulsion from the guild, and that *Shogekijyo* actors should be forbidden to appear on the higher stage. On account of this arbitrary rule, enacted ostensibly for the purpose of encouraging the profession of the drama, but in reality to maintain the position that actors in the first rank had acquired by faimly prestige, many men of undoubted histrionic ability were obliged to content themselves with displaying their talents on obscure stages. It was natural that such artificial barriers should embitter the feeling of the *Shogekijyo* actors against the performers on the "great stages." Hence the relations between the two were anything but amicable. This state of things was regarded with extreme regret by lovers of the dramatic art and many of them ardently wished that such arbitrary restrictions should be removed, and were anxious to contrive that each of the actors, regardless of rank, should perform in his special rôle on the same stage. Some of them agitated actively for the realization of the scheme, and their efforts were not without effect. At the close of last year a rumour gradually began to gain strength that the authorities were disposed to abolish the distinction of *Daigekijyo* and *Shogekijyo*, to amalgamate all actors into one body, and to classify them by grades according to the fees paid by them to the Treasury. The contemplated change became so far certain that an expert of the *Kabukiza* leased a small theatre in Akasaka and induced several of the rising actors of the *Daigekijyo* class to give representations there. Finally, the expected alteration was official announced by the Local Authorities in the latter part of March. The chairmen of both kinds of stages were summoned to the Municipal Office and were told that, as the regulations in vogue up to that time were considered to be fraught with many evils, therefore they should be amended from the beginning of April, in the manner briefly explained above. At the same time, the chairmen were told that the grades should be subdivided into 8, each differing according the amount of fees paid, as follow: 1st grade, monthly fee, 5 *yen*; 2nd, 3½ *yen*; 3rd, 3 *yen*; 4th, 1½ *yen*; 5th, 1 *yen*; 6th, 50 *sen*; 7th, 30 *sen*; and 8th, 20 *sen*. They were also told that each actor must apply for the issue of a new license, the choice of grade to which he desired to belong being, of course, optional. Thus far 60 actors have sent in applications in due form, their grades ranging between the 1st and the 7th. The following actors have been licensed as of the 1st and 2nd grades: 1st grade, Ichikawa Danjuro, Onoyé Kikugoro, Ichikawa Kuzo, Ichikawa Sadanji, Nakamura Shikan, and Nakamura Fukusuke; 2nd grade, Bando Shucho, Kataoka Ichizo, Ichikawa Kodanji, Iwai Matsunosuke, Ichikawa Sumizo, Ichikawa Shinzo, Ichikawa Yaozo, Ichikawa Yennosuke, Onoye Matsusuke, Nakamura Jusaburo, and Onoye Taganojyo.

THE POPULAR VERDICT.

The feeling in Tokyo, which has all along been in favour of peace, has of late completely veered around. In the streets, the schools, the stores, people are eagerly discussing an immediate renewal of hostilities. It is the popular verdict that China has trifled too long with Japan's magnanimous patience; that she has been playing her old game of procrastination and duplicity; and that while the Viceroy Li may be fully aware of China's weakness and Japan's overwhelming superiority, the Chinese at home are certainly blind to all this, or else believe that, in the long run, the want of funds—and perhaps cholera as well—will bring Japan to the end of her resources. At all events the attitude of the people, who have been all sympathy with the Viceroy Li and ready to credit everything in his favour, is a very threatening one at the present moment. There is thorough unanimity of sentiment, for one thing: that most important factor lacking in China's counsels. This tone is also echoed in the columns of the metropolitan press, one or two journals having written so forcibly and injudiciously as to bring upon them the ban of suspension,—the *Nippon*, of course, and the *Kokumin Shimbun* being the leading offenders. It is believed, however, that in the case of the latter newspaper the suspension will not be many day's duration, especially as in the extra announcing the publication of the ban against itself the *Kokumin* ate very humble pie and promised its readers to be "doubly careful in future."

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE KAISHIN-TO AND ITS BAKAN COMMITTEE.

On the 13th inst., according to the vernacular press, Messrs. Koizuka Ryu, and Takata Sanaye, members of the Committee despatched to Bakan by the Kaishin-to, to watch the progress of the peace negotiations, presented a report upon their doings before a meeting of the party held at the Seiyoken, Uyeno Park. There were about eighty people present. Mr. Koizuka was the principal speaker. In the course of his address he alluded to the collision that had occurred between the ideas entertained by the members of Parliament in Tokyo and those held by the deputations in Shimonoseki, regarding the murderous assault of Koyama upon the Viceroy Li and the advisability of sending a letter of condolence to the Viceroy in the name of the whole House. Owing to that difference of opinion, the Kaishin-to Committee had asked to be relieved of the task entrusted to them. The cause of their procedure was as follows. On the 22nd and 23rd of last month, the negotiations were suspended, to be resumed on the afternoon of the 24th. It was immediately after the termination of the conference held that day, that the unfortunate incident occurred which threw the whole nation into great distress. In Shimonoseki the agitation was very pronounced. The assault, however, had been committed and its consequences could not now be undone. Only one course presented itself to the minds of Japanese within the immediate vicinity of the Viceroy, and that was to take means to at once atone for the dastardly act as far as possible. No matter how trifling the character of the wound sustained by Li, the hitherto stainless escutcheon borne by Japan throughout the course of the war had been smirched, and she felt the shame very deeply. Up to that time she could fearlessly face the world knowing that she had been battling rightly in a righteous cause. If then the civil portion of the nation felt the sting inflicted by the fiendish behaviour of Koyama, how much more the army; and in the event of the nation's not extending its sympathy towards the stricken Chinese Plenipotentiary, the soldiers' martial ardour might perhaps be damped. The members of parliament in Shimonoseki at once unanimously came to the conclusion that the best way to manifest the nation's denunciation of the deed and to wipe away the stain from the national honour, was to express the public's sentiment through its representatives, the Lower House of the Diet. The matter was discussed at a meeting held in Shimonoseki, in the course of which Mr. Takahashi, editor of the Osaka *Asahi*, spoke. Opinion was unanimous as to the course to be taken, but some perplexity prevailed owing to the fact that the closing of the Diet had been fixed for the following day, the 25th., and should it be found impossible to prolong the session then the carrying out of the project would be impracticable. It was therefore decided to wait upon the Premier, Count Ito, and solicit his cōoperation so that the session might be prolonged and a vote of sympathy be passed. A messenger was despatched to Count Ito, asking whether the M.P.s then in Shimonoseki would be received by him to discuss the affair. Although past midnight, the Premier was still up, conferring, it seems, with Viscount Mutsu upon steps to be taken inregard to the incident. He said that he was quite willing to receive the deputation, and upon their appearance, and after hearing their remarks, his excellency was quite in accord with them. Viscount Mutsu, the other Japanese Peace Plenipotentiary, also applauded the step proposed by the deputation. Count Ito promised to approach the Throne and ask that the session of the Diet might be prolonged. The deputation then left Count Ito's residence and despatched with all promptitude special telegrams to the office of each party in Tokyo. Many telegrams were exchanged between the two towns that night, and it was found that the ideas of Tokyo and Shimonoseki were greatly divergent, the latter unanimously maintaining the advisability of prolonging the session, while the capital was entirely opposed to it. The members of parliament in Shimonoseki were thus placed in the awkward position of being obliged to break their promise to Count Ito, which was that the Diet would pass a special vote of condolence and sympathy if the session were prolonged; they therefore asked to be relieved of the task entrusted to them. Subsequently it was learned that the Cabinet were divided in opinion equally with the members of the Lower House, the Ministers of State in Tokyo being as much opposed to the prolongation of the Diet, as the Minister President and the Minister of Foreign Affairs were for it. Such a difference of opinion between the two centres was very remarkable, and Mr. Koizuka regretted the fact greatly. He thought that the capital did not appreciate the gravity of the situation so clearly as did those who were in the immediate vicinity of the place of the attempted assassination.

MR. OTORI, ON THE COMMERCE BETWEEN JAPAN AND KOREA AND CHINA.

A representative of the *Kokumin* called on the ex-Japanese Minister to China and Korea, Mr. Otori, now a member of the Privy Council, and inquired his views about the commerce between Japan and Korea and China. Mr. Otori regards with special regret the prevalence of vicious competetion among the Japanese merchants working in Korea; competition that results in a perpetual attempt to undersell each other. This was especially the case after the breaking out of the war and when the Chinese merchants left the Korean market in undisturbed possession of their Japanese rivals. In consequence of the disbursement of a large amount of War expenditures in Korea, the purchasing power of otherwise poor Koreans suddenly increased, while, at the same time, a large influx of Japanese military men and coolies made the Korean market unusually brisk. When the report reached Japan that the time had come for the extension of Korean trade, Japanese merchants hastened to Korea with goods such as they considered likely to be in demand there. So great was the number of these new-comers that each steamer entering a Korean harbour was literally laden with tradesmen and their goods. On landing, they experienced great inconvenience at once, houses to accommodate them being unprocurable so large was their number, neither could they find warehouses to store their goods. Moreover, they found, to their utter disappointment, that the Japanese troops had already marched on and that the greater part of Korea was as quiet as ever, commercially. All these circumstances, which the exercise of a little forethought would have enabled them to discern, made them very anxious to sell off their goods at any price. The result was that the evil practice of underselling one another was carried beyond all limits of reason, ruining these thoughtless merchants. Such procedure is a bad preface to making Japan the sole supplier of goods to Korea. An unnatural competition leads to deterioration of goods, and poor as the Koreans generally are, they, like other people, object to having inferior articles sold to them. Thus gradually Japanese goods will come to be regarded with aversion by the people of the peninsula. This evil practice of underselling is attributed by Mr. Otori to two causes, namely, want of due experience and insufficiency of capital. His idea about Japanese and Korean commerce is to organize a competent body out of Japanese merchants trading in Korea and to provide against the practice of underselling. He would induce a number of wealthy traders to amalgamate into a common concern and retail the goods on easy terms to petty agents. Itenerant pedlars are very well suited to the present condition of Korea, provided that they conduct their business on a proper system. If, further, the wholesale merchants avail themselves of experienced pedlars there is hope of greatly extending the commerce between Japan and Korea.

For commercial transactions with China, the first thing to be taken into consideration is the selection of districts. Commercially, southern China is without doubt more important than northern, but there are two obstacles to be encountered by any person seeking to inaugurate business there; namely, first, that the field is already pretty closely occupied by foreign merchants, and secondly, that the Southern Chinese are crafty and very difficult to deal with. Such, however, is not the case with the north. There the market is comparatively untouched, and the people are simpler. Japanese merchants ought to choose the north as their field of enterprise. Tientsin and Newchang are the places that Mr. Otori suggests as most suited for this purpose. A suitable locality for the pursuit of business being determined upon, the next essential to success is patience. Patience is above all qualities the most requisite for commercial operations in China. Further, any tendency to ostentation, such as is common in Japan when a shop is to be newly opened, should be carefully avoided, for it largely effects the credit of the shop. The Chinese being plain, frugal, and hard-working people, any such outward display is regarded as a sign of speculation and has the effect of deterring custom. Should the business be carried on in a painstaking and unostentatious manner, it is certain that the people will gradually begin to place confidence in the shop, and the business can be extended steadily. Not a few Japanese have failed because they neglected to carefully keep this point in view; but others who were prudent enough to refrain as much as possible from outward display, are still doing business and have a steadily increasing credit. Another thing that requires patience on the part of Japanese merchants intending to carry on trade in China is that payments there are periodical. They are made about three times a year, namely, on the occasion of the May festival according to the old calender (May 5th), the 15th of July (O.C.), and the end of December. This custom makes it necessary for merchants to begin trade with a comparatively large amount of capital. Unless one is ready to do business on the credit system it is not possible to conduct trade on any large scale. The Chinese are more honest in mercantile transactions than might be expected from their generally cunning disposition. Still, strict vigilance must be exercised, for they are, after all, Chinese, and may do anything for the sake of self-interest. The employment of Chinese clerks, commonly called Compradores, would prove extremely convenient, if only due caution be taken so as not to repose too much confidence in them. While selling Japanese goods in China, merchants should endeavour at the same time to buy in China staples that are likely to sell profitably in Japan.

In this context, we may give a rough account of what the *Jiji* says about the commercial prospects of the occupied districts. In proportion to the general status of the people the number of wealthy merchants and farmers is very abundant in Shinking. The way these merchants carry on their transactions is very peculiar. They give their goods, or even advance money, to petty farmers on the security of crops still unharvested, and thus these crops generally go to the merchants as they are reaped. The farmers, tempted by immediate gain and ignorant as to their real interests, are easily preyed upon by these pitiless merchants, and what they have produced by constant toil throughout the year affords them only a very meagre subsistence. It is by such a system—practically usury—that the merchants gradually grow rich. If, therefore, ignorant of this custom, the Japanese merchant seeks by investing a large capital, to compete with the native merchants, there is not much hope of success. Such being the general condition of Chinese farmers, the best mode for enterprising Japanese merchants desirous of carrying on transactions in north China is to barter goods against agricultural products. Unlike Japanese farmers, the Chinese are generally limited in the scope of their

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

work, and are consequently obliged to purchase their clothes and such things, whereas the Japanese generally manufacture them with their own hands. Further, the scarcity of utensils and articles of comfort in ordinary Chinese houses, is notorious. All such facts lead the *Jiji* to conclude that if only transactions be conducted properly, a good field offers for enterprising Japanese merchants willing to go to the occupied districts.

THE TREATY OF PEACE.

It has been stated in some quarters that the maximum period fixed for the ratification of the Treaty of Peace by the Emperor of China is ten days. Obviously such rapid work is out of the question. The journey to Pekin from Shimonoseki is a matter of 7 or 8 days at least. The *Hochi Shimbun* gives a more credible figure, namely, three weeks from the 18th inst., which time expires on the 8th of May. Our contemporary adds that the armistice is to be prolonged for that time, and that should the Emperor of China fail to ratify the Treaty within the appointed limit of days, the whole arrangement will fall through. Such a contingency need scarcely be anticipated. The Chinese Plenipotentiaries were in constant telegraphic communication with the Pekin Government throughout the period of the negotiations, and it is not to be supposed that they agreed to anything without their Sovereign's approval.

The *Kokumin* says that a special session of the Diet will be held at an early date for the purpose of debating several questions arising out of Japan's acquisition of foreign territory. The Authorities, it is added, are now busily engaged drafting measures and carrying on investigations with regard to those questions, the principal of which relate to the estimates of revenue and expenditure in the occupied districts; to the Constitutional status of Japan's new subjects; to the laws of taxation and conscription as applied to the annexed territories; to the opening of treaty ports; to the regulations bearing on fisheries and commercial affairs; to the naval and military defences of the districts, and to the problems of railway construction and education.

Japan has indeed a great many questions to solve in connection with this sudden expansion of her empire. The only intimation of her ideas yet given by the vernacular press, is to be found in the columns of the *Hochi Shimbun*, where an anonymous statesman is quoted as drawing a contrast between the British and French systems of colonization, the local autonomy granted to her colonists by England in all matters except those that relate to military and naval defence, being greatly preferred, on the ground alike of theory and of practical results, to the centralizing tendency affected by France.

THE CHOLERA.

The *Official Gazette* publishes the following Notification over the signatures of the Governor and Chief of Police of Tokyo:—"In time of war, when large bodies of troops have to be moved, it frequently happens, as history shows, that zymotic diseases break out and spread among the soldiers, and that, after the war is over, these epidemics continue, working great havoc. During the present conflict with China, cholera has made its appearance at Chinchow and in the Pescadores, and not only do fears exist that it may spread thence, but already since last month cases have appeared at Moji, Hiroshima, and Ujina. It is impossible, therefore, to tell at what moment the disease may not declare itself in this city, and the utmost care ought to be exercised to adopt timely preventative measures, each citizen using every precautionary means in his power to avert the calamity of a cholera epidemic."

ESCAPE OF SOLDIERS AT SENDAI BARRACKS.

About 150 soldiers of the 4th Company of the Battalion of the Sendai Corps deserted on the 31st ult., writes the *Choya Shimbun*. The incident was not new in that Division. A similar affair had occurred more than once previously, the cause alleged being excessive strictness on the part of the officers. Thus, in 1885, a company of the commissariat deserted. Three years later, a whole battery of artillery, including non-commissioned officers, repeated this grave offence. In the same year, the non-comissioned officers and privates of the 4th Company of the 17th Regiment followed suit, on the day preceding the inspection by the Minister of State for War. Again, in the following year, the non-commissioned officers and soldiers of the 10th Company of the 4th Regiment leagued together for the same purpose. Warned by such incidents, which reflect in no small degree on the reputation of the captains of companies and other officers directly responsible for the control of the soldiers, considerable attention has since been paid to the importance of not needlessly harrassing soldiers in subjecting them to their daily routine of duties. The precautions taken proved effective, for subsequently, up to the end of last month, no instance of desertion had been reported. The last case appears to be due to the same cause as the rest —over-severity on the part of the officers. The soldiers who were guilty of the breach of discipline were those of the 2nd Reserves, and as they had already gone through their service with Colours and the 1st Reserves, they thought that they were entitled to more lenient treatment than that generally extended to men on active service. But such, it seems, was not the case. An ensign of the company enforced the laws to the letter and subjected the men to the same strict rules as those applied to the troops with the Colours. Even a petty breach of discipline was punished mercilessly. The soldiers became highly dissatisfied at what they thought excessive severity, and secretly leagued together to commit some grave offence that might attract public notice. The 31st of March was Sunday, and the men of the company left the Barracks in a body. Evening came and tattoo was sounded, but not a man of all the company answered his name at roll-call. The officers of the company became alarmed and instituted a search, but no clue could be obtained as to the whereabouts of the soldiers. Nor did they return even on the next day. The Chief of the Battalion of which the Company formed a part then submitted the particulars of the occurrence to the Central Office of the Division, and Gendarmes and Police were asked to lend help in searching for the defaulters. The non-commissioned officers of other companies were also required to assist the inquiry, but all to no purpose. On the evening of the 5th instant the men came back in threes and fives, and by the 6th all who had deserted were again in the Barracks. What punishment was meted out to them in accordance with the rules of military discipline is not yet clear. It is said that the Chief of the Battalion and the Captain of the Company have tendered their resignation.

THE RECENT ARRESTS.

The arrest of the brothers Barradas and Fonseca is said to be due to their having, on behalf of some Japanese, disposed of the products of a mine which had been fraudulently obtained. It appears that two Japanese have, for some time past, been making efforts to sell the products of the mine, which they alleged belonged to them, and had approached a number of foreigners with that object, the foreigner to supply a little capital with the understanding that the profits of the output should be equally divided. Foreign business men of course fought shy of such a project, but the three Portuguese were induced to take it up. The mine in question is said to belong to a farmer.

A RAMBLE IN THE PESCADORES.

A REMINISCENCE.

A group of low lying islands, looking dreary with their monotonous flatness and want of trees and vegetation, scarcely invite a visit, yet, as we are here, a ramble will stretch our somewhat cramped legs.

The town of Makung is the capital. Villages are scattered about on most of the twenty-one inhabitated Islands. We are near the S.E. end of Ponghow (the largest island), and, getting into the boat, pull haphazard for the shore. Jumping on to the sandy beach, we are at once struck with its dazzling brightness and glare, and find that the phenomenon is caused by the sun shining on coral: the beach is actually strewn with it, broken into small pieces by the force of the waves; also a wonderful variety of shells, some of them so pretty that I fill my pockets to take home for the youngsters to play with. A few minutes and we are up to one of the villages. Our surprise is great, for there is something so unique about it: the walls of all the houses, also all the garden walls, are built of coral. We have all seen coral in a house or garden, and can imagine how pretty a sight a village built of such material would be. But here they are rough fantastic looking blocks, weather worn and weather stained into a very dirty grey, with the interstices filled with mud; the roof is covered with ordinary brick tiles. The house garden is well sown with vegetables, and in between each furrow is a row of coral nearly a foot high to protect the young shoots from being blown down by the winds, and then they have the additional protection of the coral wall about five feet high. The violence of the N.E. winds has to answer for this great amount of care, also for the entire absence of trees. The inhabitants are Chinese; quiet inoffensive looking people, with the usual amount of dirt about their appearance and clothing. The village, although dirty, presents a clean appearance by comparison with what one sees in the North of China. Pigs and dogs abound, seemingly quite happy in the dirt that all appear to revel in. Men and boys are about and looking at us; but it is a sad sight to see so many partially blind. Whether it is a feature peculiar to this village, or whether it is only partly blind men that come out this day I cannot say; but quite 30 per cent. of the adult men suffer from some ailment of the eyes. Why is it so? Can it be that the glare of the coral beach and the sand blown about by the violent winds in time impair the sight?

We walk on and find all the arable ground under cultivation; in a few places little green shoots are just starting up between the furrows. The soil is poor, but a considerable quantity of potatoes, maize, and millet is grown. Cattle roam about, and are used to till the ground. 'Tis a dreary monotonous view, not a tree, not a hill to throw a shadow: a rock underfoot has a creeper spreading over it which runs into a crevice to try and hide itself from the fierce winds and hot sun before breaking into flower. Poor little blue flower. What a waif and stray you seem to be in this cheerless island. Later on we sight and hear three larks, singing and soaring, indifferent to surroundings whilst enjoying freedom. When their morning song is lost to us the only brightness possessed by the island is gone. We turn back, making a bee line for our boat, feeling very thankful that our lot does not require us to become residents.

Adieu Pescadores! I am glad to have seen you, but more than glad to get away from your changeable climate, fierce winds, and fever ridden, cheerless shores.

Among the co-operative associations formed in New South Wales during 1894 were the Dubbo Co-operative Meat Chilling Company, Monaro and South Coast Meat Freezing and Chilling Company, Nyngan Refrigerating and Boiling-Down Company, Australian Meat and Produce Supply Agency, North Coast Fresh Food and Cold Storage Company, Narrabri Refrigerating and Boiling-Down Company, Federal Ice and Chilling Company, and Graziers' Meat Export Company, the amount of share capital of each ranging from £200,000 to £5,000.

THE SHIMONOSEKI CONFERENCE.

THE delay in the progress of the negotiations at Shimonoseki is naturally causing some uneasiness. It is true that the Viceroy himself did not resume his attendance at the Conference chamber until the 10th instant. But it it also true that he could have done so sooner, had he been so minded; and it is further true that, despite his absence, the negotiations were virtually progressing all the while. Japan's terms were known to the Chinese Plenipotentiaries from an early era, and the Viceroy and his colleague were, therefore, in a position to submit them to the Government in Pekin. Moreover, communications were passing constantly between the two sides in Shimonoseki. It is not to be supposed that while the parties to a great and momentous negotiation were living for three weeks within stone's throw of each other, no *pourparlers* took place simply because the chief on one side was temporarily disabled. For all purposes of a final agreement consultative intercourse may be assumed to have been going on throughout. Count ITO would not have returned to Shimonoseki and remained there under any other circumstances: his presence at Hiroshima is too much needed. But the Chinese Plenipotentiaries are evidently unable to come to any speedy decision. The Conference on the 10th instant did not take place in any regular routine of meetings. We learn from the vernacular press that it was the result of pressure from the Japanese side, the Chinese Envoys having given no indication of an intention to speak definitely, although there had elapsed ample time for them to make up their minds had they been disposed or competent, on their own responsibility, to meet Japan within any reasonable range of her demands. In view of all these circumstances, the Japanese are growing impatient. They begin to think that China is trifling with them, and that her immediate purpose is simply to gain time. The *Nichi Nichi Shimbun*, whose utterances upon such a subject merit full consideration, says that not a single day's grace will be granted by Japan; that if a settlement has not been effected by the time fixed for the conclusion of the armistice, the latter will not be renewed under any circumstances, and that, if China does not agree now, Japan's next statement of terms will be made under the walls of Pekin. The *Shogyo Shimpo*, a moderate and independent journal of the best type, writes almost in the same sense, though less defiantly than the *Nichi Nichi*. Its tone is plainly despondent, though it is careful to say that the negotiations are not broken off and that the next meeting is to take place on the 13th instant. The *Yomiuri*, which has been remarkably well informed throughout the war, says that the delay in the reassembly of the Conference until the 10th was at the Viceroy's instance, and that, on the eve of this tardy meeting, he sought another postponement until the 20th, which proposal was emphatically rejected by the Japanese Plenipotentiaries. But we find difficulty in believing that a diplomatist of LI'S astuteness would deliberately expose himself to the suspicions that such unwarrantable delay must suggest. The *Chiuo Shimbun* declares that the interval between China's views and Japanese demands is too wide to warrant any hope of successful bridging, but that, too, we venture to doubt. It seems to us that such a crisis as is now occurring was to be anticipated from the outset. If Japan's terms were such as the Viceroy LI might accept without hesitation on his own responsibility, she would be doing herself an injustice. If, on the other hand, as is virtually certain, they are such that LI can not think of agreeing without reference to Pekin, unless he be prepared to risk his own political ruin and invite his SOVEREIGN'S repudiation; if further—which also is tolerably certain—they are such that the Pekin Government itself finds some difficulty in dealing with them, then obviously considerable delay is unavoidable at some stage of the negotiations. We venture to think, therefore, that the hesitancy in the face of which Japan begins to chafe, need not be interpreted in a gloomy sense. The Viceroy's intention, indeed, is probably to avail himself of the armistice to its extreme limit, whatever be the nature of his ultimate reply to Japan's demands. No people have fuller faith in time than the Chinese. LI will naturally reflect that, whether or no the unpalatable pill has to be swallowed finally, the longer the operation is deferred, the greater are the chances of something happening to dispense with its necessity. Many things might happen. Cholera, for example, might assert itself so violently among the Japanese expeditionary forces that their despatch against Pekin would be scarcely practicable. We need not catalogue such contingencies; our readers will easily conceive them. The Chinese Plenipotentiaries would be lacking in astuteness if they did not seek to secure the benefit of all these chances for their country. As for the event of rejecting Japan's terms and renewing belligerent operations, it is quite plain that an answer in that sense will not be formulated until the very last moment. Thus, on the whole, China's palpable game is to procrastinate. Moreover, Japan is bound to await her opponent's final reply until the end of the armistice. She can not unsheathe the sword again a day sooner. All that her Plenipotentiaries can be expected to do is, if possible, to force China into such a position that further procrastination will be open to only one interpretation. Whether that can be done without such a display of impatience as might discredit Japan herself, is a question that diplomatists like Count ITO and Viscount MUTSU are thoroughly competent to answer. If the war is to continue, every day's delay at this juncture is an immense loss. If peace is to be made, every day saved is a great gain. All that, however, is self-evident. What we desire to point out is simply this, that whether the Chinese Plenipotentiaries contemplate accepting or rejecting Japan's terms, it is evidently their interest to take either step in the last resort, and that, consequently, delay on their part at this juncture can not be interpreted in any definite sense. There is one other point to be noted. If the Viceroy hopes to procure a modification of Japan's terms, every hour of hesitation militates heavily against his chances. Japan can not be expected to seriously consider counter-proposals advanced at the eleventh hour. That kind of shilly-shallying would be childish. China is therefore playing a very delicate game, and her plenipotentiaries must understand the fact thoroughly.

METHODS OF ARGUMENT.

IN our issue of Tuesday we published an article under the heading "One law for me, another for thee." The subject discussed was the singular mental habit of local journalistic critics in this country, who, while claiming for European Powers all kinds of rights of international interference and even aggression, deny the possession of any such rights by Japan. Russia, for example, is entitled to dictate the status of Korea and the integrity of China; France, to forbid the disposal of Formosa by the Empire to which it belongs; England, to claim the Chusan Archipelago or Keelung and its coal mines, lest the balance of power be disturbed in the Orient. But if Japan knocks down the flimsy partitions that invite, while professing to avert, Western aggression on her own borders, if she seeks to replace them by something substantial, she is denounced as a truculent aggressor, a slave to the unholy lust of conquest. That was the subject of our article. It commenced with these words:—"The denunciation of Japan's claims by foreign local critics, and the assertion of their own country's claims by the same critics, constitute an object lesson at once instructive and amusing." The article is now answered. One of the local critics has undertaken to defend his position, and this is how he sets out:—"Astonishment is expressed because local critics plead for Europe the same rights which Japan has arrogated." Is not that amusing? Our comment was on the blindness of critics who fail to appreciate the evident contradiction of denying to Japan rights that they claim for all the States of Europe. Our opponents inter-

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

pret us as expressing wonder because the rights that Japan has arrogated are pleaded for on Europe's behalf. Thus the very opposite of what we said in the plainest language is ingenuously taken as our meaning, and our honest critic proceeds to prove that if Japan has certain rights Europe must have them also, whereas what he was asked to prove was why Japan should not have those rights if Europe has them. The *Japan Gazette*, we need scarcely say, is responsible for this cheerful distortion of our proposition. It enjoys, we think, a monopoly of that kind of perversion. So far as the problem under discussion is concerned, the *Japan Gazette*, of course, does not expect to be taken seriously. To demonstrate that a man has the right of locking his own door when he goes abroad, does not help us at all to understand why his neighbour should be called ugly names for resorting to a similar precaution. But the *Japan Gazette*, though it casts honesty and fairness to the winds, gains the advantage of gibbetting us as assailants of European rights. That is its sole hope. That, indeed, has been the sole hope of our local journalistic critics for years. Unable to answer our argument—or rather the arguments of simple justice and common sense—they have sought to bring obloquy upon us by representing us as opponents of Western rights and interests. So now we are made to appear as having denied European rights and asserted the same right on Japan's behalf, whereas our actual words were:—"If that right is to be claimed for Europe—and we are not so silly as to imagine that *fin-de-siècle* morality will deny the claim for an instant—then surely the same right must be conceded to Japan." Of course no reader of ordinary intelligence can fail to perceive the *Japan Gazette's* deliberate perversion of the issue at stake. We refer to it, not at all for purposes of controversy, but simply in the sequence of a demonstration that from time to time we have thought it useful to make—a demonstration of the methods of argument employed by the so-called champions of foreign interests, exponents of foreign sentiment, and judges of Japanese character.

A word may be added here about the most recent contention of these champions, namely, that had there been no *Japan Mail*, everything might have gone on in peace and quiet to the end of the chapter. It is impossible to be complimented by any tribute coming from such a quarter, otherwise our gentle critics' constant endeavour to tear down the *Japan Mail* and bespatter its editor with mud, might give us satisfaction as a confession of the horrible inconvenience we cause them, But we assure them that, so far as concerns this particular contention of theirs, they have our entire sympathy. We can understand how dreadfully embarrassing it would be for a preacher fulminating from his pulpit at a strange sect's differences of doctrine, were his autocracy of anathema to be suddenly disturbed by the apparition of another pulpit and another preacher, ready and able to expose his quibbles and ridicule his curses then and there. So, too, it must have been very distressing for editors sailing calmly down the current of anti-Japanese denunciation, to meet with a head-wind that took their canvas aback and subjected them to nasty buffets from the waves of reason and justice. A most annoying state of affairs undoubtedly, and if it has harrassed our tender critics so as to entirely distort their sense of cause and effect, we really pity them. By way of *amende* we suggest that they can find interesting topics for demonstration if they will undertake to show why their enmity to the *Japan Mail* made them inveterate opponents of Treaty Revision from 1871 until 1895; why their enmity to the *Japan Mail* made them side with China from the outset of this war, minimizing Japan's successes, giving credence to every rumour of disaster to her troops and ships, condemning her as an unprincipled aggressor, and endeavouring by every possible means to discredit her cause; why their enmity to the *Japan Mail* makes them now endeavour to prolong the war by telling China that if she had a spark of patriotism and endurance she would fight to the bitter end rather than accept Japan's terms, though they do not even know what Japan's terms are. We admire their manly shifts to evade responsibility. First, it is the hostility of the Japanese press that must be blamed; then it is the outspokenness of the *Japan Mail* that makes them turn upon Japan and rend her; and always it is their anxiety to improve her by frank abuse that prompts them to hold her up to public scorn. Their position is becoming more and more enviable.

THE PEACE.

NO official intelligence as to the terms of peace will be published, we presume, until the document has been duly ratified. The Treaty was signed on the 17th, and as the Viceroy with his suite left Shimonoseki the same afternoon at 2 o'clock, it must be inferred that China's acceptance of Japan's terms, whether modified or in their original integrity, had been a foregone conclusion for two or three days, otherwise such a rapid start would not have been possible. This inference, which could not fail to suggest itself under the circumstances, receives confirmation from reports previously published by vernacular newspapers, to the effect that preparations for the Viceroy's departure had been in progress since the 14th or 15th.

The *Jiji Shimpo*, an authority of undoubted weight, says that the Treaty was signed at 10.45 p.m. on the 17th instant, the Chinese Plenipotentiaries accepting Japan's demands, and that the terms were:—

(1).—Japan to receive the portion of Manchuria comprised between the Valu River and the Liao River, including Yingkow, Haicheng, Chiulencheng and so forth.

(2).—Japan to receive Formosa, the Pescadores, and all the subsidiary islands.

(3).—Japan to receive an indemnity of 200 million Taels, the payment to be effected in six yearly installments.

(4).—The extraterritorial privileges now enjoyed by Chinese subjects in Japan to be abolished, but those of Japanese subjects in China to be preserved. Moreover, various tradal privileges to be granted.

We are not at liberty to state how closely the above statement approximates to, or how far it diverges from, the actuality. But our readers will at once observed the vagueness of the first and fourth items.

Viscount MUTSU was present at the final conference, and affixed his signature to the Treaty.

Meanwhile, the vernacular press has paid dearly for its not unnatural eagerness to lay before its readers details as to the proceedings at the conference, the publication of which without special permission is strictly interdicted by law. We have already noted the suspension of the *Nippon* and the *Kokumin* on the 15th inst., and we have now to add that the ban went forth against the *Yomiuri*, the *Kokkai*, the *Niroku*, the *Chiuo*, and the *Choya* on the 16th. Suspensions of newspapers are never incidents above criticism, but we are constrained to confess to a feeling of satisfaction that the Government is showing a bold front in this matter. Among the seven journals enumerated above, our readers will recognise the principal organs of the Strong Foreign Policy Party, an association of politicians not likely to be satisfied with any reasonable terms of peace, and understood to be awaiting the Shimonoseki settlement for the scarcely concealed purpose of making it the platform of a new crusade against the Government. It is impossible to sympathise with politicians of that type, however sincere may be their patriotism, and since their incendiary proceedings at present are calculated to work great mischief, we rejoice that there is to be no tampering with them. None the less does it appear most regrettable that an event so joyful as the dawn of peace in the East, should be disfigured by a wholesale suppression of prominent Tokyo Journals.

As for the terms of peace, we refrain from commenting on the obviously imperfect outline given by the *Jiji Shimpo*, preferring to wait until an official statement relieves us of all doubt.

THERE can be very little doubt, we presume, that the public is now in possession of the salient features of the Treaty of Peace signed on the 17th instant at Shimonoseki. Pending the ratification of the Treaty, it may be assumed that no official statement of the terms will be made by the Japanese Authorities. But

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

China will not be equally reticent—why should she, indeed? Before long we shall have full details from her side. In the meanwhile, however, our readers will not be much mistaken, we believe, if they set down the indemnity at 200 million Taels, or, say, 280 million *yen*, and the territorial concessions as Formosa, the Pescadores, and the Liaotung Peninsula. With regard to this last, however, there is evident vagueness in the expression 'the Liaotung Peninsula." We have to inquire how much of the Mainland is included in the neck of the Peninsula. Judging from information already published, the closest approximation to the northern boundary of the neck is the diagonal—so far as it falls within Manchuria—of the parallelogram formed by the 40th and 41st parallels of latitude and the 122nd and 125th lines of longitude. Doubtless, the demands originally formulated by Japan exceeded those that she was prepared to accept, and we may fairly conjecture that her margin of compromise was connected with the dimensions of the neck of the Peninsula and the size of the indemnity. But there can be no doubt either as to the intention underlying her territorial terms, or as to the fact that she has accomplished it. Formosa she wanted as a solid addition to her material resources. It is a rich island, capable of great development, and that its wealth-giving capacities will grow immensely in Japanese hands and under Japanese rule, cannot, we think, be questioned. Great Britain has considerable interests there already. These, of course, as well as those of all foreigners in the ceded territory, will be scrupulously respected, and we may rest assured that not the smallest of the shares in the island's augmented trade will fall to England's lot. There is, indeed, a possibility that Hongkong may suffer in one respect, since the possession of Formosa and its sugar plantations must constitute a great incentive to Japan's long conceived ambition of refining her own sugar. One of the Hongkong industry's chief markets may thus be closed. But that result was only a question of time under any circumstances. As for the acquisition of the Liaotung Peninsula, however, the principal motive was evidently strategical. Japan drew the sword for the purpose of emancipating Korea from Chinese suzerainty. She accomplishes that object completely by getting possession of the Liaotung Peninsula, as deliminated in the Treaty of Peace. For from Yingkow she commands the northern shores of the Gulf of Pechili, from Port Arthur the mouth, thus effectually blocking China's maritime routes to Korea; while at Kaiping, Haicheng, and Chiulien she holds the land approaches to the northern frontier of the little Kingdom. China thus becomes powerless for the purpose of reprisals. The territories wrenched from her may inspire her with a longing for revenge, but their situation renders it impossible for her to gratify that impulse.

Military prowess being still the sole arbiter of titles to empire, this expansion of Japan's realm is unquestionably merited. Further, as the Eastern representative of Western progress, she deserves our sympathy and congratulations. She emerges from the war a Power with which every Western State must now reckon, and since the spread of her sway makes for civilization and enlightenment, it is impossible not to rejoice at her success.

Many thoughts suggest themselves in connection with this remarkable re-distribution of territory. Chief among them is the question of what it means for the Far East in a progressive sense. England in Hongkong has presented to China an object lesson in the results of good government and intelligent enterprise. But Hongkong is a tiny island lying far beyond the practical knowledge of the mass of the Chinese nation. The case will be different with Japan in Shinking. There, on a large scale and within their own borders, so to speak, the Chinese will have an opportunity of observing the fruits of competent administration, active enterprise, good laws, security of life and property, and absence of official corruption and peculation. The two systems of civilization, that of China and that of Europe, can scarcely both survive such close contact. Perhaps it is not extravagant to hope that a new era is about to dawn for the continent of Eastern Asia.

Another most interesting problem relates to Japan's method of treating her new subjects. Will she extend to them all the constitutional privileges enjoyed by her own people? Will she, for example, grant to them absolute freedom of travel and residence in every part of her empire? An inundation of Chinese, of men content to live on the lowest planes of existence for the sake of daily bread, has long been a nightmare to her. Yet she will open the door to it if Manchuria be not differentiated from Japan proper. Whenever races following different creeds of civilization have been brought into contact, history shows that the assimilation or elimination of the weaker is inevitable. Which is it to be in this case?

Without pursuing this train of thought, it may be well to say a word about issues of more immediate interest. It is stated, we observe, by one of the foreign journals of this Settlement that the terms of the Treaty of Peace have elicited expressions of discontent from several vernacular journals, and this supposed fact is made the text for some strong criticism of Japanese national avarice and immoderate cupidity. What singular misapprehension evoked such comments we are at a loss to conjecture. Up to the present, not so much as one vernacular journal has expressed dissatisfaction about the terms of peace. Seven have been suspended, not at all for criticising an arrangement of which they had no knowledge prior to their suspension, but for publishing unauthorized and probably incorrect versions of what took place at the Conference, and above all for writing in a violent and incendiary tone about the possibility of foreign interference. As to what the nation thinks of the conditions granted to China, no journalistic information had been furnished up to the 18th instant.

This leads us to the question of foreign interference. Within the past two months, extremely ludicrous and sensational statements have been advanced by local foreign newspapers in Japan and in China, as to terribly resolute steps contemplated by this or that European Power in the event of Japan's attempting to annex an inch of Chinese territory. Russia has been a stock scarce-crow. Her Mediterranean Fleet was coming out to blow Japan to pieces if Manchuria were meddled with. Russia's Mediterranean Fleet consists of one man-of-war and a few torpedo boats! It might well be invoked by these silly alarmists. Besides, Russia's only interests in this matter are that the independence of Korea should be preserved and that her own overland trade with China should not be interrupted. Assured as to those two points, she has nothing to be concerned about. The fact is that all this much-talked-of foreign interference had no existence outside of the newspaper columns where it was invented. The Powers of Europe have left China and Japan to settle their dispute without foreign dictation of any kind.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

A CORRECTION.

To the Editor of the "Japan Mail."

Sir,—It is natural to infer from one paragraph of the report of "The Baptist Missionary Conferences," in the *Japan Mail* of April 15, that the *Yorokobi no Otodzure* and the *Chiisaki Otodzure* are Baptist publications. As no such misrepresentation was intended, it is only just to state publicly that the statistics about those periodicals were taken from the report of a joint committee on the religious publications of all denominations.

Respectfully yours, REPORTER.

Tokyo, April 16th, 1895.

JAPAN AND SILVER.

To the Editor of the "Japan Mail."

Sir,—It is of special importance at the present time to keep before those responsible for the monetary system of this country the great advantages that Japan is now deriving and will derive by its manufacturing competitors in Eastern markets being countries with a Gold standard. Let Japan adopt that single standard and these immense advantages will be at once lost.

At a recent meeting of the East India Association held in London, the Duke of Devonshire in the chair, Sir Lepel Griffin, a distinguished Indian official, read a paper on India in 1895. His remarks on Japan as a competitor in Eastern markets do not exaggerate the situation. He said that "with the year 1895 India was entering upon a new phase of her wonderful story. The war between China and Japan was still in progress. There could be no doubt that a new Power had

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

arisen, and China was so shaken that she might be driven to open her country to foreign influences. The valley of dry bones would then stir with new life, and the competition of Japan would have the gravest effect both on India and Great Britain. The gravity of the situation had as yet been imperfectly appreciated. Then in financial matters India had reached a crisis, and there must be a change of policy or a great disaster would ensue. The year happily opened with a full, free, and generous acknowledgment in the House of Commons that India was not to be tossed in the sea of party politics. Mr. Fowler had won the lasting gratitude of India by his masterly defence of Indian interests, and he had also done well in placing the whole cost of the Opium Commission on this country. The currency question involved for India prosperity or ruin. Low prices might be a good thing; but the working man might find that low prices and starvation were perfectly compatible. His own conviction was that in bimetallism alone—the unrestricted coinage of silver and gold on a fixed ratio—lay the remedy for the present depression. Happily the tide of public opinion in this country and abroad was setting strongly in this direction, and Germany and France were only waiting for a signal from England to join in an international convention. In postal matters such conventions had been found practicable and had been faithfully observed, and there was no reason why a like result should not follow in respect of a bimetallic convention. To India the solution of the difficulty was a matter of life and death—and if it were not solved the new development of China and Japan would ruin our Indian Empire."

I am, Sir, yours faithfully,

A BIMETALLIST.

Tokyo, 18th April, 1895.

AUSTRALIAN NOTES ON JAPANESE TOPICS.

By John Plummer, M.J.S.

Sydney, March 9th.

It cannot honestly be said that Australians take much interest in the progress of the war between Japan and China, nor do they appear to realise the momentous issues that may become raised after peace has been proclaimed between the two Powers. The popular idea is that Australia, with the assistance of Great Britain, could crumple up Japan at any time, if necessary. Fortunately, the more educated and experienced class of colonists fully realise the magnitude of the social and political changes which have suddenly transformed the once slumberous-land of the Chrysanthemum into one of the most powerful and active nationalities of modern times; and this has largely intensified their desire to effect a commercial and industrial alliance with Japan. Already Australia is becoming a good customer to Japan. In Sydney, Melbourne, and elsewhere there are large stores owned by Japanese, which do a roaring trade in Japanese vases, silks, and other commodities, while considerable quantities of the same are periodically sold in the leading auction rooms. There are few Australian homes in which vases and other Japanese ornaments are not to be found, and the ever-increasing business in these has largely checked the import of fancy goods from the United Kingdom, France, Germany, and elsewhere. Not only this, but it is also having a marked influence on Australian art taste, the number of rooms decorated in Japanese fashion being considerable. These facts point strongly to the possibilities of increased commercial intercourse between the two countries, especially in the matter of wool, for which the Australian woolgrowers think a good market may be found in Japan.

On the subject of Australian wool trade with Japan, Mr. J. N. Brunker, Colonial Secretary of New South Wales, has received a lengthy communication from Mr. R. N. Synnot, of the National Wool Company, Limited, Melbourne, of the course of which Mr. Synnot says:—

"On behalf of Australian wool producers, I have the honour to bespeak your kind interest in the proposed endeavour to establish an export trade with Japan and China for wool and such other of our primary products as may be in demand—particularly in the first named progressive and flourishing country. The present is rather the revival of an old than the initiation of a new movement. The first attempts to open up a wool trade with the East were made 20 years ago by the late Mr. Monckton Synnot, wool merchant, of Melbourne, and the records he has left behind him testify to the earnestness and persistency of his experiments." Mr. Synnot then goes on to speak of the wool market in 1874, the opening of correspondence with Messrs. Olyphant & Co., of Shanghai, and a shipment of choice western district wools for distribution among the workers in the cloth trades. A further test with manufactured woollen yarns, and the support given to the experiment by the late Mr. Richard Goldsbrough, Mr. Hastings Cunningham, Mr. John L. Currie, of Lara, Mr. Evan Evans, of Roto, and Mr. D. M'Lean, of New Zealand. Continuing, Mr. Synnot says:—"A mixed assortment prepared at the Victorian and other woollen mills, was sent to Messrs. Olyphant & Co., and was distributed by them among the Chinese gratis. The latter received it without knowing where it came from, or what the object of its free distribution was, and, mixing it with cotton yarns, they turned out a serviceable cloth of exceptionally strong texture; and the samples of cloth returned to Australia proved conclusively that we could satisfactorily fill an existing want in China. Then the experiments were extended to Japan. Correspondence was opened up with Messrs. H. Ahrens & Co., of Yokohama, and Messrs. Okura & Co., of Tokyo, in 1878, and by a strange coincidence the Imperial War Department almost simultaneously began to initiate experiments with a view to clothing the Japanese army in woollens, and despatched a Commission of Inquiry to Australia to find out all about wool. Singularly enough the Australian Governments took no notice whatever of this commercial embassy. The commissioners fully endorsed Mr. Monckton Synnot's belief that Japan offers Australia a practically inexhaustible market for wool when the trade shall have been properly introduced and popularised. Unfortunately, both experiment and negotiation were brought to a sudden standstill: first, by the death of Mr. Monckton Synnot; and secondly, by a sudden and considerable advance in the value of wool. This, however, proved only a very temporary revival, and in 1885 the present writer was induced by the collapse in the market to endeavour to resuscitate the movement towards the East. In this connection a meeting was held at Scott's Hotel, at which the original Woolgrowers' Association was formed, the provisional committee including such men as Sir Thomas Elder, Sir James M'Culloch, Sir P. Jennings, Sir William Clarke. The movement was properly organized this time, and would no doubt have succeeded but for a sudden rise in wool value—a rise of from 25 to 30 per cent.—which at once killed all interest in the movement by making woolproducers content with present gains and indifferent or lethargic in their attitude towards a movement which then only seemed to aim at providing for a vague necessity which might arise in the dim and distant future. However, past investigation has proved:—1. That woollen manufacturing in China and Japan is in its infancy. 2. That China, while possessing sheep, produces no wool which will compare favourably with our lowest qualities, and that sheep there are propagated for food chiefly. Also, that what wool is made use of in China is used in the method in vogue in Scriptural times, 2,000 years ago and upwards, with the skin attached. 3. That Japan cannot breed sheep without growing food to keep them alive in winter. What I now seek is the help of your Government in paving the way for Australian private enterprise to introduce and develop itself in China and Japan, especially Japan. Of course the wool industry is not likely to ask for any State aid in a financial sense, and nothing is further from my thoughts; but I feel that your Government can render the industry yeoman service by officially introducing the matter to China and Japan with a view to obtaining some publicity in those countries for the innovation which it is proposed to make, as well as the approval of the respective Imperial Governments."

Of course, the Australian Governments are prepared to give what assistance they can in the matter, but private enterprize is already working rapidly in the desired direction, both in Japan and in Australia. In Melbourne, a letter has just been received from Mr. E. Jerome Dyer, who is travelling in Japan and the East on behalf of several Melbourne business firms, stating that the Japanese are about to establish a regular line of steamers between Melbourne and Japan, and that vessels for the service are being already selected. He added that he had been informed by the Japanese merchants that with the establishment of this line of steamers they would be large and increasing importers of wool, leather, minerals, food products, flour, wines, fruits, and horses, from Australia. The E. and A. Co.'s steamer *Airlie* is taking out several leading Sydney produce and other agents, who purpose spending several weeks in Japan with a view to ascertaining what openings exist for the disposal of Australian produce. The possibility of the Nippon Yusen Kaisha Company running a direct line of steamers between Kobe and Sydney, is causing the Eastern and Australian and China Navigation Companies to consider the best means of extending their service between Australia and Japan. The steamer *Menmuir*, which left Sydney the other day for Japan, took out the largest load of wool ever despatched from Australia to an Asiatic port. But there will be serious obstacles to encounter, principally in the shape of attempted anti-Asiatic legislation by the leaders of the various Australian labour parties. On this point a colonial paper says:—"It is just possible that the development of Japan as a manufacturing country may now be extremely rapid, and a considerable demand for our produce may spring up. If, however, as seems likely, Japan will not open her ports to our merchandise unless we admit her subjects without restriction, another difficulty confronts us. We may find the bargain an unsuitable one. With half a million Japanese in the colony, we might find that we had purchased a fresh outlet for our wool at too high a price." That is absurd. Australia is not too attractive as a field for Japanese emigration as are other countries, and although the Japanese population is rapidly multiplying from hundreds into thousands, it is very unlikely to rise into millions, unless, indeed, the Australian workman refuses, as of old, to sell his labour at current market rates.

Speculation is rife in Australia as to the real object of Japan in pressing the war to the bitter end. The *Sydney Morning Herald* says:—

All that seemed to have been originally contemplated has been achieved, or at the least could now be obtained for the asking. Korea, the original *causa belli*, has long ago been swept of all Chinese influence, and its independence, or whatever other disposition of its political life may be desired, is already in the hands of Japan. But much beyond this has been achieved in the fall and occupation of Port Arthur and Weihaiwei and the capture of all the principal naval fighting force of China. Yet Japan still presses onward, and new loans and new mobilisations tell of far greater achievements in contemplation. Despite the impassive dignity which the Chinese Government would desire to maintain, it is evident that humiliation deep and far-reaching is in contemplation; and while the Western Powers now and then make demonstrations, and intentions of intervention are frequently rumoured, it seems destined that the mutual jealousies of these will paralyse action until Japan will have worked its will, and made intervention inadmissible. And what is that will? And what are the great ulterior objects which Japan has in view, if she did not always contemplate them, in determining to humble China in the dust? This is the question that is now of deepest import to the world, which cannot, without some anxiety, contemplate the possibility of the building up of a great Power that may aim at dominating all other interests in the East.

The general impression is that one result of the war will be a general awakening in China, and that one of the possibilities of the near future will be the turning back of the tide of Russian invasion by the combined forces of Japan, Korea, and China. There can be no question that a new chapter in Asiatic history has been opened, and that indirectly the rise of Japan as a great naval and military power will largely influence the future course of events in India and Europe. Possibly Japan may be called upon to take a leading part in the general war which political soothsayers declare to be impending, but, if the experiences of the past are of any value, she will find her greatest triumphs to be those secured in the arts of peace.

ARIMA CHRISTIAN CONFERENCE.

Programme for 1895.

Sunday, August 4th.—10 a.m. Morning Service; with Sermon by a Missionary from China (not yet definitely arranged). 7.45 p.m., Evening Service; with Sermon by the Rev. F. C. Neitz, of Osaka.

Monday, August 5th.—10 a.m.. Paper (by the Rev. G. H. Pole, of Osaka) and Conference on "Methods for developing and training workers from among the Japanese Christians." 7.45 p.m.. Devotional Meeting on Mission Work in Japan.

Tuesday, August 6th.—10 a.m., Bible Study, by the Rev. H. D. Page, of Osaka. 10.55 a.m., Paper on "The Holy Spirit as Convictor," by the Rev. R. H. Consterdine, of Matsuye. 7.45 p.m., Devotional treatment of the same subject.

Wednesday, August 7th.—10 a.m., Bible Study, by the Rev. H. D. Page. 10.55 a.m., Paper on "The Holy Spirit as Teacher," by the Rev. J. W. Moore, of Kochi. 7.45 p.m., Devotional treatment of the same subject.

Thursday, August 8th.—10 a.m., Paper (by a Medical Missionary from China), and Conference on "Medical Work as an Evangelistic Agency in China." 7.45 p.m., Devotional Meeting on Mission Work in China.

Friday, August 9th.—10 a.m., Bible Study, by the Rev. H. D. Page. 10.55 a.m., Paper on "The Holy Spirit as Comforter," (probably) by the Rev. F. Franson, the Scandinavian Evangelist. 7.45 p.m., Devotional treatment of the same subject.

Saturday, August 10th.—10 a.m., Bible study, by the Rev. H. D. Page. 10.55 p.m., Paper on "The Holy Spirit as Sanctifier," by the Rev. F. S. Curtis, of Yamaguchi. 7.45., Devotional treatment of the same subject.

Sunday, August 11th.—10 a.m., Morning Service; with Sermon by the Rev. H. McC. E. Price, of Osaka. 7.45 p.m., Evening Service, with Address by the President.

Notes.—1. A prayer meeting, lasting half an hour, will be held daily from Monday to Saturday at 6.30 a.m.

2. The Morning Sessions are to close at 12.45 a.m.

3. The Evening Devotional Meetings are to last one hour only.

LEAVES FROM THE DIARY OF A WAR CORRESPONDENT IN MANCHURIA.

Haicheng, February 27th, 1895.

The Japanese, in preparation for their start from this town, sent out this morning an unusually large number of reconnoitering parties to learn the exact strength and disposition of the enemy's forces. This roused the Chinese into a semblance of activity: they fired big guns at the scouts, and several large bodies of men marched out into the plain. After a visit to Hwanshishan, a little before eleven, to see if anything serious was really going to take place, and after learning that as usual the enemy had no stomach for an attack, I returned to go on with my preparations for the start.

I was interrupted once only, by an invitation to the hospital to see an operation. A Chinaman, yesterday, an inhabitant of Haicheng, had, when outside the town, picked up what appears to have been a small unexploded shell. Ignorant of its nature, he proceeded, when he had brought it home, to break it open with a hammer. The shell thereupon exploded, and blew off his left hand, with which he was holding it. A shattered fragment of the palm and one or two torn fingers remained, but it was necessary to amputate at the carpo-metacarpal articulation. Singularly enough, he escaped with the loss of his hand and with one or two slight wounds of the face.

I have now (a quarter to nine) finished all my packing. My baggage had to be divided into three portions; one, consisting of articles for which I have no further use, goes back to Japan, another, the largest portion, follows with the heavy baggage of the division; the third, all that I can carry on a pack-mule, goes with me on the march. When I shall again see the boxes that I leave behind is very doubtful; but I can get on without them with fair comfort until the beginning of summer.

My orders for to-morrow are to be at Hwanshi-shan at 4 a.m. The Chinese in that direction are to be taken by surprise before daylight, and driven back at the point of the bayonet. After this we shall at once proceed to march.

Tohopu, February 28th.

The army began to march to-day, and I realized that I had been living in the lap of luxury for the past four weeks at Haicheng. Even the ride from Kinchow to Haicheng, which I thought rather full of hardship, was a mere pleasure trip compared with the experiences of actual campaigning. Not every day, doubtless, will be so severe as to-day was—if it were I should soon be invalided home—but for two months or so we shall have, I suppose, a life of the same kind, even if the fatigues are lesser in degree.

Two especial contributory causes to to-day's over-fatigue will, I hope, soon be obviated. One is that I had to go on foot all day. The quantity of luggage to which I had limited myself for the actual march—a very small modicum as I thought—proved far too much for one mule, and I had at the eleventh hour to hand over my saddle-mule for the humbler office of carrying a pack. Perhaps before long I shall be able to buy another mule, or better still, a horse. If not, I don't know how I shall get on. When there is actual fighting, as to-day, excitement makes me able to walk almost any distance; but fifteen or twenty miles of steady marching every day for a week, with nothing to withdraw my attention from the stiffness of my legs and the soreness of my feet would reduce me to a condition of absolute prostration. Nature never intended me to walk.

The other cause of especial fatigue to-day was the snow. It was already deep and soft when we started, and a heavy fall in the afternoon increased the depth to nearly a foot. In such circumstances walking is exceedingly fatiguing even to the strongest man.

The difficulty about the baggage was discovered only at twenty minutes past three in the morning, and we were due to start at half-past. In the hurry and confusion that ensued, Tamura and I came away without our luncheon. The result was that after a light breakfast at before three in the morning we got nothing more to eat till after two in the afternoon, when a cavalry soldier who happened to learn the famished condition we were in kindly gave us a mouthful or two of biscuit and tinned beef. This was when we were returning from the place occupied by the advance-guard to the Divisional Head-quarters. The snow having concealed all the roads, our leader, Captain Ikata, of General Katsura's staff, lost his way, and for several hours we wandered about from village to village until at last we saw the main body of the army on the march. Joining it, another mile brought us to our quarters. This last mile was to me the hardest of the day. Greatly to my surprise, Tamura, whom I had thought to be of very tough fibre, gave out earlier than I, and at two, when I was still feeling quite fresh, declared he could hardly walk any further. He, however, was much fortified by the biscuits and tinned beef, so his exhaustion must have been chiefly from hunger. In my case fatigue was muscular, so that when it once became excessive nothing would relieve it but rest. In this last mile I could, literally, hardly drag one leg after the other; and I fully realized the feeling described by travellers that induces men to lie down and sleep to death in the snow. In my intense fatigue I had no thought of the cold; my one desire was physical rest.

The actual distance we walked did not exceed ten miles, but we were on our feet for fourteen hours continuously.

When at last we reached our quarters we found our troubles were not over, for the pack mules and servants had not arrived, and we had to sit till after eight in a cold room without candles and without food. Even when my own luggage came we could get no rice, as the commissariat train had not come in; but fortunately I had enough in my own stores to give us a good supper.

March 1st.

As I was very stiff and tired, and as there was no probability of any hard fighting to day, I remained at Tohopu till three, writing my account of yesterday's movements. We then walked over to Tan-kan, the Divisional Head-quarters for the night. The enemy had retreated before the Japanese advance, with even less attempt at resistance than they made yesterday.

March 2nd.

By the time I was ready to start, a few minutes after seven, the Staff had already left, but I found them just outside the town, awaiting news of the enemy's movements. While I was there the chief officers of the First Army who had come to Haicheng with General Nozu on February 2nd, and General Nozu himself, joined us. Among them were Major-General Ogawa, Chief of the Staff of the First Army; Major-General Kuroda, Chief Officer of Artillery; Major-General Kuroda, Chief Officer of the Commissonist; Major-General Yabuki, Chief Officer of the Engineers; and Surgeon-General Ishizaka, Principal Surgical Officer of the First Army.

At eight, information was received that the enemy was continuing to retreat, and immediately afterwards I walked on to join General Oshima and the advance guard, and with them marched to the Anshantsan, which we reached soon after eleven. Just before we got there news was received of the approach of the other Division (Fifth) which was there to effect a junction with the Third.

Anshantsan is a fortified town, or rather a fortified village, for the sides of the square measure barely a quarter of a mile each. As usual, the walls are in ruins. It stands on a level somewhat above that of the Newchwang plain, and is between two steep elevations, both with double granite peaks. One of these hills was so inviting to climb that, as there seemed every probability that the army would go no further to-night, I could not resist the temptation. It was a stiff climb. We went up the south face of the hill, which for the most part was covered with loose fragments of rock split off from the granite peak, forming a steep slide like the "screes" of the Cumbrian fells. These, though they look dangerous to the inexperienced eye, are perfectly safe walking for any one with a sure foot and a steady head. When, however, I turned from the south face of the hill to the east, I found that the snow was lying deep, and it was not very safe to go on without the Alpine accompaniments of an ice-axe, boot spikes, and a rope. I was loath, however, to turn back, and picking steps for myself in the snow and clinging to projecting peaks of granite, I got safely to the top. Tamura, who had been frightened by the look of the "screes," had taken a very dangerous course straight up the face of the granite peak, but he reached the top without misadventure. We were rewarded for our pains by a glorious view. Three or four miles to the north-eastward was the nearest point of the mountain chain, stretching away north and south as far as we could see. The other side was the great snow covered plain, broken by a line of low hills extending towards Newchwang. Three lines of soldiers could be seen; the main body of the third division advancing towards us from the south; the fifth division defiling from the hills to the eastward, and marching beneath the south foot of the hill to join the third; while ten miles away to the northward was Chan-shung's army retreating towards Laoyang.

We came down from the hill (the height of which above the plain is 1,050 feet) by the north-western face, which is less steep than the others. The lower half of this, however, was a sharp incline, deeply covered with frozen snow. Here walking was out of the question, and we descended in a much quicker manner—one that may best be described as tobogganing without a toboggan. It was safe, speedy, and agreeable, but somewhat destructive to the clothing.

It was a very pleasant walk, but I shall not soon again undertake any superfluous exercise—not at any rate till I get a horse—for when we returned we found the staff had disappeared. Instead of staying at An-shan-tsu to-night and advancing to-morrow towards Laoyang, which had seemed to be the intention of its leaders, it had turned off to the westward in the direction of Newchwang, and we had the pleasure of a seven miles walk in ankle-deep snow, at the end of an already tiring day.

March 3rd.

After a long-day's march and going late to bed, I find it difficult to get up in time to start with the Staff, and to-day, though I got away just after seven, I was with the tail of the army. Walking with sore and aching feet, with the additional discomfort of wet shoes and socks (for it had been impossible to dry them since the previous night), I was still able to overtake General Katsura by about ten o'clock. Marching through deep snow an army moves very slowly, and, if a man is willing to sacrifice the ease of walking in the beaten track and to plough his way through the snow at the side, he can easily make his way from the rear to the front. I learned from General Katsura what had indeed seemed probable to me from last evening, that the army was now marching against Newchwang, leaving Laoyang unattacked for the present.

The army was going on one mile further for its mid day halt, but I decided to make mine at the village (Fu-lai-ton) where I had overtaken the Staff. The owner of the house I rested in seemed fairly well to do, and the women and children of the house, who had been spirited out of the way while the soldiers were in the village, came out of hiding, and, having become friendly with us, remained out when another body of men came through. The inhabitants generally seem, indeed, very little afraid of the army. One man I saw this morning kneeling by the road side at the entrance to the village and "kow-towing" as fast as he could towards the troops as they passed by. Whether this was from fear, or to give a polite welcome, I do not know. If he did it to the whole army, including the baggage train, he must have a stiff back to-night.

March 4th.

I had a fine experience again to-day of the fatigues of campaigning. Breakfast at three, luncheon at eight. On my feet—wet feet, for the sun was strong and the snow began to thaw at nine—from five in the morning till five at night. Then three hours to wait, with a sharp evening frost, before all resistance was at an end and we could enter the city and go to our quarters. Then all packed very close, as a few houses only could be occupied, the regular inhabitants having been all turned out. (This precaution was necessary as any ordinary looking Chinaman might be a soldier in disguise, and to quarter two or three men in a house; here and there, about the town, would have been most dangerous.) Eight or nine of us slept on a Chinese bed 12 feet long, and half a dozen coolies on the floor of the same room. I ate about a quarter of a pound of tinned tongue (without bread, biscuit, or rice); but most people got nothing to eat until the rice was cooked soon after midnight. Few of the soldiers can have had two such substantial meals as those I had early in the day; they had much harder work; and they had nothing dry to put on their wet feet when it was all over. Yet they were all bright and cheerful in the evening, and the more I see of them the more I am astonished at their powers of endurance. It would be a different matter no doubt, if in addition to fatigue, and exposure, they had to bear the gloom of defeat.

March 5th.

In the morning, before we left Newchwang, I saw M. Flandin, a French Catholic Missionary resident at Newchwang. Most of the missionaries in this district went to the treaty port when the war broke out, but he had remained at his post.

We left the town at about eleven in the morning, but waited nearly three hours just outside while the Staff of the army was holding a council. Then we set off to march through the mud to Zanchaten. I had been given another mule this morning, and as the dirt of the spring thaw is indescribable, and I had, moreover, during the last few days much more walking than I am fit for, I was glad to be able to ride.

March 6th.

Yesterday I had ridden the old mule, the one

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

that had carried me from Chinchow; but to-day, as the boy and the coolie declared that the new mule was very sluggish so that they could not get on with the baggage, I said I would ride the beast myself to-day. He was the largest mule I have ever seen, larger than most Japanese horses, and I thought his sluggishness was due simply to largeness. Spurring, however, failed to make him do more than crawl, and after a mile or two he fell in a deep patch of snow and could not get up again. After waiting ten minutes to give him a chance to recover, I could wait no longer, for it was possible that an action might take place at mid-day, so I hurried on afoot, leaving the poor beast to his fate and my saddle on his back.

No fighting took place, as the enemy retreated before the Japanese advance.

In the course of the morning I met another French missionary, M. Letor, on his way to Newchwang to enquire after M. Flandin, concerning whom a report had been spread abroad that he had been killed. M. Letor was much relieved when I assured him that I had seen M. Flandin alive and well only 25 hours before.

We stayed for the night at Chi-nan-pu, seven or eight miles N. by E. of Yingkow and a rather greater distance East by South of Tenchwantai.

March 7th.

Last night for the first time we spent the night in a house from which the owner's wife had not fled. It was a tiny hut with a bed about twelve feet long. In the middle a mud partition about two feet high divided it into two parts. The peasant, his wife, and three or four children slept on one side, my own party of four on the other. A large number for so limited a space; but as it was warm I was able to keep the window open all night.

We started before dawn, and marched through rain at first; this gave place soon, with a change of wind, to a bitter, blinding snow storm. After we had walked about seven miles I was furnished with a horse that had belonged to a Chinese officer. It had a Chinese saddle only; but I was delighted to hear that my own saddle had been brought on by one of the soldiers, and would be given to me later in the day.

We walked to a place about a mile and a half from the Liao River opposite Sung's camp at Ten chwan-tai. General Oshima had intended to make a reconnoissance, but as the snow made it impossible to see more than a few yards ahead, we marched back, after waiting a few hours, to Newchwang-tou, 5 or 6 miles from Tenchwantai on the Newchwang road.

March 8th.

This morning we again went forward to near the river. I was a little late in starting, and by the time I overtook General Oshima all the day's work was over. The point to which he had advanced commanded a view of the river front of Tenchwantai. Wishing to learn the strength of the Chinese artillery, he fired a shot or two near the river, and the enemy replied with a volley of thirty to forty guns. When they had been thus induced to show their hand, Oshima's object for the day had been gained, and he withdrew his soldiers to a position further from that of the enemy.

The Divisional Head-quarters for the night were at first fixed at a village named Chantsukao, a place 7 miles N. by E. of Yingkow; but just as we were making ourselves comfortable in our allotted quarters, we were told to move back to the village in which we had spent the previous night, fortunately near at hand.

We had the same room as before—not bad quarters at all, but the water is worse than any we have had before. It is always very dirty, but this is positively filthy, being green and muddy with an iridescent scum. Perhaps it is worse than usual only because the thaw has set in. Even to wash in it was disagreeable—and rather futile; but to drink it, by daylight, was positively disgusting. Of course we always boil our water: this renders it less dangerous, but hardly less disagreeable.

March 9th.

We started before dawn to take part in the attack on Sung's position at Tenchwantai.

At five, in the early twilight, I met with an accident that prevented my making the best use of the day. I was pushing forward to overtake General Katsura, who had started a few minutes before me. The line of soldiers having halted for a moment, I crossed it to reach the other side of the road, where there was better footway. As I passed in front of a led horse, close, but not so close as to force it to move, the vicious brute wheeled round and kicked, one foot striking me on the side of the knee. It was fortunate for me that I was clad for the Manchurian winter, so that my leg was covered with two layers of thick underclothing, silken trousers, and fur overalls; for my knee would certainly have been shattered. As it was, I received merely a very painful bruise of the joint. Two or three minutes later, when I was thinking too much of the pain to guide my mule properly, the animal fell in a slippery place, but this time, oddly enough, I was not hurt at all. I soon became faint and sick from the pain in my leg, and asked Tamura for my brandy flask with the carrying of which he had been entrusted. Alas! he had not brought it, having come to the conclusion, since I had not used it before, that it was an unnecessary encumbrance; and two officers whom I asked for some brandy had exhausted their supply. At length I met a Red Cross soldier who gave me some ether—methylated ether, with an abominable and persistent taste, but it acted as a temporary stimulant; and an hour later, when I reached General Katsura's staff, I was at length able to get some brandy.

By this time my knee had become so weak that the leg was practically useless; I could not bear my foot in the stirrup; had no grip; and could not mount without assistance. Under these circumstances, I could not keep up with the van, and was soon left behind, even by the Divisional Staff, so that I did not reach Tenchwantai till half an hour after the soldiers had entered it, and could only ride through the burning town and recross the river to a place where the whole Staff of the army, including General Yamaji, had assembled.

Here, as my seat was dangerously insecure as well as painful, I asked for a stretcher to take me back to our quarters for the night. This itself was not very comfortable, the stretcher being of Japanese dimensions; nor was it very safe, as I was twice dropped. Once one of the coolies slipped; and the other time the iron cross-bar of the stretcher became displaced, and I was dropped into a puddle of dirty water, but the soldiers who accompanied me had me up again before the wet had got through my furs. It was a great relief to me when we eventually reached our quarters—the same as those of the two previous nights. If it is painful to be carried in a stretcher with nothing more than a contused knee, what must it be like with a shattered bone, for no splinting but a plaster case would prevent under such circumstances the rough ends from grinding together and rasping the soft tissues!

I declined offers of surgical assistance to-night, having determined to go on to Yingkow to-morrow, and feeling it better to take off nothing, not even my boots, since it would be difficult to reclothe the lower extremities with a stiff and tender knee. I had a bandage applied over the clothing soon after the accident, and this was sufficient attention until I reached a place where I could remain at rest for a few days.

MEDICINE IN CHINA.

By V. P. Soyoong, B.D., M.D., Shanghai.

Medicine as practised by the Chinese is in a deplorable condition. As in every department in life in China, so here also, too much blind reverence is paid to old ideas. A Chinese doctor still talks learnedly of the mythical Shen Nung who first tasted the different herbs to find out their remedial virtues, which happened thousands of years ago, or which might never have happened at all but in the imagination of the later quidnuncs. As a general thing a very few Chinese medicoes are ever educated or know anything of such a book as Ts'o-pun, an old Chinese Materia Medica, while the vast majority of them know only how to write a few old stock prescriptions copied out of some antiquated document that came down to the family as an heir-loom. I know one man who was engaged in the Kiangnan Arsenal as a petty overseer, who on being dismissed from his post was a long time out of a job; at last he made the acquaintance of a certain Buddhist priest who had a written copy of some secret prescriptions. He stole this copy, and after a few nights of application and research in that dirty dog-eared volume, he swung out a signboard informing the public that he was ready to guarantee a perfect cure for any ailment that humanity is heir to. This happened in Shanghai, and there are hundreds of similar cases where an ignoramus imposes on the public without being exposed to ridicule.

The better class of Chinese doctors have served their time in the office of their preceptors, who, however, never give lessons or readings in anything—indeed there are no text-books to go upon. They are more like assistants, who make themselves generally useful in an office where the anxious ones look over the prescriptions and listen to whatever their chief may have to remark on any case. A Chinese medical student in the higher sense of the term has never existed. They are all charlatans, jealously guarding a few empirical ideas from the public.

In the neighbouring district of Ching-poo there are two villages—Mang-ho and Tsung-ko—each having a family of doctors. They are celebrated all over China, and during a previous illness of of the present Empress-Dowager, one of these doctors was called up to Pekin, which was quite a feather in his cap, although not a peacock's feather! Her Majesty asked his opinion, but she did not ask him to prescribe for her, unfortunately, or perhaps fortunately! With her usual sagacity she would not lean on a broken reed. The patients that go to those places for a cure are generally well off in worldly means, so that they are either hypochondriacs, having been surfeited with the good things of the world, or are incurables in the eleventh hour of their existence. The one class come back better, imagining the doctors did them good—really it is the journey that benefited them; the second class come back much worse from the fatigue of the travel, and are dissatisfied after having seen the most celebrated doctors in China.

I have never seen one who had either functional or organic disease that went to those places that was ever cured in the end; and I do not blame them for not being able to perform miracles, for under the present circumstances, to require intelligent treatment from a Chinese doctor is demanding too much.

One sometimes hears of the Imperial College of Medicine in Pekin, mentioned in the *Pekin Gazette*. A foreigner, on first hearing of it, is sure to make an egregious mistake from its high sounding name, which leads him to suppose that it is some institution like the Royal College of Physicians and Surgeons in the West. It is only a handful of self-styled doctors like any of their brethren in Shanghai, except their good fortune has placed them in a comfortable position where they have nothing to do but to put on an air of being skilful. Their anxiety, however, commences with an Imperial cough or colic. They have no lectures to give, as there are no students, and they need not write articles for medical journals, as there are no readers.

The Chinese apothecary does a large business, as can be seen from the many hongs and shops dealing in drugs in any city in China. The doctors prescribe large bowlfuls of decoctions for any complaint, so that a constantly ailing and dosing man is nicknamed a "decoction pot." That is their favourite method of dispensing, though pills, powders, &c., are not neglected. Consequently a druggist must have a large supply of herbs and roots on hand to meet the demand, and he ransacks creation for the odds and ends in his shop. If a man dies in China, it is not for want of medicines and drugs, but they are either inert or not intelligently applied. Of the inert drugs one may have some idea by looking over the advertisements in any of the Chinese newspapers published in Shanghai. I will mention one as an illustration; the advertiser in the Chen-fuh-lan-tang shop, which has offices in Canton and elsewhere in China. The thing advertised is honoured with a wood-cut in the newspaper, which represents it to be what in natural history would be called an ordinary lizard, measuring a little over five inches in length from tip to tip. A free translation of the advertisement here will show the depth of darkness in which the Chinese mind is yet enshrouded in respect to medicine:—

"Recently Hongkong and the province of Kwangtung being visited by the plague, the Provincial High Authorities have published a prescription called Plague Cure which is infallible. Our shop has already prepared this medicine for the two great benevolent institutions in Canton, where it has been used with invariable success. In this prescription there is one ingredient called, Son of Stone Dragon, which is found in the mountains in the province of Chekiang. Through the agency of our branch office in Hangchow we have obtained a superior variety of this stony son of a dragon, and together with other valuable drugs we have made this mixture. During the compounding, we have reverently said a thousand prayers. Now we offer this medicine to the public. Herewith is an illustration of this stony son of a dragon as our trade mark. The medicine is not only unusually effective against the plague, but it is also infallible against different kinds of cholera, vomiting, diarrhœa, colic, apoplexy, sunstroke, asphyxia, typhus and typhoid fevers, ague, diphtheria, liver and stomach aches, tetanus in children, surfeiting, small-pox, poison, malaria, all sorts of tumours and inflammatory poisons, &c. Shanghai being particular in its sanitation against plague, we have specially prepared this medicine as a valuable weapon in the hands of committees on preventive measures.

(Signed) Chen-fuh-lan-tang."

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

I wonder who discovered such potent virtues in the little rascal of a lizard, which, in its native province of Chekiang, as here, is always regarded with distavour, and if it gets any attention at all it is to be killed and burned, as it is said that its tail will cause deafness, if it gets into the ear, though I should think anything else would do the same if similar chances were offered.

For various female complaints and diseases what are called Dragon and Phœnix Pills are largely sold in the Canton shops. These are coated with wax, either white or yellow, and are of the size of an English walnut. Their efficacy is of course lauded to the sky, but nearly every woman that I have seen in practice has told me that she had tried them and no found improvement therefrom. No doubt, they are composed of some such simple drugs as aloes, myrrh, &c., which, if appropriately applied, of course have their uses; but to make them a panacea for all the complaints of woman, they fail egregiously. The Chinese druggists, in their anxiety to make money, advertise drugs that can even restore the virile power in a profligate, and cause the sterile to bear offspring. The vaunted nostrums have a seductive charm and play on the imagination well, as to be without children is a solemn thought even to the otherwise unthinking, for he may be deprived of support in old age, and when he dies his spirit will have none to sacrifice to him. After spending his youth in sowing wild oats, he on the shady side of forty, becomes anxious, and begins to invest in quack drugs to recall the power that is forever gone and that prematurely too. In his chagrin he accuses his wife for being barren, and takes to other partners in life with the same result. But indeed the woman herself may be sterile, and often the cause of that sterility may be easily removed by a simple operation according to Western surgery; but here the recourse is in those pills of high sounding names which may be seen in large gilt characters flaring to the gaze in every city in China. The deluded souls never cry out in disappointment against the mercenary shops, as embarrassment and shame would recoil on themselves. Thus the harpies still continue to make money, and the stupid prodigal is at last punished when repentance is too late.

But there are stuffs which the Chinese druggists do conscientiously collect, and with much expense and labour, but which are nevertheless inert and useless:—as tiger bones, bear's legs, hart's horns, &c. Tiger bones are ground into powder and used in plasters for internal injuries; bear's paws are boiled to a jelly and used as a powerful alterative for the weak and aged. Hart's horns are sawn into thin discs and boiled down and given for renewing wasted vitality. A young horn is considered as particularly valuable, when it is a little ruddy and somewhat translucent. I cannot make my old friends believe that its virtue consists in ammonia, any quantity of which can be obtained almost for a song in a Foreign drug-store. They rather think I am a greenhorn myself and not particularly valuable either!

When every available drug in their reach has been pressed into service and found wanting, then they resort to superstition, or, if I may be pardoned, to a "faith cure!" Humanity is the same the world over. But the great danger is, that often the people resort to the fetish first and neglect a rational medication. In China it is largely so, and I cannot blame a man for catching at a straw while struggling in the water. Many years ago my eldest child, then a babe, was not to be pleased on any account, and in my absence one afternoon, my folks called in an old nun from a neighbouring convent for consultation. She went through her usual mummery and incantation to exercise some malign spirit from the child, and ordered that paper sycees should be burnt toward certain cardinal points of the compass, scattering rice on the ground where the child had been in the day time, offering incense, candles, &c., &c., not neglecting to take a fee for her nonsense. On my return I heard of it, and expatiated on the stupidity of the idea. I just then thought of santonine, and immediately jumped up and got a dose of it and gave it to the child, and the next morning the enemy was all driven out, far quicker than from Port Arthur, and peace was at once restored!

Unfortunately superstition often retains its victims long in its thraldom. But sometimes, however, it gives a sort of pleasant rounding to the recovery of an important member of the family. Deceptive it surely is: as for instance, a father gets well from severe illness because his filial son cuts a piece of flesh from his arm and puts it in the decoction pot to impart special virtue to it. Every year the *Pekin Gazette* gravely makes an honourable mention of filial sons and dutiful daughters-in-law who have thus maimed themselves in their devotion to their parents. The frailty of the human flesh in this connection is largely believed in by all classes here. A former manager once took me to task that foreigners are not affectionate enough towards their parents to do the same, or that they do not know the medicinal virtue of human flesh. I told him that all flesh is the same in chemical ingredients, whether human or animal, so that it is far more convenient and cheaper for a filial son to put a piece of pork in the decoction pot than to cut himself and make a fuss about it! He good-naturedly upbraided me for being a foreigner at heart!

In the reign of Hien Fung, in the early fifties, there was a local rebellion in Shanghai city, which a few senior residents no doubt still remember but too well. As a boy I was in the city. During that atrocious period many a man was slaughtered and butchered, and his gall bladder was taken out and invariably swallowed by some savage chieftain, with the idea that it would brace up his courage—this latter being said to reside in the gall. The Chinese word for bravery means a large gall.

In the History of the Three Kingdoms mention is made of a distinguished General, who, on an eye being struck out, immediately picked it up and said, "This is made of my father's essence and my mother's blood; I dare not throw it away," and forthwith he swallowed it.

These are instances showing that from time immemorial the people of China have a notion of the peculiar virtues of the human body. And not only so, but even excrementations and effete matters are sometimes used. Thus old feces are selected and moulded into the shape and size of chestnuts and hermetically sealed in a jar and buried in the ground for a number of years. Then they are taken out again, when they have a gray colour and are devoid of smell, and are then carefully covered with gilt and stowed away to be called for by some eccentric medico, when they are euphemistically denominated "Golden Beans." Their ultimate destination is the decoction pot, and the patient knows nothing of it while taking it. A human placenta is sometimes cleaned, cut up in pieces and given to a white duck to feed, and after a few days the latter is killed, its insides taken out and thrown away, and the duck is cooked and given to the consumptive to take. Cat's placenta are roasted to ashes on a tile and taken in a warm drink; this also for consumption. Young boy's urine is taken in samshu and sugar, though parents generally object to this, having an idea that it will have a reflex action in shortening such a boy's life. Of course there are many other things infinitely more unspeakable that are, or may be used, in the despairing hope of life, but the above I know to be facts from personal observation. This category of outlandish remedies should not excite disgust in the enlightened, but rather pity and sympathy for poor humanity in its endeavour to seek a weapon to ward off the fell attacks of disease. It is sad to contemplate how even the lowly and wasted places of nature have been ransacked for an elixir to prolong this mysterious life.

But are there no Chinese drugs and remedies that are worthy to be rescued from oblivion? Certainly there are, it would be indeed strange that these thousands of years should have rolled by without leaving some practical hints and experiences behind. Indeed, many Chinese drugs and remedies have already been naturalized in the Western pharmacopœias, such as rhubarb, camphor, mercury, musk, etc; and there are some empirical methods that will surely reward a trial, but are either not known or are ignorantly sneered at because they are of Chinese origin; for instance:—When a child has either eaten too much or otherwise brought on discomfort to the abdomen, nothing is so effective as to put ½ oz. or 1 oz. of pi-siau in a thin cotton band and apply to the abdomen. By the next morning the stuff almost entirely disappears, very likely by absorption, evaporation and mechanical loss; the abdomen has subsided and the child is well. The stuff is native sulphate of soda, sold in all the Chinese drug shops for this purpose alone. This is a pleasant way of using a cathartic, which it most certainly is. It is easily done and effective, and done too all over China. Another empirical method is that of scraping or pinching the skin for mild cholera, sunstroke, etc. This consists of a cash scraping the back till it is striped like a zebra—only in red. It looks barbarous, but its effect is instantaneous. In the sickly months of the summer, when one feels out of sorts, with perhaps a touch of colic, then let his spine be first scraped clear down to the lumbar region, then down the median line in front and on either side of the ribs; he will feel the charm right away. Of course, this is nothing more than counter-irritation, it brings the blood to the surface and is redistributed. But no medicine in the British Pharmacopœia can give such rapid and happy effects as this under the circumstances.

A milder method is that of pinching the skin of the neck till it is covered with red vertical stripes. There can be no mistake in these methods being useful, as I have experienced them myself many times in these nearly twenty years. I have often thought of bringing them to the notice of the profession as instances where nature unassisted by science has found a rough but reliable staff to lean upon in the hour of need. With the exception of these few gleams of phosphorescence, it is all darkness on the medical horizon of China.

But thanks to the self-denying efforts of the medical missionaries of all denominations, the healing art is now being taught in many parts of the empire. The names of Parker, Kerr, Meyer, and others will ever be held in grateful remembrance in South China. While in the north there are medical students attached to the St. Luke's Hospital in Shanghai, the hospital in Soochow, and also in the school of the Presbyterian Mission in Shangtung; and no doubt there are many other places where a similar labour of love is being performed. The latest additional effort is the medical college in Tientsin under the immediate patronage of the Viceroy Li. All these institutions are the results of sincere prayer to God and a sign of the Christian's love to mankind. The young men that are more or less trained under their enlightened teachers will play a large part in the field of medicine in the country. But they are yet too few in number. Has not the time arrived for some united effort to establish a central medical college where such students may complete their studies in the sense that it is done in the West? China is the only country in the world where there is no large recognised school of medicine, where modern science should be enlisted in the battle against ignorance and fetish. The initiative lies with those who have already broken the ice in their several spheres of work. I do not mean to thrust this project as an additional burden on to their shoulders, but rather point to that as another precious jewel to be set in the shining crown that is waiting for them on high.

Being a Chinese, I am filled with profound humiliation that China, with all her boasted learning of classic memory, never gives a thought of pity to those that are wounded in her defence. The government truly needs a fiery trial for her purification, but the unhappy humanity under it deserves commiseration. It may be well for some to say that China ought to take care of her own sick and wounded: do they mean that if China does not, the Christains need not and ought not? It is remarkable that of all those that came to Christ for a cure none were refused, whatever the cause and origin of their complaint, and although He did say that it is not lawful to cast the children's bread to the dogs, yet He acquiesced in the appeal that the dogs do eat the crumbs that fall from the Master's table.

The idea of the Red Cross Society is new to the Chinese, and the stupid ones naturally suspect its flag as some secret sign in collusion with the enemy; no wonder they would tear it down as they did at Port Arthur a few days ago. Such deplorable ignorance can only be cured by proper education—by putting the Red Cross idea on its true footing, by giving a status to medical men in the army and navy—in a word, by doing as a civilized nation ought to do, thereby imparting courage to the men by the fact that if wounded they have the means of cure at hand. Every great nation in time of war leans heavily upon the medical staff for moral support. Such a medical school as above indicated will therefore confer an incalculable blessing on China, not only in time of peace but also in the hour of war, and will prove to be the greatest land-mark of progress in the course of thousands of years in Chinese history, and its honour is due to the Christians from the West. The Chinese may blindly reject the Christian religion, but they have never refused the offices of the Christian physician; some may receive Christianity, but all will accept medicine.—*China Medical Missionary Journal.*

There are forty-eight different materials used in constructing a piano, from no fewer than six teen different countries, employing forty-five different hands.

The Government Savings Banks of New South Wales afford a good means of testing the material condition of the more provident classes in that colony. The number of depositors in 1894 was 290,035, as against 192,466 in 1888; the deposits being £2,110,048, against £1,191,419 in 1888; and the withdrawals £1,848,918, against £1,011,848 in 1888, thus illustrating the increasing tendency on the part of colonial depositors to accumulate their savings.

THE MIRACLE OF PURUN BHAGAT.

By Rudyard Kipling.

Oh, light was the world that he weighed in his hands;
Oh, heavy the tale of his fiefs and his lands.
He has gone from the *gaddi* and put on the shroud,
And departed in guise of *Bairagi* avowed!

Now the white road to Delhi is mat for his feet,
The *sal* and the *shisu* must guard him from heat;
His home is the camp, and the waste, and the crowd—
He is seeking the Way as *bairagi* avowed!

He has looked upon Man, and his eyeballs are clear
(There was One; there is One, and but One, saith Kabir).
The hot mist of Doing has thinned to a cloud—
He has taken the Path for *bairagi* avowed!

Let him learn and discern of his brother the clod,
Of his brother the brute, and his brother the God.
He has gone from the council and put on the shroud
("Can ye hear?" saith Kabir), as *bairagi* avowed!

A Song of Kabir. (*Trans.*)

There was once a man in India who was Prime Minister of one of the semi-independent native States in the north-western part of the country. He was a Brahmin, so high caste that caste ceased to have any particular meaning for him: and his father had been an important official in the gay-coloured tag-rag and bobtail of an old-fashioned Hindu Court. But as Purun Dass grew up he realised that the ancient order of things was changing, and that if anyone wished to get on he must stand well with the English, and imitate all the English believed to be good. At the same time a native official must keep his own master's favour. This was a difficult game, but the quiet, close-mouthed young Brahmin, helped by a good English education at a Bombay University, played it coolly, and rose step by step to be Prime Minister of the little kingdom. That is to say, he held more real power than his master the Maharajah.

When the old king—who was suspicious of the English, their railways, and telegraphs—died, Purun Dass stood high with his young successor, who had been tutored by an Englishman; and between them, though he always took care that his master should have the credit, they established schools for little girls, made roads, and started State dispensaries and shows of agricultural implements, and published a yearly blue-book on the "Moral and Material Progress of the State;" and the Foreign Office and the Government of India were delighted. Very few native States take up English progress without reservations, for they will not believe, as Purun Dass showed he did, that what is good for the Englishman must be twice as good for the Asiatic. The Prime Minister became the honoured friend of Viceroys and Governors, and Lieutenant-Governors, and medical missionaries, and common missionaries, and hard-riding English officers who came to shoot in the State preserves, as well as of whole hosts of tourists who travelled up and down India in the cold weather showing how things ought to be managed. In his spare time he would endow scholarships for the study of medicine and manufactures on strictly English lines, and write letters to the *Pioneer*, the great Indian daily paper, explaining his master's aims and objects.

At last he went to England on a visit, and had to pay enormous sums to the priests when he came back; for even so high caste a Brahmin as Purun Dass lost caste by crossing the deep sea. In London he met and talked with everyone worth knowing—men whose names go all over the world—and saw a great deal more than he said. He was given honorary degrees by learned Universities, and he made speeches and talked of Hindu social reform to English ladies in evening dress, till all London cried, "This is the most fascinating man we have ever met at dinner since cloths were first laid."

When he returned to India there was a blaze of glory, for the Viceroy himself made a special visit to confer upon the Maharajah the Grand Cross of the Star of India—all diamonds and ribands and enamel; and at the same ceremony, while the cannon boomed, Purun Dass was made a Knight Commander of the Order of the Indian Empire; so that his name stood Sir Purun Dass, K.C.I.E.

That evening at dinner in the big Viceregal tent he stood up with the badge and the collar of the Order on his breast, and, replying to the toast of his master's health, made a speech few Englishmen could have surpassed.

Next month, when the city had returned to its unbaked quiet, he did a thing no Englishman would have dreamed of doing, for, so far as the world's affairs went, he died. The jewelled order of his knighthood went back to the Indian Government, and a new Prime Minister was appointed to the charge of affairs, and a great game of General Post began in all the subordinate appointments. The priests knew what had happened and the people guessed, but India is the one place in the world where a man can do as he pleases and nobody asks why: and the face of Sir Purun Dass, K.C.I.E., had resigned position, palaces, and power, and taken up the begging-bowl and ochre-coloured dress of a Sannyasi or holy man, was considered nothing extraordinary. He had been, as the Old Law recommends, twenty years a youth, twenty years a fighter—though he had never carried a weapon in his life—and twenty years head of a household. He had used his wealth and his power for what he knew both to be worth, he had taken honour when it came his way; he had seen men and cities far and near, and men and cities had stood up and honoured him. Now he would let all these things go, as a man drops the cloak he no longer needs.

Behind him, as he walked through the city gates, an antelope skin and brass-handled crutch under his arm, and a begging-bowl of polished brown *coco de-mer* in his hand, barefoot, alone, with eyes cast on the ground—behind him they were firing salutes from the bastions in honour of his happy successor. Purun Dass smiled. All that life was ended; and he bore it no more ill-will or goodwill than a man bears to a colourless dream of the night. He was a Sannyasi—a houseless, wandering mendicant, depending on his neighbours for his daily bread; and so long as there is a morsel to divide in India neither priest nor beggar starves. He had never in his life tasted meat and very seldom eaten even fish. A five-pound note would have covered his personal expenses for food through any one of the many years in which he was absolute master of millions of money. Even when he was being lionised in London he had held before him his dream of peace and quiet—the long white, dusty Indian road printed all over with bare feet, the incessant slow-moving traffic, and the sharp smelling wood-smoke curling up under the fig trees in the twilight, where the wayfarers sat at their evening meal.

When the time came to make that dream true the Prime Minister took the proper steps, and in three days you might more easily have found a bubble in the trough of the big Atlantic seas than Purun Dass among the roving, gathering, separating millions of India.

At night his antelope-skin was spread where the darkness overtook him—sometimes in a Sannyasi monastery by the roadside; sometimes by a mud pillar shrine of Kala Pir, where the Jogis, who are another misty division of holy men, would receive him as they do men who know what castes and divisions are worth; sometimes on the outskirts of a little Hindu village, where the children would steal up with the food their parents had prepared; and sometimes on the pitch of the bare grazing-grounds where the flame of his stick fire waked the drowsy camels. It was all one to Purun Dass—or Purun Bhagat, as he called himself now. Earth, people, and food were all one. But unconsciously his feet drew him away northward and eastward; from the south to Rohtak; from Rohtak to Kurnool; from Kurnool to ruined Samanah, and then upstream along the dried bed of the Gugger river that fills only when the rain falls in the hills, till one day he saw the far line of the great Himalayas.

Then Purun Bhagat smiled, for he remembered that his mother was of Rajput Brahmin birth, from Kulu way—a Hill-woman, always home-sick for the snows—and that the least touch of Hill blood draws a man at the end back to where he belongs.

"Yonder," said Purun Bhagat, breasting the lower slopes of the Sewaliks, where the cacti stand up like seven-branched candlesticks—"yonder I shall sit down and get knowledge;" and the cool wind of the Himalayas whistled about his ears as he trod the road that led to Simla.

The last time he had come that way it had been in state, with a clattering cavalry escort, to visit the gentlest and most affable of Viceroys; and the two had talked for an hour together about mutual friends in London, and what the Indian common folk really thought of things. This time Purun Bhagat paid no calls, but leaned on the rail of the Mall watching that glorious view of the plains spread out forty miles below, till a native Mohammedan policeman told him he was obstructing traffic; and Purun Bhagat salaamed reverently to the Law, because he knew the value of it, and was seeking for a Law of his own. Then he moved on, and slept that night in an empty hut at Chota Simla—which looks like the very last end of the earth, but it was only the beginning of his journey. He followed the Himalaya-Thibet road, the little ten-foot track that is blasted out of solid rock, or strutted out on timbers over gulfs a thousand feet deep; that dips into warm, wet, shut-in valleys, and climbs out across bare grassy hill-shoulders where the sun strikes like a burning-glass; or turns through dripping, dark forests where the tree-ferns dress the trunks from head to heel, and the pheasant calls to his mate. And he met Thibetan herdsmen with their dogs and flocks of sheep—each sheep with a little bag of borax on his back—and wandering woodcutters, and cloaked and blanketed Lamas from Thibet, coming into India on pilgrimage, and envoys of little solitary Hill-states, ponies, or the cavalcade of a Raja paying a visit; or else for a long clear day he would see nothing more than a black bear grunting and rooting down below in the valley. When he first started, the roar of the world he had left still rang in his ears, as the roar of a tunnel rings long after the train has passed through; but when he had put the Mutteeance Pass behind him that was all done, and Purun Bhagat was alone with himself, walking, wondering, and thinking, his eyes on the ground and his thoughts with the clouds.

One evening he crossed the highest pass he had met till then—it had been a two days' climb—and came out on a line of snow-peaks that belted all the horizon—mountains from fifteen to twenty thousand feet high, looking almost near enough to hit with a stone, though they were fifty or sixty miles away. The pass was crowned with dense dark forest—deodar, walnut, wild cherry, wild olive, wild pear, but mostly deodar, which is the Himalayan cedar; and under the shadow of the deodars stood a deserted shrine to Kali—who is Durga, who is Sitala, who is sometimes worshipped against the small-pox.

Purun Dass swept the stone floor clean, smiled at the grinning statue, made himself a little mud fireplace at the back of the shrine, spread his antelope-skin on a bed of fresh pine needles, tucked his *bairagi*—his brass-handled crutch—under his armpit, and sat down to rest.

Immediately below him the hill-side fell away, clean and cleared for fifteen hundred feet, to where a little village of stone-walled houses, with roofs of beaten earth, clung to the steep tilt. All round it the tiny terraced fields lay out like aprons of patchwork on the knees of the mountain, and cows no bigger than beetles grazed between the smooth stone circles of the threshing-floors. Looking across the valley the eye was deceived by the size of things, and could not at first realise that what seemed to be low scrub, on the opposite mountain-flank, was in truth a forest of hundred-foot pines. Purun Bhagat saw an eagle swoop across the gigantic hollow, but the great bird dwindled to a dot ere it was half-way over. A few bands of scattered clouds strung up and down the valley, catching on a shoulder of the hills, or rising up and dying out when they were level with the head of the pass. And "Here shall I find peace," said Purun Bhagat.

Now a Hill-man makes nothing of a few hundred feet up or down, and as soon as the villagers saw the smoke in the deserted shrine the village priest climbed up the terraced hillside to welcome the stranger.

When he met Purun Bhagat's eyes—the eyes of a man used to control thousands—he bowed to the earth, took the begging bowl without word, and returned to the village, saying:—"We have at last a holy man. Never have I seen such a man. He is of the plains—but pale-coloured—a Brahmin of the Brahmins." Then all the housewives of the village said: "Think you he will stay with us? and each did her best to cook the most savoury meal for the Bhagat. Hill food is very simple, but with buckwheat and Indian corn, and rice and red pepper, and little fish out of the stream in the valley, and honey from the flue-like hives built in the stone walls, and dried apricots and turmeric and wild ginger, and bannocks of flour, a devout woman can make good things, and it was a full bowl that the priest carried to the Bhagat. "Was he going to stay?" asked the priest. "Would he need a *chela*—a disciple—to beg for him? Had he a blanket against the cold weather? Was the food good?"

Purun Bhagat ate, and thanked the giver. It was in his mind to stay. That was sufficient, said the priest. Let the begging bowl be placed outside the shrine, in the hollow made by those two twisted roots, and daily should the Bhagat be fed, for the village felt honoured that such a man—he looked timidly into the Bhagat's face—should tarry among them.

That day saw the end of Purun Bhagat's wanderings. He had come to the place appointed for him—the silence and the space. After this, time stopped, and he sitting at the mouth of the shrine could not tell whether he were alive or dead—a man with control of his limbs—or a part of the hills, and the clouds and the shifting rain and sunlight. He would repeat a Name softly to himself a hundred times, till at each repetition he seemed to move more and more out of his body, sweeping up to the doors of some tremendous discovery; but, just as the door was opening, his body would drag him back, and with grief he felt he was locked up again in the flesh and bones of Purun Bhagat.

Every morning the filled begging-bowl was laid silently in the crutch of the roots outside the

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

shrine. Sometimes the priest brought it; sometimes a Ladakhi trader lodging in the village, and anxious to get merit, trudged up the path; but more often it was the woman who had cooked the meal over-night; and she would murmur, hardly above her breath: "Speak for me before the Gods, Bhagat. Speak for such an one, the wife of so-and-so!" Now and then some bold child would be allowed the honour, and Purun Bhagat would hear *him* drop the bowl, and run as fast as his little legs could carry him; but the Bhagat never came down to the village. It was laid out like a map at his feet. He could see the evening gatherings held on the circle of the threshing-floors, because that was the only level ground; could see the wonderful unnamed green of the young rice, the indigo blues of the Indian corn; the dock-like patches of buckwheat, and in its season the red bloom of the amaranth, whose tiny seeds, being neither grain nor pulse, make a *food* that can be lawfully eaten by Hindus in time of fasts.

When the year turned the roofs of the huts were all little squares of purest gold, for it was on the roofs that they laid out their cobs of the corn to dry. Hiving and harvest, rice-sowing and husking passed before his eyes, all embroidered down there on the many-sided plots of fields, and he thought of them all, and wondered what they all led to at the long last.

Even in populated India a man cannot a day sit still before the wild things run over him as though he were a rock; and in that wilderness very soon the wild things, who knew Kali's Shrine well, came back to look at the intruder. The langurs, the big grey-whiskered monkeys of the Himalayas, were naturally the first, for they are alive with curiosity; and when they had upset the begging-bowl, and rolled it round the floor, and tried their teeth on the brass-handed crutch, and made faces at the antelope-skin, they decided that the human being who sat so still was harmless. At evening they would leap down from the pines, and beg with their hands for things to eat, and then swing off in graceful curves. They liked the warmth of the fire, too, and huddled round it till Purun Bhagat had to push them aside to throw on more fuel; and in the morning, as often as not, he would find a furry ape sharing his blanket. All day long one or other of the tribe would sit by his side, staring out at the snows, crooning and looking unspeakably wise and sorrowful.

After the monkeys came the *barasingh*, that big deer who is like our red deer, but stronger. He wished to rub off the velvet of his horns against the cold stones of Kali's statue, and stamped his feet when he saw the man at the shrine. But Purun Bhagat never moved, and little by little the royal stag edged up and nuzzled his shoulder. Purun Bhagat slid one cool hand along the hot antlers, and the touch soothed the fretted beast, who bowed his head, and Purun Bhagat very softly rubbed and ravelled off the velvet. Afterwards, the *barasingh* brought his doe and fawn—gentle things that mumbled on the holy man's blanket—or would come alone at night, his eyes green in the fire-flicker, to take his share of fresh walnuts. At last the musk-deer, the shyest and almost the smallest of the deerlets, came too, her big rabbity ears erect—even brindled, silent *mussick-naba* must needs find out what the light in the shrine meant, and drop her moose-like nose into Purun Bhagat's lap, coming and going with the shadows of the fire. Purun Bhagat called them all "my brothers," and his low call of "*Bhai! Bhai!*" would draw them from the forest at noon if they were within earshot. The Himalayan black bear, moody and suspicious—Sona, who has the V-shaped white mark under his chin—passed that way more than once, and since the Bhagat showed no fear, Sona showed no anger, but watched him and came closer, and begged a share of the caresses and a dole of bread or wild berries. Often in the still dawns, when the Bhagat would climb to the very crest of the notched pass to watch the red day walking along the peaks of the snows, he would find Sona shuffling and grunting at his heels, thrusting a curious forepaw under fallen trunks and bringing it away with a *whoof* of impatience; or his early steps would wake Sona where he lay curled-up and the great brute, rising erect, would think to fight, till he heard the Bhagat's voice and knew his best friend.

Nearly all hermits and holy men who live apart from the big cities have the reputation of being able to work miracles with the wild things, but all the miracle lies in keeping still, in never making a hasty moment, and, for a long time at least, in never looking directly at a visitor. The villagers saw the outlines of the *barasingh* stalking like a shadow through the dark forest behind the shrine; saw the *minaul*, the Himalayan pheasant, blazing in her best colours before Kali's statue; and the *langurs* on their haunches in deep talking with the walnut-shells. Some of the children, too, had heard Sona singing to himself, bear fashion, behind the fallen rocks, and the Bhagat's reputation as a miracle worker stood firm.

Yet nothing was further from his mind than miracles. He believed that all things were one big miracle, and when a man knows that much he knows something to go upon. He knew for a certainty that there was nothing great and nothing little in this world, and day and night he strove to think out his way into the heart of things, back to the place whence his soul had come.

So thinking, his untrimmed hair fell down about his shoulders, the stone slab at the side of the antelope-skin was dented into a little hole by the foot of his brass-handled crutch, and the place between the tree-trunks where the begging-bowl rested day after day, sunk and wore into a hollow almost as smooth as the *brown* shell itself; and each beast knew his exact place at the fire. The fields changed their colours with the seasons, the threshing-floors filled and emptied and filled again and again; and again and again, when winter came, the *langurs* frisked among the branches feathered with light snow, till the mother-monkeys brought their sad-eyed little babies up from the warmer valleys with the spring. There were very few changes in the village. The priest was older, and many of the little children who used to come with the begging dish sent their own children now; and when you asked of the villagers how long their holy man had been up there in Kali's Shrine at the head of the pass, they answered, "Always."

Then came such summer rains as had not been known in the Hills for many seasons. Through three good months the valley was wrapped in cloud and soaking mist—steady unrelenting *downfall*, breaking off into thunder-shower after thunder-shower. Kali's Shrine stood above the clouds for the most part, and there was a whole fortnight in which the Bhagat never caught a glimpse of his village. It was packed away under a white floor of cloud that swayed and shifted and rolled on itself and bulged upward, but never broke from its piers—the streaming flanks of the valley.

All that time he heard nothing but the sound of a million little waters—overhead from the trees, and underfoot along the ground—soaking through the pine-needles, dripping from the tongues of draggled fern, and spouting in newly-torn muddy channels down the slopes. Then the sun came out and drew forth the good incense of the deodars and the rhododendrons, and that far-off clean smell the Hill-people call "the smell of the snows." The hot sunshine lasted for a week, and then the rains gathered together for their last downpour, and the water fell in sheets that flayed off the skin of the ground and leaped back in mud. Purun Bhagat heaped his fire high that night, for he was sure his brothers would need warmth; but never a beast came to the shrine, though he called and called till he dropped asleep, wondering what had happened in the woods.

It was in the black heart of the night, the rain drumming like a thousand drums, that he was roused by a plucking at his blanket, and, stretching out, felt the little hand of a *langur*. "It is better here than in the tree," he said sleepily, loosening a fold of blanket. "Take it and be warm." The monkey caught his hand and pulled hard. "Is it food, then?" said Purun Bhagat. "Wait awhile and I will prepare some." As he kneeled to throw fuel on the fire the *langur* ran to the door of the shrine, crooned, and ran back again, plucking at the man's knee.

"What is it? Why is thy trouble, Brother?" said Purun Bhagat, for the *langur's* eyes were full of things that he could not tell. "Unless one of thy caste is in a trap—and none set traps here—I will not go into that weather. Look, Brother, even the *barasingh* has come for shelter."

The deer's antlers clashed as he strode into the shrine, clashed against the grinning statue of Kali. He lowered them in Purun Bhagat's direction and stamped uneasily, hissing through his half-shut nostrils.

"Hai! Hai! Hai!" said the Bhagat, snapping his fingers. "Is this payment for a night's lodging?" But the deer pushed him towards the door, and as he did so Purun Bhagat heard the sound of something opening with a sigh, and saw two slabs of the floor draw away from each other, while the sticky earth below smacked its lips.

"Now I see," said Purun Bhagat. "No blame to my brothers that they did not sit by the fire to-night. The mountain is falling. And yet—why should I go?" His eye fell on the empty begging-bowl, and his face changed. "They have given me good food daily since—since I came—and, if I am not swift, to-morrow there will not be one mouth in the valley. Indeed, I must go and warn them below. Back there, Brother! Let me get to the fire."

The *barasingh* backed unwillingly as Purun Bhagat drove a torch deep into the flame, twirling it till it was well lit. "Ah! Ye come to warn me," he said, rising. "Better than that we shall do. Better than that. Out, now, and lend me thy neck, Brother, for I have but two *feet*."

He clutched the bristling withers of the *barasingh* with his right hand, held the torch away with his left, and stepped out of the shrine into the desperate night. There was no breath of wind, but the rain nearly drowned the torch as the great deer hurried down the slope, sliding on his haunches. As soon as they were clear of the forest more of the Bhagat's brothers joined them. He heard, though he could not see, the *langurs* pressing about him, and behind them the *uhh! uhh!* of Sona. The rain matted his long white hair into ropes; the water splashed beneath his bare feet, and his yellow robe clung to his frail old body, but he stepped down steadily, leaning against the *barasingh*. He was no longer a holy man, but Sir Purun Dass, K.C.I.E., Prime Minister of no small State, a man accustomed to command, going out to save life. Down the steep plashy path they poured all together, the Bhagat and his brothers, down and down till the deer clicked and stumbled on the wall of a threshing-floor, and snorted because he smelt man. Now they were at the head of the one crooked village-street, and Bhagat beat with his crutch at the barred windows of the blacksmith's house as his torch blazed up in the shelter of the eaves. "Up and out," cried Purun Bhagat; and he did not know his own voice, for it was years since he had spoken aloud to a man. "The hill falls. The hill is falling. Up and out, *oh ye within!*"

"It is our Bhagat," said the blacksmith's wife. "He stand among his beasts. Gather the little ones and give the call."

It ran from house to house, while the beasts, cramped in the narrow way, surged and huddled round the Bhagat, and Sona puffed impatiently.

The people hurried into the street—they were no more than seventy souls all told—and in the glare of the torches they saw their Bhagat holding back the terrified *barasingh*, while the monkeys plucked pitoously at his skirts, and Sona sat on his haunches and roared.

"Across the valley and up the next *hill!*" shouted Purun Bhagat. "Leave none behind. We follow!"

Then the people ran as only Hill-folk can run, for they know that in a landslip you must climb for the highest ground across the valley. They fled splashing through the little river at the bottom, and panted up the terraced field on the far side, while the Bhagat and his brethren followed. Up and up the opposite mountain they climbed, calling to each other by name—the roll-call of the village—and at their heels toiled the big *barasingh*, weighted by the failing strength of Purun Bhagat. At last the deer stopped in the shadow of a deep pine wood, five hundred feet up the hillside. His instinct, that had warned *him* of the coming slide, told *him* he would be safe here.

Purun Bhagat dropped fainting by his side, for the chill of the rain and that fierce climb was killing him; but first he called to the scattered torches ahead, "Stay and count your numbers." Then whispering to the deer as he saw the lights gather in a cluster: "Stay with *me*, Brother. Stay—till—I—go!"

There was a sigh in the air that grew to a mutter, and a mutter that grew to a roar, and a roar that passed all sense of hearing, and the hillside on which the villagers stood was hit in the darkness, and rocked to the blow. Then a note as steady, deep, and true as the deep C of the organ drowned everything for perhaps five minutes, while the very roots of the pines quivered to it. It died away, and the sound of the rain falling on miles of hard ground and grass changed to the muffled drums of water on soft earth. That told its own tale.

Never a villager, not even the priest, was bold enough to speak to the Bhagat who had saved their lives. They crouched under the pines and waited till the day. When that came they looked across the valley and saw that what had been forest; and terraced field, and track-threaded grazing-ground was one raw, red, fan-shaped smear, with a few trees flung head-down on the scarp. That red ran high up the hill of their refuge, damming back the little river which had begun to spread into a brick-coloured lake. Of the village, of the road to the shrine, of the shrine itself, and the forest behind, there was not a trace. For one mile in width and two thousand feet in sheer depth the mountain-side had come away bodily; planed clean from head to heel.

And the villagers, one by one, crept through the wood to pray before their Bhagat. They saw the

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

barasingh standing over him, who fled when they came near, and they heard the *langurs* wailing in the branches, and Sona moaning up the hill but their Bhagat was dead, sitting cross-legged, his back against a tree, his crutch under his armpit, and his face turned to the north-east.

The priest said:—"Behold a miracle after a miracle, for in this very attitude must all Sunnyasis be buried! Therefore where he now is we will build the temple to our holy man."

They built the temple before a year was ended—a little stone and earth shrine—and they called the hill the Bhagat Hill, and they worship there with lights and flowers and offerings to this day. But they do not know that the saint of their worship is the late Sir Purun Dass, K.C.I.E., D.C.L., Ph.D., &c., once Prime Minister of the progressive and enlightened State of Mohiniwala, and honorary or corresponding member of more learned and scientific societies than will ever do any good in this world or the next.—*Pall Mall Budget.*

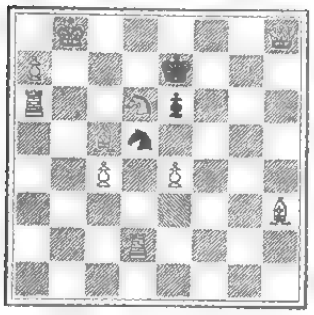
CHESS.

(All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

Solution of Problem No. 172.



WHITE.	BLACK.
1—K to K sq.	1—Any
2—Mates accordingly.	

Note.—K to B sq. or B 3 will not do, as Black replies R to B sq.

Correct solutions received from Diganima, W.H.S., Kr., Omega, J.D., W. Barrie, and E. J. King.

Problem No. 174.

By A. H. Robbins.

White to play and mate in two moves.

The mails which arrived on the 15th have brought news of the Cable-match between New York and London, which was played on the 9th ultimo. We quote the following from an exchange:—

The great international cable match, which has attracted the attention of two continents, took place on Saturday last and resulted in a draw. The participants made the mistake of not allowing sufficient time for the transmission of the moves as only one game of ten was finished. Play commenced soon after 10 o'clock, New York time, and at 11 o'clock the first moves were received from London. A short adjournment was taken at 2 o'clock for luncheon, after which play went on uninterruptedly until 6.30, or 11.30, London time.

The following shows the pairing of the opposing teams:

1—Lipschutz (M) vs. Owen (B), Zukertort.
2—Showalter (M) vs. Hoffer (B), Vienna.
3—Hodges (M) vs. Lonck (B) P to Q 4.
4—D. G. Baird (M) vs. Mills (B), Ruy Lopez.
5—Hanham (M) vs. Lord (B), Irregular.
6—Ryan (M) vs. Guest (B), Philidor.
7—Isaacson (M) vs. Mortimer (B), Ruy Lopez.
8—J. W. Baird (M) vs. Trenchard (B), Ponziani.
9—Simonson (M) vs. Heppel (B), Two-Kts, defence.
10—De Visser (M) vs. Hunter (B), Centre Gambit.

The only game finished was that on board No. 4. Mills *versus* D. G. Baird, a Ruy Lopez, which was drawn after White's 26th move. We hope the next attempt will be more successful.

The projected match between Blackburne and Bardeleben is fixed for Monday (22nd instant) at the British Chess Club, London. This should produce some fine games.

Gossip *versus* Pollock at Montreal resulted in a tie, each player scoring 6 games—with 5 draws.

Albin has challenged Showalter to another match, which will probably be played in New York, without delay.

Steinitz has left New York for London, where it is hoped that his return match with Lasker may be fought. All accounts represent the new champion as fully restored to health and now in good form.

San Francisco.

The Mechanics' Institute chess tournament is practically concluded, only one game to decide a tie having yet to be played. The following are the prize winners:

Dr. Lovegrove, first prize; G. R. Thompson, second prize; G. Nevill, third prize; G. Hallwegen, fourth prize; A. C. Thomas and M. Lazarus, fifth and sixth prizes respectively; G. O. Johnson, seventh prize; Martin, eighth prize; O. Samuels, ninth prize; P. W. Fairweather, tenth prize; T. Flanders, eleventh prize; O. Boxall, twelfth prize, and J. Ettinger, thirteenth prize.

Game No. 251.

CHESS IN SYDNEY.

A recent off-hand skirmish which presents points of interest.

EVANS' DECLINED.

WHITE. Mr. H.	BLACK. Mr. C.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B to Kt 3
5—Castles	5—P to Q 3
6—P to B 3	6—Kt to B 3
7—P to Q 4	7—B to Kt 5
8—Q to Kt 3	8—Castles
9—Q Kt to Q 2	9—P takes P
10—B to Kt 2	10—P to Q R 4 (a)
11—P to Kt 5	11—P to R 5
12—Q to B 2	12—P to R 6
13—B to B sq.	13—Kt to K 4
14—Kt takes P (b)	14—Kt takes B
15—Kt takes Kt	15—B to Q B 4
16—B to K 3	16—B to Q 2
17—Q R to Kt sq.	17—Kt to Kt 5
18—P to B 3 (c)	18—Kt takes B
19—Kt takes Kt	19—R to K sq.
20—K to R sq.	20—P to K Kt 3 (d)
21—K R to K sq.	21—Q to R 5
22—Kt to B sq.	22—B to K 4
23—Q to Q 3 (e)	23—R to K R 4
24—Kt to Q Kt 3	24—B to B 7
25—R to K 2	25—R to Kt 4 (f)
26—P to Q B 4	26—R to K sq.
27—Q to Q 2	27—B to Kt 3
28—Kt to B sq.	28—P to K B 4
29—R to Kt 3	29—P to B 5 (g)
30—R takes P	30—R to B 4 (h)
31—P to K 5	31—Q R takes P
32—R takes R	32—R takes R
33—Kt to Q 3	33—R to K 2
34—Kt takes P (i)	34—R to K 8
35—R to R 8 ch.	35—K to Kt 2
36—Kt to R 5 ch.	36—P takes Kt
37—Q to B 3 ch.	37—B to Q 5
38—Q to Q 3	38—Q to B 7 and wins.

(a) The three moves of this P nullify White's attack.
(b) He should have retained the K B.
(c) Here also he should have avoided the exchange of B for Kt.
(d) Necessary to prevent Kt to K B 5.
(e) To protect the Q Kt P.
(f) If now 25—B takes P; 26—P to Q B 4, B to Q 2; 27—P to K Kt 5, &c.
(g) This P is now strongly posted.
(h) Black contemplates Q R to K 4, followed by the sacrifice of Q and R.
(i) White falls in, as is shown by Black's reply.

The Rook.

Mr. Mason remarks that when you have the Rook in play he is easy to handle. "The difficulty in his case is to get him out and at work where he can do most good. He is an awkward piece, easily harassed by Bishops, Knights, and Pawns, and of little active value in the early or early-middle part of the game. The Pawns block and resist the Rook more than they do any other piece. But if the Rook once gets in among or behind the hostile Pawns, he soon changes all that. The Rooks doubled are more than doubly strong. It is generally well to have them in combined action somehow. It is often good play to take two Rooks for the Queen when the Rooks are working together, pressing upon an important point in your position. Rooks doubled on the seventh or eighth rank are hard to stand against. Do not double your Rooks behind your own Pawn, unless, indeed, to force a passage for it, or to defend it in the last resort. Do not play your Rook so as to impede your Pawn when it is a question of queening. Do not give up a Rook for a minor Piece unless the provocation is great. In the end the exchange is nearly equal to two Pawns, and may be heavy odds against you."

Game No. 252.

CHESS IN PARIS.

Mieses and Janowski match. The following is the sixth game:—

VIENNA OPENING.

WHITE. J. Mieses.	BLACK. D. Janowski.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to Q B 3
3—B to B 4	3—Kt to B 3
4—P to Q 3 (a)	4—B to B 4 (b)
5—B to K Kt 5	5—P to R 3 (c)
6—B to R 4	6—P to K Kt 4
7—B to K Kt 3	7—P to K R 4 (d)
8—P to K R 4	8—P to Kt 5
9—Q to Q 2	9—P to Q R 3 (e)
10—P to B 4	10—P takes P e.p. (f)
11—Kt takes P	11—Kt to K Kt 5 (g)
12—Kt to Q 5 (h)	12—P to Q 3
13—R to K B sq	13—P to B 3 (i)
14—Kt to R 2 (j)	14—R to B sq.
15—Kt takes Kt	15—B takes Kt
16—Q to R 6	16—Kt to Q 5 (k)
17—K to Q 2	17—P to K B 4
18—Q to R 7	18—R to B 2
19—Q to Kt 8 ch.	19—R to B sq.
20—Q to Kt 6, ch.	20—K to Q 2
21—P to B 3	21—Kt to K 7
22—B to B 2	22—B takes B
23—R takes B	23—K to Kt 6
24—Q to Kt 7 ch.	24—K to B 3 (l)
25—P to R 4 (m)	25—R to B sq. (n)
26—P to R 5	26—Q takes P (o)
27—Kt to K 7 ch.	27—K to Q 2
28—Kt to Kt 6 dis. ch.	Resigns.

(a) This prevents 4. . . . Kt takes P; 5. Kt takes Kt, P to Q 4, &c.
(b) Not good. The right move being 4. . . . B to Kt 5.
(c) Not wanting to lose a move by returning B to K 2, he has no other means of unpinning the Kt.
(d) Still more weakening. Better would have been 7. . . . P to Q 3, and if 8. P to K R 4, then 8. . . . P to Kt 5.
(e) In such a dilapidated King's position he has hardly time for this precautionary move to prevent the K B from being exchanged.
(f) Developing only White's game still more. 28. . . P to Q 3 would still be preferable.
(g) Compulsory, because of the threatened 12. Kt to Kt 5.
(h) Obviously, if now 12. Kt to K 4, then 12. . . . B to K 6.
(i) We prefer here 13. . . . B to K 4, and, if 14. Kt to Kt 5, then 14. . . . Q to Q 2, so as to enable him to castle QR.
(j) 14. P to B 3 would have prevented Black's Q Kt from coming into play. White need not have precipitated matters.
(k) Had he played now 16. . . . Kt to Kt 5, then White had no time to play his King, because of 17. . . . Kt takes Kt, getting rid of the most troublesome piece. The check with the Knight at once does not seem dangerous.
(l) 24. . . . K to B sq. was the only move now.
(m) A fine move. It threatens 26. B to Kt 5 ch, P takes B; 27. P take P ch, B takes P; 28. R takes R and wins.
(n) If 25. . . . P to Kt 3, then 26. Kt to K 7 ch, K to B 2; 27. B to Q 5 ch, and wins
(o) He has no saving move. Herr Mieses played this game splendidly.

Steinitz and Chess.

Refering to Steinitz's desire to regain the chess championship of the world, the *Birmingham Weekly Mercury* expresses the hope that the veteran will remember that human nature is always the same, and that having almost reached the age of 60, he is now unable to stand the tremendous strain of conflict. "He has done well, superlatively well. Let him be content; and let not the world see the worn-out champion crushed and pulverised by the man of the time in the heyday of his youth and strength." The *Mercury* continues:—"We warned you years ago, but you thought you knew best. We told you again and again that Lasker was no Tschigorin with his eleganeies, no Gunsberg with his second-hand inventions, but a real live player of the largest kind. But you hardened your heart and stiffened your neck, and went on to perish in your pride. And now you want to do it again. But be not small when thou mayest be great. Be quiet, be humble, take thy gruel, admit the soft impeachment. Say 'I am old' (*alt und schwach*) like Haydn. Say 'When I was young I was the strongest!' and all men shall exclaim. But persist not in thy 'exclamations,' at which every body laughs more or less decorously; say nothing of 'health,' for all know the why and the wherefore. Be silent. Retire. Climb down. Take off the aureole, hand it to the mightier than thou, efface thyself, and take a back seat. Then—but not otherwise—thou shalt still be honoured."

In 1894, 217,606 cases of preserved meats were exported from New South Wales, against 170,447 cases in 1893, and 174,406 cases in 1892. In 1894 there were 533,995 carcases of sheep exported, against 364,958 in 1893, being an increase of 169,237 carcases, of nearly 50 per cent., in twelve months.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 14.

In St. Petersburg it is semi-officially reported that Russia will strongly oppose the annexation of the mainland of China by the Japanese.

London, April 15.

The *Novosti* reports that the Minister of Finance [Russia] is preparing to establish a gold currency.

London, April 18.

The Russian press says that the session to Japan of the Chinese mainland will compel the Powers to interfere.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Shimonoseki, 8.40 p.m., April 15.

The Peace Conference to-day lasted from 2 o'clock in the afternoon until 7. Viscount Mutsu was absent, his indisposition being still too severe to permit of his taking an active part in the negotiations. The discussion to-day seems to have been serious. Everything depends upon to-morrow's Conference.

Shimonoseki, April 17, 2.30 a.m.

The Treaty of Peace was signed to-day, and the Viceroy Li started for home at 2 p.m.

(FROM JAPANESE PAPERS.)

Söul, April 18.

Li Yo-shun, Korean Minister to Japan, having resigned, the Korean Government has resolved to appoint Yu Kitsu-yei to the post. Some 130 Korean students leave here on the 20th inst. to enter the Keiogijiku School in Tokyo.

Hiroshima, April 18.

The *Fayeyama Kan* put into the harbour of Ujina at 4 p.m. to-day with Count Ito and Viscount Mutsu, from Shimonoseki. All the vessels in the harbour were dressed. When the two statesmen left the *Fayeyama* in a steam-launch the war-ships fired a salute, the steam-launch stopping until the salute had finished. The national anthem was played by the Band when the party arrived at the wharf at 4.30 p.m. Counts Yamagata, Kuroda, Saigo and Matsukata, Viscount Hijikata, Marquis Tokudaiji, officers of Principal Head-quarters, Governor Naheshima, and several others proceeded to Ujina to welcome the party. A grand arch was erected near the wharf. After a brief rest the Premier and the Minister of Foreign Affairs were conveyed to Hiroshima in a carriage sent from the Imperial Household. Both sides of the road between Ujina and Hiroshima, a distance of over three miles, were crowded by representatives of various public bodies, who gave the Ministers a warm reception. Another large arch was erected near the Miyuki Bridge, and many fireworks were displayed.

It is stated that the report of the death of Colonel Sato, who was wounded at Newchwang, lately reached his family in this town.

Kumamoto, April 19.

A strong earthquake was felt here shortly after 9 o'clock last night.

LATEST COMMERCIAL.

IMPORTS.

The fresh rise in Exchange has caused prices of Yarn and Grey Cloth to turn downwards but without inducing business of any moment. The reduction in quotations would have been greater but a firm tone with rise in values at home has come to the help of importers. Dyed Cottons and Fancies have given rise to a few transactions, prices being easy in favour of buyers. Woollens dull, with no fresh purchases, although deliveries of previous bargains have been on a fair scale.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8¼lb, 38½ yds. 39 inches	$2.85 to 2.85
Grey Shirtings—9lb, 38½ yds. 45 inches	2.70 to 3.10

No. 20s, Bombay	—
No. 16s, Bombay	—

METALS.

Buyers have won the "tug" and prices for Iron are lower all round. Even this does not induce much business as dealers appear to be well supplied with former contracts. Wire Nails are well maintained; stock being small. Tin Plates in abundant supply and prices lower accordingly.

	PER PICUL.
Flat Bars, ½ inch	$3.35 to 3.40
Flat Bars, ¾ inch	3.45 to 3.50
Round and square up to ¾ inch	3.40 to 3.50
Iron Plates, assorted	3.50 to 3.60
Sheet Iron	4.50 to 4.70
Galvanized Iron sheets	8.25 to 8.75
Wire Nails, assorted	5.80 to 6.10
Tin Plates, per box	5.65 to 5.75
Pig Iron, No. 3	1.55 to 1.60

KEROSENE.

Nothing done this week, beyond the raising of prices once more by holders. Buyers have not responded, but are taking delivery of their former purchases. No fresh arrivals to note. Present stock 850,000 cases.

American	Nom. $2.35 to 2.40
Russian	Nom. 2.35 to 2.40

SUGAR.

Brown—Free arrivals and fair sales; but the latter do not equal the former, the market closing quiet and weak, with prices more or less nominal. White—Small business but no change at present in quotations.

	PER PICUL.
Brown Takao	$3.60 to 3.65
Brown Manila	4.30 to 4.40
Brown Daitong (New)	3.40 to 3.45
Brown Canton	3.50 to 3.70
White Java and Penang	6.50 to 6.60
White Refined	6.40 to 9.20

EXPORTS.

RAW SILK.

The stagnation of the past weeks has made holders give way in price and some little business has been done for the U.S. trade at the reduction. The continued improvement in Silver will probably cause prices of Silk to decline further.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

YOKOHAMA: SATURDAY, APRIL 27TH, 1895.

BIRTH.

At Nagasaki, on April 26th, the wife of G. MÖLLER-BERCK, H.I.G.M.'s Consul, of a Son.

DEATH.

At Tokyo, Tsukiji, No. 32, on the 24th April, at 1 p.m., WILHELM HEISE, born at Hamburg, 1846.

SUMMARY OF NEWS.

IT is said that the Emperor may remain in Kyoto for three months.

BIN HON-JUN, the leader of the Tonghaks, has been sentenced to death.

THE boycott against various Chinese firms in Yokohama continues.

A GRAND war celebration is being projected by the Town Council of Yokohama.

TWO of the Portuguese recently arrested on a charge of fraud have been released.

VISCOUNT ENOMOTO, it is said, will be the new Japanese Minister to the Court of Pekin.

THE Minister of Home Affairs has prohibited the sale in Japan of Nos. 788 and 789 of the *Seko Shimpo*, a Japanese periodical published in America, these issues containing matters injurious to the public peace.

THE *Nichi Nichi Shimbun*, *Yiji Shimpo*, and *Choya Shimbun* were suspended on Thursday.

THE British steamship *Glenogle* was the first vessel to discharge cargo at the Yokohama Pier.

THE new gasometer at the Yokohama gas-works was inspected by the general public on Monday.

THE Government will establish an Administrative Board in Formosa, with a *Shinnin* official at its head.

VISCOUNT KONO TOGAMA, once Minister of Home Affairs, and Vice-President of the *Kaishin-to*, is dead.

SEVENTY-FIVE houses were destroyed by fire at Yamanacho, Yamana District, Shizuoka Prefecture, on the 20th inst.

IT is probable that the construction of the proposed new docks at Uraga will be sanctioned by the authorities.

THE last concert of the Choral Society, for the present season, is arranged for the 8th of May. A Pastoral will be presented.

THE principal head-quarters will be established in the Sendo Palace, Kyoto, after the arrival of the Emperor from Hiroshima.

A THOROUGH cleansing of the streets of Yokohama will commence on the 1st prox. to prevent the outbreak of epidemic diseases.

A HOUSE was set on fire by lightning at Akazuka-mura, Kita-toshima District, Tokyo, on the 19th inst. No lives were lost.

ST. GEORGE'S BALL, held in Yokohama on Tuesday evening, was very enjoyable. The decorations were extremely beautiful.

THE projected electric railway between Tokyo and Yokohama has produced three different sets of promoters with rival schemes.

MR. NITTA YOSHISHIGE, of Ishikawa Prefecture, has petitioned the Government for permission to permanently settle in the Liaotung peninsula.

THE Prize Court at Sasebo has been enquiring into the circumstances attending upon the capture of the steamer *Yik-sang*, during the week.

A SMALL fire occurred in a godown in Yokohama Settlement on Thursday morning. It was extinguished before much damage had been done.

MR. BOISSONADE, ex-French law adviser to the Japanese Government, has been made an honorary member of the Tokyo Gakushi Kai-in.

THE Japanese silk merchants of Yokohama are petitioning against foreign firms buying silk materials and fabrics direct from the producing districts.

YUAN, the ex-Chinese Resident at Söul, is said to be with the Chinese forces at Liao-yang, and Ming, the ex-Premier of Korea, is staying in Hongkong.

THE Governor of Kanagawa entertained a large number of Yokohama residents at Nagahama on Monday, when the new quarantine station erected there was thrown open to the public.

THE negotiations for the revision of the Treaty between Japan and France have made remarkable progress, and the revised Treaty will be signed by the commissioners of both countries at no distant date. It is expected that the negotiations with France will be concluded sooner than those with Germany.

THE Spring Meeting of the Nippon Race Club will occupy Wednesday, Thursday, and Friday of next week. The promise is bright of some good racing.

MR. ITO MIYOJI and H.E. Chang are the Plenipotentiaries appointed by the Emperors of Japan and China to exchange ratifications of the Treaty of Peace at Chefoo.

DESTRUCTIVE hailstorms are reported from Ibaraki Prefecture, while a whirl-wind which passed through a part of the same prefecture on the 19th occasioned the death of several persons.

REUTER telegraphs:—In consequence of the wholesale peculation which has been discovered in connection with the building of the Siberian Railway, large parties of Don Cossacks have sailed for Vladivostock to settle that district, and to assist in the protection of the line. The Corps of Guides crossed the Panjkora River, and meeting a large force of the enemy were obliged to retreat. Colonel Battye was killed, and several further casualties have been recorded. Umra Khan has released Lieutenant Edwardes, who has now arrived at the British Camp. The Spanish troops in Cuba have routed a large force of rebels. It is reported that Germany, France, and Russia have agreed to take joint action to protect their interests in the East. A Chinese loan of three millions sterling has been concluded by a German syndicate. *The Times*, in a leading article, states that Her Majesty's Government has acted wisely in refusing to join the other Powers in putting pressure upon Japan in regard to that country's treaty of peace with China, and that the proposed naval demonstration in the East is impolitic in view of the conditions of peace not in any way directly menacing British interests.

BUSINESS in the Import trade continues to be influenced by the silver market and the consequent condition of Exchange, the rates for which have fluctuated during the week, and although higher than for some time past have not acquired the requisite stability to enable buyers to enter the market with confidence. Holders are strong with a rise in Manchester, especially in regard to Yarns and Shirtings, and although buyers want stock they hesitate to come up to the scratch, and quotations can not be altered for the want of transactions to make rates. There is nothing doing in Metals, and no sales are reported in Kerosene, all brands of Oil being firmly held. The Sugar market is weak, with a downward inclination in the value of China and Manila sorts. A cargo of 50,000 piculs Takao has come to hand, but prices for this sort are nominal. Some enquiries are made for Whites at late rates. There is no business to report in Silk, though holders are current; and very little has been done in Waste, though late deals have reduced the one time heavy stock to about 10,000 piculs. The Tea trade has been opened by small quantities of new leaf, and the *City of Peking*, which sailed to-day, took the first shipments. These, however, are not of much account, either in regard to quality or quantity, and teamen are not well pleased with the "cup" of what has so far been brought to market, though the parcels of leaf that have been sent to Yokohama have been eagerly bought up at high figures when compared with the opening rates of last year. Rates of Exchange have fluctuated, though they are about the same as those of a week ago. The latest movement is a rise on this morning, with rates closing firm.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Peace being now presumably restored, the press is busily discussing various themes incidental to the termination of the war. One of them is the policy that ought to be pursued by the Imperial Government toward the new dominion. The *Jiji* suggests that the Government should adopt a most tolerant system of administration and should refrain from any act of undue interference. This recommendation has special reference to Manchuria, where, owing to a rigorous climate and many other physical disadvantages, the population is comparatively small. What is primarily wanted there is security of life and property, a benefit never enjoyed by the people while they were under the corrupt administration of China. If it became noised abroad that in the portion of Manchuria subject to Japanese dominion people enjoy perfect security of property and are blessed with a generous form of government, then the natives from other parts of Manchuria will flock to the place, thereby augumenting its prosperity and importance. Such a state of affairs would induce Japanese also to settle there. Formosa, being a district far better endowed by nature, will readily attract immigrants without any such special inducements. The *Kokkai* and the *Kokumin* have something to say on the same subject. The latter contends that the administration should be so conducted as to Japonicise the new dominion, and that, for the purpose of making the natives openly acknowledge themselves Japanese subjects, they should be made to cut off their queues, use western or Japanese clothes on occasions of ceremony, forbidden to follow the unnatural custom of cramping women's feet, and not allowed the use of opium. The *Kokkai* is more tolerant. It confines its recommendation to the prohibition of the use of opium, being persuaded that other reforms will be accomplished gradually. In this respect its opinion is endorsd by no less an authority than Mr. Otori, ex-Minister to China, who, in a lecture delivered a few days ago on the subject of the new dominion, dwelt on the importance of not interfering with the manners and customs of the Chinese, and urged that Japan should confine herself to devising some measure for stopping the baneful habit of opium smoking. The *Asahi* suggests that to inculcate Japanese ideas and introduce Japanese habits among the people in the new dominion, the best and simplest way would be to induce some *shisoku* to settle there.

* * *

The Imperial Rescript proclaimed a few days ago is commented upon by the vernacular press in terms of the deep respect that always characterizes the nation's attitude where anything connected with the Sovereign is in question.

* * *

The *Mainichi* and the *Asahi* call the attention of the Government and of the public to the necessity of exercising the greatest possible care in the selection of Japanese representatives to the various Treaty States. Our contemporary's reason is that Japan has become a Power not only in the East but also in the world. In short, she should hold herself prepared hereafter to take part in the affairs of the world and to make her voice heard in the arrangement of any important affair relating to the maintenance of general peace. A "carpet Minister" will not do in this future. The *Asahi* lays special stress on the importance of selecting the Japanese Representative to China. The latter country was the indirect cause of Japan's sudden rise into prominence, and the future greatness of the Empire depends also on its relations with China. Hence, it is vitally necessary for Japan to watch with keen eyes everything occurring in the wide domain of her neighbour. Other Powers will also observe narrowly what course Japan follows hereafter toward China, and will modify their Eastern policy accordingly. Decidedly, Japan's diplomatists will find their best and most important opportunity of manifesting ability and adroitness in dealing with China. In this context, we may note that rumour indicates Admiral Viscount Enomoto, Minister of State for Agriculture and Commerce, as the most probable candidate for the position. If so, more or less changes in the Cabinet will be unavoidable.

* * *

On no previous occasion, writes the *Nippon*, in the whole annals of the Empire were such distinguished achievements accomplished both at home and abroad as in the reign of the present Emperor. Refinement and military prestige, usually so incongruous, have grown up side by side to an unprecedented extent under the wise and benevolent rule of the Sovereign, and the inauguration of a constitutional system of Government, in other countries counted detrimental to the attainment of military prestige, has proved itself, in the case of Japan, a factor in the achievement of splendid success. In olden times, when the country was under the sway of the Imperial Court, the nation and the army were synonymous, and on each man devolved the dual function of pursuing peaceful avocations in time of tranquillity and of fighting in time of war. This system has been revived by the restoration of the Imperial régime, though not in the same shape as it possessed in ancient days. But as every gain is invariably attended by a loss, so refinement is frequently liable to be neglected in the sequel of splendid military achievements. It is to avert such an evil that the Imperial Rescript specially warns the people against any one-sided development of either refinement or military powers. Nothing can be more apposite than the concluding portion of the Rescript, where it is specially enjoined that after the exchange of ratifications of the Treaty of Peace, no endeavours should be spared to develop more than ever relations of neighbourly good-will with China. The words show most characteristically that the Japanese are a "nation of gentlemen."

* * *

The present war is considered by several metropolitan papers to be an excellent occasion for introducing changes not only in the Government but also in political parties. The *Kokumin* says that the war has acted as a crucible for fusing into one body all the various political organizations, and that they will emerge in new shapes. The political world, formerly divided into two distinct bodies by purely party lines, will now be divided on lines of principle. The new element of firmness in the Government will coalesce with the element of the same nature in the Opposition; while the old element of moderation will similarly coalesce with its like.

* * *

The *Nippon*, speaking allegorically, says that with the expansion of the Imperial dominion corresponding changes should be introduced in the system of administration. The Manchus conduct their administrative policy on the same petty scale and mould it on the same lines as when they were a small tribe in Manchuria. That is the reason why centralization of power is utterly wanting in China, the localities being independent units. The same thing would overtake Japan if, while her dominion has been artificially expanded all of a sudden, she resolved to leave all changes of her administrative mechanism to the natural course of events.

* * *

The most important journalistic discussion in the latter part of this week has been the rumours about combined foreign intervention. The subject has involved an unprecedented catastrophe among the metropolitan papers, the *Nichi Nichi*, the *Jiji*, the *Choya*, and the *Mezamashi* having all been suspended on the 25th instant. The offence committed by these papers in the eyes of the Press Censors, seems to have chiefly been the publication of telegrams from London about alleged combination on the part of Russia, Germany, and France, with a view to preventing the annexation of Chinese territory by Japan, and also about the movements of the Russian Squadron in Japanese waters. Other papers took warning by the misfortune of their contemporaries, and their issues of the following day were disfigured by spaces entirely blotted out. It is very easy to infer, however, from what the vernacular press has already written on the subject of foreign interference, the attitude that it takes toward it. It is an attitude of defiance. The *Nichi Nichi*, indeed, devoted its leading columns to the discussion of the question on the day immediately preceding its suspension. It strongly suspected the authenticity of the rumour about a combination of three European Powers for the purpose of re-casting the terms of peace, its incredulity being based on the ground that the Powers in question have no just cause to object, seeing that the terms do not in the least affect their several interests. Granting, however, for the sake of argument, that these Powers have entered into an alliance and have determined to do violence to the rights and advantages that Japan should enjoy in virtue of her victory, what should Japan do in that case? She should simply be guided to the end by her own convictions. Where rectitude is, thither the sympathy and good-will of man of sincerity and benevolence will be directed; *per contra*, whenever a country proves itself unprincipled enough to unjustly place obstacles in Japan's path, other countries of strict probity and chivalrous sentiment will come forward to uphold the cause of justice and uprightness. Of course, in pursuing to the end the path indicated by her own convictions, Japan does not count upon any help from abroad. The *Nichi Nichi* declares that its remarks are actuated by the conviction that the right is bound to win the day at the last, and that any rash attempt made to interfere with it, is doomed to failure.

* * *

The *Choya* and the *Niroku* have written in more violent terms, declaring that should Russia or any other country prove herself so selfish as to object to the terms of the Treaty, then such country should be chastised even as China was chastised. In short, these papers think that a second China is looming on the horizon in connection with the Korean problem, and that Japan must deal with her as she dealt with her first opponent, holding firmly by the resolution of not submitting to any arbitrary and unjust measure even if the whole country be turned into a desert.

* * *

We may note here that the exchanges, so sensitive to any abnormal incident, have been thrown into a state of extreme confusion by the rumours of foreign interference. On the 25th instant, the quotations for stocks and shares showed an extraordinary fall. A similar tendency, though not to so great an extent, prevailed on the following day.

EDITORIAL NOTES.

HOW THE NEWS WAS RECEIVED.

The announcement of the successful conclusion of the Peace Conference was received in Tokyo with outspoken gratification, very apparent though subdued. That China would agree to Japan's ultimatum had been foreshadowed by the suspension of the *Nippon* and *Kokumin*, for these papers in their leading articles on Sunday had been very emphatic in the expression of their views as to the hesitation of the Chinese Plenipotentiaries. On Monday, the 15th, there was still considerable doubt as to the successful issue of the Conference; but this was speedily dispelled on Tuesday afternoon when rumours began to circulate in the city that the Viceroy Li had yielded in every point and that the war was practically at an end. A few hours later came the confirmation of the great news, and the undisguised joy of the people at once showed itself in a pretty general display of bunting: not indeed the banners that erst bore triumphant legends of the prowess of Army and Navy, but simply the national flag, or, still oftener, the Imperial Standard. The 16th and 17th instants marked, as we have already noted, the suspension of more than half-a-dozen leading journals, and particularly the closing of the doors of the Foreign and Domestic News Agency, believed to be responsible for the dissemination of many

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

politic opinions. The more prudent journals had their leading articles subjected to rigid censorship before venturing upon publication, in consequence of which thoughtful step several came out on Wednesday and Thursday with two or more blank or blurred columns. But whatever may have been the position taken by the press, the last two or three days have amply shown that the people are deeply and sincerely grateful for the conclusion of peace. One of the wealthiest merchants in the city, in speaking with a representative of the *Japan Mail*, remarked that it was only the hot-headed politicians who dared to feel or express dissatisfaction; the people else were to a unit greatly delighted. Several metropolitan schools of note observed Thursday, the 18th, as a holiday, while in others the students joined in singing the national anthem with unusual fervour and depth of feeling. So the spirit of thankfulness has been, with the sole exception of the *coterie* of chronic malcontents, everywhere apparent. And surely it is but right and just that it should be so.

JOURNALISTIC XYLOGRAPHY.

It is with pleasure that we note a recent decided improvement in the woodcuts appearing in the columns of the metropolitan daily press. This we opine, is partly due to the adoption of a more decidedly foreign style by the draughtsmen employed. As a general rule the rough scenes from the war that have so frequently been published during the last few months, have left everything to be desired; it required a strong and unusually healthy imagination, as a rule, to find out what the "artist" was really aiming at; to discriminate, for instance, between a cloud and a mass of fleeing Chinese, or a hill-top and serried ranks of the Japanese troops. Most amazing have, in particular, been the battle sketches, evidently the work of advanced impressionists. The general outlines might in most cases have been those of almost anything—from a mastodon in an access of insanity to a wagon-load of dismantled barrels. But quite latterly there has been a noticeable change for the better. In a recent issue of the *Yorozu Choho*, for example, there was a sketch of no small artistic merit; no attempt at shading, but none the less life-like and impressive. Equally noteworthy has been the progress made in this direction by the *Hochi Shimbun*, the new management of which journal seem determined to leave nothing undone that may enhance the popularity of their paper. The *Hochi* on several recent occasions presented its readers with very picturesque collotypes, taken from evidently excellent photographs. It is becoming by-the-bye a recognised institution for any journal that hopes for an increasing patronage to give its readers every now and then xylographs or lithographs of war-scenes. Some of these have been specimens of remarkably good workmanship, and very creditable to the artist. On the other hand, there are papers, such as the *Yamato* for example, that stick to the old-style xylography, where great attention is paid to the hair and clothing of the figures while perspective is left altogether out of reckoning. Saikiku-sanjin, otherwise Mr. Jono Dempei, always has his novelettes illustrated in this, to critical foreign eyes, anything but pleasing style. But as his muse runs in the direction of the adventures of anything rather than strictly moral beauty, the fault is less apparent. Of course it is of prime importance that the heroine's xylographic effigy should be clad in gorgeous raiment and have a *bin* or chignon of faultless coiffure.

JAPANESE GAME-COCKS.

The *Yomiuri* states, we know not on what authority, that a comparatively large number of Japanese fowls have of late been shipped to America, to what part is not particularized. Japanese long-tailed fowls and bantams have long been favourites with fanciers not only in the United States but also in Europe. But this is the first time that we have heard of fowls being exported for sporting purposes. The kind sent is that popularly known as *shamo*, said by some to be a corruption of *Shamuro*, the Japanese name for Siam, whence these long-legged and rather ungainly birds are believed to have come originally. This is possible, for *Gallus bankiva*, the prototype of all varieties of the domestic fowls, is found wild in Cambodia, Burmah, and particularly Siam. In the Himalayan district the jungle-fowl is its nearest congener, in fact the species is almost if not quite identical. The *shamo* of Japan are very close relatives of the last-mentioned variety or species, possessing all the distinguishing characteristics of the wild bird. Domestication has, however, tamed the bird's spirit. We cannot imagine that the exported *shamo* will be utilised at once as game; they are probably, always premising the authenticity of the *Yomiuri's* information, intended for cross-breeding, and as they are very muscular and thick-boned birds it is quite probable that an excellent hybrid may be obtained. What the Japanese *shamo* wants in particular is more spirit and quicker action.

CHINESE SOLDIERS IN A NEW RÔLE.

On account of the rapid increase in the number of cholera cases on Panghu Island, says a vernacular contemporary, the Japanese coolies proved insufficient to perform the work that fell to their share. To make good this deficiency native bearers were hired, but soon threw up their engagement owing to their inherent dread of the epidemic as well as perhaps on account of the hard work they were required to perform. Upon this, the army officers were struck with a brilliant idea: they would hire the Chinese soldiers who, after having surrendered to the Japanese, still lingered on the island. When the fort on the isthmus was taken no less than five hundred Chinese relinquished their arms. They were all set at liberty soon after and provided with three or four days' rations; but with proverbial Asiatic improvidence they soon ate up what had been given them. Some came to the very verge of starvation, and were always prowling about the Japanese camp-kitchens in hopes of bounty. These starveling folk the officers resolved to hire, offering them an attractive wage for their services. The proposal was promptly and joyfully accepted, and over fifty ex-braves entered the service of the Japanese army as carriers, bearers, and general utility men. They shaved or cut off their cues the better to work. It is a novel episode altogether.

THE TRIALS OF WAR CORRESPONDENTS.

Writing to the *Yorozu Choho*, a war-correspondent now in Manchuria, makes the following plaint:—Ever since the outbreak of the war, the distinguishing badge of newspaper correspondents has been a red ribbon worn on the shoulder. Quite recently this has been altered, and we are now expected to wear a strip of red cloth, six or seven inches in length. The stock of red ribbon which I had brought with me has thus become useless, and so the other day I had to beg a gendarme for his cast-off trousers. Out of this humble material I got a strip of dingy red cloth sufficient for a make-shift badge; and this I sewed with infinite trouble on the upper part of the right sleeve of my scarcely less dingy overcoat. Rigged out in this fashion, I bore a general resemblance to a coolie-headman, though the colour and shape of the badge were different. Still, the similarity was so great that on the way from Kaijo to Kogasai I was frequently mistaken for a coolie, and often arrogantly called to by some trooper "Here, you coolie-fellow!" (*Oi, nimpu!*). On arriving at Kogasai, I found that my brethren of the pen had met with similar experiences and had time and again been in even more painful situations. A coolie is one thing and a war correspondent another, and we do not want to be confounded with other people.

EPIGRAMMATIC DEFINITIONS.

Inspired probably by similar contests in the London journals, an instructor of English in a well-known school has recently been offering prizes to those of his pupils able to produce the best and wittiest definitions of various words. The pupils are all of an advanced grade, and some of them quite fluent English conversationalists, so that the epigrams are occasionally couched in surprisingly excellent language. We select a few from the list forwarded us:—

HOME.

1. Home is a spiritual bread, without which no one can ever be healthy.
2. Home is a little paradise in this existence, which grapples the roots of a man's soul and affects all his associations.
3. Home is the name given to the place in which one first sees the light of day.

HEALTH.

1. Health is the greatest enemy of poverty and ignorance.
2. Health is the fruitful root whence grow all human pleasures.
3. Health is the harmonious working of the functions of the spiritual and physical body; and it is the source of a happy life.

A CYNIC.

1. A cynic is one habited in surliness.
2. A cynic is a wolf in the shape of a human being.
3. A cynic is one who pleases nobody, and whom nobody pleases.

A CRYING BABY.

1. A case of *chi-an ôgai* (disturbing the public tranquillity).
2. A jarring discord.
3. A broken wind-instrument that has to be beaten in order to bring into proper shape again.

THE SUN.

1. A giant lamp which is never extinguished.
2. Japan's immediate ancestress.

FIELD-MARSHAL YAMAGATA.

A gentleman recently returned from Hiroshima reports that Field-Marshal Count Yamagata has no waday's so large a foreign mail to get through that the services of nearly half a dozen translators are daily necessary. The number of foreign letters received averages seventy per diem. Most of these come from Great Britain and the United States, but France and Germany are also responsible for a large percentage. These missives are, almost without exception, penned by admirers in Europe and America; they beg for his autograph, or often enclose a photograph of the Field-Marshal, requesting him to write his name on the back and then return it to the sender. It is said that the Count invariably has the courtesy to accede to these requests; he has moreover a translation of each letter read to him, and dictates replies when necessary. One ardent admirer sent the Field-Marshal a present with which the latter was greatly pleased. It was a medal worn by the first Napoleon in his first campaign, and was thus a prized heirloom of the giver. Gifts of various kinds have been sent from many places; always accompanied with some pretty expression of the sender's admiration. Field-Marshal Count Yamagata deserves this meed of praise, for it was the stimulus of his presence and his able tactics that won the Japanese their first victories in the war and inflicted on the Chinese a series of defeats from which they never recovered.

THE COMMISSARIAT LINE OF THE SECOND ARMY.

The *Kokumin's* correspondent writes as follows from Kaiping, under date of the 17th ult., on the operations of the commissariat of the Second Army. When a detachment of the Second Army marched against Kaiping in the early part of the year under Major-General Nogi—now a Lieut.-General and Commander of the Second (Sendai) Division—Commissariat stations were established one after another as the column advanced, till, at last, after the capture of Kaiping, there were 17 of these stations, commencing at Talien and terminating at Kaiping, covering a distance of about 135 miles. Subsequently, when the main body of the Second Army joined the advanced detachment and marched farther north toward Taipingshan, Yingkow, and Tienchwang-tai, the Commissariat line was extended and three more stations were established, bringing the total number up to 20, covering about 168 miles. As soon as provisions, ammunition, and so forth, are discharged at Talien, they are sent forward from one station to another, whatever the weather may be. It takes 20 days for them to reach Liaoyemiao, the northern terminus of the line. The transportation of necessaries was a question that perplexed the authorities greatly at first, for the condition of the road is so bad that

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

the waggons sent over from Japan were found entirely unsuitable, while, if human shoulders alone were depended upon, an immense number of men would have had to be employed. Through the exertions of the Administration Office, at Chinchow, 200 Chinese waggons were at last requisitioned. The Chinese at first doubted the sincerity of the Japanese troops, but as soon as they were convinced of their punctiliousness and strict discipline, they began to supply vehicles. At present, therefore, the transportation of provisions, ammunition, and so forth, is done entirely by the durable Chinese waggons. They are drawn by oxen, horses, or donkeys, each one generally having 4 oxen and horses south of Fuchow, and 3 north of it. Two drivers, who take turns to work, are attached to each vehicle. The load carried by one waggon is usually 220 lbs. The Chinese are very skilful drivers and the vehicles move easily up-hill and down-hill. The advantages accruing from the use of these waggons is indeed great. Supposing that coolies were used instead, 20 to 25 would be required to transport one waggon-load, as each man could only carry one bale of rice containing 2 *to*. At that rate, there would have to be at least 2,000 coolies at each Commissariat station. That would mean a total of about 40,000 coolies for the line of stations mentioned above. Even if the coolies were supplied with hand-carts, about 20,000 men would be required. Then again, there would be the food of the coolies to transport, and superintending officers would be needed to keep the men in order. The charge for one Chinese waggon varies from 5 *yen* to 1.40 *yen*, according to the locality. These vehicles are also found very useful for carrying wounded soldiers. The waggons, at the time ■ which the correspondent wrote, began to move at 6 or 7 in the morning, and, after discharging their loads at the next station, they returned to their starting-point, carrying back from 3 to 5 patients. There is no proper road from Chinchow to Kaiping admitting of the passage of such waggons, so that they were generally driven through farms. Two grooves have been gradually formed through the wide plain, and along them more than one hundred waggons were driven backwards and forwards every day.

A MEMORIAL TO THE EMPEROR OF CHINA.

SEVERAL vernacular papers report that the Chinese communities in Yokohama and other Japanese ports, are exceedingly pleased with the successful termination of the Peace Conference. The *Miyako* adds to this that the leading Chinese merchants are debating the presentation of an address to their Emperor, begging him to reward the Viceroy Li for his exertions in behalf of peace, and stating that, in their opinion, the aged statesman has obtained the best possible terms under the circumstances. As to the wording of the address there are a variety of opinions, and no one has as yet been chosen to draw up the document. It will probably be given in charge of a Special Committee elected for this purposes.

* * *

On the other hand, the *Yomiuri* relates that the Chinese prisoners are anything rather than elated at the prospect of a speedy return to their native country. The majority of them have been better and more regularly fed than ever in their lives before, and they do not like to relinquish the certainty of plentiful food and comfortable quarters for the *res angusta domi* to which they have hitherto been accustomed, not to speak of the disgrace that will attach to them as captives of the enemy. The officers in particular view the prospect of return with well-grounded apprehensions; cashiering is the least punishment they are said to expect, despite sub-clause five of the Treaty.

A LETTER FROM THE FRONT.

WRITING from Pitzuwo, under date of March 25th, a sergeant in the First Regiment of the Imperial Guards addresses his whilom English teacher in the capital as follows:—"It was at four in the afternoon of March 8th that we sailed from Ujina to Talien Bay. We had remained inactive, after the call to arms, for fully six months in Tokyo; so on reaching Hiroshima we were all anxious to know how long we should have to stay there. When and where should we, the First Regiment of the Imperial Body Guard, supposed at least to be the bravest of the Army of Japan, plant our victorious flag? Our bodies were indeed some days at Hiroshima, but our spirits were always travelling over the battlefields of China. This is true not only of myself; every soldier in the Regiment talked and felt thus. Fortunately our patience did not have to get exhausted in Hiroshima. On the 8th we left Head-quarters, and on the 12th reached Talien Bay, just at daybreak. We landed in good order at eight o'clock in the morning. The next day we began our inland journey and after many hardships reached this place, where we still are. It is very cold here. The thermometer often falls lower than 25°. We are quartered in miserable Chinese houses, very unclean, the floors of which are made of native earth. But underneath this earthen floor there is a place to burn wood, or hay, or stubble, and so it is not so unbearably cold as one might suppose. When are we to march on to Shanhaikwan or Taku? Our feet are impatient to take the route. While we have been dreaming of these scenes, the news comes that the Peace Conference may end successfully and that we shall probably set out for home again in a few months. There is no news of interest here to report. Life is very dull. This is a dark world. We all hope that our country may obtain a brilliant peace, but we should so like to have the enjoyment of taking the Chinese capital before the war is entirely over. With such men as ours it would be an easy task."

DEATH OF A RUSSIAN SUBJECT.

INFORMATION was received by the police at 5.45 p.m. on Saturday from William Nelson, a Norwegian, the keeper of ■ restaurant and boarding house at No. 134, that one of his boarders, a Russian subject named Salkoloff, had died suddenly during the afternoon. On proceeding to the house, Inspector Kawada and a constable saw the man, who had every appearance of being dead, lying on the bed with a cigarette between his fingers. The deceased first went to the restaurant on Monday the 14th inst., since when he has been residing there. On Friday he took tiffin as usual at 12 o'clock, and at one p.m. retired to his room to have a nap. As he did not appear with evening, one of the boarders named G. H. Marton, thinking the circumstances somewhat strange went into Solkoleff's room, where he found the man dead. The police immediately set a guard over the corpse, while information was conveyed to the Russian Consul. On Saturday morning the Russian Consul, accompanied by Public Procurator Ando, Inspector Kawada, and a doctor from the Russian man-of-war *Admiral Korniloff*, inspected the body, when it was determined to hold a *post mortem* examination. This was done at Messrs. Stiboit & Co.'s by Doctors Eldridge and Rokkaku, and the Russian naval surgeon; and they ascertained that the deceased had died from heart disease.

COUNT OKUMA ON THE FINANCIAL QUESTION OF THE DAY.

IF all the demands made upon the indemnity were to be computed, remarked Count Okuma to a visitor a few days ago, a total of over one thousand million *yen* would be needed. As the indemnity is a fund of extraordinary character, the Count does not like the idea of appropriating it for ordinary expenditures. The amount required for the defences of the newly-acquired territory, for the building of ships, and so forth, is enormous, but these items ought to be defrayed out of the ordinary revenue. The Count then proceeded to say how, in his opinion, the indemnity of 300 million *yen* should be disposed of. One hundred million *yen* ought to be kept in the General Treasury as a Contingency Fund, in the form of foreign bonds, convertible at any time into specie. Thirty million *yen* should be appropriated for refunding the loan accommodated by the Bank of Japan. Then, a certain sum should be set aside as a fund for the purpose of holding a World's Fair in Tokyo four or five years hence, so as to show hospitality to the leading politicians, business men, and so forth, of the world, and to develop the various domestic industrial enterprises. The prestige of the country would be thus greatly augmented. The Imperial University and other important institutions should be endowed so as to make them permanent memorials of the glorious victories achieved by Japan. The total amount of specie defrayed by the country on account of the war does not exceed 30 million *yen*, so that if, in six years, 300 million *yen* were to be poured into the market in the form of specie, a rise in the price of commodities and a general derangement of the market would result. The loan of 80 million *yen* floated for the War Fund should, therefore, be left untouched, or be redeemed gradually. The Surplus of Revenue appropriated for War Expenditures should also be left ■ it is. The remainder of the indemnity should be distributed over the realm to form the basis of a permanent fund in each *shi*, town, or village. For although the present brilliant success is attributable to the virtue of the Emperor and the valour of the Army and Navy, yet the people themselves must also be considered to have worked for the victory. It is therefore right that a certain amount of money should be distributed in each locality as a common fund, to reward the services rendered by the people ■ the State and to encourage further faithfulness and loyalty on their part.

THE RUSSIAN FLEET.

WE (*Kobe Chronicle*) understand that Kobe will henceforth be the head-quarters of the Russian fleet so far as Japan is concerned. Nagasaki has previously served the Russian fleet for this purpose, but the Japanese authorities complained that the harbour was too small, and that the men-of-war lying there took up so much room as to greatly incommode the merchant shipping. We understand that communication was made to the Russian Minister to this effect, and as the result of a personal visit paid by him to Nagasaki, it was arranged that the head-quarters of the Russian fleet should be established at Kobe. We believe that all the commanders of foreign fleets in the East have now agreed to the arrangement suggested by the Japanese authorities, by which only two men-of-war of each nation are to lie at anchor in Nagasaki ■ one time.

JOMI YEISUKE.

THE *Yomiuri* gives an interesting biography of Jomi Yeisuke, a celebrated coppersmith and glyptic artist of Kyoto, showing how he succeeded, by dint of perseverance and self-denial, in reaching the position that he now occupies among the artists of Japan. Jomi Yeisuke was born in Kyoto on the 18th of February, 1839, and was the second son of a physician of that city. His father was on friendly terms with Kanaya Gorosaburo, the eighth descendant of the Kanaya family, famous for works in copper. Gorosaburo had no son, and, struck with the uncommon ability of the doctor's second son, asked his friend repeatedly to allow him to adopt Yeisuke as his heir. The offer was, however, declined for some time. One day the doctor asked Yeisuke whether he would care to succeed the house of Kanaya and win fame as a coppersmith and glyptic artist. He told him, at the same time, that although affluent to all outward appearances, Kanaya was really as much as 3,500 *ryo* in debt. The little lad replied that he was willing to become Kanaya's heir and to work hard in his line of business. The debt would, instead of damping his energy, serve ■ a stimulus. Yeisuke was, therefore, adopted by Kanaya. To relieve the family from its pecuniary embarrassments and to heighten its fame was the object constantly kept in view by Yeisuke. He began to apply himself zealously to the work of the atelier, handling the hammer and chisel and making moulds as if he were a common appren-

tice. His adopted parents thought, however, that he was lowering himself in the eyes of the workmen, and that all that was expected of the head of such a family as the Kanaya was simply to superintend the work-shop, to acquaint himself with the prevailing taste of the time, and to be sharp in business transactions. Yeisuke was, therefore, strictly forbidden by his parents to mix with the apprentices. He continued to work secretly, choosing the time when he could go to the house of his own father, or when the family was asleep and he was in his sleeping apartment. Gorosaburo's wife did not like Yeisuke, and told her husband one day that as a certain clerk employed in the house was a relative of one of its many creditors, he should take Yeisuke's place as heir of the family in order to propitiate the creditor. Gorosaburo consented, and asked Yeisuke to give up his position and to become the guardian of his substitute. Yeisuke protested against this unreasonable arrangement and was supported by others, but the master was so much under the sway of his wife that he turned a deaf ear to all remonstrances and Yeisuke was obliged to leave the family. He took up his abode with a man that had acted as go-between when he first went to live with Gorosaburo, and stayed for some time under his roof. At last, however, Yeisuke grew weary of the listless life he was leading and resolved to set up a small shop in Kyoto and to resume the work to which he had devoted himself with such energy while in Gorosaburo's house. Being very scrupulous, he thought it necessary to obtain Kanaya's permission before opening a shop. The permission having been given, Jomi began life again as a regular coppersmith and glyptic artist with a capital of only 100 *ryo*. He found it very hard to get on, at first, for in those days reputation was the great thing. Any work in copper bearing the time-honoured mark of Kanaya was sure to fetch a high price, while other specimens failed to attract public attention even though their make might be superior. Jomi continued, however, to work patiently and diligently, confident that if he went on turning out wares of superior quality public notice would sooner or later be directed toward him. His hope was at last fulfilled, and the name of Jomi Yeisuke came to be so much talked of that even the attention of Gorosaburo was attracted. He did not, however, think much of his ex-heir's talent till he saw one of his works. When he had done so, he sincerely repented of having so thoughtlessly disinherited his adopted son, and was still more affected when he heard of many deeds on Yeisuke's part showing that he still retained his interest in the affairs of Kanaya. Gorosaburo was, moreover, very much disappointed in his new heir, who proved himself to be a dissolute fellow and so indifferent to the family's reputation that Kanaya was at last obliged to to send him away. With hearty apologies to Yeisuke for his treatment of him, Gorosaburo asked him to return to his house. This was declined both by Yeisuke and his father, but the old intimacy between the two families was renewed and Yeisuke's father even acted as go-between for another son to be adopted by the Kanaya family. The social revolution incidental to the Restoration was a critical time for Japanese art. Everything old was rejected and despised, and no new things of real worth were produced to take their place. But Jomi was not a man to flinch before any difficulty. He resolved to devise new designs suited to the changed taste and also to the wishes of foreigners. At last, after years of trouble, he succeeded in producing several kinds of decorative articles of new patterns, and sent them abroad by way of trial. They were all favourably received and a new epoch of Japanese art was commenced. Jomi's merit was recognized by the Court, and last month the Board of Decorations awarded him a blue-ribbon medal in recognition of his valuable services in the development of the glyptic art of Japan. A few of Jomi's numerous new designs are given by the *Yomiuri*, and are as follow:—The production of various foreign metal utensils in the shape of lotus leaves, and so forth. An imitation of smoked bamboo in copper, so realistic that the public was at first deceived, and also utensils in imitation of that particular bamboo in brass, *shakudo* and other metals. By compounding *shibuichi*, *shakudo*, and other metals, he invented a method of showing perspective and light and shade, and chiselled landscapes, flowers, and birds after that system. This is admirably done. Jomi's influence is not confined to his sphere alone. When he devises a new design, art artizans of porcelain, *cloisonné* wares, and so forth are eager to avail themselves of it. His fame is now widely known, and a tourist is said to have told him some time ago that, everywhere on his travels, he had seen "copper baskets" designed and made by the great master of Japanese glyptic art.

A RISE IN VALUE.

It is noteworthy that the three plants which command the highest prices in Japan are one and all prized for the beauty of their leaves rather than for the shape or perfume of their flowers. These are the *ran*, a generic term which includes many species of orchids, the *omoto*, or ground pine (*Lycopodium*), and the *hi-no-tsukasa*, with the botanical nomenclature of which we are unacquainted. The leaves, however, resemble those of the jasmine, with the exception of a tiny spike at the end, while the flower is not unlike a *rosacea*. The plant never attains any great size, being a singularly slow grower. The name means literally "sun-chief," or construing *hi* as *Nippon*, we should have "Leader (Chief) of Japan." It is probably for this reason that the *hi-no-tsukasa* has latterly commanded such enormous prices. At ordinary times a plant with three leaves costs something less than two *yen*, the usual charge being about fifty *sen* per leaf. At present such a plant easily commands sixty-five *yen*; while somewhat larger specimens have recently changed hands at one hundred and fifty *yen* or over. This is a big figure for a small flower, though the Dutch did once pay thousands of guelders for a single tulip-bulb.

THE PROPOSED URAGA DOCKS.

It is stated, in the *Boyeki*, that although the War Department first opposed the granting of permission to construct docks at Uraga, as the sites chosen were between the Uraga forts and the gunnery training institution, the Government lately intimated to the applicants that permission would be given under certain conditions. It will be remembered that two docks were projected. One is advocated by Messrs. Tsukawara Shuzo and Arai Ikunosuke, and the site selected is in the harbour of Uraga, the dimensions of the dock being 360 ft. in length, 60 ft. in breadth, and 27 ft. in depth. Another dock is promoted by Messrs. Shibusawa Yeiichi, and Umeura Seiichi, and Marquis Saionji. The latter is to be constructed at Tateura, and the dimensions are 407 ft. in length, 100 ft. in breadth, and and 30 ft. in depth. The Authorities are likely to permit the construction of both docks.

THE LOSS OF THE "NORA."

A very unfortunate accident resulting in the total loss of a fine steamer and the blocking up of the *Feima* Channel, occurred at Woosung on Thursday, the 11th inst. As the Swedish steamer *Nora*, with nearly 2,000 tons of coal on board besides general cargo, was coming in from Nagasaki she struck on the wreck of the *Feima* and filled and sank. It seems that she was coming in on the flood tide about 2.30 p.m., when she met the *Esang* outward bound, and in endeavouring to keep close inshore to give the *Esang* all the room possible, she just touched the mud a little below the *Feima*. She was easily got off, but in swinging across the channel the tide caught her and drifted her down on the *Feima*, where she remained. Though everything possible was done to get her off, she could not be stirred, and shortly after she began to fill. By 6 o'clock the water had gained such headway that her decks were nearly awash, and seeing that nothing could be done for her, the Captain, officers, and crew, taking their personal effects with them, abandoned the vessel. Only the top of her funnel and her masts are now showing above the water, and as she is lying right across the stream, the *Feima* Channel is completely blocked. At the time of the accident, Mr. C. Vincent was the pilot in charge. It was the vessel's first trip to Shanghai, where she was consigned to Messrs. Reuter, Brocklemann & Co. She was built in Wallsend in 1882. The Captain is staying with Mr. Vincent, and the crew are accommodated at the Sailors' Home. —*China Gazette*.

A JAPANESE OFFICERS' EXPERIENCE IN GERMANY.

The *Yomiuri Shimbun* gives a couple of gossipy columns to the experiences of a Captain of the Japanese Army, quite recently returned from Germany. Shortly before the departure of the officer, the Emperor of Germany one day visited the Military Academy, where the Captain was enrolled as a student. The whole corps of instructors as well as a large number of prominent officers were present. H.M. the Emperor then made a short speech, in the course of which these words occurred: "It is our hope that this Our Empire will, in future, become more and more friendly with Japan," etc. Turning towards the Japanese Captain, the assembled officers cried "*Japan lebe hoch!* Nippon Banzai! Captain (—) banzai!" They then crowded about him and while some were content to congratulate him with hearty hand-shakes, others kissed him on both cheeks, lifting him completely off the floor. "The princely captain," says our contemporary, "felt a little afraid when kissed by so many bear-like bearded faces, but was thoroughly happy for all that." The same officer further narrates that on the occasion of the Grand Cross of the Chrysanthemum being presented to the German Emperor and a second-class decoration of the same order to Major-General Meckel, everybody was delighted with the honour thus done Germany. "Three people could not meet without conversing about it." Indeed the citizens seemed so elated over this that each appeared to believe he shared in the nation's honour. "On hearing all this pleasant talk," concludes the *Yomiuri*, "the Captain was glad and unconscionably proud."

THE QUEEN'S DRAWING ROOM.

Japanese material appears to be coming into fashion for use in Court dresses, according to an account of a recent Queen's Drawing Room contained in the *Court Journal* of March 9, which says:—"Mrs. Woolley wore a wonderful dress, in which her association with Japan was clearly indicated. It consisted of a handsome train from both shoulders of rich Indian crimson, and real gold thread brocade of gold mohor pattern, lined with gold satin, festooned with plumes on left side and cluster of red and gold variegated dog roses at one corner; corsage and petticoat of black Genoa velvet, covered with black and gold tulle, the front of both being slashed with red and gold variegated dog roses and butterfly bow of gold satin on left side of bodice, fastened with diamond stars; large pouffe sleeves of gold satin, edged with rich bullion fringe. Headdress, the new Court plume, veil, and diamond stars; ornaments, necklace of stars and crescent, in Indian gold and emeralds; Victoria shower bouquet of gold and crimson roses with long satin streamers."

KOBE AND ST. GEORGE.

The Ball given in Kobe on Tuesday evening was attended by as great a success as that which waited on St. George's Ball in Yokohama. After supper, we quote the *Kobe Chronicle*, Mr. Enslie made a humorous speech in which he said that St. George should be regarded especially as the patron saint of the ladies, as he is credited with having saved young ladies from becoming tid-bits for a certain dragon with a taste for human flesh. St. George was also associated with a knightly order of chivalry the the badge of which was a certain portion of ladies' attire which it would seem was to be abandoned in the near future if the threats of dress reformers were to be carried out. But St. George was for "merrie England," and as

the patron saint of that country he proved an excuse for the present festivities, whereupon Mr. Enslie called upon his fellow-hosts to rise to their feet, if they could, and join with him in expressing the pleasure with which they saw so large an assembly gathered together. "To their credit be it said," the hosts were able to a man to rise to the occasion, and Mr. Enslie's words of welcome were emphasized by enthusiastic cheers.

COLONEL SATO.

It appears that the intelligence of Colonel Sato's death, said to have been received in Tokyo, was not well founded. The distinguished officer not only lives still, but is now reported to be in a fair way to recovery. It is a curious experience for a man to read obituary notices of himself published in all the leading journals of his country. Yet it has its compensations when the notices are such as Colonel Sato's supposed demise elicited. He must have travelled, however, very close to the edge of the valley of the shadow, for the step of rank generally awarded to public men *in extremis*, was duly announced some days ago in the *Official Gazette*. The latest telegram, received on the 24th inst. from Haicheng, says that the Colonel is progressing satisfactorily and that he bore the shock of amputation well.

DEATH OF VISCOUNT KONO TOGAMA.

THE death is announced of Viscount Kono, which took place in the capital on the 24th inst. The deceased has been suffering for some years from a disease affecting his spine. The Viscount for many years was Vice-President of the *Kaishin-to*, and held the portfolio of Home Minister. In recognition of his services to the State the Emperor was pleased to promote him from the Third Class First Grade to the Second Class Second Grade shortly before his death. The funeral will take place on the 28th instant, the bier leaving his residence at Nishi-ogawa-machi, Kanda, Tokyo, at 1 p.m.

THE PHOTOGRAPHIC SOCIETY OF JAPAN.

A CAMERA FIELD-DAY of the above-mentioned Society will be held on Sunday, 28th instant, beginning in the morning. Members will meet for lunch at the Kai-hin-in, Kamakura, at 12.30 p.m. The annual meeting of the Society will be held shortly after the middle of next month. Members are requested to prepare prints of their work during the past 12 months, for exhibition on that occasion.

KOBE UNION CHURCH.

THE accounts of the Kobe Union Church show a credit balance of $121.44, against $69.72 last year. The pastor's report said that the membership was now twenty, composed of twelve adies and eight gentlemen. The election of officers resulted, says a Kobe paper, as follow:—Pastor, Rev. J. L. Atkinson; Deacons, Messrs. P. S. Cabeldu, J. Paton, and R. M. Thomson; Sec. and Treasurer, Mr. A. Richardson; Invitation Committee, Mr. W. D. S. Edwards, Mr. A. Richardson, Mrs. Stedman, and Mrs. Kenderdine; Music Committee, Mrs. Atkinson.

PRIZE DOGS.

ONE of the best known sportsmen of Yokohama, Mr. P. Beretta, has recently received from Italy a pair of sporting dogs, both winners of first prizes at dog shows. Boorik, a two-year old, is a lemon and white pointer of excellent temper and great intelligence, while his mate, Bella, is three years of age. Both have been put to the severest tests, which they passed with honours. They are both from pure St. Germain stock. Lovers of the canine race any inspect them at the residence of the owner, at No. 81, Main Street.

FRENCH INDO-CHINA.

ACCORDING to a Havas telegram which appears in the *Siam Free Press*, the French Cabinet are preparing a project by which Indo-China shall be authorised to effect a loan of 25,000,000 francs, of which sum 13,000,000 will be used for the completion of the Langson railway, and the remainder to be employed in public works, the chief of which will be a railway line from Hanoi to Phulang-thuong, and from Langson to the China frontier.

DEATH OF MR. BYRNE.

A TELEGRAM has been received in Hongkong from England announcing the death of Mr. E. Byrne, who is well known in Hongkong and Shanghai, having reconstructed the firm of Hall and Holtz and being a partner with Mr. J. P. Cottam in the Hongkong Trading Company. Mr. Byrne leaves a widow and a grown-up family, one of his sons holding an appointment in Chinkiang.

SHINJU IN KOBE.

A CASE of *shinju* occurred in Kobe on Monday night at Fukuwara, says the *Chronicle*. The girl is named Ko. She was 25 years old and her lover was 29. The man cut the girl's throat with a *deba*, and she died instantly. He then attempted to commit suicide by cutting his own throat, but when found was still living and may possibly recover.

EXECUTION ON A RUSSIAN MEN-OF-WAR.

THE *Hongkong Telegraph* states that as the Russian ironclad *Vladimir Monomach* was leaving the waters of that colony on Tuesday (9th inst.) a Russian seaman, who had been convicted of assaulting an officer, was hanged at the main yard-arm and buried at sea.

NEW GOVERNOR OF FUKUOKA.

MR. IWAMURA TAKATOSHI is gazetted Governor of Fukuoka, his predecessor, Mr. Iwasaki Kojiro, being appointed an Imperial nominee in the House of Peers.

IMPORTANT SUSPENSIONS.

THE *Nichi Nichi Shimbun* and the *Jiji Shimpo* have been suspended.

COMMENCEMENT DAY AT THE TOKYO SHOSEN GAKKO.

The graduating exercises of the Tokyo Shosen Gakko (Tokyo Mercantile Marine College), took place in the hall of that institution at 10.50 a.m. on the 20th instant. There were present among the invited guests a number of prominent gentlemen. Viscount Enomoto, Minister of the Agricultural and Commercial Department; Mr. Watanabe, Minister of the Department of Communications; Vice-Admiral Ito, Vice-Minister of the Navy; Mr. Makino, Vice-Minister of the Department of Education; Mr. Suzuki, Vice-Minister of the Department of Communications; Viscount Soga, Baron Akamatsu, Captain J. M. James, some members of the House of Representatives, the higher officials of various Government Departments, and some members of the Nippon Yusen Kaisha may be specially mentioned. First on the programme of the day came the presentation by Mr. Matsuyama, Acting Director of the institution, of certificates to 22 graduates, of whom 13 were of the Navigation class, and 9 of the Engineering class. Certificates of promotion were also given to a number of the undergradnates. Many valuable prizes were presented by the school, the Nippon Yusen Kaisha, and Captain J. M. James, to a number of students who had distinguished themselves both in attainments and deportment,—books, drawing instruments, and so forth, by the Yusen Kaisha, and a valuable silver tea-pot by Captain James.

The guests were then invited to the top of the three-storied building, which commands an extensive view of the best districts of the metropolis. Thence they witnessed boat races, and various sailing exercises conducted by the young men of the school on board the *Moshun*, moored before the school near the Yeitai Bridge. The *Moshun* was once a man-of-war, and is now a training vessel for the school. On the conclusion of the exercises, the guests were sumptuously entertained in the rooms of the second storey. It is stated that such a large attendance of visitors had never been witnessed on any previous occasion.

WHY THE WAR EXPENSES WERE SO EASILY FURNISHED.

The distinguished achievements of Japan, says the *Nippon*—which journal was released from the ban of suspension on the 18th instant—are attributable not less to the satisfactory arrangement of her finances than to the valour and loyalty of her troops. As the fighting capacity of her soldiers was really appreciated only after they were led to the field of battle, so nobody thought at first that her finances were able to bear such a strain. Hence, when the first installment of the War Loan of 30 million *yen* was announced, the Authorities and people were more or less apprehensive as to the result. Their apprehension proved superfluous, for the amount subscribed far exceeded the required sum. And yet, when the second installment of 50 million *yen* was subsequently raised, the Treasury, anticipating more or less difficulty, reduced the minimum price of the Bonds to 95 *yen*, and moreover took great pains to persuade capitalists to subscribe to the Loan. Again, to the surprise of everybody, the result far surpassed public expectation, the total subscription being nearly double the sum needed. Since then no particular change has been noticeable in the money market: business is carried on in as regular a manner as before. Nay more, when it was rumoured that the Government contemplated having recourse to the aid of foreign capital to obtain the third installment of the loan, leading bankers waited upon the Minister of Finance to dissuade him from such a course and to urge him to rely once more upon domestic capital.

It is said that a decade ago the withdrawal of half a million *yen* from the market had an appreciable effect; yet, to-day, the withdrawal of even five times that sum does not appear to influence the market. Such a wide difference in a short space of time is an unmistakable sign of the remarkable development of national wealth. Perhaps the present notably smooth working of the money market's mechanism may not be solely due to the development of wealth: another equally important factor may be responsible, namely, the development of the credit system, and the free use of cheques. Indeed, a certain authority on finance attributes the present satisfactory state of affairs entirely to the power of cheques. About 7 years ago, he says, the cheque system came into vogue in Tokyo and Osaka. At first, public recourse to the convenience was insignificant, for in the 21st fiscal year, namely, the year succeeding the inauguration of this important factor of mercantile operations, the whole amount of the cheques drawn in Tokyo did not exceed 16 million *yen*. But things changed very soon. Gradually people began to appreciate the importance and benefit of cheques, so that, last year, the cheques passed through the clearing house in Tokyo exceeded 100 million *yen*. In the same year the total passed through the Osaka clearing house was about 60 million *yen*. Thus money aggregating no less than 160 million *yen* circulated freely in the two cities, without the aid of either specie or paper, but simply by entries in the pages of ledgers. That is the principal reason why the operation of the money market is so smooth at present and why the War Expenses have been furnished so easily. The *Nippon*, speaking of this as only a common-place economical argument, says that truth is generally found in simple expositions, and is inclined to think that the explanation given by the authority referred to may turn out to be the correct one. At any rate, it recommends the theory to the consideration of financiers and economists who, often blind to simple facts lying before them, are liable to waste their energy on far-fetched opinions and ingenious conjectures. It may be noted here that the total value of the cheques passed through the Tokyo clearing house last month was 23,334,093 *yen*.

The death has occurred of Admiral Sir George Giffard, K.C.B., who in the early part of his career saw a large amount of active service, and achieved much distinction. He took an active part in destroying the pirates of Borneo, and the success of his efforts gained him the rank of captain.

WAR AFFAIRS.

MONDAY, APRIL 22ND.

When the prospect of negotiations for peace began to be discussed by the vernacular press, it was pretty generally maintained, as readers of our weekly "Spirit of the Vernacular Press" probably remember, that should a treaty of peace be concluded, China, pending its ratification, must be required to furnish material evidence of her good faith, by placing some of her most important military positions temporarily in Japanese occupation. Yet, when the question came up for practical settlement, no such precaution was insisted on, the armistice being unconditionally prolonged for three weeks in order to leave time for the ratification of the treaty. The *Kokkai* alleges that the Japanese Plenipotentiaries did indeed demand that Japanese troops should be allowed to occupy Taku and Tientsin, but that the Viceroy Li strongly objected on the ground that the appearance of the enemy's forces in these places would in all probability produce an insurrection far more dangerous to the Chinese Government than any foreign war. The validity of this objection was recognised by the Japanese Plenipotentiaries, and the prolongation of the armistice was made unconditional. The fact is that so long as Japan holds Port Arthur and Weihaiwei, she has her hand upon China's throat, and need not concern herself about occupying any other positions.

The *Yomiuri* says that the indemnity of 200 million taels is to be paid in the following manner:—

100 Millions in July of the present year.
50 Millions in April, 1896.
10 Millions in each of the next five years.

This statement takes no account of interest, though the Treaty provides for its payment at the rate of 5 per cent.

A question of great interest is the sum actually expended by Japan for the purposes of the war up to the present. The *Jiji Shimpo's* opinion is that the total does not exceed 100 millon *yen*. It arrives at that result thus:—According to the terms of the Imperial Ordinance issued on the 13th of August last year, the Government was authorized to employ the sums standing under Special Account, to borrow money, and to issue bonds. The amount paid by the public into the Treasury, in connection with the issue of bonds, up to the end of March, was 38 million *yen*. The sum borrowed was doubtless obtained from the Bank of Japan, and may be estimated from the excess of the latter's issues of convertible notes, as compared with ordinary times. Under that heading, the *Jiji* finds a figure of over 11,800,000 *yen*. Finally, the surplus revenue up to the 26th fiscal year has been employed, namely, 26 million *yen*. Thus the aggregate amount that appears to have been expended, so far as the public can judge, is 75,800,000 *yen*, approximately. Assuming, further, that a portion, or perhaps the whole, of the Army and Navy Appropriations for the 27th fiscal year have also been used, namely, 17 million *yen*, we have, roughly speaking, a total of 100 millions. It will probably be found, however, when the accounts come to be made up, that Japan's direct expenditures alone amount to 150 million *yen*.

Doubtless, some agreement has been arrived at as to the rate at which the taels paid by China are to be converted into Japanese money. The terms of the Treaty, as published by the *Nichi Nichi Shimbun*, defined 200 million taels as 300 million *yen*, but other vernacular journals do not accept that statement as definite. The *Hochi*, for example, calculates that 200 million Haikwan taels would weigh 8,180tons of silver, which might be coined into 307,690,000 *yen*.

Our Hiroshima correspondent says that Mr. Ito Miyoji is likely to go to Chefoo for the purpose of exchanging the ratifications of the Treaty of Peace, but the *Kokkai's* information is that Viscount Mutsu will go.

The arrest of I Shunyo, grandson of the Tai Wön-kun, on a charge of high treason, is evidently creating great excitement in Seoul. The incriminated noble had been appointed Minister to Japan, which post he resigned. But his resignation did not save him from arrest, by order of the King. We read in the *Kokkai* that no little difficulty has been found in getting a Judge to try him, and the Tai Wön-kun is moving heaven and earth to effect his release. Further details on the same subject are published by the *Yomiuri Shimbun*. It is there stated that the Tai Wön-kun is particularly fond of I Shunyo, and has never abandoned the hope of seeing him raised to the throne, now occupied by his uncle. The comprehensive conspiracy of last Fall, which was discovered in consequence of the arrest and examination of the assassins of Kim Kakuu, Vice-Minister of Justice, had been planned with the object of putting I upon the throne, and it transpired that I was one of the principals in the assassination. Suspecting that the plot had been found out in part, and fearing that the whole might transpire, the Tai Wön-kun conceived the idea of getting I appointed Minister to Japan, and then repeatedly pressed Count Inouye to expedite the young man's departure. But the Count seems to have reasons of his own for proceeding with deliberation, and the delay suggested so much reason for fear that preparations were made to smuggle I out of the country and secrete him abroad for some years. Before that could be effected, however, the King, on the 18th instant, placed a warrant of arrest in the hands of the Chief of Police, and the latter, with a *posse* of 60 men, proceeded to the Unpyon Palace, and carried I off, after considerable resistance on his part. The Tai Wön-kun spent the night of that day endeavouring, by persuasion and threats, to effect I's release, but the attempt was not successful. It is tolerably plain, however, that very drastic measures will have to be adopted by the Japanese in Korea, if all this conspiracy and disloyalty is to be checked.

According to the *Hochi Shimbun* the guns captured by the Japanese from China since the commencement of the war are as follow:—

Guns for use on board ship	105
Guns for coast defence	103
Guns for field service	606
Total	814

This statement does not seem conclusive. It appears to us that the guns captured in the forts at Talien, Port Arthur, and Weihaiwei must aggregate more than 103.

In the *Mainichi Shimbun* we find a horrible story of the death of a coolie attached to the Japanese expedition to the Pescadores. It appears that some Chinese managed to get the coolie into a house and there burned him to death. Information having been given by another coolie, who seems to have escaped a similar fate, a party of gendarmes went to the place, and found the unfortunate man dead, his whole body, except his head, in a charred condition, his hands and feet tied, and a towel and girdle bound round his nose and mouth. A Chinaman was found in an adjoining room, and carried off by the gendarmes to be "examined" for the purpose of discovering the perpetrators of the cruelty.

The total money voluntarily subscribed by way of gratuity to the Army and Navy aggregates 2,615,721.223 *yen*. It appears that this money—we quote from the *Mainichi Shimbun*—has been gradually paid out to the soldiers as it was received.

TUESDAY, APRIL 23RD.

On the 18th instant, their Excellencies Count Ito and Viscount Mutsu were received in audience by His Majesty the Emperor on their return to Hiroshima. The Emperor addressed the Plenipotentiaries in the following words:—

China having sent to Us an Ambassador to sue for peace, We, recognising the sincerity of her intentions, invested you with full powers to meet and confer with him. You have succeeded, after several days' negotiations, in effecting a definite arrangement, the principal points of which, as just reported to Us by You, are entirely satisfactory and are calculated to materially enhance the prestige of Our Empire. We are highly pleased with the signal services that you have rendered.

Had there been any prospect of the terms obtained by Count Ito and Viscount Mutsu being received with dissatisfaction by political agitators or any other section of the nation, these very explicit words of approval by the Sovereign would effectually obviate such a contingency.

An important and interesting Proclamation has just been issued by the Emperor:—

Convinced that through peace national prosperity is best promoted, and that the preservation of peace is a duty bequeathed to Us by Our Ancestors, it has ever been Our object since Our accession to the Throne to confer lasting advantages upon the realm by the maintenance of tranquillity. Unhappily, a rupture occured last year in Our relations with China, with the result that war was forced upon us, which during the long period of over ten months it was impossible to bring to a termination. During that interval, Our Ministers of State, in concert with Our Army and Navy as well as with both Houses of the Diet, have done everything in their power to further Our aims and fulfil Our instructions. At home nothing has been neglected in the way of elaborating plans, supplying funds and material of war, and perfecting the national defence. Abroad, heedless of storm and tempest, of the biting cold of winter and of the scorching heat of summer, Our expeditionary forces have triumphed over all difficulties and hardships, and the Flag of the Rising Sun has been everywhere borne in victory. While, on the one hand, Our soldiers and sailors have earned a reputation for discipline and humanity, the management of the foreign affairs of the realm has, on the other, been characterized by promptitude and sagacity, so that the honour and glory of Our Empire both at home and abroad have been augmented. These happy results are largely due to the illustrious virtues of Our Ancestors, but the successes achieved could not have been so complete had not the disinterested loyalty, valour, and earnestness of Our Ministers of State and all Our subjects contributed to secure them. It is Our earnest desire, with the aid of Our subjects' loyalty and sincerity and by their zealous cöoperation, to restore peace and thereby attain Our great object of promoting the prosperity of this country. Negotiations for peace having now been concluded between the two empires, and an armistice having been proclaimed, the permanent cessation of hostilities is near. China's sincerity in repenting of her breach of faith with Us is already manifest, and the terms of peace negotiated by Our plenipotentiaries give us complete satisfaction. That peace and prestige have thus been secured simultaneously, is attributable to harmonious cöoperation between Our civil and military servants of State. A basis has been restored for working out the grand task bequeathed to Us by Our Ancestors, while, at the same time, the weight of the responsibilities that we have incurred toward them is augmented.

The present is a fitting opportunity to declare to you, Our good subjects, the objects that We keep in view, and to enlighten you as to the course of Our future policy. Gratified as We are that the victories recently obtained by Our arms have enhanced the glory of the Empire, We are nevertheless sensible that the road still to be traversed by the country in its march of civilization is long and arduous, and that the object unceasingly kept in view by Us since Our accession to the Throne remains yet unattained. We therefore hope, in common with Our loyal subjects, to be constantly on the watch against any feeling of self-content, and ever in a spirit of modesty to labour for the perfecting of Our military defences without exceeding the limits of wise economy, and to strive for the promotion of the cause of education and refinement without engendering the vice of effeminacy. It is, briefly, Our wish that Government and people alike should work for the common end, and that Our subjects of all classes should strive, each in his own sphere, to lay the foundation of permanent prosperity and national strength. With regard to plans of military defences and financial adjustment, consequent upon the present war, the duty of adopting proper measures shall be entrusted to Ministers in whom we repose confidence, but in the matter of nursing the nation's resources by constant economy and frugality, we have to rely upon the aid of Our good subjects.

It is hereby definitely announced that our strong displeasure shall be visited upon such as, in the pride of recent victory, offer insults to other States or do injury to our relations with friendly Powers. More especially with regard to China, the exchange of ratifications of the Treaty of Peace shall mark the restoration of friendship between the two Empires, and no endeavours should be spared to develop more than ever relations of neighbourly good-will with her.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

It is Our pleasure that all Our good subjects shall respect and observe these Our plainly expressed wishes. (Sign Manual.)

&c., &c.

It has been decided that Mr. Ito Miyoji, Chief Secretary of the Cabinet, shall proceed to Chefoo for the purpose of exchanging the ratifications of the Treaty of Peace. We have not heard that the date of his departure has yet been fixed.

In our issue of Saturday last, we referred to the apparent fact that some of the Chinese soldiers wounded at Tienchwangtai had been killed on the field of battle by the Japanese. It was at all events certain that all the bodies found after the fight had not been killed by the wounds that struck them down, though whether death had afterwards resulted from the habitual disposition of their own comrades to save them thus from falling alive into the enemy's hands, or whether the Japanese had participated in the slaughter, was uncertain. The Japanese officers were very frank about the matter. They did not deny that something of the kind might have taken place in view of the behaviour of wounded Chinese soldiers who make a habit of firing or stabbing at any Japanese approaching them. But telegraphic inquiries addressed to Field-Marshal Nodzu from Hiroshima, when the rumour was first started, elicited from him an indignant denial that any excesses whatever had been noticed at Tienchwangtai. The reports circulated by foreigners had been founded entirely on inferences drawn from the state of the bodies, but it is not to be denied that the inferences seemed reasonable and warranted. It now appears that a very strong telegram on the subject was sent to the London *Times* by its Shanghai correspondent, and it further appears, according to news received yesterday from Shanghai, that the correspondent, convinced of the error of his former conclusion, has now withdrawn the statements contained in the telegram. Shanghai reports also that British naval officers who visited the field shortly after the battle, testify to the splendid behaviour of the Japanese troops, and speak, at the same time, of the courtesy and consideration shown by them at Yingkow.

WEDNESDAY, APRIL 24TH.

It is interesting to note the growth of Japanese ideas, as set forth in the columns of the vernacular press, with regard to the responsibilities devolving on Japan in the sequel of the Treaty of Peace. Mr. Ozaki Yukio, a man of high reputation and acknowledged authority, is quoted by the *Yomiuri Shimbun* on the subject of the expenses that must be defrayed by Japan on account of her new territorial acquisitions. He thinks that she must increase her land force by two Divisions, one for service in Formosa, the other for Manchuria, and that a hundred thousand tons must be added to the Navy, the latter item having reference only to the protection of the Liaotung Peninsula and the Formosan archipelago. The cost of a Division of the Army in Japan is about 1½ million *yen*, and if it be put at 2 millions in consideration of the greater difficulty of maintaining troops in such distant places as Formosa and southern Shinking, the military expenditure becomes 4 million *yen* annually. With regard to the Navy, the cost of maintenance is from 40 to 50 *yen* per ton yearly. Taking the higher figure, there results under this item a sum of 5 million *yen*. Then, as to the cost of administration, observing that the area of Formosa is 3,500 square *ri*, approximately, and the area of the Liaotung Peninsula 2,500 square *ri*, so that the total superficies of the two exceeds that of Hokkaido by 1,000 square *ri*, a basis of calculation is obtained, and Mr. Ozaki arrives at the conclusion that a yearly outlay of from 2 to 3 million *yen* will suffice. Hence the aggregate expenditure in connection with the newly acquired territories becomes about 12 or 13 million *yen*. To defray that amount, there is the surplus revenue of Japan, representing about 10 million *yen*, and there are the customs dues collected in Formosa (about 2,800,000 *yen*) and at Yingkow (over a million), so that, without imposing any new taxes, the expenditure can be met.

The above calculation is evidently of the roughest character. Mr. Ozaki may be right as to the cost of maintaining troops and ships, but he over-estimates the customs revenue of Formosa and Yingkow, and takes no account of the cost of collecting it. Moreover, it seems strange that no possibility of obtaining revenue in the districts themselves should be contemplated. Moreover, we give Mr. Ozaki's figures for what they may be worth.

We still remain without definite information as to whether the ships sunk in Weihaiwei Bay are likely to be raised and repaired. The *Hochi Shimbun* says, with regard to the ironclad *Ting-yuen* and cruiser *Lai-yuen*, that the nature and position of the injuries inflicted on them by the Japanese torpedoes have been ascertained. The *Lai-yuen* has a hole in her left side, a little below the water mark, measuring about 16 feet square, and the *Ting-yuen* has a hole, pretty much in the same place, one half of which is buried in the mud and the portion appearing measures some 12 feet square.

The same journal gives a list of all the Chinese ships-of-war taken by the Japanese in the course of the war. It may interest our readers to have the complete record, as showing the actual addition to the Japanese Navy :—

Name.	Class.	Armament.	Tonnage.
Chen-yuen	Iron-clad...	22 guns...	7,330 tons.
Chi-yuen.....	Cruiser....	12 guns...	2,300 tons.
Ping-yuen	do	11 guns...	2,200 tons.
Kwang-ping	Gun-boat...	11 guns...	1,100 tons.
Tsao-chiang ...	do ...	5 guns...	950 tons.
Mei-yuen	do ...	4 guns...	578 tons.
Chan-tung	do ...	5 guns...	440 tons.
Chan-pia.....	do ...	5 guns...	440 tons.
Chan-nan	do ...	5 guns...	440 tons.
Chan-poh	do ...	5 guns...	440 tons.
Chan-pien	do ...	5 guns...	440 tons.
Chan-chung ...	do ...	5 guns...	440 tons.
Totals :—			
12 vessels...	1 Iron-clad. 2 Cruisers and 9 Gun-boats.	97 guns...	17,098 tons.

Estimating these at 800 *yen* per ton, their total value is 13,678,400 *yen*, to which total must be added 8 torpedo-boats taken at Weihaiwei, and having a value of at least 80,000 *yen*. If the *Ting-yuen*, the *Lai-yuen*, and the *Ching-yuen*, sunk in Weihaiwei Bay, can be raised and repaired, the total increment of the Japanese fleet will be 15 men-of-war and 8 torpedo-boats.

The *Kokumin* gives an outline of the things to be done by Japan in connection with her newly acquired territory. They are, first, to station a Division of troops in Formosa and another in Manchuria; secondly, to organize, for service in Manchuria, a body of local cavalry resembling, but better than, the Russian Cossacks; thirdly, to open a port for foreign commerce in the Pescadores; fourthly, to adopt measures for encouraging emigration to Formosa and Manchuria; and fifthly, to devise means for promoting the trade of Yingkow and Talien. These are merely the first steps that occur to our contemporary.

The question of the employment of the indemnity to be paid by China has elicited a great variety of opinions from the vernacular press. The *Jiji Shimpo* epitomizes these various views :—

(1.) To keep the money in the Treasury as an Emergency Reserve.
(2.) To use it for building ships and forts, and generally for completing the national defences.
(3.) To use it as a fund for assisting maritime enterprise.
(4.) To spend it upon the newly acquired territories.
(5.) To devote it to the establishment of a Steel Foundry.
(6.) To convert it into a fund for rewarding the services of those engaged in the War.
(7.) To use it for endowing the Imperial University.
(8.) To apply it to educational purposes.
(9.) To make it into a capital fund for the various localities.
(10.) To spend it upon an international exhibition.
(11.) To build a permanent edifice for the Diet with it.
(12.) To immediately discharge with it the country's seven-per-cent foreign loan (2 million *yen*) and the 7.5 per-cent domestic loan due to the Fifteenth National Bank (10 million *yen*).
(13.) To use it for riparian works.
(14.) To use it for railway construction.
(15.) To employ it as a means of abolishing the import duty on raw cotton.
(16.) To devote it to re-assessing the taxable value of land and reducing the land tax.

The above objects, in most cases, relate to the disposal of a portion of the fund only. Not many of them commend themselves as really advisable.

The *Nichi Nichi Shimbun* thinks that Vice-Admiral Viscount Kabayama will be appointed Governor-General of Formosa. It is a position demanding very high qualities. Japan's success is administering the island will be a pretty conclusive test of her governing abilities.

Mr. Ito Miyoji's appointment as Plenipotentiary for the purpose of exchanging the ratifications of the Treaty of Peace is a well deserved reward for the invaluable assistance rendered by him at Head-quarters during the progress of the war and at Shimonoseki during the peace negotiations.

As soon as the troops return from the war, says the *Nichi Nichi Shimbun*, it is in contemplation to take up the single Martini rifles now carried by them and serve out Martini repeating rifles. This will be done in the case of all the forces with the colours. The single rifles will be repaired and used for the Territorial Army. The Martini rifles now in the hands of the Local Militia will also be replaced by Murata repeaters. It is estimated that these changes will double the fighting efficiency of the Army.

Some vernacular journals have amused themselves, throughout the war, estimating the money value of the acquisitions made by Japan or the losses suffered by China. The latest calculation of this kind is to be found in the *Hochi Shimbun*, which, on the authority of an anonymous economist, pronounces the total value of the territory acquired in Shinking to to be 150 million *yen*, and the value of Formosa and the Pescadores to be 250 millions, so that the total value of the territories acquired by Japan is 400 million *yen*. We should like to know how that estimate is reached. The articles of native production exported from Tamsui, Tainan, and Newchwang alone aggregate over 8½ million Taels, or about 12 million *yen* in value at the ports of export. Funding that annual output at 5 per cent., we at once obtain a capital sum of 240 million *yen*. But the produce exported represents only a fraction of the produce actually obtained from the land and water. The *Hochi Shimbun's* economist invites us to believe that the total value of the staples raised for home consumption in the districts acquired by Japan, with their population of some 8 million souls, is only 8 million *yen*, at one *yen* per head. The calculation is obviously inaccurate to a gross extent. The people of Japan pay in taxes alone a sum of about 150 million *yen* annually, or, say, 4 *yen* per head. Assuming that the gross revenue of the inhabitants of Shinking and Formosa does not exceed the contributions of the Japanese to public expenditures—an estimate greatly erring on the side of lowness—we have still a yearly income of 32 million *yen*, representing a capital of 540 millions. But, in truth, such calculations are worse than useless, being altogether misleading. A dozen different factors have to be included in the estimate before even an approximation to the gross value of a province or an island is obtained.

THE IMPERIAL VISIT TO KYOTO.

The *Official Gazette* announces that, as the Imperial Head-quarters are to be moved to Kyoto, His Majesty the Emperor will leave Hiroshima on the 27th instant by the 7.30 a.m. train, arriving in Kyoto the same day at 7.15 p.m. Her Majesty the Empress is to make the journey at the same hour on the day preceding the Emperor's departure.

LETTERS FROM SHIMONOSEKI AND HIROSHIMA.

(From our Correspondent.)

Shimonoseki April 15, 1895.

An important and memorable conference has just taken place at the Fujino Hotel. It commenced at a little past two and ended at a few minutes past seven, lasting fully five hours. Hitherto the meetings of the Plenipotentiaries had not lasted more than two hours. Viscount Mutsu was unable to attend to-day's conference on account of influenza, from which, by the by, he has nearly recovered, though not sufficiently to venture out of doors. It having been expected for the past few days that this conference would in all probability settle the question one way or other, unusual activity was manifested by Japanese newspaper correspondents. They went about from one hotel to another seeking information from officials connected with the mission. I wonder if, with all their activity and perseverance, they succeeded in eliciting any trustworthy information.

From the intelligence I have been able to gather and from general signs, it seems to me that at the meeting just concluded the terms of peace have been settled, so far as all essential points are concerned. What those terms are, however, I cannot say. It had been generally understood that there was so wide a gulf between the terms proposed by the Japanese Plenipotentiaries and the views of the Chinese, that little hope could be entertained of an adjustment. It was, indeed, feared at one time that the true motive of the Chinese Ambassadors in prolonging the negotiations, under one pretext or another, might be simply to gain time, with the hope that some of the European Powers would step in and rescue China from the grasp of her victorious enemy. But it now appears that these suspicions were unjust, and that the Chinese Ambassadors were all the while striving earnestly to obtain a favourable bargain. Whatever may have been their true motive, it seems to be a fact that an agreement has finally been arrived at. It is reported that the treaty will be signed either to-morrow or the day after. After signature, the Japanese Plenipotentiaries will leave this and accompany the Emperor to Kyoto, where His Majesty will stay for some time. He is expected to leave Hiroshima on the 20th instant.

Yesterday morning the *Ikai Maru*, with H.I.H. Prince Komatsu, the Commander-in-chief of the Japanese armies in China, on board passed through this strait about ten o'clock. He was preceded by H.M.'s ship *Chiyoda*, and was followed by the new war ships *Izumi* and *Tatsuta*. Her appearance in the strait was a signal for the firing of a salute of twenty-one guns from the war-vessel *Fayeyama*, which is now lying in port for the service of the Japanese Plenipotentiaries. The transport with the Imperial party did not stop in port but steamed right through with the band playing on board. During her passage both sides of the port were crowded with enthusiastic spectators shouting "Banzai." The transport and her convoys, however, stopped in the vicinity of Mutsure Islands, a few miles west of here, where a big flotilla of 50 ships with troops on board has been collected during the past week or so. The immediate destination of these troops is the Chinchow peninsula and not any point in the line of actual campaign, so that their shipment is no infringement of the terms of the armistice. Count Ito and several distinguished Japanese officers followed the *Ikai Maru* in a steam launch as far as Mutsure Islands. The big fleet of transports then steamed out into the Genkai-nada. It was a sight not easily to be forgotten.

On board the transport *Hinode Maru*,
April 17th, 1895.

The treaty of peace was signed to-day. The Plenipotentiaries of the two High Contracting Powers met at the Fujino Hotel from ten in the morning. Viscount Mutsu, who has now completely recovered from the influenza, attended the meeting. This first conference [illegible] Ambassadors and those assembled to welcome about noon, and the Plenipotentiaries and other persons present dispersed after heartily congratulating each other on the happy conclusion of the negotiations.

The Chinese Ambassadors and suite at once broke up their residence at the Injo-ji Temple and went on board the *Kun-yi* at about half-past two in the afternoon. Less than half an hour later the vessel steamed out of port, followed by the *Li-yu*. It had been rumoured that before their departure, the Chinese Ambassadors would be entertained by the Japanese Plenipotentiaries. It was also known that the principal citizens of Shimonoseki contemplated entertaining the Plenipotentiaries of the two countries. But these projects have all been abandoned, doubtless owing to the desire of Viceroy Li to go home as speedily as possible.

Count Ito, Viscount Mutsu, Mr. Miyoji Ito, and other members of the Japanese mission will leave Shimonoseki by the war-vessel *Fayeyama* at seven to-morrow morning. Hearing of the departure of Mr. Hanabusa, Special Secretary to Count Ito, at six this afternoon, by the transport *Hinode Maru*, I applied for and readily received permission to take passage by the same vessel. She also carries Mr. Okazaki, a member of the House of Representatives from Wakayama Prefecture, who has been staying at Shimonoseki since the beginning of the peace negotiations.

The terms of peace have not yet been made public. The treaty will not be made known until after the exchange of ratifications.

Hiroshima, April 18th, 1895.

The Japanese Plenipotentiaries, Count Ito and Viscount Mutsu, and their suite, arrived at Ujina about half-past four this afternoon. Their reception was a sight such as has not been witnessed here since the commencement of the war. The *Fayeyama Kan* with the distinguished party on board, was expected to enter the port at three o'clock, so I left my hotel for Ujina at two. The road was already crowded with citizens and country-folk slowly moving in the direction of the port. Every house front was decorated with a national flag, and at frequent intervals the street was spanned by bridges of paper lanterns. About midway between Hiroshima and Ujina, an arch was constructed with the characters 祝勝 (Congratulation for distinguished services) worked out very artistically. From the arch to the entrance of Ujina, the road—a distance of more than a mile—was lined on one side by school boys and girls, each holding in his or her hand a small flag, and on the other by deputies of the various streets of Hiroshima. Ujina itself was thronged with people of all classes, including officials and private citizens of rank and quality. At the pier a temporary shed had been constructed and profusely decorated with evergreens. A long row of tables spread under the shed supported an array of innumerable glasses. Further on a small triumphal arch had been constructed.

As I was observing these elaborate preparations for the reception of the Plenipotentiaries, distinguished officials were fast arriving from Hiroshima, some in carriages, others on horseback, and the majority in *jinrikisha*. Among them, I may mention their Excellencies Count Matsukata, Minister of Finance; Count Saigo, Minister of the Navy; Count Yamagata, Minister of War; Count Kuroda, President of the Privy Council; Viscount Hijikata, Minister of the Household; and Marquis Tokudaiji, Lord Keeper of the Privy Seal and Grand Chamberlain; Governor Nabeshima, Lieut.-General Okagawa, Major-General Kodama, Major-General Tsuchiya, Judge Okayama, and so forth.

The *Fayeyama* was sighted slowly entering the harbour at four. Just as the Ambassadors and suite left the ship a little before half-past four, a salute of nineteen guns was fired. All the transports and other steamships in port, seven or eight in number, were gaily decorated with flags. As the launch approached the pier where a large party of officials and others were waiting, a military band began to play. On landing, cordial greetings took place between the Ambassadors and those assembled to welcome them. Count Ito was dressed as usual in a frock-coat. He had a large field glass by his side, and seemed to be in good spirits, and deeply touched by the hearty congratulations showered upon him on every side. Viscount Mutsu also wore a frockcoat. He looked rather pale and debilitated, owing to his late sickness. In the temporary shed a general drinking of healths in champagne took place, the band playing the while. Getting into carriages specially sent for them by His Majesty the Emperor, Count Ito and Viscount Mutsu at once proceeded toward Hiroshima. All the way they were enthusiastically cheered by the crowd on the roadside, and had to doff their hats almost continually. Passing through Otemachi, they directly proceeded to the Imperial Head-quarters, where they had a long audience with His Majesty.

In my last letter I stated that the Emperor will leave here for Kyoto on the 20th, but I have since learned that the date is still undetermined. Perhaps it will be at the end of this month.

As to the terms of peace: I hear that several of the leading papers of Tokyo have published the principal points. I suppose they are not wide of the mark. But it is not yet permitted to divulge the exact details. With regard to the exchange of ratifications, it is reported that it will take place at Chefoo. Probably Mr. Miyoji Ito, Secretary-General of the Cabinet, will proceed thither for the purpose. The date of his departure is not yet known, but it will be before long.

Hiroshima, April 21st.

Last evening an enthusiastic demonstration was organized by the inhabitants of this city in recognition of the services of the Japanese Plenipotentiaries, Count Ito and Viscount Mutsu, and their suite. The distinguished guests were invited to an entertainment at the Kokomachi Park by more than six hundred leading citizens. The city wore the aspect of a popular festival, the streets being adorned with national flags and paper lanterns as on the preceding day when the Ambassadors returned here from Shimonoseki.

At half-past five I went to the park. It was already full of people, among them a large number of naval and military officers. The park having been described at some length in a former letter, I need not speak of it here. The evening was perfect, and the distant view of hazy mountains to the south fascinated the eye. At a little past six, Count Ito, Mr. Ito Miyoji, and other members of the Mission arrived, and were led to a garden pavilion, where they rested for a few minutes. Viscount Mutsu was unable to be present on account of sickness. Before his departure from Shimonoseki, he had nearly recovered but the voyage seems to have produced a relapse. At half-past six, a cold collation was served. Mr. Ban, the mayor of this city, on behalf of the citizens, read a memorial highly extolling the services of Count Ito and Viscount Mutsu. Count Ito then stood on a chair and addressed the company. He began by thanking the Mayor and his entertainers generally for their hearty welcome, and then proceeded to summarize the origin and the course of the present war. "Beaten on land and sea," he said, "China sued for peace by sending an Ambassador to this country. His Majesty was pleased to entrust to me and my able colleague, Viscount Mutsu, the duty of proceeding to Shimonoseki and there conferring with the Chinese Envoy. The negotiations have been brought to a happy conclusion. This is to be attributed to the illustrious virtues of the Emperor, to the bravery and skill of the Army and the Navy, and finally to the union of the nation as one man." Loud applause and vigorous clapping of hands here interrupted the speaker, who concluded by repeating his thanks to his hosts. Mr. Nakada, of the Foreign Office, then read a letter from Viscount Mutsu's expressing deep regret for his inability to attend the meeting on account of sickness, and offering warm thanks to the Mayor and citizens of Hiroshima. In addition to Count Ito and other members of the Mission, there were present among the guests of the evening Count Saigo, Admiral Arichi, Major-General Kodama, Major-General

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Okazawa, Dr. Sato, and several other persons of note. Mr. H. W. Denison, legal adviser to the Mission, was also present.

The guests were then entertained with several dances by two companies of *geisha*, who sang songs specially composed for the occasion. On one of the small islands in the pond, extensive preparations had been made for a display of fire works, the most attractive of which was the national flag of the Rising Sun brought out by brilliant illuminations. Later in the evening a party of schoolboys came into the garden singing a new poem on the Japanese victories.

I do not know what is the impression in Tokyo about the terms of peace arranged by Count Ito and Viscount Mutsu. But from the manner in which they have been received here, I cannot but conclude that they are satisfactory to the people of this locality. Doubtless a small body of party politicians, notably the Progressionists, will be disposed to criticise with more or less severity what has been done. But the great majority of the people are sincerely glad of the restoration of peace and contented with the terms secured by their Plenipotentiaries.

On their return from Shimonoseki, Count Ito and Viscount Mutsu were received in audience by the Emperor who expressed warm approval of their services.

On the same occasion Mr. Miyoji Ito and Dr. Sato were also received in audience. The Plenipotentiaries and suite afterwards had the honour of dining with His Majesty.

A CURIOUS INCIDENT.

A singular incident occurred at Haicheng toward the end of March. A Japanese coolie who had disappeared early in the month, returned to Haicheng, carrying a letter from the Governor of Liaoyang. The letter was superscribed to "King Otori," from which it would seem that the former Japanese Minister to Korea is regarded by the good folks of Manchuria at a wearer of purple. In the letter the Governor explained that the bearer, when captured, had been in a terrible condition from frost-bite, that his life had been spared, his hurts treated, and that he was now sent back to the Japanese Army. There were, the letter went on to say, nine other Japanese coolies held prisoners in Liaoyang. The case deserves publication as showing that some of the Chinese commanders, at all events, had given up the cruelty of butchering all their prisoners of war; a reform attributed to the influence of the Governor-General of Mukden, who is said to be a humane and enlightened man. Probably the Chinese had also appreciated the strong remonstrances addressed to them on the same subject by foreigners in Yingkow.

AN EXTRAORDINARY RECONNOISSANCE.

One of the most daring reconnoissances undertaken in the war was that accomplished immediately after the capture of Newchwang by a party of only 40 troopers, the object being to ascertain the passability of the Liao river. The mission was undertaken by Captain Kojima, a staff officer, Major Hyozu, Captain Miura, and a surgeon, accompanied by 32 picked troopers and an interpreter, numbering 40 in all. In assaulting Tienchwangtai the Liao would have to be crossed, and it was therefore necessary to ascertain whether the river was sufficiently frozen to permit the passage of the Japanese columns. The distance from Newchwang to Hakowtsz, a village standing on the upper course of the river, which had been selected as the point of passage, was about 20 miles. The party rode out of Newchwang at 3 p.m. on the 4th of March, its orders being to accomplish its task by the morning of next day. According to the original arrangement, Major Suzuki's battalion should have followed the party as a guard, but the battle of Newchwang having been unexpectedly prolonged owing to the stout resistance offered by the remnant of the Chinese troops, the battalion could not start quickly. When it did march off, late in the afternoon, it missed the road, and was not in a position to give any aid to the reconnoitring party.

The little band rode as far Hungtsaopao, and there rested for its mid-day meal, awaiting the arrival of the battalion. The latter not putting in an appearance, the reconnoitring party pushed forward as soon as evening fell. On the road two Chinese soldiers, fugitives from Newchwang were captured, and from them it was learned that the main body of the fugitives from Newchwang would pass the night at Tafangshan. The captives were then set free and the party arrived after a while at Siaofangshan, when the interpreter asked a native for information about the road, and the presence of the enemy. The native replied that there were quartered at Tafangshan some 200 foot and 600 mounted soldiers. About a dozen troopers were then despatched to Tafangshan to ascertain more accurately in what force the enemy was present there, and the rest of the party remained at Siaofangshan. Presently two of the van rode back with intelligence that there were no Chinese soldiers in the village and that the information of the native had been incorrect. Thereupon the remainder of the party rode forward and joined the van. When the troopers were about to enter the village five or six rifle shots were fired at them, but nothing daunted, they galloped on with drawn sabres, uttering loud war cries. Whether frightened or asleep the majority of the Chinese did not come out of the houses. About a dozen that emerged, apparently in confusion, were cut down by the troopers. At last, in the dead of night, the party reached its destination, having overtaken *en route* little groups of from three to five fugitives whom the troopers, in many cases, shot or cut down. In most of the farm houses in that neighbourhood Chinese soldiers were quartered for the night, and it was consequently no easy matter to find a native. After considerable difficulty one was discovered, and various questions were put to him about the freezing and thawing of the river and forth. Captain Kojima and Major Hyozu then crossed the river, and thoroughly examined the thickness of the ice, without attracting the suspicions of the enemy who, about 2,000 strong, were posted for the defence of the opposite bank. It was 1 a.m. on the following day when the party, having successfully accomplished its mission, rode back. The troopers were confident that the battalion of Major Suzuki must already have arrived at Tafangshan to meet them. But they were mistaken, for when they approached the village they saw big fires kindled in several places, and Chinese moving hither and thither in apparent confusion. On approaching nearer, it was found that Chinese fugitives had arrived in such large numbers as to literally crowd the narrow lanes of the village. For a moment the party was at a loss what to do, but it was finally determined to cut through the enemy. Captain Mimura who commanded the troops ordered his men to gallop through the village with drawn sabres. They obeyed, shouting lustily. The Chinese, subsequently ascertained to have numbered about fifteen hundred, were taken by surprise, but the odds were so much in their favour that before the main body of the party could cut through them several troopers had become separated, and narrowly escaped death. Captain Kojima also was separated from the party and surrounded by a large number of Chinese. But he cut through them and succeeded in emerging from the village, after having killed several of his foes, one of whom was an officer mounted on a white horse. Before the captain reached Hungtsaopao, he twice encountered Chinese fugitives, and though fired at by them no shot hit him. But the adventures the Interpreter Muto encountered were by far the most perilous. As he rushed through the village with the rest of the party his horse was shot under him and fell, throwing the rider, just close to the feet of a foe. The interpreter was up in an instant, cut the Chinaman down before the latter could do anything against him, and ran into the yard of a house, climbing over the wall. He found in a corner a heap of bundles of rushes and in these he concealed himself. His life hung on a thread, for a number of Chinese soldiers quartered in the house, came out into the yard when morning dawned, and more than once passed very close to where the Interpreter lay concealed. Soon, however, the trumpets sounded, summoning the Chinese quartered in the village, and those who had put up for the night in the house, in the yard of which the Interpreter was concealed, went away, to his intense relief. Gradually the noise of the retreating detachment grew less, and by about 11 a.m. the village became as quiet as though it were the dead of night. Still he thought it safer not to leave his hiding-place during the day-time. Only when darkness had fallen did he venture out. Hungry and bare-footed, and carrying a drawn sword, he travelled at the top of his speed some 12 miles, when he suddenly came upon a Japanese guard on duty and was saved.

One trooper was subsequently found missing, but that was the total loss sustained by the party in this daring adventure, while on the part of the Chinese it was calculated that at least 70 must had been either killed or wounded.

THE HONGWANJI CEREMONIAL.

The city of Kyoto is now at the height of its festivities. The Exhibition draws hundreds of thousands of visitors, and besides this attraction two great religious ceremonies are to be, or have been, held, namely, the ceremony of dedicating the new Hongwanji, and the anniversary of the removal of the Imperial Seat to Kyoto, together with the dedication of a newly-built shrine to the Emperor Kwammu, by whom the removal was effected. The influence of the Hongwan Temple over the general public of Japan is about as great as that of St. Peter in Rome over Roman Catholics in Europe. Any appeal made by the Temple for subscriptions is eagerly responded to by devout believers, and a trip taken by the Chief Abbot though any religious district means the contribution of thousands of *yen* by the people. From the early part of April religious Japanese men and women have been streaming into Kyoto, for the Hongwanji ceremony was to be performed on the 15th inst., and other ceremonies, on the 19th, 20th, and 26th. The trains and steamers have been crowded and not only the hotels and inns near the Temple, but even the private houses, are full of these pilgrims. On the occasion of the erection of the main pillar of the new temple, no less than one hundred thousand persons were said to have gone to Kyoto for the express purpose of attending the ceremony. It is inferred, therefore, that about twice that number must be now visiting Kyoto to witness far more important rites.

The 15th of April was a bright, clear day, the weather being perfect for a ceremony of the kind celebrated. Curtains were hung in various parts of the new and old temples and decorations were also made with electric lights and lanterns. The preparations against accidents were as complete as could be desired. Besides a large force of Kyoto police, there were also present a great number of doctors and nurses. The ceremony proper commenced at half-past one o'clock. At the appointed time the Chief Abbot removed the mortuary tablet of the late Emperor Komei, the father of the present Emperor, then the tablets of the reigning Emperor and Empress, and afterwards the images of Shotoku Taishi and the seven distinguished saints of the sect, and placed them in a Chinese casket (*kara-bitsu*). Then the image of Amida Nyorai was put into a special white casket. This ceremony of removal was performed in secrecy, only two or three high priests being present besides the Chief Abbot. At 3 o'clock a bell was rung to call together the

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

priests that were to join the procession or to attend to various duties. At 6 o'clock, the preparations having been completed, the Chief Abbot and the other dignitaries assembled in the hall and then commenced to descend, in due order, the steps of the old temple, and to proceed to the new building. As soon as the van of the procession had passed through a certain gate, the band of musicians stationed inside the gate struck up a solemn air as it moved along. Behind it walked the junior Chief Abbot accompanied by a torch-bearer and following him were 20 priests dressed in white, and carrying a special kind of casket, on each side being a torch-bearer. Then came the Chief Abbot, clad in the sacerdotal dress with seven folds, and also accompanied by a torch-bearer. He was followed in due order by the scions of the holy family, those treated as scions, and high dignitaries of the temple. When the possession reached the new edifice, the caskets were borne into the inner chamber, and the Chief Abbot set the tablets and images in their places. There was no reading of sacred texts when the ceremony was over, the Abbots and the others simply bowed down and then left the hall.

We hope to give a description of the new temple—a magnificent specimen of modern Japanese architecture—in another issue.

THE RUSSIAN NAVY.

The process of expansion and elaboration, as performed by some of the ingenuous journalists of this Settlement, often leads to very pretty results. For example:—Last Friday we wrote, "Russia has been a stock scare-crow. Her Mediterranean Fleet was coming out to blow Japan to pieces if Manchuria were meddled with. Russia's Mediterranean Fleet consists of one man-of-war and a few torpedo-boats! It might well be invoked by these silly alarmists." This expression of amusement at the ignorance of writers who imagined that Russia keeps a big fleet in the Mediterranean, provoked a characteristic scale of criticisms. First, the *Japan Mail*—always carefully called "the Government organ" or "the Japanese official paper," in order to involve the Japanese authorities in the criticism—was charged with "sneering at Russia's Mediterranean Fleet." Then a larger step was taken, and the *Mail* was represented as making "satirical reference to the Russian Navy." And then the final summit of reasoning was climbed by a declaration that, "acting doubtless under specific instructions, the subsidized organ of the Japanese Government has sneered at the ability of the Russian Fleet to blow the Japanese out of the water." It is really worth while to trace the processes of this kind of argument, for we greatly doubt whether the opportunity of observing anything so superbly logical and ingenuous could be found elsewhere. You laugh, for example, at the ignorance of a writer who imagines that England keeps a powerful body of troops in Newfoundland, and you immediately stand convicted, first, of sneering at Great Britain's Newfoundland Army; secondly, of making satirical reference to the British Army in general, and finally, of ridiculing the ability of the English army to hold its own against the army of some other country. The newspaper readers of this Settlement scarcely appreciate the phenomenal quality of the journalism they enjoy.

STABBING AFFRAY.

A serious stabbing affray occurred in Japanese town on Sunday in one of the innumerable grog-shops kept by Japanese. A sailor named Henry Shaw, an American, seriously wounded two other sailors named Hopkins and Conroy, one being stabbed in the stomach and the other having his chin cut open. One of the men was conveyed to the police station where he was examined by Dr. Rokkaku who then sent him to the General Hospital for treatment.

THE TERMS OF PEACE.

The *Nichi Nichi Shimbun* publishes the terms of the Treaty of Peace concluded at Shimonoseki. They are as follow:—

(1.) China recognises the independence of Korea.

(2.) China cedes to Japan the following territory, namely:—In Manchuria the whole of the district lying south of a line drawn from the point where the Anping River enters the Yalu River to the mouth of the Liao river, so as to include Fenghwan, Haicheng and Yingkow. Also, the island of Formosa and its adjacent islets, and the Pescadores Group.

(3.) China pays Japan an indemnity of Tls. 200 million; that is to say *yen* 300 million. The payment to be effected in seven yearly instalments, and the portion unpaid to carry interest of 5 per cent. per annum. Provided that, should the whole sum be paid in three years, interest will be foregone.

(4.) Japan shall be entitled to all the privileges and all the tradal advantages possessed in China by Western Powers under the provisions of the most-favoured-nation clause.

SUB-CLAUSES.

(1.) Japanese ships shall have free access to the ports of Shashih, Chungking, Hangchow, and Soochow, and shall be entitled to enter and freely navigate the rivers at Chungking, Soochow, and Hangchow.

(2.) Articles purchased by Japanese in the interior of China, or imported articles carried into the interior, may be stored free of all tax.

(3.) Japanese subjects shall be free to carry on manufacturing industries in China.

(4.) Japanese subjects shall be free to import all kinds of machinery into China.

(5.) Articles manufactured in China under Clause 3 shall be treated as imported articles, and shall be handled under special permits.

(6.) The new Commercial Treaty between Japan and China shall be based on China's present Treaties with Western States; so long as the subjects or citizens of the latter retain the privileges of extraterritorial jurisdiction and tariff, Japanese subjects also shall fully enjoy the same privileges.

(7.) By way of security for the payment of the above mentioned indemnity, Japan shall hold Weihaiwei, and China shall pay the cost of the occupation.

(8.) When an exchange of prisoners is effected, the Chinese Government shall inflict no manner of punishment on the prisoners returned to her by Japan; neither shall she raise any question whatever as to the conduct of such of her subjects as had relations with the Japanese during the war. Further, she shall make unconditional rendition of any Japanese soldiers held prisoner by her.

(9.) Ratifications of this Treaty shall be exchanged within three weeks from the date of its signature, the place of exchange being Chefoo.

THE PROGRESS OF THE PEACE NEGOTIATIONS.

Now that peace has presumably been restored, it may be worth while to reproduce from the *Jiji* the following recapitulation of the progress of the negotiations:—

On the 19th ult., Li Hung-chang arrived at Bakan as the third of China's envoys for peace. He was accompanied by Lord Li, his son-in-law, Messrs. Lo, Wu, Ma, and scores of others. On the next day, the first meeting between the Plenipotentiaries of the two belligerents took place in the Shunpa-ro. It was simply for the purpose of mutually examining credentials, and the Plenipotentiaries separated after having accomplished that task. On the 21st, the second meeting was held. The Chinese Plenipotentiary on that occasion asked for an armistice, and the Japanese Plenipotentiaries replied that the request would be complied with if China consented to the following conditions:—

1.—To evacuate Tientsin, Taku, and Shanhaikwan, and to surrender those places with their forts, barracks, and military armament, to Japan, as a temporary measure, pending the conclusion of the negotiations.

2.—To place the railway between Shanhaikwan and Tientsin under the control of the Japanese.

3.—To defray the expenses of the forces sent to occupy the above places.

The Chinese Plenipotentiary complained of the harshness of these terms, and asked that an armistice be granted on condition merely of the evacuation of Shanhaikwan and Taku. The Japanese Plenipotentiaries, however, were inflexible, and the Viceroy, much perturbed, asked for an interval of two days to deliberate and to send despatches to the Pekin Government. The negotiations were therefore suspended for two days, during which interval the two Japanese Plenipotentiaries made a pleasure trip to Chofu. On the 24th, the negotiations were resumed, the third meeting taking place. The Viceroy Li then withdrew his request for an armistice, and it was agreed that the negotiations for peace should be commenced from the next day. It was then that the situation underwent a great and sudden change, owing to a murderous attempt made by a fanatic on the life of Earl Li. The progress of the negotiations was suspended, and the Emperor of Japan, out of special consideration for the unfortunate Chinese Representative, unconditionally granted an armistice for a space of 20 days. For the purpose of arranging various procedure in connection with the armistice, the Japanese Plenipotentiaries consulted with Lord Li and other subordinates of the Viceroy, and on the 30th the armistice was signed. Its duration was to be for 20 days only, during which a settlement of the peace question had to be made. But as the Viceroy's wound was not yet healed, he sought and obtained the sanction of the Pekin Government to the appointment of Lord Li, as second Plenipotentiary. The fact was intimated to the Japanese, but they did immediately signify their acceptance of Lord Li. On the 3rd of April, however, a conference was held, to the surprise of the public. Men wondered especially when they saw the palanquin of the Viceroy Li carried, at 5.40 p.m., to the place of meeting. Subsequently, however, it transpired that the Viceroy, whose wound was now almost healed, had visited the Conference Chamber, simply to tender his thanks for the kindness shown to him since the painful incident, and to express gratitude for the grant of an unconditional armistice.

On the 6th inst. the fifth meeting was held. The Japanese Plenipotentiaries then submitted the terms that Japan was resolved to exact in consideration of making peace, and the Chinese Plenipotentiaries replied that they should give a definite answer in one or two days. At the same time, Count Ito asked for an explanation concerning an avowal of ignorance of the armistice made by the Chinese troops in Manchuria to Colonel Aoki, a staff officer, who had been despatched by the Japanese Army to make arrangements in connection with the armistice, and concerning the lawless action of these troops in firing upon a Japanese military party that carried a white flag. The Viceroy expressed regret for what had occurred, and said that, owing to the interruption of telegraphic communication, intimation as to the armistice might not have reached Manchuria yet. He promised, however, that he should once more despatch a message to Pekin on the subject. On the 7th instant, Japan acknowledged the communication of the Viceroy as to the appointment of Lord Li in the capacity of fully accredited Plenipotentiary. Another meeting was held on the 8th, but it had no special consequence. That day Lord Li called on the Japanese Plenipotentiaries to announce his new appointment and also to obtain, if possible, a postponement of the time for giving a definite answer to Japan's demands. On the 9th, Count Ito invited Lord Li and others to his residence, and urged that China's reply be given speedily. The Count declared that should China, on one pretext or another, endeavour to defer the period of giving a definite answer, it was to be feared that the time covered by the armistice would expire. In that event he warned the Chinese that, without even h

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

day's grace, the Japanese forces would resume the offensive, and that any appeal for a prolongation of the armistice would be peremptorily rejected. Lord Li replied that the Viceroy himself would attend the meeting next day (10th), when an answer would be given. The meeting took place at half-past 4 p.m. on the 10th instant. As it had been promised that the Viceroy would that day give a definite answer to Japan's demands, the conference attracted unusual public attention, Count Saigo, Minister of the Navy, waited till evening at the residence of the Premier, for the purpose of obtaining intelligence as to the issue of the conference. Nevertheless, though the meeting lasted for over two hours, the Viceroy advanced one plea after another, and finally asked for a postponement of two more days. Count Ito—Viscount Mutsu being too much indisposed to attend the meeting—had no choice but to consent, and the meeting separated with a promise that China's answer would be given on the 13th. During this interval of a few days the Count invited his literary friends to his residence, and also took a trip to an adjacent district. The 13th instant came and still the Viceroy's promise remained unfulfilled. The same was the case on the 14th, when Lord Li called on Count Ito and asked to have one more day's grace. On the 15th, the eighth meeting took place. It was the most important of all, for on that occasion China's long deferred answer was at last given. From early morning evidence of the exciting character of the crisis were observable at the residences of the Plenipotentiaries of the two Powers, and in the town everyone was breathless. At last the conference commenced from 2 p.m. and was continued until 7. Viscount Mutsu's health still incapacitated him from attending. The Viceroy finally declared that China would acquiesce in the terms demanded by Japan. One other meeting, held on the morning of the 16th, was simply for the purpose of signing the Treaty. Thus peace was at last restored. It was agreed at the same time that if the Treaty were not ratified within three weeks, calculated from that day, it should be null and void.

THE NAGAHAMA QUARANTINE STATION.

Sanitation, as a science, received but very little attention, even in the most civilised countries of the West, until what may be called comparatively recent years. Although the Laws of Moses, fourteen hundred years before Christ, enjoined "strict cleanliness," Moses can hardly be called a sanitarian; and from what we know now of sanitary science, as evidenced by the check placed upon epidemics by taking certain precautions, the terrible plagues that have visited the various countries of Europe and Asia during the succeeding three thousand years may safely be set down as the outcome of the insanitary condition of the people and their surroundings. France must be credited with being the first country in Europe to take up the matter of sanitation in earnest, but it was not until the early years of the present century that the French paid any particular attention to the public health, and it was 50 years later (1854) that M. Tardieu published a standard work on the subject, namely, his "Dictionnaire de Hygiène." In the meantime, the subject of sanitation had been taken up in England, and Dr. Southwood Smith published his "Philosophy of Health" in 1832. The International Sanitary Congress at Vienna, in 1874, doubtless gave a great impetus to sanitary reform in Europe, this being followed, in 1876, by the establishment of the Sanitary Institute of Great Britain. About this time Dr. Parkes inaugurated the Museum of Hygiene at University College, London, and a succession of pamphlets and lectures by such men as Sir Joseph Phayrer, Dr. Andrew Clark, Corfield, and Prof. Tyndall, followed later by additions to sanitation literature by Sir William Gull and Professor Huxley, brought the subject prominently before the English public, and a succession of Acts of Parliament and consequent municipal regulations were the result, to the end that during the past twenty years England has been foremost in the application of scientific sanitary methods. Japan has made a good commencement by the establishment in Yokohama, Hakodate, and Nagasaki of a pure water supply; other important centres of population have also waterworks under construction; while in several other direction this country is inaugurating sanitary reforms. Not the least of these is the establishment of quarantine stations for the check of imported disease. Being so near to China, with which this country has constant maritime communication, and the Celestial Empire being the undoubted cradle of cholera and such diseases as the bubonic plague, which recently caused so many deaths in Hongkong and various parts of Kwangtung, Japan is bound, for the preservation of the public health, to take every precaution against the introduction of epidemics that can be devised by the most advanced forms of sanitary science. That she is doing this, and in a very effective manner so far as precautions are concerned, is evident by the establishment at various points of contact with over sea shipping of such quarantine stations as that opened on Monday at Nagahama.

A few days ago, Mr. Nakano, the Governor of Kanagawa Prefecture, issued invitations to a large number of the foreign residents of the port to visit the Quarantine Station above mentioned, and a goodly number of persons, representing all classes of the community, assembled on Monday afternoon at the Western Hatoba, whence they were conveyed to Nagahama in steam launches, the run down occupying just one hour. Situated amongst the hills and woods a short distance below Tomioka, the station is delightfully placed in most a salubrious spot, which alone must go a good way towards rendering less irksome the somewhat grim and repellent idea of being "disinfected." On approaching the station, the first thing we observe is a breakwater to give shelter to boats landing passengers, for the occasional northerly wind raises a choppy sea. Inside the breakwater, we run alongside a pontoon that rises and falls with the tide, this convenience being at the end of a pier which leads at once into the grounds of the station. Mr. Yoshida, the Chief Superintendent of the Kanagawa Police, who is also the chief official of the Quarantine Station, conducted the party over the establishment, and explained the uses to which the various buildings were to be put. The buildings are all detached, that is to say, there are first, second, and third class separate sets of apartments, with a good space of garden between each, these again being detached from the hospital, boiler-house, and officers' quarters, all of which are separate erections. The buildings include a mortuary and a crematory, both of which are at some distance away, and are fitted with the latest appliances to effectually carry out the purposes for which they are intended. The fittings and furniture of the first class apartments are more like those of a good hotel than a quarantine station, and general surprise was expressed at the neatness and comfort displayed in the furnishing of the bedrooms, bath-rooms, sitting-rooms, and smoking-room, as well as the general arrangement of the entire establishment.

The area of ground upon which the station stands is 14,337 *tsubo*=nearly 12 acres, the buildings covering 1,058 *tsubo*. There are apartments to accommodate 17 first-class and 50 second and third-class passengers, No. 1 bath-house containing 10 bath-rooms, including 2 ladies' rooms, and No. 2 bath-house, 3 bath-rooms for crew, 3 for steerage passengers, and 3 for ladies. The hospital contains 3 rooms for first-class passengers, and 8 for second and third-class, the latter having 2 beds in each room. The engine-house contains an engine of 40 horse-power, and a disinfecting oven for clothing of the latest construction. The time occupied in disinfecting clothing, bathing, &c., is from 40 minutes to an hour and a half. In order to prevent unnecessary delay these operations go on simultaneously, so that while a "patient" is taking a bath his clothing is being attended to, and thus the inconvenience is reduced to a minimum. The necessary adjunct to such an establishment—pure water—is in good supply, the reserve being held in a tank 36 feet long by 12 feet wide and 8 feet deep; while for the drainage of the heavy rainfall which occurs at certain seasons ample provision has been made by the construction of stone-faced nullahs. The visitors on Monday included a large contingent of the medical fraternity of Yokohama, who testified their appreciation of the arrangements in a marked manner, as indeed did the lay element.

As usual on such occasions, the Japanese Authorities displayed their hospitality by providing ample refreshment, both solid and liquid, and after taking a short rest the party returned to Yokohama at five o'clock, well pleased with the trip and fully impressed with Japan's advance along the path of sanitary science.

COMMERCIAL ADVANTAGES ACCRUING FROM THE TREATY OF PEACE.

The commercial provisions of the Treaty of Peace, writes the *Jiji*, confer considerable advantages on Japan as compared with the tradal regulations that were in force between Japan and China prior to the declaration of war. Those Regulations being entirely distinct from the regulations that Western countries have concluded with China, and there being no most favoured nation clause in the treaty between Japan and China, the merchants of Japan were placed at a great disadvantage in competition with the merchants of the West. For instance, though European and American merchants were free to trade in the interior, the Japanese were obliged to confine themselves to the narrow bounds of the settlements. Again, while goods imported by Japanese were subjected to heavy imposts in passing into the interior, those imported by Western traders had simply to pay transit dues amounting to one half of the sum levied by the Customs. Moreover, Japanese ships, owing to the non-existence of a most favoured nation clause in Japan's Treaty, could not enter the ports that Western Powers had caused China to open in recent years for purposes of commerce, but were obliged to confine themselves to the ports indicated in the original Regulations. The result was that whereas Western ships could call at no less than 25 Chinese ports, the ships of Japan were obliged to content themselves with 15. The new Commercial Treaty to be concluded with China is to contain the same most favoured nation clause as that existing in her treaties with Western countries, and thus not only will Japan be hereafter entitled to carry on trade in all the 25 ports, but also, by the new Treaty, the three additional ports of Shashih, Soochow, and Hangchow are to be opened, thus bringing to 28 the total number of Chinese ports where Japanese merchants will be entitled to carry on trade. It is needless to say that any Western country whose treaty with China contains a most favoured nation clause will have an equal right to enjoy this additional advantages, on which score gratitude will doubtless be felt toward Japan. The reason why Chungking, already included in the list of treaty ports opened to Western countries, is specially mentioned in the new Treaty, requires some explanation. Chungking being an important mart in the interior, it was stipulated, when England concluded the Chefoo Treaty in 1876, that the place should be opened for commercial purposes so soon as the Yangtsze-kiang, on the upper part of which Chungking lies, should be dredged to admit the passage of steamers. But China never opened the port. Consequently, in 1890, England raised the question, obliged her to open it for purposes of commerce, with this proviso, however, that goods should be carried thither in Chinese bottoms only. In point of fact the river is navigable for steamers not only as far as Chungking but even for a considerable distance higher up. Thus the obstacles arbitrarily placed by China in the way of foreign commerce have

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

been removed by the present Treaty. The provision by virtue of which Japanese ships are to have free access to Chungking, Soochow, and Hangchow must be regarded with satisfaction by England. As to Shashih, no mention is made of approaching it by ship. That is because the city is situated between Hangchow and Ichang, on the bank of the Yangtsze-kiang so that any special provision about approaching it by ship is superfluous.

Though otherwise free to carry on tradal transactions in the interior, on the payment of comparatively small import duties, western merchants have hitherto been obliged to pay heavy transit dues when they desired to store goods in the interior. That inconvenience has been obviated by the present Treaty. Further, the provision in virtue of which Japanese subjects will be free to carry on manufacturing industries in China is a great concession, and must have caused Li Hung-chang more regret even than the payment of 200 millions taels of indemnity. This provision, securing to foreigners the privilege of carrying on manufacturing industries in China, together with the commercial facilities already secured by treaty and those now obtained by virtue of Japan's efforts, have opened China to foreign enterprise in every direction except that of agriculture. It is probable that in the future various enterprises will be started by foreigners in the interior now that all obstacles are removed.

The provision relating to be free import of machinery extends and explains the article contained in the Commercial Treaty between China and Western countries. No definite statement as to machinery is contained in that article, and machines have consequently been imported in the past under the name of commodities. A few years ago, however, when cotton gins were sent to Shanghai from Japan, the Customs authorities objected that the Chinese Government did not allow foreigners to engage in manufacturing industries in the interior, and therefore the import of machinery for manufacturing purposes could not be permitted. All such objections have been removed by the present Treaty.

The sixth provision of the Treaty relates to goods manufactured by Japanese subjects in the interior of China. These goods are to enjoy the same special advantages in connexion with taxes or imposts as goods directly imported from Japan.

Such are the new advantages that Western countries will enjoy in virtue of the success of Japan's arms and the conclusion of peace. In fact, the whole empire of China may now be considered to have been virtually thrown open for the purpose of commercial transactions.

In another part of the same issue, the *Jiji* says that the importance of the advantages that Japan, and with her all Western nations in virtue of the most favoured nation clause, will enjoy hereafter in commercial transactions with China, may be illustrated by reference to the spinning industry. Hitherto yarns sent to China were subjected to taxes and imposts of divers kinds, so that Japanese merchants experienced considerable difficulty in selling such goods. That obstacle now disappears entirely. Yarns from Japan may hereafter be carried to places far in the interior, as Shashih, Chungking, Hangchow, and Soochow on payment of a comparatively light tax, and will be, at the same time, exempted from storage dues, which Chinese subjects are obliged to pay. Moreover, as manufacturing industries can be carried on freely in the interior, and as goods thus produced are to enjoy the same immunity with regard to the assessment of duties and taxes as goods directly brought from Japan, it may be found more profitable for Japanese spinners, desiring to place their products in the Chinese markets, to establish factories at suitable localities beyond the sea, since Chinese cotton could then be obtained cheaply, the cost of transportation would be economized, and the tastes of consumers could be more satisfactorily consulted.

CHINESE PRESS REPORTS.

With each incoming mail from Shanghai we have invariably to marvel not only at the inaccuracy of the news published in the local foreign press of Shanghai, but also at the ridiculous conclusions drawn and wholly absurd theories expounded. But if foreign newspapers err, the vernacular Chinese press is a monument of the most outrageous falsehood. To a certain extent this is excusable, particularly when one calls to mind the manner in which "news" is always disseminated by Chinese newsmongers and the nature of the news. We have already instanced numbers of the most barefaced misstatements, yet each mail brings fresh evidence of a still more startling disregard for truth on the part of the Chinese press. Small wonder that there should be sedition and tumult in Kwangtung when nearly every native journal has consistently described scores of Chinese victories and a corresponding number of Japanese "total defeats." If so successful on the whole, why should China cede territory to Japan or pay her an indemnity?—might very well be questioned by the readers of Chinese journals. As a sample of infelicitous journalism take the following paragraphs, translated from recent issues of a vernacular paper published in Hongkong:—"A telegram from Tientsin announces that the Viceroy Li has succumbed to his wound. China's greatest statesman has thus lost his life in a barbarous land. Later: The Japanese Government officials state Koyama is an insane man. It is customary in Japan to send mad people to insane asylums where they receive medical treatment. May we not then suspect that the Japanese purposely permitted this maniac to be at large, in the hope that he might commit his evil deed? Otherwise we are inclined to believe that the members of Parliament, who have been so vociferously exclaiming against peace, have bribed the ruffian Koyama to attempt the assassination of our great Minister; or it may possibly be that the political opponents and enemies of Ito and Mutsu contrived the affair, so that the onus of the atrocious crime would fall on those two Ministers of State." Three most acute and perspicacious theories, in faith. Anent the armistice, a Shanghai paper—quoted by the *Miyako Shimbun*—had the following excellent item:—"The Japanese have entreated our Minister Plenipotentiary to grant an armistice of three weeks' duration, Formosa only to be without the pale of the cessation of hostilities. We clearly see from this that the sole object of the Japanese in begging for the armistice is to the freed from the bold assaults of our troops in Manchuria, and thus be able to act against Formosa. We trust our generals will not falter at their posts but stoutly repulse the rapacious foe." Another no less veracious Shanghai journal reports that Tung, the Formosa Governor, was so delighted with the news of the sinking of two Japanese war-vessels by the forts on Panghu Island, that he "immediately sent twenty thousand *yen* in Mexicans to the general in command of the victorious forts." Up to date no sum of the kind has been received in the Pescadores; it is therefore probable that our Shanghai contemporary mistook the will for the deed. The sinking of two (or more) Japanese war ships is a paragraph that has gone the rounds of every vernacular journal in China. One of the latest versions runs thus:—"Japanese men-of-war, more than ten in number, attacked Makung. Shells from our forts sunk two of the enemy's ships, and on another showing signs of being about to founder, the remaining uninjured vessels launched eight boats of tough cedar-wood to save the crew. The wind and waves both being high at the time, all those boats were driven on the beach, after receiving much injury from the forts. Our soldiers then ran forward to take the Japanese prisoners, but when they reached the place they found that the enemy had managed to escape. In this engagement between the forts and Japanese fleet only 27 were lost on our side, while at least one hundred Japanese must have been killed"—a very small estimate if it is supposed to include the crews of the sunken war-ships; but it is always best to err on the right side. More interesting, though not so amusing, is the subjoined account of the battle of Yingkow:—When the Japanese made their attack on Yingkow the town was garrisoned by troops under General Wu. On seeing the enemy approach all became utter rout. Upon this General Sung sallied forth to encounter the foe in person. His assault forced the foe to retire a little, but unluckily the snow was deep and the icy roads very slippery, so the General's horse had a nasty fall, its distinguished rider being thrown. Believing that their Commander had been severely wounded our troopers were quite dispirited. Taking advantage of the momentary confusion the Japanese again came rushing on, but General Sung still presented a bold front. It was not until three thousand of his men had been killed or disabled that the General was compelled to retire. The Japanese hereupon at once entered the town, and shortly afterwards captured Tienchwangtai. The trades-people of the two places had no time to escape with their belongings. One pawnbroker alone in Yingkow was robbed of upwards of forty thousand dollars' worth of goods by the fleeing soldiers and deserters."

CHINESE NEWS.

The Japanese Government, if it attempted to follow the advice of all its foreign critics, would fare like the man and the ass in the fable. In this country the local foreign press condemns the Authorities because they insist upon the necessity of exercising some control over the press. In Shanghai, on the contrary, we find the leading English journal adjudging the Government directly responsible for crimes like the attack on the Czarewitch and on the Viceroy Li because more stringent methods are not adopted to check the inflammatory utterances of the vernacular newspapers. It is impossible for Japan to be right anyhow.

The *North China Daily News* has "seen it somewhere brought forward that the peace negotiations were arranged to take place at Shimonoseki because it was not considered safe to introduce the Envoys into the more populous Hiroshima." That is curious, in view of the fact that Shimonoseki was selected in deference to the convenience of the Viceroy Li himself.

The Korean correspondent of the leading Shanghai journal, whose glaring and innumerable misstatements about the events of the war in its early stages should exclude his writings from the columns of any newspaper, now affirms that "any person showing anti-Japanese sentiments publicly is imprisoned, and a few of the leaders have been beheaded. There are at present," he goes on to say, "between 60 and 70 anti-Japanese in the prisons in Sôul, whose sole crime is that they have expressed dislike for the Japanese; three of them have been beheaded. The Japanese, despairing of ever persuading the Koreans to like them, are trying to see what force will do." We believe that the much abused vernacular press of Japan might be searched in vain for any example of such a malicious, wanton, and monstrous lie as the above. The idea of Count Inouye's having men imprisoned and beheaded merely because they express dislike for the Japanese, is one of the most barbarous slanders we have ever seen in print. And in a leading article in the very same issue the editor of our Shanghai contemporary reads the Japanese press a lesson for intemperate writing!

It appears to have been actually believed in Tientsin that H.M.S. *Æolus* undertook to relieve the Japanese ships lying off Taku of the duty of searching foreign vessels for contraband of war, on the ground that the performance of such a task by the Japanese might lead to friction between them and the British! Is there any limit to public credulity?

In the Tientsin correspondence of the *North China Daily News* we find a statement that Dr. Kiu, the principal Chinese physician at Chinchow (North), died in the middle of March,

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

"that he had sent on 1,000 wounded men from that town and that more were to follow." Up to the date (March 26th) of the letter, however, only 56 out of the 1,000 had reached Tientsin. What becomes of the Chinese wounded is an inscrutable problem. It is alleged that the badly injured are killed by their own comrades, and there appear to be strong grounds for supposing that inasmuch as the wounded lying on the field have often shot or stabbed Japanese soldiers, the latter's instructions about giving quarter have not always prevented them from averting such contigencies in a summary manner. If the history of the sufferings endured by the Chinese soldiers in this war could be written truly, it would probably be a terrible record.

Despite the war, floods in the north and typhoons in the south that injured the rice and sugar crops, the foreign trade of China was larger for 1894 than it had ever been before, except in 1891. The figures were Tls. 290,207,433 against Tls. 267,995,130 in 1893 and Tls. 139,908,438 in 1892. The Customs Revenue in 1894 was Tls. 22,523,600 against Tls. 21,989,300 in 1893. There was a marked falling off in the import of opium, but the fact is not interpreted to mean a diminution of consumption, but only that the home-grown drug is replacing the foreign.

Very curious reading is to be found in Shanghai journals with reference to the armistice. The *North China Daily News* declares that the supposed sacrifice on Japan's part meant no sacrifice at all, since—and this is the delightful part—it only suspended the march on Pekin and left Japan free to "go on with the subjugation of Formosa, and possibly visit Amoy, while her other army might press its way merrily forward into this province and lay siege to Nankin." "Only suspended the march on Pekin!" Is not that charming? In fact, the armistice involved no sacrifice on Japan's part because it prevented her from pursuing the one object to the achievement of which she had devoted all her energies, and left her free to do several other things for none of which she was prepared and none of which she had any intention of doing. Perhaps her critics, who made so light of the armistice, have begun by this time to recognise the injustice of their comments seeing that throughout the whole period of the truce Japan never fired a shot anywhere.

That "march upon Nanking" ought surely to have passed before now into the realm of fiction. Yet, in the leading Shanghai journal of the 2nd instant, we find this paragraph:—

> Referring to the entry into this province, our readers will doubtless remember that we foretold a descent on the northern coast of Kiangsu in articles on the 18th of January and 27th of February, and the idea, as most new ideas are, was received with scepticism. Now that the Japanese are probably already on the road to Nanking, every one finds they always knew it would be so, while certain local writers, with an assurance which merits a better cause, claim to have been the first to prophesy this move.

The local writers claiming to have been the first to prophesy a march upon Nanking must now wish that they hadn't been quite so previous.

Our readers remember the controversy that took place about the term "Wojen" applied by the Emperor of China to the Japanese in His Majesty's Proclamation of War, wherein he ordered his Generals to discharge the task of "rooting these *Wojen* from their lairs." It was claimed by the defenders of China that the term had no opprobrious meaning whatever, and that it was habitually employed by the Chinese in all good faith and courtesy to designate the Japanese. Nevertheless, its original signification of "pigmies" or "dwarfs" appears to be now generally accepted, for in correspondence from Pekin and Tientsin appearing in the Shanghai papers, the Japanese are constantly designated "dwarfs" or "pigmies," evidently in half-jesting allusion to the term used in the Emperor's Proclamation.

It is hinted that the interior of Formosa has hitherto been abandoned to the aborigines, not because the Chinese could not conquer or govern them, but because within a narrow belt of coast line the Formosan malaria is so terrible as to defy even Chinese residence.

This is how the Pekin correspondent of the *North China Daily News*, writing on March 22nd, viewed the supposed territorial demands of Japan:—

> The demand said to be put forward for a very large portion of Manchuria, at the very least the province of Shingking, including, of course, the peninsula of Liaotung with the stronghold of Port Arthur, is no small demand. The cession of so much territory and especially maritime territory must tend to wreck all prospect of a peaceful solution of the present dispute. The Emperor neither now nor later can agree to such terms. He might as well abdicate at once, or give up his whole ancestral home with its ancient capital and its archives of the dynasty or become entirely Chinese and move westward to some new capital. Peking must be abandoned if the Japanese are to hold Manchuria.

"The withdrawal of the Japanese from Shantung," says the Chefoo correspondent of the Shanghai morning journal, "is an extraordinary piece of good luck for the Futai of the province, who is preparing to blossom forth as a hero of the first class, as he recaptured Ninghai in gallant style, shortly after it had been evacuated by the enemy, and has since announced the re-capture of Yungching. The fact that Liukungtao is still held by a handful of bandits will probably be slurred over in his reports."

We read in a Shanghai contemporary that "to further cut down the expenses of the Court, H.I.M. the Empress-Dowager has signified her intention to return to the capital and live in the Tzening Palace, and close the large establishments known as Eho Park and the Lake Palace (*Nan-Pei-Hai-tse*), which have cost the Imperial Treasury nearly ten million taels yearly. The Emperor, knowing that the Empress-Dowager is passionately fond of Eho Park with its surroundings of hill and forest, especially as it is ten miles away from the noise, dust, and smells of the capital, tried his best to make Her Majesty retain Eho Park and close the Lake Palace only; but the Empress-Dowager is determined to economise for the country, and her decree has now become law."

It really seems as though one effect of the war has been to diminish the unpopularity of foreigners in China. The Chinese see that, after all, the presence of foreigners in their midst has helped them in this crisis. A correspondent writing from Pekin to a Shanghai journal, says "We shall soon forget what the expression "foreign devil" means, we hear it now so seldom. The Chinese have certainly become much more friendly and look upon us as their saviours. At all events our presence here gives them confidence and they think on our account the city will not be destroyed or their lives taken."

After the battle of February 21st, 800 Chinese wounded arrived in Newchwang (Yingkow), and the Newchwang correspondent of the *N.-C. Daily News* says "so far as we can ascertain, the Japanese sustained heavy loss." The battle of the 21st February was the last attack made by the Chinese against Haicheng. We have hitherto supposed that it did not cost the Chinese much loss, for, although some 17,000 of them moved to the assault, they never came to close quarters, and after their retreat only 100 dead—according to the Japanese report—were found on the field. The Japanese casualties were 2 killed and 6 wounded!

The same correspondent's account of the capture of Yingkow is as follows:—

> Between 10 and 11 a.m. on the 6th of March the Japanese were reported to be in sight and several of the foreign residents hurrying out to the East gate, found the bridge in possession of five Japanese scouts, who were calmly puffing at cigarettes while waiting for the rest of their detachment. Troops of Japanese then began to congregate and pour in from all sides and by noon they started marching through the town. Several Chinese—soldiers, merchants and coolies—fled across the river to the north shore and very stupidly hoisted a flag to show their independence, whereupon the Japanese at once crossed the ice and forming into line fired three volleys in rapid succession, but no one fell. The Japanese then re-crossed and patrolled the town without meeting with the slightest resistance on the part of the natives, who stared at them in astonishment, exhibiting no disposition to resent their movements. 12,000 Japanese, in all, entered the town, under the command of Major-General Nodzu, who is in command of the First Brigade. In the afternoon, the artillery made an attempt to capture the forts, whither, according to native rumours, the Taotai and General Chiao had fled with 3,000 soldiers; they made a resolute stand, firing one of the mines laid down on the plain, the explosion forming a chasm 20 feet in depth and 30 feet wide, and succeeded in repulsing the Japanese assault. In spite of the heavy firing there were but few casualties, and the Japanese retreated, intending to repeat the attack the following morning. During the night, however, the Chinese evacuated the forts and fled towards Tienchwangtai, thereby enabling the enemy to take possession of what seemed a well nigh impregnable position. General Sung, anticipating the advance of the Japanese, left here early on the 4th inst., with some 40,000 strong for Tienchwangtai, where he was defeated on the 9th instant. Some British residents went to the scene of action, and on arrival found the main body of the Japanese army posted on the south side of the river, from which position they had shelled Tienchwangtai; the entire town was in flames and the rattle of musketry proclaimed the fact that an advanced body of Japanese was clearing the streets. Some of the fugitives were flying towards the enemy's ranks, and the Japanese themselves were obliged to retire for a time from the town on account of the dense smoke caused by the conflagration.

On the 8th of April the following was published in Tientsin:—

> Viceroy Wang received yesterday telegraphic despatches from Liu K'un-yi, dated Kinchow, announcing the arrival of couriers from Liaoyang reporting that Generals I-k'o-tang-a, Ch'ang Shun, and the guerilla chief Han Pienwai had succeeded in defeating the Japanese fifteen miles south of Liaoyang in a series of bloody battles lasting three days and two nights, on the 24th, 25th, and 26th of March. The Japanese have now retreated southward 45 *li*. The couriers who brought the above despatches from Liaoyang lost two of their number, having been intercepted and pursued by the enemy's cavalry near the East Shaho river. Liu K'un-yi also telegraphed that General Sung succeeded in beating back a Japanese attempt to cross the West Shaho river on the 29th of March, and that General Ma had penetrated east of Tienchwantai to the vicinity of Newchang, in consequence of defeating a Japanese division which opposed him twenty-two *li* west of Tienchuangtai.

No intelligence has reached Japan of the above fighting. We believe the Chinese account to be baseless. *The Times* correspondent, writing to us from Newchwang (Yingkow) under date of March 29th, says:—"There is no news of importance concerning military operations, for the First Army is at present inactive. The greater part of the Army is at Haicheng, Newchwang, and various places between these two cities and Yingkow. The farthest position to the northward occupied by the Japanese is Anshan-tsan, the town 20 miles south of Liaoyang, at which a junction was effected between the two divisions of the First Army, prior to the attack on Newchwang (old town). Chinese troops occupy Liaoyang, and there have been skirmishes between reconnoitering parties south of Liaoyang, but there has been no fighting of importance since the battle of Tienchwangtai on the 9th instant." It is plain, therefore, that these "skirmishes of reconnoitering parties" are the "series of bloody battles" reported by the Chinese.

The steady improvement in the trade and commerce of New South Wales is shown by the returns of the Sydney shipping trade, the number of vessels arriving and leaving the port during 1894 being 3,094, against 3,058 in 1893, representing a tonnage of 5,714,458 tons against 5,653,292 tons in 1893. The number of officers, seamen, and other employés was 144,696, against 140,365 in 1893, and the number of passengers 141,564, against 125,759 in 1893. The number of seamen whose engagements were registered for 1894 was 11,782; the number of seamen whose discharges have been registered, 10,664; and the number of desertions reported, 241. The amount of wages paid to seamen discharged in the shipping office, Sydney, 1894, was £33,238 8s. 10½d., and the amount issued to seamen by advance notes during 1894 was £2,435, the wages on the ocean steamers generally being paid at British and other ports.

TIENCHWANGTAI.

THE battle of Tienchwangtai derives unusual interest from the fact that the Japanese soldiers engaged in it seem to have been guilty of excesses that have evoked severe comment. We are in possession of direct information from a foreign correspondent at Yingkow, and can therefore lay before our readers a trustworthy statement of facts. Our correspondent was one of the two first foreigners to visit Tienchwangtai after the battle. He arrived there about an hour after the fighting had ceased, and, looking around, was struck by the fact that among some 200 or 300 soldiers lying in an open space to the north of the town, there was not one man living. Were there then no wounded? Of course many of those hit by rifle bullets in a fight are able to run away, but there must always be some too severely hurt to escape, and at Tienchwangtai the flight of the Chinese had been so hurried that they could not have carried off all their severely wounded. Our correspondent was unable to make any immediate examination of the bodies, but other foreigners, subsequently visiting the place, found some 20 or 30 corpses with incised wounds of the throat or bayonet stabs, in addition to bullet wounds. Moreover, only one wounded Chinaman was brought away by the Japanese. It is suggested that others may have concealed themselves in the houses—for the town was not entirely burned—and it is known that a great many must have struggled away, or been helped away by their comrades, since from 1,000 to 2,000 wounded Chinese were in Chinchow (N) ten days after the battle. Moreover, positive assertions have frequently been made that the Chinese themselves make a habit of killing their badly wounded comrades to save them from the painful fate supposed to await them if captured by the enemy. Still, there appear to be valid grounds for concluding that some of the wounded were killed by the victors, and the question arises, was this an act of wanton cruelty or does some extenuating explanation offer. Our correspondent gives an explanation. The methods, he says, of Chinese fighting render it difficult, if not impossible, to extend to a Chinese soldier the merciful treatment dictated by modern canons. Not because he decapitates a foe to earn money, or mutilates a corpse to satisfy his own cruel instincts, but because, not expecting when wounded to be the recipient of clemency that he himself would never show, he does not hesitate to fire upon or stab at everyone approaching him. Ready enough to fly if he can save his life by doing so, he fights fiercely when escape is impossible. In the early battles of the war, frequent cases are recorded of Chinamen lying injured on the battle-field who sat up and discharged their rifles at Japanese soldiers approaching without any hostile intention. A Japanese officer with whom our correspondent conversed, said that, in the course of the Tienchwangtai fight, his men surrounded a house containing 20 Chinese, who, refusing to surrender and, fighting to the last, had to be killed. The same officer described that in the town of Tienchwangtai, the Japanese, as they entered houses, were fired upon from lofts and cellars, and under such circumstances it was practically inevitable that every one in the house should be killed. Our correspondent sums up the case thus:—"In this kind of warfare, the soldiers' blood is soon up, and it becomes almost impossible to restrain them. They treat their wounded enemies as a man treats a wounded snake, killing it before he gives it a chance to strike. The Japanese must not be judged too harshly if they have not in all cases been able to attain the high ideal they set before themselves in the conduct of the present war."

The fact is, as it seems to us, that if the paradox is to be achieved of conducting warfare in a civilized manner, both sides must cöoperate for the achievement. If, on the part of one of the belligerents, rewards are given for the head of an enemy—which means, of course, that wherever a wounded man is found he is at once decapitated—; if the mutilation of corpses is encouraged, and if disabled men, believing that capture means torture and a terrible death, fire upon and stab at everyone approaching them, then it becomes plainly impossible for the other belligerent to adopt such measures as shall restrain all retaliation in kind on his own side, human nature being still human. However, the more publicity these matters receive, the better. No doubt can be entertained that the criticisms to which Japan has been subjected, have contributed materially to raise the standard of belligerent morality throughout the Far East.

THE PROCESS OF STIRRING UP STRIFE.

A DEFINITE prospect of the restoration of peace in the Orient being now apparent, two of the English newspapers published in Yokohama have apparently thrown off the mask, and seem to be endeavouring, by all the means at their disposal, in the first place to prolong the war by inducing China to refuse ratification of the Treaty signed at Shimonoseki on the 17th inst.; in the second, to push Russia into the breach and induce her to interfere by force of arms between the two Eastern Empires. It is, indeed, admitted by these journals that were the EMPEROR of China to withhold his consent to terms of which he had been made telegraphically cognisant before their acceptance by his Plenipotentiaries, he would be guilty of an act of unpardonable bad faith. But the force pretext that the transfer of Formosa to of that admission is entirely nullified by accompanying comments. It is declared, for example, that "a child could not have been more overmatched in every part of the diplomatic game" than the Viceroy of Chihli has been; that Japan has made "a prodigiously successful and very profitable bargain with humiliated and victimized China;" that "if the people of that unfortunate country complain of the hard terms which have been exacted by their conquering foe, nobody could find fault with them for so doing;" that "the world will watch with interest what China finds to say on the subject;" that Japan's "territorial acquisitions are far beyond what in equity she had any right to demand;" that Japan "has obtained in six months such immense advantages as will lead her at no future date to repeat an experiment so extravagantly remunerative;" that "any acquisition of territory by Japan would once and for all leave the campaign exposed as one of unscrupulous plunder," and so forth, the whole spirit of the writing being to convince the Chinese that they have been most harshly treated by their conqueror, and that if they tamely submit to the terms imposed, they will deserve the world's contempt. We are unwilling to think that the tendency of such criticism is fully appreciated by the critics themselves. Probably they are merely carried away by a feeling of jealousy that there should have sprung up in the Orient a Power competent to effect considerable re-adjustments of territory without reference to the dictatorship that Western States have hitherto been accustomed to exercise in all Eastern matters. Japan, imposing terms upon China independently of European sanction, is a novelty so startling that to extreme Jingoists like our local contemporaries the proper arrangement of affairs may seem to be undefinably dislocated. There are, undoubtedly, ample grounds to discuss the changes effected by the Treaty of Peace, but we can not too strongly deprecate the spirit in which the discussion has been commenced, or condemn too emphatically the tone of marked unfriendliness to Japan that permeates the articles from which we have quoted.

Still more unjustifiable are the efforts made to embroil Japan and Russia, in default of embroiling Japan and England. Russia, since the commencement of the war, has largely augmented her naval forces in these waters. Great Britain has done the same. There are obvious reasons for such a precaution, but the only reason apparently conceived by our local contemporaries is a desire to forcibly curb Japan's ambitious designs. Entirely sympathising with anything calculated to embarrass this empire, they complain of England's "loss of prestige;" denounce Lords ROSEBERY and KIMBERLEY as "backboneless incompetents," and even

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Japan means "the destruction of British trade in that island." Of course no thinking person really imagines that Great Britain's prestige can be impaired by allowing Japan and China to settle their disputes without foreign interference; and as for the pretence that British trade in Formosa will be destroyed by the transfer of the island to an enlightened Power, pledged to throw open every part of its territories to foreign commerce and residence, it is evidently a mere chimera of delirium. For the rest, the contention that Japan in Formosa will be a menace to Hongkong, whereas China in Formosa was nothing of the kind, must evidently be based on an assumption that Japan is inimical to Great Britain. Is such an assumption either just or politic? Is not its origin to be found in the enmity cherished by these writers themselves against Japan? So long as to agitate for armed intervention by Great Britain offered any hope of success, they wrote as though, without such intervention, England would disgrace herself and betray her interests. Great Britain, however, having remained indifferent to such silly clamour, the tide of incentive in now turned upon Russia. The list of ships sent by her to the Far East during the past few months is set forth, with their tonnage and armament; she is asked whether "she has gone to all this expense and trouble for no purpose whatsoever, except to play the undignified part of a silly alarmist;" whether "she is to figure in the dignified rôle of being a mere scarecrow, and so become the laughing stock of nations, by making extensive preparations for the purpose of simply doing nothing at all;" whether she has been "so far intimidated by Japan's great successes as to deem it prudent to pause for the moment;" and whether she is "likely to be imposed upon by so transparent and foolish a fiction" as Korea's independence under present circumstances. She is even assured that "she would be fully justified in expelling the Japanese did they insist" on occupying "an inch of the mainland of China," and that "this decision on her part would be unquestionably merited."

There is not the smallest probability that Russia's statesmen will be moved by language such as we have quoted, emanating, above all, from such sources. If Russia has interests to protect, her method of protecting them is not likely to be shaped at the dictation of petty English journalists noted for the violence and unreason of their utterances. What induces us to note these facts is perplexity as to their significance. Toward which Power is the animosity of our local contemporaries directed? Do they wish to plunge Russia into a war with this empire, hoping that the struggle would cost the great Northern State an injurious effort; or do they—Englishmen, be it remembered—hate Japan so cordially that they would like to see her engaged in a life-and-death struggle with Russia in order that the latter might establish her right to dictate the ownership of Manchuria?

CHINA'S FATE.

"THE violet on the tyrant's grave" begins to spring over the ruins of China's power. Every complete collapse is pitiable. An empire until quite recently supposed to possess strength worthy of the world's respect, can not fall as low and as suddenly as China has fallen without evoking some sentiment of commiseration. How has it happened? What are the causes of such miserable, such unlooked for weakness? Explanations in abundance are offered, but the public remain bewildered. The individual Chinaman is the element that complicates the problem. Wretched as has been the fiasco made by the armies and fleets of the State, every one of us retains his belief in the capacity of the nation's units. We know by experience what the Chinaman is. Morally and physically gifted above the average, a man of quick perception, dogged perseverance in the path of toil, patient in the presence of adversity, generally loyal to his engagements, and possessed of common sense that rises almost to the level of philosophy, it is in truth an evil and harsh fate that has condemned him to be the object of ridicule, a fair mark for the shafts of every shallow critic. And yet what has happened in Korea, in Manchuria, in Shantung, in the Yellow Sea, in the Gulf of Pechili, and at the Pescadores, is but a replica of events that have passed with painful monotony into the pages of history under like conditions in every age. Even those among us that have not yet reached the threshold of middle life remember vividly how a great European nation was beaten to its knees by a newly born Power—a nation standing in the very van of civilization; a nation foremost alike in the science of war and in the arts of peace. At no period of the world's existence has the invincibility of system and order against scramble and chaos been so thoroughly recognised as at present. Yet we stand astonished when a Power representing a high type of organization wins fight after fight from the very personification of disorder, confusion, and disarray. "Miserable poltroons" is the epithet generally applied to China's soldiers, though their poltroonery has no more been proved by the issue of this war than has the invincibility of the Japanese. We do not believe that if the stoutest soldiers in the world were handicapped with the disadvantages against which the Chinese have to contend, they would make a much better stand. No men will fight without leaders and without a knowledge that arrangements exist for the succour and treatment of the wounded. There were brave Chinese in the Pescadores. The half-dozen men that remained to defend a fort when its garrison of several hundreds had fled; the two detachments, 20 and 30 strong, respectively, that were not daunted by the stampede of their comrades, mustering 500 or 600, at Makung, but with admirable pluck awaited the onset of an overwhelmingly large force of Japanese—these were men of the best fighting fibre. Well disciplined, well armed, and well led, the Chinese would be formidable to any foe. The Japanese, who know them far better than any European knows them, affirm that they are not intrinsically weak, and that the causes of their repeated defeats are extrinsic. But has the nation sufficient moral malleability to be beaten into an improved shape by the blows that it is now receiving, or has it become so hardened in the groove of conservatism that no marked alteration of form is possible without fracture? We believe the latter to be the case. China may be split up and her component parts absorbed into foreign structures with considerable access of strength to the latter, but as a great homogeneous empire her day is past. People have talked of her uprising as of the uprising of a force that might rehearse the conquering inundations of early centuries, and swamp Christendom under an East-Asian deluge. But where in all history can there be found an instance of a nation reversing retrograde feet and climbing to a second summit of power and prosperity? For the State, as for the individual, there is no elixir of life. There is not even a nodal condition. Ascent or descent is the doom of all, and when either has commenced, its continuance is inevitable. China has stood on her pinnacle, has fallen from it, and can never raise herself again. The residuum of force that remains latent in her huge frame might indeed be utilized by a conqueror. Her neck is accustomed to an alien yoke. Mongol rule or Tartar rule, it matters little to her people provided that they be left undisturbed in their grim struggle for daily food. A foreign dynasty seated in person or by proxy in Pekin, might employ China as a powerful means to some large end, but that end could never be the restoration of Chinese prestige. "Victor from vanquished issues at the last," said LANCELOT, but China has not been vanquished in that sense: she has been exposed; presented to the world as a helpless monster upon whom any aggressor may prey without apprehension of serious resistance. The Powers of the West have been tender and long-suffering with her. They have patiently endured injuries at the hands of her people and insolence from her officials, because they shrunk from the apparently formidable task of forcing her to mend her ways. But there will be no patience hereafter. Complications hitherto avoided because of their possible con-

sequences will now be welcomed for the sake of the opportunities they offer. It is a repitition of the story of Castle Perilous and the little boy in giant's armour that held the gate by the vastness of his stature until he went down at a touch from the spear of a fearless tilter. Japan has shown the nations what China is; has laid her prostrate for them to dissect at their convenience. What and how rapid will be the advantage they take of the situation, we have no skill to prophesy, but that China will raise herself from the dust and recover the status of a great empire, we can not for an instant believe.

THE IMPERIAL PROCLAMATION.

IT may well be supposed that State documents of such importance as the Imperial Proclamation just issued, are composed with the utmost care, and that the language employed in their compilation represents the highest attainable standard of Japanese scholarship. To render documents of the kind into a European language so as convey the full force and meaning of the original without sacrificing its terseness and elegance of diction, is a task of immense difficulty; a task no daily newspaper can reasonably be expected to perform satisfactorily except by deferring publication to a degree inconsistent with prompt circulation of intelligence. Making every allowance, however, for the extremely arduous character of the work, and premising that we do not, on our own account, by any means claim to do full justice to the originals of our translations, we are nevertheless constrained to express astonishment at the terrible renderings published in this Settlement. Any reader of them must conclude that the Japanese originals are characterized by uneducated crudity, vagueness of conception, and shocking inelegance of expression, and must carry away the notion that scholarship and statesmanship are conspicuous by their absence in Japan. Look, for example, at the following quotations from translations that have appeared in the local foreign journals of the recent Imperial Proclamation :—

We deem it that the development of the prestige of the country could be obtained only by peace, it is our mission, which We inherit from Our ancestors, that peace should be maintained in an effectual way.

Those engaged in the expeditions have been exposed to severe rain and storms, &c.

The foundations of the great policy of the general work of Our ancestors have been made more table.

We desire that We shall, together with our people, be specially guarded against arrogance r relaxation, &c.

It is what we highly object to that the people ould become arrogant by being puffed up with lumph and despise others rashly, which would towards losing the respect of foreign Powers :—

Since the development of the nation can be tained by peace, it is a divine duty imposed on us by Our ancestors and it has been Our intion and endeavour since Our accession to the rone to maintain peace so as to enjoy it conntly.

The expeditionary forces have got the fame for benevolence and obedience.

We are of course, glad of the glorification of the Empire by the victories of the present war, but at the same time are aware that the Empire as well as the scheme pursued since Our accession to the Throne have yet a distant future.

We are positively against insulting others and falling into idle pride by being elated by victories and against losing the confidence of Our friendly States.

Never was unfortunate SOVEREIGN made to flounder more clumsily in an illiterate morass of verbiage. But the most wretched and unidiomatic translation is a mere trifle compared with the extraordinarily false import that has been assigned to HIS MAJESTY'S Proclamation by one of our local contemporaries. "One can not," says the *Japan Gazette*, "read the Imperial Rescript without experiencing some sensation of alarm. It means, divested of its verbiage, Japan has won a little renown and some territory, but that is a mere circumstance to the vast scheme of conquest planned. The people are to lead self-denying lives that they may put by money for future expeditions, and not become too fond of peace because peace will not last. * * * * * * If the Japanese seriously practice the principles propounded there can be no doubt that war will be again resorted to and resorted to successfully. The Japanese are naturally a fighting race and the EMPEROR'S address is the address of a leader of fighting men. There is much bloodshed in store for Asia." It would be impossible for any critic, however dishonest his intention, to misrepresent more grossly the plain purport of the EMPEROR'S Proclamation. From its opening to its close the whole spirit of the Proclamation is eminently pacific. Its emphatically and clearly enunciated aims are to recall the nation's mind to the blessings of peace; to advise the people against allowing their ambition to be fired by the successes achieved in the war now happily ended; to check the tendency to extravagance and reckless enterprise that history shows to be one of the gravest dangers threatening a State after signal victories; to proclaim HIS MAJESTY'S entire satisfaction with the terms obtained by his Plenipotentiaries, and thus to convey a timely warning to political agitators for larger gains; and finally, to impose a stern restraint upon the ill-balanced utterances of public writers and speakers who employ toward friendly States language inspired by the arrogance of triumph and entirely opposed to the amity that HIS MAJESTY seeks to cultivate. No one bringing a modicum of intelligence, however small, or a spark of honesty, however faint, to the perusal of the Proclamation, could interpret it otherwise than we have here interpreted it. The EMPEROR is "convinced that national prosperity is best promoted through peace, and that the preservation of peace is a duty bequeathed to him by his ancestors." Does that mean that "the people are warned not to be too fond of peace because peace will not last?" Does it mean that "the renown and territory won by Japan are a mere circumstance to the vast scheme of conquest planned?" The EMPEROR declares that "it has ever been his object since his accession to the Throne to confer lasting advantages on the realm by the maintenance of tranquillity;" that it is his "earnest desire, with the aid of his subjects' loyalty and sincerity and by their zealous cöoperation, to restore peace and thereby attain his great object of promoting the prosperity of the country," and that his "strong displeasure will be visited on any one who, in the pride of recent victory, offers insults to other States or does injury to the empire's relations with foreign Powers." Does that mean that HIS MAJESTY propounds "principles the serious practice of which will undoubtedly lead to war's being again resorted to?" Does it mean that his "address is the address of a leader of fighting men?" The EMPEROR tells the people at large that they have no occasion to concern themselves about measures relating to military defence or finance, since such things will be entrusted to the Ministers of State, and that his non-official subjects have only to think about "nursing the nation's resources by constant economy and frugality." Does that mean that "the people are to lead self-denying lives in order to put by money for future expeditions?" Does it mean that "there is much bloodshed in store for Asia?"

The conclusion forced upon us by the writings of some of the journals in this Settlement is that the desire to find a pretext for censuring the Japanese, and the longing to discover an opportunity for denouncing them, has developed into a mania entirely beyond the control of reason or intelligence. In whose interests such excesses are committed, we can not comprehend. Certainly not in British interests.

THE JAPANESE NAVY.

SINCE the beginning of the war between China and Japan there have appeared frequent articles in the vernacular press relating to the Japanese Navy. All the writers of these articles show a remarkable consensus of opinion with regard to the degree of naval development at which Japan should aim. They all agree in naming two hundred and fifty thousand tons as the total displacement of war-ships essential to her safety and to the defence of her national interests. Until now, however, no accurate account has been given of the manner of arriving at that figure. Our first clear information on the subject is derived from the *Yomiuri Shimbun*—not by any means an infallible journal, nor yet possessing official authority, but still a representative, in some degree, of public opinion. Before quoting its views, however, we shall make brief reference to

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

ing to embody the ideas of a Japanese Vice-Admiral. The article runs thus :—

In consequence of the war with China, Japan's national status has been raised appreciably, and it becomes a matter of necessity that she should increase her Navy accordingly. It will not suffice that she should be competent merely to defend herself against foreign ships coming to the East: she must go a step farther, and lay up strength sufficient to assume the offensive against the territories of her enemies. Foreign experts, comparing the navies of England and France, are wont to say that the British fleet is twice as strong as the French. In the event of war between the two Powers, however, the British fleet would not be able to conquer the French, for the vessels of the latter would not merely have to oppose those of the former, but would also be able to lay waste British territory in all parts of the world and to capture British merchantmen. That is a point of great importance. Considering the lesson taught by the war, we perceive that our cruisers have been able to win a signal victory over the enemy's iron-clads. At the same time, it has been clearly demonstrated that iron-clads are essential to any Navy. In the battle in the Yellow Sea, the shells fired by our cruisers were unable to penetrate the armour of the *Ting-yuen* and *Chen-yuen*, and though the two war-ships were struck more than 300 times, they remained afloat. The strength of iron-clads was thus effectively demonstrated. According to the organization of foreign navies, one iron-clad is allowed to every three cruisers, the four forming a squadron. It will therefore be necessary that an iron-clad be added to each of our squadrons. The chief strength of a man-of-war at the present time lies in her speed. Our future cruisers must have a speed of at least 20 knots, and our iron-clads a speed of 17 or 18. In England they have already built torpedo boats with a speed of 29 knots, whereas the highest speed hitherto developed by such craft has been 25 knots. We must improve the quality of our torpedo-boats and also the pattern of our torpedoes.

To these opinions, in so far as concerns the increase of the Japanese Navy, little exception can be taken, we think. But it appears difficult to endorse the Vice-Admiral's views with regard to the victory of cruisers over iron-clads. The *Ting-yuen* and the *Chen-yuen* emerged virtually unscathed from the battle of Haiyang. Against their hulls the Japanese cruisers could do nothing: the one resource was to shoot at their crews. With greater speed, better handling, and more skilful gunnery, there is every reason to conclude that the two ships would have achieved a record very much opposed to the Vice-Admiral's dictum. We venture to make a still more emphatic assertion, namely, that the *Ting-yuen* and the *Chen-yuen* saved Pekin. But for the presence of these two ships in the Peiyang Squadron, little doubt can be entertained that, after the fall of Port Arthur, a Japanese army would have been landed at once on the north-eastern shore of the Gulf of Pechili. Let us pass on, however, to the *Yomiuri Shimbun's* estimate of the maritime force that Japan needs under the altered conditions of her national existence. Our contemporary alleges that the theory of increasing the Navy to a total tonnage of at least two hundred and fifty thousand tons has now obtained vogue among the public-spirited men of the empire, and that the various political parties will combine to introduce, in the next session of the Diet, a Bill in that sense. The basis of the calculation is that this empire must be prepared to hold its own against a combination of three Powers, viz., China, England and Russia. The last two Powers are not distinctly named, but that there is no mistaking the intention of the writer will be apparent to any one reading the following translation of the *Yomiuri's* article :—

The first thing to be considered with reference to the building of new ships is the question, what countries must Japan regard as possible opponents, for the strength of her Navy must be fixed on the basis of the force that her opponents may be able to bring against her. The possible opponents of this Empire are ———, ———, and China. Consequently, we must be prepared to hold our own against these three Powers simultaneously. The first of the three countries has an Eastern Fleet of about 80,000 tons, and as that country has now reached the zenith of its power, there is little probability of its Eastern Fleet being increased. The second country is engaged in raising the strength of its Eastern Fleet to 60,000 tons. But as its military strength is developed chiefly in central Asia, its object in increasing its Eastern Squadron is simply to have in these waters a force equal to that of the former Power. With regard to China, it may be that she will entertain a desire to be avenged on Japan, but to achieve such an ambition she would have to greatly multiply her present military organization. For the present, therefore, she will probably have to be content with the thought of revenge. Hence we may conclude that she will aim at nothing more than the possession of a fleet competent to cope with that of either of the Powers referred to above; in other words, will restore her fleet to the strength it had before the war, or 70,000 tons. Thus, the combined tonnage of the three countrys' naval forces in Eastern waters would not exceed 250,000 tons, and to that point Japan must endeavour to raise her Navy. With regard to the method of carrying out that programme, omitting the vessels now in our possession and those already ordered or in course of construction, if 10,000 tons be added to the Navy each year, the required total would be reached in 25 years, and if the ships that we have already, together with those ordered or in course of construction be included in the account, a period of less than 20 years would suffice to bring the Navy to 250,000 tons. As, however, the life of a vessel-of-war does not much exceed 25 years, we should have to go on steadily building 10,000 tons annually in order to keep up our Navy. Estimating the cost of a man-of-war and her armament at 1,000 *yen* per ton, it results that we should have to spend ten million *yen* every year.

It should be repeated that the *Yomiuri Shimbun* does not represent either official opinion or any large section of political opinion, but we can scarcely doubt that many will be found more or less in sympathy with its utterances on the subject of naval increase, though few, we imagine, will endorse its theory that Japan's warlike preparations should be directed by the contingency of a combination between Russia, China, and England. In no conceivable vista can we discern such a union, nor do we find it within the bounds of reasonable probability that Japan should ever be required to face an Anglo-Russian alliance cemented either in the interest of China or for the purpose of her dismemberment. Upon that phase of the matter, however, there is no occasion to dwell here, nor need we pause to discuss the *Yomiuri's* axiomatic declaration that Great Britain has reached the zenith of her power, and need never be deemed capable of greater things than she has already achieved. It may, perhaps, have been reserved for Japanese spectacles to make that discovery, but we cannot pretend to be disturbed by it. At all events, if the *Yomiuri* imagines that a tonnage of eighty thousand or even three times eighty thousand, represents the largest fleet that Great Britain could [illegible] assemble in these waters at two months notice, it can very easily correct its misapprehension by reference to the Navy List, and to any authentic statement of the steps that England is constantly taking to increase her ships. If Japan's basis of calculation is to be the contingency of having to face a combination of England, Russia, and China, she had better think of half a million tons as a minimum figure, and even then her safety would be exceedingly problematical. Apart from such injudicious and unneeded comparisons, it must be frankly admitted that an extensive scheme of naval development has now become a necessity to her. The fruits of her victories have imposed upon her the unavoidable duty of holding the Yellow Sea against assailants. Henceforth a considerable part of her dominions will lie over the water, and to preserve communication with it is absolutely essential. The cares of empire grow with its growth. Japan's statesmen doubtless understand very well what an immense change has been introduced into the constitution of their country by grafting upon its insular stem a branch of the Chinese continent. But history suggests no faith whatever in the future of a country that shrinks from the responsibilities imposed by its own achievements. Let Japan play her new rôle stoutly. She has entered the regimen of big armaments, and must accept all the resultant inconveniences. The most injudicious thing she could possibly do, however, is from the outset to count England a probable foe rather than a possible ally.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sence responsible for the sentients or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MIDDLE SCHOOL ENGLISH TEACHERS.

To the Editor of the "Japan Mail."

Sir,—In the Editorial Notes of your yesterday's issue there is a statement in reference to the Middle School English Teachers, which runs as follows :—"It is true that in one or two instances the possession of a diploma from some third-rate American college seems to have undue weight with the examiners—we could cite a case in point," &c.

Now, as until last year every applicant for a teacher's certificate who could present a diploma from a college in America or England, was almost without exception accepted by the Educational Department, I think the statement above quoted is based on wrong information. Let me add, Sir, that while those who have received the certificate by competitive examination number, at present, only thirty-three, those who have been certificated without any examination, of whom the above is an example, number one hundred and sixty-two!

Should you kindly find space in the columns of your valuable paper to insert this, I should feel greatly obliged.

Your obedient Servant, VERITAS.

Tokyo, April 18th, 1895.

ST. GEORGE'S BALL.

To the Editor of the "Japan Mail."

Sir,—I protest against the unwarrantable suggestion published last night that the Committee of St. George's Ball had not "fulfilled the wishes of the [illegible]" in declining to give a list of

subscribers to that entertainment for publication. As a resident in Yokohama for a period nearly ten times that of the writer who wishes to publish a list of the invitations, I say that it has not been the custom of the leading journals of this Settlement to publish such lists. As to the Secretary, he may rest assured that his action will be generally applauded, and that the impertinence attributed to him rests entirely with the person who makes the charge.

I am, Sir, yours truly,

A SUBSCRIBER.

REVIEW.

Mr. Shiga's "Nippon Fukeiron" (Japanese Landscapes).

Mr. Shiga's "Nippon Fukeiron," an essay on the landscapes of Japan, from a scientific as well as from an artistic point of view, is, undoubtedly the book of the season. From boyhood the author was very fond of travel, and his poetical proclivities and charming style, combined with his keen observation, make him a fit delineator of Japanese scenery. The above-mentioned work has met with a very favourable reception from both the press and the public. Not a newspaper critic but has written of it in warm terms and has recommended it to the careful perusal of all that love to read of what is beautiful and charming in the landscapes of this country. The result is that the work has already reached its third edition, although only published last fall, which fact is all the more remarkable when we remember how absorbed the Japanese are in the war. Although Mr. Shiga does not cover such a wide area as Ruskin, he resembles that great author-poet in some respects, being one of the most prominent composers of Chinese poems. He attributes the beauty of Japanese scenery to the following four causes:—

1. Diversity of climate and sea currents.
2. Abundance of moisture.
3. Abundance of volcanic rocks.
4. Strong erosive power of Japanese streams.

Extending as Japan does from north to south as much as 27°, the diversity of the climate is great, and this undoubtedly influences the scenery. The variety of the fauna and flora is entirely due to the same cause. Mr. Shiga gives a general description of the flowers, trees, birds, insects, and so forth of Japan. Japanese scholars usually regard the cherry tree as a symbol of the chivalrous spirit of the country and give the blossoms the first place among flowers. Mr. Shiga does not entirely agree with that idea. He considers that cherry trees are too limited as regards locality and their blossoms too transient to fitly symbolize Japanese national sentiment. Pines are, he thinks, much more suitable, for they are found throughout the realm, and are, moreover, evergreen.

The author deals with the part played by moisture in the development of the natural beauties of the country. This part, is according to him, a very great one. A certain critic observed that Mr. Shiga lays too much stress on moisture in its various forms, and that he should have given equal prominence to a clear sky. There is some justice in that remark.

The third cause of the development of scenic beauty in this country is treated of by Mr. Shiga at some length. This portion of the book seems to us somewhat too scientific, consisting chiefly of a description of numerous volcanic chains traversing various parts of the country and of the peaks that mark them. He says that all the Japanese peaks of renown are volcanic, but that owing to the moisture of the climate, they are covered with verdure. The rest of this chapter is devoted to lakes formed by old craters and basalt rocks, which according him, are more numerous than is commonly thought.

The natural configuration of the country, a high back bone running through the length of the land with only narrow borders on each side, naturally produces swift streams with strong erosive power. It is by these streams that picturesque gorges, such as those of Yabakei in Hyuga and Tsugase in Yamato, have been gradually formed. The subject is dealt with at some length.

We doubt whether Mr. Shiga has not fallen into the error of being too minute while neglecting to give more general accounts of natural beauties. He may be right, as his wish seems to be to give prominence to what is less known: But why he should give a long description of a rock and not mention celebrated scenes such as Matsushima and the Inland Sea, we cannot understand. One would expect to find these noticed in the chapter on volcanic rocks, for it was, we presume, by the erosive action of the waves that so many small islands came to be scattered about within a comparatively narrow space. Seismology undoubtedly plays a large part in the formation of the landscapes of Japan.

The work is profusely illustrated, and is full of appropriate quotations from Japanese scholars. It is published at the Seikyosha, Kanda, Tokyo, and costs the small sum of 50 *sen*.

THE GREAT POWERS TO JAPAN.

Meekness is weakness;
Force is triumphant;
All through the world,
Still it is Thor's day.—Emerson.

Salve Japan! We seven, the sovereign Powers,
Greet thee compeer; inscroll thy name with ours,—
United States, Great Britain, Germany,
France, Russia, Austro-Hungary,
And Italy. Henceforth the world-estate
We share with thee—Japan the Great.

For years on years, thy marvel-working art,
Thy homage, leal and feal of hand and heart,
Have borne thy name to fame in many a land,
Procured thee largess, won thee wide command.
But not for these do we this equal place
Allow with us in lordship o'er man's race.
The meek are weak, triumphant yet is force,
The globe around the mastery still is Thor's.
The conquering hand that strikes to maim, to kill,
Insatiate greed, show Thor the world-god still,
These test a claim to wear the human crown;
When pitiless swayed are badge of true renown.
Commanding there, we scorned thy tranquil years,
We set at naught thy peaceful hopes and prayers.
But now, these held by thee with ruthless might,
Prove thee our peer; the crown is thine by right.
America, thick strewn with Red Men dead;
India's wide plains, by Hindoo blood washed red;
Hot Afric's jungles, trailed by dying slaves;
Great Asia's heights and ravines, foul with graves;
The isles of Southern seas, a gory prey;
The whole earth round, the aggressor's unstopped way!—
This we have wrought, we, world-compelling Powers;
Like having wrought, Japan, we hail thee ours.
Place for Japan! Our throne and rod of state
We share henceforth with thee, Japan, now Great.

So boast these haughty Potentates; and yet,
Amid their proud acclaims, none may forget
That o'er them each, illumes the bannered word
Of Him whom they profess their Sovereign Lord:—
Word given for all men at the meek Christ's birth,
"Glory to God! Good-will and Peace on Earth."

Clay MacCauley.

Tokyo, April 20th, 1895.

ST. GEORGE'S BALL.

St. George's Day was very fittingly celebrated in Yokohama on Tuesday with a Ball in the Public Hall, at which the English residents extended their hospitality to all the other nationalities who go to form this most cosmopolitan community, as well as to the foreign residents of Tokyo. It is an axiom of the race that "if a thing is worth doing, it is worth doing well," and the St. George's Ball of 1895 was undoubtedly well done. The ingenuity of local ball-room decorators has evoked some very pretty schemes in times past for transforming the unsightly interior of the Yokohama Public Hall into something bright and pleasing, but seldom has an effect so charming been achieved as that which met the eyes of guests as they entered the dancing *salon* on Tuesday evening. From the ceiling were hung baskets and festoons of roses, white, yellow, and red; sprays of roses were flung over the walls or clustered round pillars and brackets; the stage and green-room were bowers of roses; in fact, roses were everywhere. At what period in English history the Rose—the symbol of silence among the ancient Greeks—came to be associated with the national arms, it would be difficult to determine. Although not indigenous to our island, the rose was among the first of flowers imported and cultivated in convent gardens and manorial or baronial pleasances. Soon we find it taken up by the exponents of heraldic art, and long before the famous Wars of the Roses, the princely House of York had adopted the white rose as their family cognizance. On this point, Master William Shakespeare, of Stratford-by-Avon to wit, has somewhat perverted history in his endeavour to make the scene in the Temple Gardens fit in with the dramatic exigencies of his play. The even more stately red-hued blossom—also the Lancastrian badge—had long been firmly established in pride of place upon "old England's emblazoned shield" when our Henry the Eighth met Francis the First of France upon the Field of the Cloth of Gold. These were brave days for the display of armorial bearings, and strange and wondrous are the shields, badges, crests, and quarterings which date from that most brilliant period of chivalric heraldry. One thing the national flower has achieved for robust English beauty, which should ever endear it to the hearts of English women. "Fair and sweet as an English Rose," has passed into a saying of the race—this is no mean compliment for the daughters of England to have won from the lips and hearts of their stern men-folk: and right worthily do they still deserve it. There were many of England's fair daughters present last evening, and their sweet faces made pretty foils to the thousands of roses which surrounded them. But to return to the general decorations. In the rustic arbors erected on the stage English holly and mistletoe played a considerable part. Over the stage was suspended a large shield bearing a spirited painting of St. George engaged in transfixing a terrible dragon—from a design which appeared a little while ago in the *Sketch*, and which came from the pen, we believe, of Mr. Walter Dickson. This shield was draped on either side by a pure white ensign charged with the Saint's red cross. At both sides of the stage were erected old Englishhouses, covered with trailing roses, whose interiors made the cosiest of cosy corners. Around the walls evergreens were banked, and on the pillars were hung pictures of "men of old renown"—it was left largely to the imagination of hosts and guests alike to determine whom the effigies represented, but as they were all attired in mediæval costumes it may safely be surmised that they were something of light and leading in England's brave days of old. Over the doors leading from the vestibule were hung medallions, one representing Britannia, the other St. George and the Dragon, and these were draped with ensigns bearing the blood-red cross. Various emblematic and armorial shields found place upon the walls to the north, and south, and west. At the end of the room facing the stage were ranged several tiers of chairs; splendid "coigns of 'vantage" for viewing the dancing. Their canopies of red and white were supported by sturdy tilting poles, reminders of the stately days of tilt and tournament when the brawniest arm and the steadiest seat won ladies' kindliest favour. A fine emblazoned shield bearing the Royal Arms of England was hung over the mantel-board in the Green-room, while in the supper-room—the smaller hall—were suspended portraits of Her Most Gracious Majesty Queen Victoria, and William Shakespeare, once of Stratford-by-Avon, eke a famous man in England's literature. The lighting arrangements, usually a source of no small grumbling, were very effective. Electric-light-clusters of 30-candle power were pendant among the roses hung from the roof, while smaller lights twinkled here and there among the bowers, on the stage, and in the Green-room. The working committee, of whom Mr. and Mrs. Lowder, Mr. Rickett, Mr. C. D. Moss, Mrs. James Waller, Mr. and Mrs. Healing, were very active members, are to be congratulated upon the success of their designs.

Special cloak rooms for ladies and gentlemen were erected on the lawn outside the Public Hall, and covered ways lead from them into the dancing-room. The gentleman's smoking-room was, as usual, upstairs. The Ball commenced at about 9.30, when, notwithstanding the boisterously inclement weather the room was crowded, though not inconveniently so. Dancing was kept up till past three o'clock, the floor being perfect and the Town Band in very good form. After the ladies had retired a second supper-party gathered under the genial presidency of Mr. J. F. Lowder, and song and toast were gleefully sung and drank till long after dawn had appeared in the Eastern sky. The following was the dance programme, which does not include the innumerable "extras":—

PROGRAMME.

1.—Waltz.	9.—Waltz.
2.—Quadrille.	10.—Quadrille.
3.—Waltz.	11.—Waltz.
4.—Lancers.	12.—Lancers.
5.—In the Barn.	13.—In the Barn.
6.—Waltz.	14.—Waltz.
7.—Polka.	15.—Polka.
8.—Sir Roger de Coverley.	16.—Sir Roger de Coverley.
	Extras.

During the evening Mr. J. J. Enslie, on behalf of the Kobe St. George's Ball, wired hearty fraternal greetings.

A very large entry has again been secured for the Parliamentary golf tournament, which is year by year increasing in popularity with the members of both Houses. The Attorney-General, Mr. Herbert J. Gladstone, Sir Robert Reid, and Colonel Saunderson are amongst the new competitors. Mr. Herbert Gladstone has a big task in the first round, in which he has to meet Lord George Hamilton, who carried off premier honours last year.

BIOGRAPHICAL SKETCH OF THE REV. NATHAN BROWN, D.D.

AN ADDRESS DELIVERED BEFORE THE BAPTIST CONFERENCE. BY THE REV. A. A. BENNETT.

It is not the design of this sketch to enter extensively into the details of Dr. Brown's career. His daughter, in her excellent biography of him, entitled "The Whole World Kin," has so beautifully traced even the finer lines and more delicate shadings of his life-picture, that such work need not be done a second time, certainly not by so uncouth a hand as that now holding the pen. The writer desires to express the debt of gratitude which he, in common with hundreds of others, owes to Miss Brown for her book, from which have been borrowed almost all of the quotations given below. These, of course, have been rearranged for the present purpose, and have been supplemented by personal memories, and by gleanings directly made from Dr. Brown's journals at the time of his death. The aim of this paper will be realized if it succeeds in presenting to the mind's eye once more the person of him who was not only our father in mission work here, but whom some of us learned to love so dearly, and then in causing us to catch from elements of his character that which will make us better as men and women and better as tireless labourers.

The pen-and-ink sketch submitted for inspection to-day might properly be labelled "Nathan Brown the Loyal." If rightly his character has been analyzed there is no better key to the secrets of his worthiness and success than this word "loyal." Around it as a central idea crystalize, it is true, many other traits, clear-cut and brilliant, but they seem to be rather its resultants than its causes, and should be classified accordingly. That Dr. Brown was richly endowed by nature is a fact that will be granted, but that thousands of others are—others who neither bless their fellow men nor glorify their God—is a fact that must be granted, too. To such questions as why did Dr. Brown become an explorer, a leader, a linguist? Why did he curb fondness for certain lines of study and indulge in others less to his choice? Why did he so often separate himself from those he loved the best and mingle with those for every reason but one repulsive to him? Why was he in the fore-front of controversy when he loved and longed for peace? To such questions there seems to be no simpler answer than that he was loyal ■ what he believed to be the will of God his supreme Ruler, whether that will were directly revealed, or witispered by conscience, or hieroglyphed in the sign of the times.

It is not here claimed that this loyalty kept him from mistakes, that his zeal was invariably wise. This matter may be open to question, but not to-day. Shortly before his death, he himself said that he sometimes wondered if it would not have been better for him to have pushed reforms more slowly. It is not even claimed that his loyalty was without exception. Few indeed are the men who can truthfully say with Paul, "I have lived in all good conscience before God until this day." But the exceptions, if they existed at all in the subject of this sketch after he reached maturity, are to be learned rather from the recorded results of his own severe, self-scrutiny than from aught our less discerning eyes could see. To us he was, in this matter at least, an Israelite indeed in whom there was no guile.

This dominant trait in Dr. Brown was legitimately inherited. His Puritanic stock had been retempered in the person of his grandfather, Lieutenant Josiah Brown, at Bunker Hill and Ticondaroga. His father and grandfather,—men of purity, muscle and grit,—and his mother,—judicious, tender, devout, the light of the home and the life of the prayer meeting,—had been cultivating this trait whose seeds they gave him as an holy heirloom, his from childhood. The environment of his early life served to foster it. Born in New Ipswich, N.H., U.S.A., June 22, 1807, he was removed about a year later to live in a log cabin in Whitingham, Vt., and to spend his youth in helping to take care of the sixty-five acres of his father's farm and wood-land. Here was developed that solidity of constitution and character without which his after life would have been impossible. He was no hot-house exotic. God knew what niche He would have him fill, and chose and shaped the clay accordingly. Looking backward, we can see young Nathan, of whom his parents thought to make a farmer, toiling in summer fourteen hours a day at farm work, and trudging in winter through the snow, bearing on his shoulder an axe whose cold blade is soon to warm beneath his stalwart blows, while his sweat rolls off in big drops to freeze. Though excelling in athletic sports, play must have been rare. When there was work to be done, and even reading and study, of which he was passionately fond, must, if indulged in at all, be wedged in between the thus more densely crowded hours of manual toil. Such life is an ethical drill to those who are properly exercised thereby, and serves to toughen moral as well as physical sinew. It did so with him. It was a merciful providence that drove fallen man out of Paradise, and the hills of Vermont did more for our hero than the bowers of Eden could have done. It is possible, however, for one who is of Puritan descent and nurtured in stern New England, to be only a worthless Epicure; like the Jews who, boasting they had Abraham to their father, and living in luxury where he had been a pilgrim, yet knew none of that which made him great. Dr. Brown had more than inherited traits, and the conditions favourable for their development; he had also early, and in large measure, the direct work of grace in his own heart. During a revival season, the boy while reading one of Dr. Watts' hymns, thought that the Lord was calling him, and he responded as promptly as did Samuel of old. He was baptized upon profession of his faith, and united with the Baptist Church in which his parents and other members of the Brown family seemed to be pillars. He was at this time about nine years of age. The opening incident in the biography written by his daughter beautifully pictures a timid boy, baffled but not beaten, going from a sense of duty to tell a distant so-called neighbour that "*there* is a God," although that coarse man persists in denying it. There may have been then in the boy like feelings to those which in Jeremiah were expressed in the cry "Ah, Lord God, behold I cannot speak: for I am a child," but if so there must have been also the assuring answer first given more than twenty-five hundred years ago, "Say not *I* am a child: for thou shalt go to all that I shall send thee, and whatsoever I command thee thou shalt speak. Be not afraid of their faces: for I am with thee to deliver thee, saith the Lord." From that day he was destined in more points than one to be a modern Jeremiah seems to have feared not the faces of men when he believed God was with him. Just here it may be allowable to say that Dr. Brown never seemed to the writer to be a man that would have been marked for mere physical bravery. He seemed to shrink from the sight of blood, and from aimless deeds of danger, criticising severely the actions of some, even on the mission field, who hazard life needlessly, or take no precautions for health and strength. This may have been different in earlier years; it matters not for our purpose now. It is enough to know that this natural timidity, if such there was, did not to the last turn him away by so much as a hair's breadth from what he believed to be the line of duty. For instance, on some baptismal occasions the wind played wildly with his white hair, and the angry waves of the sea disputed his right to enter, but he never seemed to falter. The pestilence was abroad in the city taking some in his vicinity, but he had work that required immediate attention and would not seek safety elsewhere. His views often having another centre from that around which revolved those of some of his friends or opponents, he was often, when he expressed himself, thought to be eccentric; yet, although he could keep silence if nothing was at stake, when loyalty demanded it he was outspoken and fearless, though alone amid his adversaries. At such times Cæsar could not have faced Rome more boldly, nor Luther the Diet of Worms. Perhaps he was a *timid body*, but he was *a brave soul* for all that.

See in what varied ways this loyalty manifested itself. When study was the duty of the hour, how faithfully he applied himself to his books—not to favourite studies only but to all! Late as was the beginning of his "fit" for College, he yet made such rapid strides that he entered the Sophomore Class of Williams at the age of seventeen, graduating three years later (September 5th, 1827) as its valedictorian. The different schools in which he taught before and after graduating showed a like faithfulness in imparting as well as in imbibing knowledge. It would exceed the limits of this article to go into any lengthy consideration of his wide scholarship. It is enough for our purpose to note that such encomiums as those awarded him by Max Müller and other literati could not have been earned but for the trait under consideration. Does he not tower, Saul like, head and shoulders above us all? Is he not a very Nestor in our midst? Who of us could, as he did, on leaving college, render into poetry the first and second books of the Æneid and repeat the whole of the first book from memory, and this, too, when mathematics was his favourite study? Who of us, after living only two years among a people of strange language, could, as on one occasion, in his experience in Burma, on returning to them "veiling errors." The way in which he came to have eight years later, not only understand what the people said, and preach to them intelligibly in their own tongue, but write hymns for them that were destined, according to the opinion of later missionaries, to live and to be sung as long ■ there should be a hymn-book in that language? Or, to pass by unnoticed many facts that might furnish intervening illustrations, and come ■ something we can all understand, which of us, even if not, as was he, sixty-five years old on reaching Japan, could, with such helps only as Dr. Brown could obtain, learn the language with sufficient speed and accuracy to have translated with Mr. Kawakatsu's help, during the first seven years in the country, the whole of the New Testament besides many hymns, tracts, and O. T. fragments? To understand this Titan task we must remember that most of our grammars, dictionaries, and other helps are of later date, and that besides the ordinary cares which so much encroach upon the missionary's time for study, Dr. Brown had the additional one of being his own printer, personally superintending to some extent at least, the printing office on his own compound. True, Dr. Brown did not attend much to the study of the Chinese characters—! his loyalty would not let *him*, since he seemed to believe that they were an invention of the evil one—yet according to the modest estimate he always put upon his own ability, he knew "some six hundred," which other men would have reported as "about a thousand." Look at his translation work. Despite its faults, which Dr. Brown would not have us cover, his New Testament is a marvel. The writer confesses, though self-condemned for his temerity in presuming to institute comparison, that in some special work which has been occupying part of his time during the past year, he has repeatedly—though having Greek texts and existing English and Japanese translations, and dictionaries, grammars, and other aids all at hand, and a Japanese scholar by his side—come back to re-adopt, after extensive research, discarded words and phrases that were chosen by Dr. Brown when he had not lived here half so long nor had half the facilities for study. That Dr. Brown's great linguistic power attests something more than faithfulness will be granted, but that it allows of anything less, will not.

The mention of the printing office suggests other lines of work in which loyalty to conviction was manifested. The existence and continuance of that office—whether wise or not we need not here discuss—was with him a matter of "oughtness," and despite the personal financial loss it involved, he put his conviction into practical working. In its details there was traceable a like loyalty to conviction, so far as he was concerned. To give a single illustration: the writer once, in looking over some *proofs* submitted by Dr. Brown, detected an error seemingly very slight and not misleading, but whose correction at that late stage, would involve considerable work. He therefore suggested to let it stand. Dr. Brown replied essentially, and in his reply was an unintended revelation of his whole character, "I never take into consideration the amount of work a correction will involve; my one aim is to have it right."

This same spirit marked him as a reformer. He felt as Charles Sumner used to feel, "nothing ever can be *settled* until it is right." In college days and afterwards, he was a temperance reformer and lecturer. The sentiments he advocated were not then so popular as now, but that was nothing to him; it was for him ■ make them popular. Indeed, how much may have been his part in changing the colour of popular opinion, no one can tell. As in the building of a breakwater it is often necessary to dump into the bay large quantities of rocks before there can be obtained a solid foundation for masonry destined to stretch its protecting arms between a quiet harbour and an angry sea, so the temperance and other reform movements of early days, that seemed to rise only to fall amid the mockery of their enemies, are, coral like, the hidden foundations on which are standing the strong battlements we see to-day. The grains of wheat have died, but waving harvests deck their graves. Temperance was not his only line of reform—everything that needed reforming he deemed a legitimate object of his effort, every public evil a power he should assail. In private conversation, in sermons and in lectures in the editorials of the *Journal and Messenger* and of his own papers, the *Vermont Telegraph* and the *American Baptist*, and in contributions ■ various publications, slavery and other forms of oppression or public wickedness were ruthlessly dealth with. Witness his avowal in regard to the nature of the *American Baptist*:—"It is intensely opposed to slavery in every form, and to all other kinds of moral evil. This is our mission, to bear testimony, intense and undiluted, against [illegible]

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

charge of the paper shows his loyalty to conviction. Mr. Post thus describes a part of his first meeting with Dr. Brown :—

"He said 'my name is Brown; I received a short letter from A. L. Post, in relation to the editorship of the *American Baptist*; made up my mind that it was a call from higher than human authority, and obeyed at once, and here I am to learn more as to the meaning of the call.'" His opposition to public evils was not without its effect. It is probable that President Lincoln consented to proclaim the emancipation of slavery to be an act of "justice," on account of the interview he had with a Committee of three one of whom was Dr. Brown.

Did time and space permit, we might notice how loyalty to the duty that lay nearest often interrupted him in, though not diverting him from, the more important duties of life. It was not from pleasure that he laid aside his studies at times to teach the Assamese to make an axe, or lime, or bricks—or with his own hand to build his chimneys or make his own widow-sashes. We find him exclaiming in sorrow on one occasion, that it had taken him two months to build his house, and hoping that such a thing would nevechappen again. To some of us who are fond of tools, and perchance even more fond of drawing plans to be beautifully materialized by the skill of our deft artisans here, such work may seem coveted recreation, but in Assam to Dr. Brown it was stern duty.

As a pastor he was faithful. Should we seek evidence of this in his work in this country only, such evidence is abundant, though perchance in Assam it is even more abundant. He loved this people, and they loved him. The prayer chiselled according to his direction in the stone that marks his last resting-place, was a prayer that throbbed in his heart, and was articulated in his speech,—"God bless the Japanese!" The brethren loved him. They did for him what they probably never did for any one else, native or foreigner, when they with their own hands bore his body to the grave. He could not often go to their homes, but he welcomed them to his, and showed that he was glad to help them spiritually. In other important ways he assisted them. For instance, the church records would again and again have been neglected but for his pastoral oversight, and the Pastor's Record, in his own hand writing, though a little, unpretentious book—is of inestimable value with reference to the history of the early days of our Yokohama interest.

The pastoral office might have been his at home. It is in the missionary, distinctively so considered, that we have the grandest view of Nathan Brown the loyal. He heard God's call at Williams. Twenty-four of his class were candidates for the ministry, and two others were professing Christians. The President, Dr. Griffin, was not only himself a devout man, but strained every nerve to have his pupils devote all their powers for the glory of God and the best interest of man. In his baccalaureate sermon before the class he says, "I know that this College has been saved by the Holy Ghost and to the Holy Ghost let it be forever devoted, as a scene of revival of religion to raise up ministers and missionaries for Christ and his Church. I long to see every class go forth in the spirit of a Mills and a Hall, a Richards and a Robbins, determined to make their influence felt on the other side of the globe. Will you not, my dear pupils, carry this spirit with you, will not every one of you say with an eye lifted to your dying Lord, here am I, soul and body, here am I, send me, if it be to the ends of the earth. All that I am and have, I consecrate to thee, to promote the salvation of the world. Oh, my dear pupils, can you resist the influence of this holy enthusiasm?" Dr. Brown could not. We may infer from what he himself wrote that there was many a struggle in his heart before he became one of those early missionary volunteers, but whether those struggles were such as Moses knew when God would send him to Egypt, or only such as many a Christian has felt in seeking to discern the mind of the Lord on this very question of missionary consecration, we may not now say. We know the results, and we also know that there were these conflicts day and night. He felt and wrote :—

> My soul is not at rest. There comes a strange
> And secret whisper to my spirit, like
> A dream of night, that tells me I am on
> Enchanted ground. Why live I here? The vows
> Of God are on me, and I may not stop
> To play with shadows, ■ pluck earthly flowers,
> Till I my work have done, and rendered up
> Account. The voice of my departed Lord—
> Go, teach all nations—from the eastern world
> Comes on the night air, and awakes my ear.

He was still in college when he wrote this, and later he seemed to think God had not wished him to be a missionary. He became a school-teacher and editor, and, humanly speaking, there was little prospect of his going abroad. May we not, however, reading backward from development to conception, now devoutly interpret the divine leading, and say that both he and Eliza Ballard were sent as teachers to that Bennington Seminary that they might learn each other and each other's tasks, and then go, after their marriage May 6th, 1830, to learn in Burma and Assam more of the God who reigns over the heathen and of the heathen who do not like to retain God in their thoughts? Certain it is that that heroic woman, whose virtues deserve far more attention than we can give them here was, until the time of her death (May 14th, 1871) a genuine spiritual help-meet. Not long before his marriage he resolved again "not stop to play with shadows or pluck earthly flowers" till he his work had done. More than half a century later he wrote, Aug. 8th, 1885, on his last postal to his daughter :—

"The 5th of this month is the 69th anniversary of my baptism. I do not think I am gaining any although I am working hard eight or ten hours every day to get the hymn-book finished up before the call comes." "Till I my work have done."

He not only did not seek the flowers, but when they were brought to him,—when his Alma Mater had twined for him a well earned garland, he did not wish to wear it. Hear what he writes on receiving the title of "D.D." :—"I have long felt, in common with many others, that the customary use of D.D. as a mark of distinction among ministers of the gospel, or as an appendage to the common address of an individual, is liable to serious objections. Regarded simply as a college honor, like the title of A.B. or A.M., its application would be attended with fewer inconveniences. Entertaining these views, I trust I shall not be regarded as wanting in true respect for my Alma Mater if I request my friends, in writing or speaking of me, still to use the plain title of Mr." It would be a mistake to suppose that Dr. Brown's consecration was of that kind which seems to sap from the heart all mundane enjoyment. Quite the reverse was true. Where he could use this world as not abusing it,—could be in it and enjoy it but be not of it, pleasure became a duty just as at other times duty became pleasure. He loved all nature from snow-capped Fuji to the tinted shells he so often collected on the beach. Science, literature, and arts were welcomed so far as they could aid him in his work or furnish wholesome recreation after work was done. Even puzzles and innocent games brought him genuine enjoyment,—but he knew how to stop them before they stopped him. His love for all creation, linked with allegiance to the All-Creator, is beautifully brought out by a letter dictated shortly before his death. "I have," he says with reference to some bamboos, "lain and looked at the men from my window as they have planted them; if they live they will be a remembrance of me. You would think that in my precarious health, I should be withdrawing my thoughts from the things of this world, and fixing them exclusively on religious matters, but it is not so; every beautiful flower, every bird, hill-top, valley and ocean, strike me with a richer loveliness, as the work of my Father's hand, than they ever did before. I should be willing to live forever in this world, but as He has otherwise ordained, I rejoice to pass away to such other spheres as He hath appointed, and especially to obtain a nearer access, and stronger love for the dear Jesus, the union of God and man."

Dr. Brown, then, with a loyalty that triumphed over his love for objects that would have detained him, heard not in vain the Lord's second call, but, like the apostles at their second call, left all and followed Jesus. We can almost hear him say :—

> And I will go. I may not longer doubt
> To give up friends and home and idol hopes,
> And every tender tie that binds my heart
> To thee, my country! Why should I regard
> Earth's little store of borrowed sweets? I sure
> Have had enough of sorrow in my cup
> To show that never was it His design
> Who placed me here, that I should live in ease
> Or drink at pleasure's fountain.

No one could then have foreseen how much was involved in the "giving up friends and home. . . . and every tender tie." The months that intervened between letters from home, and the absence of any such thing as a photograph, we may somewhat understand though not from our own experiences. Imagine, if you can, the inexpressible emotions which overcame him when the first daguerrotype, a then new invention, found its way to Assam from his absent wife. To quote his daughter's words "Like Joseph he turned away and sought where to weep aloud, and for a long time cried with a 'great and exceeding bitter cry.'" It is not uncommon for those who go away from the old home-stead to build new ones, and who have sons and daughters around them instead of brothers and sisters, to practically forget what was, or even to say with one of old "God hath made me forget all my father's house." Sometimes the ties if not forgotten, still become so loose they scarcely deserve the name of ties. But in Dr. Brown's case it was different. They did not yield nor snap under the tension of decades, even though stretched half-way round the globe, now in one direction, now in another. The affection between himself and brother even down to old age, was tender and true. How touching his remark on receiving, in Assam, a spoon from his mother :—"that is a beautiful spoon, mother, it has only one fault,—it chokes me." His father Deacon Nathan Brown who died suddenly in his eightieth year, and his brother-in-law, Deacon Jonathan Ballard, who died in the same house within a few hours of the other, were very dear to him. He speaks of them in scripture language:—"Lovely and pleasant were they in their lives, and in death they were not divided." Other shocks awaited him. The winsome babe who made their family a triad when they started from Boston for Burmah, three days before Christmas in 1832, was not only, with later children, to die as mission sacrifices, but her little bones were to be thrice ruthlessly disinterred by beast or beastly man, before they were brought home for burial in her native soil. The long separations from his wife in her lonely and perilous journey down the Bramaputra, and, later, across the oceans, could not have been foreseen when the black tears, flowing from his student pen, recorded his vow to surrender all these tender ties. How tender these ties were in Dr. Brown may also be inferred from his own words, and the words of his devoted wife in speaking of each other. In writing to her when with a sick child she had gone to Calcutta to seek medical aid, he says :—"My heart is broken, sunk, and sorrowful, but through the loving kindness of my Saviour I enjoy a good degree of spiritual comfort, although I am so unfaithful to Him. Since I have received your letters describing your troubles, I have been very down-hearted and distressed," and later "And now, my dearest beloved, once more farewell. Cry a tear upon the dear little white cheeks of your sweet babies for their far-away lonely papa. It almost breaks my heart to think of them. You are having a hard time, that I know full well, but I hope God will give you strength, and enable you to overcome every difficulty, and stand under every trial."

The departure on this journey is described mainly by Mrs. Brown in not less touching words. "The idea of leaving our missionary work so soon, after having lost nearly the whole of the previous year, made my poor husband feel almost broken hearted and discouraged. I therefore summoned all my resolution, and told him that if he was willing to remain at home and pursue his missionary labours without me, I would, God helping me, undertake the long and hazardous journey alone." * * * * "We wept together and prayed together," and at last the father committing his wife and helpless infants to divine protection, decided that duty demanded his remaining at work.

And that "duty" governed everything. His courage it is true at such times would often fail him. See this from a letter written to Dr. Bronson later, when Mrs. Brown had been compelled to return to the States:—"My dear wife has now been absent from me two years and a half, and I often fear I shall never see her face again. I have heard nothing from her for near two months. Assam seems desolate indeed, now you are all gone. I am only clinging to the wreck, while the surges are dashing around me, not even attempting more than to hold on, if possible, till some of you return." Did his consecration fail with failing courage? Did he look back from the plough and wish to obliterate what he had promised to his God? Or was he still loyal? He shall speak for himself.

"Should a work of retrenchment be carried on—should Assam be one of the first positions to be relinquished, every missionary, I trust, will solemnly wash his hands of the responsibility. We can part with our families and send them home to be supported by their friends, and we shall do it, if necessary, but this field we cannot abandon. Should we be reduced to the extremity, be recalled, or left without any regular support in a heathen land, I trust our Lord will not find us wanting in the day of trial. The call to return [to America] is one which we could never obey so long as life and a moderate share of health ■ granted us. No, the precious converts that are gathered in, and to be gathered in, from among this people, are dearer to me than life, and with them by God's grace will I remain to the last."

With such a heart, he could sing on :—

> Henceforth, then,
> It matters not if storm or sunshine be
> My earthly lot; bitter or sweet my cup.
> I only pray, God fit me for the work;
> God make me holy, and my spirit nerve
> For the stern hour of strife! Let me but know
> There is an Arm unseen that holds me up
> An Eye that kindly watches all my path,
> Till I my weary pilgrimage have done;
> Let me but know I have a Friend that waits
> To welcome me to glory, and I joy
> To tread the dark and death-fraught wilderness.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

"I only pray God fit me for my work." He felt that he *had a special work;* that it required *fitting;* and that *God* must do the fitting, the workman receiving his implements and instruction from the Master of the harvest, direct, and being accountable to Him only.

In regard to the first of these three points, notice this from his daughter's pen:—"There was no part of his work into which Mr. Brown threw himself with more zest than outdoor preaching. When he could find a few natives talking together—at the bazaar, around a blacksmith's shed, tailor's tent or mazier's shop on the river bank, or under a tree—he entered into their conversation, drew out their religious beliefs, and in a frank and friendly way, expressed his own. "How I wish I could travel up and down the country, and preach to the people!" he wrote, "I often feel most painfully distressed that I cannot give myself to preaching, instead of translating and making books. But the latter, I know, is my particular duty, and therefore I try to be content."

In regard to the second point, see what he says in a letter to Mr. Whiting, on the arrival of Mr. and Mrs. Whiting, as missionaries in Assam:—"We have to labour for the future rather than the present—still I believe that by the exercise of a more truly self-denying and missionary spirit, we might see great things accomplished in our day. In these days of bustle and excitement we are too apt to lose sight of that simplicity of effort and that patient continuance in well doing which are so essential to the success of every minister and especially every missionary. Had we the meek, lowly, self-sacrificing spirit of a Schwartz or Brainerd, what a happy example of Christianity would be held up before the heathen and before our native converts. But alas, the Church is becoming too much like the world—shorn of her lovely radiance, and stripped of her primitive power. We can preach, and we can pray; but the question is, do we act out Christianity? Do we exhibit a fair specimen of it before the heathen? In proportion as we do this, we may expect that our efforts will be accompanied with a life-giving energy, similar to what was witnessed in the apostle's days."

In regard to the third point, viz., the matter of the immediate responsibility of a missionary to God, these two extracts may suffice. The first, from his journal, shows his own actions; the second from an address to a returning missionary—Rev. Norman Harris—shows that he believed that the principle applied to all missionaries. "Oct. 21, 1892. Sent off to-day my answer to the anti-slavery committee, with a copy to Mr. Peck. Have taken an important step, of which I know not what the end will be. Every motive but that of duty seemed to dissuade me from the step, and it has been a painful one to take. I trust I have not followed my own will."

To Mr. Harris—"Going out on such a mission, the bearer of such a message, with such responsibilities resting upon you, with such motives urging you on, with such witnesses above and all around you, with death and the judgment standing before your face, is it for me, my brother, to give you orders and instructions in your work? For a thousand worlds I would not stand between you and your conscientious convictions of duty to the Master. For a thousand worlds I would not take the responsibility of answering in your behalf at the judgment-bar for a single deviation from what your own conscience dictates. No, my brother, you must answer for yourself at that day."

With the gaze of his soul fixed on that "Friend" who waited to welcome him to glory, Dr. Brown *did* "joy to tread the dark and death-fraught wilderness." His daughter writes:—

"Burma had been his appointed field, and two years of precious time had been spent in acquiring the Burman language; but the voice of Providence now seemed to call to regions still beyond, and he cheerfully took the torch his brethren placed in his hand, and set his face to go down into the new mine." In regard to this, Dr. Judson wrote:—"Brother Brown embraced the proposal with instant enthusiasm."

That this was a dark and death-fraught wilderness is plain from the following extracts:—

"We were all ready to embark on Saturday; the vessel started from her moorings on Sabbath day, and we were expecting to go on board early Monday morning, carrying with us our two dear children. But God had ordered otherwise, and before we set sail we were called to deposit our darling in the silent dust. Little William's sufferings appeared to be very great. . . . . The remarks of Dr. Judson at the funeral consoled our hearts with the reflection that it was for our good, and the good of our dear child, that God had taken him away. We feel that we needed the affliction. Oh, may it be sanctified to us, and may we be led by it to live more soberly, righteously, and godly in this present evil world."

This is from Dr. Brown's pen; the next is from Mrs. Brown's. She says:—

"We learned that the current of the Brahmaputra was in many places fearfully strong, and that the bed of the river, like our own Mississippi, was full of snags and sawyers which had been torn from the banks by the strength of the current. Occasionally rumour reached us of the dense and terrible jungles we should have to pass through, where roamed the wild elephants, buffaloes, and tigers of the country; that the boats would be moored at night to sandbars or small islands of sand, formed by the changing current of the stream, which were the daily resort of these wild beasts, and that crocodiles and other monsters swarmed in many parts of the river. . . . We took it as a call from heaven to go, hence obstacles and dangers counted for nothing."

Though he was in Assam rather than in Africa, this "death-fraught wilderness," especially during his absence from his wife, or his wife from him, must have made him often recall the words:—

> And when I come to stretch me for the last,
> In unattended agony, beneath
> The cocoa's shade, or lift my dying eyes
> From Afric's burning sands, it will be sweet
> That I have toiled for other worlds than this;
> I know I shall feel happier than to die
> On softer bed.

While his wife was in America he was taken sick with cholera and was not expected to recover. Then, and at some other times, these words seemed near to fulfilment. But God was more merciful to him than was his own prophecy. When for the last time on earth he heard God's call, and was about, Bartimeus-like, to cast off the upper garment, in this case of his flesh, that he might follow Jesus up to the holy city, he was neither "unattended" nor in "agony." Not to mention the angels who had kept him in all his ways and who now waited to bear him in Abraham's bosom, his second wife, whom he had married more than thirteen years previous (July 24th, 1872), and other loving friends stood round and strove to make his a "softer bed." The tender lips of his little boy gave their nightly kiss and wished him a "good bye" of undreamed-of import. All was tranquil. That God, who once had shut the mouths of the lions and lifted Daniel from a den to a palace, now bade the king of terrors return his shafts to their quiver that another faithful servant might pass peacefully through the valley of the shadow of death up into the divine presence.

Until almost the close of his life, which occurred Jan. 1, 1886, Dr. Brown had that same consciousness of self-deficiency which is revealed at the end of his early poem:—

> And if I should reach heaven;
> If one that hath so deeply, darkly sinned;
> If one whom ruin and revolt have held
> With such a fearful grasp; if one for whom
> Satan has struggled as he hath for me,
> Should ever reach that blessed shore, oh, how
> This heart will flame with gratitude and love;
> And through the ages of eternal years,
> Thus saved, my spirit never shall repent
> That toil and suffering once were mine below.

He once wrote to his wife:—

"I have been thinking of the goodness of God to poor unworthy me, until it seems as if my heart would break. It is not often that I can speak or write of my feelings, it agitates me so—but on the whole I have a sweet peace of mind, that leads me to trust and believe, and personally apply God's promises."

Somewhat similar is an early entry in his journal:

"June 22. My birth-day—thirty-five years old. It fills me with confusion to look back upon my life. The coming year shall, through grace, be devoted faithfully to His service, and O Lord, let an abundant harvest of precious souls be gathered into thy flock."

These doubts gathered like clouds even around his dying bed, but the sunshine broke though at last. Never will the writer, who was with him much by day and night during his last illness, forget his final prayers and hymns. Shortly before this, the subjunctive mood of early years had sufficiently grown into the indicative to enable him to put in his journal, under date of October 10th, 1885:—

> And IF I should reach heaven—
> Glory Hallelujah!
> It is done, the goal is won,
> The silver wave doth circle round my feet—
> Heaven is begun.

Through almost all his poetry, even the hymn that was sung at his wedding and that was composed by himself for the occasion, there runs a sad minor strain, like that which ran through the stern prose of his actual life. At times this adds intense pathos to thought already poetic, and gently touches in our own natures a sympathetic chord. What could be more beautiful than those verses written by request in the album of a friend, describing his life as a book, and his hours as its pages, and closing with

> But alas! I stand by my native hearth,
> And the forms that I loved are gone!
> Changed, changed unto me is this beautiful earth;
> Let me pass with the passers on!
> A few more lines on the fading scroll,
> And the tale of life is o'er,
> But its impress, typed on the inner soul
> Will abide for evermore.

It may be that an exact analysis of his character would show that this infusion of melancholy traceable in his writings was also responsible for the shadows which sometimes fell athwart his otherwise strong faith. But that man's faith is most rightly counted "full" who is most *faithful*, and in this Dr. Brown had few superiors, alas, all too few peers. The element of melancholy has now been removed, for the great Musician has re-arranged his song, and changed it to a major key. To adopt part of the sonnet Dr. Brown wrote on the death of Mrs. Simons, we may say:—

> But now no longer o'er thy griefs we sigh;
> Since thou art gathered to the glorious fold
> Where the kind Shepherd wipeth every eye;
> And radiant there with immortality,
> His lovely face thou ever dost behold,
> And with the pure and perfect walk the streets of gold.

Brethren, it is now nearly a decade since the hand into which you have put the pen for writing this sketch was entrusted with transcribing to a granite slab the inscription now visible over Dr. Brown's grave. Such privilege is deemed an honour. At the same time there is the consciousness that all that is *valuable* in that inscription, is of Dr. Brown, and all that is *durable*, is of him who cut deep what would have otherwise been washed off by the first summer's rain. If this sketch has faithfully portrayed a loyal man it has value, yet only because of *his* worth. May the divine finger, which writes now on tables of stone, now on the fleshly tables of our hearts, grave deeply in us the lessons we should learn. May God make us all better—more loyal for the future, and help us even now, before our eyes are withdrawn from the portrait to-day unveiled, to ponder the words once addressed by Dr. Brown to another assembly of Christian workers:—

"Let us stand side by side as brothers. If we are all pressing forward to the same Kingdom, let us help and encourage each other by every means in our power. Let no unhallowed strifes mar the beauty of our onward march; no painful reminiscenes of unseemly discords, unkind words or acts be left for explanation and settlement after we reach heaven. Let us be careful to avoid the occasions of alienation, not attempting to control the religious views of others, but looking well to the consistent and faithful practice of our own. Above all, let us take care how we build. Let us endeavour to plant living churches of God, here upon this virgin soil, in as exact accordance with the New Testament pattern as possible, honestly aiming to follow the Master, irrespective of any human teaching. And let us have faith to believe that out of our denominational organizations God will select for the Church of the future all the excellencies that are to be found in each, while He purges them from every spot and stain, that we in our weakness and ignorance have suffered to remain. Let us so pray, and so preach, and so live, that the proportion of hay, wood, and stubble in our respective churches may be reduced to the smallest possible dimensions; and when, perhaps, some darling scheme or theory that we have cherished is swept away by the increasing light, let us be ready to say, Amen! God be thanked for this also."

THE BATTLE OF KANGWANGTSAI

(From an occasional Correspondent.)

Kangwangtsai, April 11th, 1895.

By a convenient coincidence, the *Weekly Mail* of March 23rd, containing a reference to the conflict between the Chinese and the Japanese accounts of the battle of Kangwangtsai, reached me here to-day. This conflict of evidence, of which I had heard a good deal from the Foreign Residents of Newchwang, had puzzled me also, but this morning I was taken over the field of battle by one of the officers of General Katsura's Staff, and learned how the mistake occurred. The Chinese were quite right in denying that four bayonet charges were made by the enemy, and the Japanese official reports are in error on this matter. What actually took place was this. The Japanese were fighting under great difficulties. They were advancing in the face of a largely superior force; they had the setting sun in their eyes; the artillery in the background was unable to give any effective support to the infantry owing to the fading light and gathering mist. The Japanese infantry, advancing with fixed bayonets, made four successive [illegible] during these halts that the Chinese

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

riflemen, who had the light behind them and were under cover, delivered an effective fire and caused considerable loss to the Japanese. It appears that these four interruptions to the Japanese advance were, by one of those mistakes that are always liable to occur in the interpretation of a *kana* telegram, transformed in the official report into four bayonet charges. The enemy finally abandoned their position, and, retreating under cover of the darkness, made good their escape with a trifling loss only. The greater part of the Japanese force had to return immediately to Haicheng, to be ready to repel a possible attack from the north. The earliest of those to return did not reach the town till half-past one in the morning. It was in this night march after an exhausting day that such a large proportion of men were disabled by frost-bite.

The Chinese, as I learned in Newchwang (Treaty Port), persistently made light of the engagement of Kangwangtsai. In one respect, indeed, that of casualties, the battle was a much less serious matter to them than to the Japanese; but this is, from the military point of view, one of the least important aspects of a fight. The actual results of the battle were, that a force of about 12,000 Chinamen was dislodged from its position by less than half the force of Japanese; that Sung's men were so thoroughly disheartened by their repulse that they made no further attempt to effect a junction with I at Newchwang; and that time was given for the reinforcement of the Japanese garrison at Newchwang. Had Sung and I been able to act in concert in the end of December, Haicheng might have been invested, and the small force then under Katsura's command would have been in a position of great peril.

The strategic aspects of this battle are now, however, matters of ancient history, and I need not dwell on them. My object in writing to you today is merely to vindicate the Japanese official reports from the charge of intentional inaccuracy.

An inspection of the battlefield has shown me once again the utter ineptitude of the Chinese Generals. At the time when the Japanese infantry was advancing westward towards Kangwangtsai, to attack a superior force, which was firing, part through holes in a wall, part under the protection of a bank, there was in a village half a mile to the south of the end of the Japanese line a force of two or three thousand Chinese, held in check by a single company of Japanese infantry. Had this force of the enemy made a bayonet charge on the Japanese left flank, the whole line would have been thrown into disorder, and the Chinese main body, advancing from Kangwangtsai might then have practically annihilated their enemy. But the flank attack was not made, and the Chinese lost the best chance they have ever had of gaining a signal victory.

LETTER FROM ST. LOUIS.

(From our own Correspondent).

St. Louis, March 29th.

St. Louis has just enjoyed a visit from the great evangelist, Rev. Sam Jones. No man in America can draw such crowds as Sam Jones. A visit by the President of the United States would scarcely raise greater enthusiasm, or bring out such gatherings. The distinguished speaker preached every day and night for three weeks in the great Music Hall at the Exposition Building, which is the largest auditorum in the city. Tens of thousands of people flocked to hear him, and the size of the congregation was only limited by the capacity of the hall. Every Sunday afternoon only men were admitted, and after 7,000 people were packed in, hundreds could not find admittance. Last Sunday evening he preached his last sermon, at which fully 15,000 people were present. After the Hall was crowded, the evangelist mounted the steps in front of the door and spoke to 6,000 people on the streets who could not get in, after which he went in and preached to the 7,000 inside. The Rev. Stewart, his co-labourer, preached in an adjoining hall at the same hour to several thousand people. The papers printed his sermons daily, and it is safe to say that such a meeting was never before held in this city. The speaker denounced the sins of the times in bold language, and criticised public officials in a rambling manner. Sam Jones is a man to himself, peculiar in style, and a giant of the times.

News has just reached America of the attempt to assassinate Li Hung-chang in Japan. It is received as a sad bit of news by the admirers of Japan. All think here that no greater calamity could have befallen the country, as it creates a bad impression of Japan, especially as this is the second time a foreigner of note has been attacked while in the country, by a Japanese.

A movement is now on foot in this city to prosecute all saloons and stores that sell on Sunday. Two cases have already been tried in the Court of Criminal Correction, and convictions were obtained in both. There are thousands of Jews and foreigners in the business here who disregard the Christian Sabbath, and the movement points to the closing of all such places.

The Public Safety Committee, which has been prosecuting election frauds for several months, is still hard at work, and a number of persons who voted more than once at the last election are in a good way to spend several years in the state penitentiary.

The criminal docket of the St. Louis Criminal Court has been so crowded for the past two years that it has been impossible to try half the cases. As a result the Legislature has provided for an additional Criminal Court, and this week Governor Stone signed the bill which makes it a law. Within a few weeks a judge will be appointed. St. Louis will have two Criminal Courts which will be in session ten months in the year.

With the return of spring the business prosperity of the country is looking up, and withal everything is progressing in this country very smoothly and satisfactorily.

JAPANESE TOPICS IN AUSTRALIA.

By John Plummer, M.J.S.

Sydney, March 20th.

The death of Sir Robert W. Duff, Governor of New South Wales, has naturally awakened considerable speculation respecting his probable successor, but it is not at all unlikely that the British Government may be induced, by reason of the sudden development of Japanese naval and military power, to select an individual who has, at least, some little knowledge of affairs in the China and Yellow Seas, for with the large and increasing Asiatic population, chiefly Japanese and Chinese, in Australasia and Polynesia, delicate questions affecting the various Colonial Governments and Japan or China, are certain, sooner or later, to arise. Many leading public men in Australasia are beginning to recognise this fact. Major-General Hutton, of the British Imperial Army, and commandant of the Military Forces in New South Wales, at a dinner recently given to Sir W. P. Manning, ex-Mayor of Sydney, said, in the course of a vigorous speech, that within the last few months there had arisen, almost at the door of Australia, a Power great by sea and land, and possessing many of the attributes that made the British people what they were. "There could be no question," he "said, that within the next few months Great Britain and British trade would have to assert themselves in Chinese waters; no one could tell what the future had in store for Australians in a country not many thousand miles from their doors, for the result of these victories of Japan would be the partial destruction of the great Chinese Empire. To Australians, he said, it was not a case of British, but Australian interests. Indicating the importance of the matter, he reminded his hearers that the Chinaman, in a climate as severe as that of Canada, wore quilted cotton. What Australians had to do, if they could, was "compel him to wear wool."

And here, it may be mentioned, will probably be found the basis of a real federation of Australasian and Asiatic interests, for the bonds of commerce are more powerful than those secured by official treaties. The Australasian pastoralists are still anxiously watching an opportunity for opening the Japanese market for the entry of their rich stores of wool. Years ago the New South Wales wool merchants were to be found earnestly discussing the possibilities of trade with Japan. "In 1874," says Mr. P. N. Trebeck, of Sydney, in a letter to the *Sydney Morning Herald*, "I collected all the best lots of wool, bales and cases, from our Agricultural Society's Exhibition of that year, and consigned them to Sir Harry Parkes, K.C.B., at her B.M. Legation at Yeddo, and to his Excellency Okubo Toshimichi, Minister of the Interior Department, Yeddo. A beautiful lot of snowwhite sheep and lambs' wool of Mr. Kermode's was to be presented to the Mikado, and the other was for distribution among the manufacturers. In return, the Mikado sent us some good silk handkerchiefs and neckties, and also some of the cotton rugs and mats generally used in their dwellings. The following year I induced Mr. Faithfull, of Goulburn, to send two bales of his very high-quality wool to Shanghai through Messrs. Gilchrist, Watt, and Co., but both these attempts were allowed to rest for the reason that the price of wool advanced 20 to 30 per cent., and the squatters were satisfied for the time. A few years afterwards, when the price of wool again became low, I tried to induce some of our largest squatters to subscribe sufficient funds to introduce into China and Japan a few simple modern looms for weaving the plainest and most useful tweeds, and in the first instant to supply some wool or yarn; but again the price of wool advanced considerably, and the squatters were satisfied without sending to an experimental market." Mr. Trebeck, like most of his fellow merchants, is extremely sanguine respecting the future. "The war between Japan and China," he says, "is sure to be the means of opening many other ports on the coast of China, and lead to further commercial relations. At the close of the war will be our opportunity to act unitedly and vigorously to again introduce our wool into China and Japan. Both wool and yarn can be supplied cheaply enough now to be worth their favourable consideration, and the reception of the wool would lead also to the use of our meats, which we can supply as cheaply as any country in the world. This movement should certainly be Australian, and all our colonies should unite in making a thoroughly practical attempt to push our wool to the notice of two or three hundred millions of people."

The Port Arthur episode continues to form a subject of comment in the Australasian papers, all based more or less on the reports furnished by the correspondent of the London *Times*, but it seems to be generally conceded that none have more regretted the occurrences than the great body of the Japanese people. Australasians are, however, much perplexed by the contradictory reports received from London.

The Melbourne *Age*, asking what is the prospect before the victorious Japanese, says:—

They may occupy Pekin and deprive the Chinese of their present dynasty, but the spoils of war in the shape of increased territory will be denied them. Even the possession of Korea would in all probability not be tolerated by Russia. The most that they can look for is a heavy indemnity, payment of which they will find it difficult to enforce, and a right of free entry into the territory over which China has held or has claimed to hold sway. In respect to this latter it would appear that she has been engaged in pulling the chestnuts out of the fire for others. The Powers most interested in China's commerce have shown that they are on the alert to turn the situation to their own advantage. The dismemberment of the Empire would probably serve the purposes of France and Russia, which would gladly extend their frontiers in the one case northwards, in the other southwards; but such a settlement would not be palatable to Great Britain. England's interest lies in ensuring increased facilities for trade. Already she practically controls the bulk of the usefully applied revenues collected at the treaty ports of the central province. Sir Robert Hart, the British Inspector-General of Customs, exercises an almost autocratic power as the representative of British commerce, and the improvement which has taken place owing to his wise administration of the revenues entrusted to his care is described as being wonderful. What the mother country aims at is the throwing open of all the Chinese ports, and for the time being France and Russia apparently profess themselves content with this policy, leaving Japan to reap such fruits of victory in the shape of pecuniary compensation and right of free entry into the Celestial Empire as she can wring from her discomfited and disheartened foe.

A Fiji correspondent of the *Sydney Daily Telegraph*, writing from Suva, under date of March 5th, says:—"The steamer *Afghan* arrived here direct from Kobe, early last month. She was sent by the Emigration Department of Japan to convey back what remained of the Japanese labourers imported by the C.S.R. Company in May last for plantation work. Out of 200 apparently sturdy Japanese who landed here 92 have died in this short space of time, and a large majority of them was always in the plantation hospitals. On their way from the company's mill to the steamer, the distance of a few miles, one died, and directly they had embarked a second succumbed. It will be rather interesting to know how many of them eventually reach home. This extraordinary mortality is very difficult to understand, as the company has been most assiduous in its care for them, far exceeding the demands of the contract in this respect; and they have been a source of considerable loss to the company. Beri-beri, the disease from which they have died, was unknown here before their advent—Indians and Europeans finding plantation upon which they have been working a healthy one. They must, under given circumstances, have been exceedingly susceptible to this form of disease." Sir John B. Thurston, Governor of Fiji, who has just left on a visit to England, has given considerable attention to the matter, and during his absence the Acting Governor will continue the investigations already commenced. It is possible that that the bulk of the labourers had come from a comparatively cold climate, and had not sufficient time to become acclimatised. In Australia they are among the healthiest members of the population, but even native Australians find the heat of the Fijian climate unbearable during portion of the summer months, and are glad to escape from it.

RECENT BOOKS ON ORIENTAL SUBJECTS.

The *Dial* of March 16 contains considerable information concerning books, both old and new, written with reference to Oriental Subjects. Mr. Arthur H. Smith's "Chinese Characteristics" has already reached its third edition. The life of Joseph Hardy Neeshima, by Rev. J. D. Davis, D.D., of the Doshisha, is advertised under the appropriate title, "A Maker of the New Japan." The following works have just been issued:—

Chinese Central Asia; A Ride to Little Tibet. By Henry Lansdell, D.D., author of "Through Central Asia." In 2 vols., illus., 8vo. Charles Scribner's Sons. $5.

Diary of a Journey Through Mongolia and Tibet in 1891 and 1892. By William Woodville Rockhill. Illus., 8vo, uncut, pp. 413. Washington: The Smithsonian Institute.

Thos. Nelson and Sons, among new publications, make the following announcement:—

Voyages and Travels of Capt. Basil Hall. With illustrations. 8vo, cloth extra, $2.00.

The writings of Captain Basil Hall have all the interest of a good sea story which is also a true story. Life on board a British man-of-war was a more stirring experience during the five and twenty years before Waterloo than it has ever been since, and the part of Captain Basil Hall's story reproduced in this volume covers ten years of that period of activity. The writer also gives interesting and lucid descriptions of the period. A biographical sketch of the author, who was contemporary and friend of Sir Walter Scott, is prefixed to this volume.

The following books are also in the list of spring announcements:—

Chin-Chin, or the Chinaman at Home by Tcheng-Ki-Tong, late of the Imperial Chinese Legation, trans. by R. H. Sherard, $1.50. (J. B. Lippincott Co.)

The Peoples and Politics of the Far East, Travels and Studies in the British Colonies, Siberia, China, etc., by Henry Norman, illus., $4.

Lotus-Time in Japan, by Henry T. Finck, illus., $1.75. (Charles Scribner's Sons.)

Chinese Characteristics. By Arthur H. Smith. With 16 full-page original Illustrations. 8vo, cloth, $2.00.

Cannot be praised too highly.—*Independent.*
Not only one of the ablest analyses and portrayals of the Chinese character, but on the whole one of the most judicial. Twenty-two years' residence among the people, with command of their language, has enabled Mr. Smith to see them as they are.—*The Nation.*
The best book on the Chinese people.—*New York Examiner.*

A Maker of the New Japan. Joseph Hardy Neesima, the Founder of Doshisha University. By Rev. J. D. Davis, D.D., Professor in Doshisha. Illustrated. 12mo, cloth, $1.00.

Mr. Davis has written most interestingly of him in his surroundings in Japan, of his home life, and of the work which he did, as only an eye-witness could tell it.—*Advance.*

Dodd Mead and Company announce a book that will probably be a strong competitor of the works previously mentioned:—

The Real Chinaman. By Chester Holcombe, late Secretary U.S. Legation at Pekin. Illustrated with 80 engravings from photographs collected by the author. 8vo, $2.00.

Mr. Holcombe's residence of sixteen years in China, his masterly and ready use of the language, and his exceptional opportunities for knowing the Chinese in their homes, have qualified him, as few Americans are qualified, to describe the Chinaman not as he seems, but as he is.

From Houghton, Mifflin and Company comes the following advertisement of a new book that has already been alluded to in these columns and that will undoubtedly find a ready sale:—

Out of the East. Reveries and Studies in New Japan. By Lafcadio Hearn. Attractively printed, with artistic binding. 16mo, $1.25.

Mr. Hearn's fascinating "Glimpses of Unfamiliar Japan" has had a remarkable success both in this country and in Great Britain, and is already in the third edition. The two qualities which most impress its readers are its ample and exact information and the wonderful charm of its style. These qualities characterize in equal degree this new book by Mr. Hearn.

Letters from the Land of the Rising Sun. By Henry Spencer Palmer, F.R.A.S., Major-General (Retired), Royal Engineers. Seventy-six Collotype Illustrations; forty full-page pictures. Yokohama: Published by the *Japan Mail* Office:—

To a graceful and flowing style the late General Palmer united the experienced scientist's keen powers of observation, a sympathetic nature, and a wide knowledge of affairs. Whatever subject he wrote upon he rendered attractive, and in the Land of the Rising Sun he had a rich field before him. . . . . The book is a veritable *edition de luxe*, well printed and bound, and contains seventy-six excellent illustrations in collotype. . . . . We are tempted to make many extracts from General Palmer's pages, but must refer our readers to the book itself, a perusal of which we can assure them will afford them much pleasure.—*Hongkong Daily Press.*

Among the hundreds of letters written from Japan, at the period when that country was emerging from the chrysalis state that followed the declaration of the Era of Progress, few are better worth preserving than those of *The Times* correspondent in the years 1886-92. It is not alone their literary merit—Japan seems to imbue not a few writers with a taste for judicious word painting—that justifies the republication of a number of Gen. Palmer's contributions in book form, but the fact that many of the letters deal with events that are for Japan important matters of history. . . . . A considerable number of social matters are dealt with in a tender and sympathetic manner. Old Japan and its customs are portrayed; the social problems brought about by the social revolution Japan has voluntarily enacted; Japan's amusements; and its religion. . . . . The book is published as a veritable *edition de luxe*, well printed and bound, and illustrated by collotypes in Ogawa's best style. Illustrations from photographs have been brought to a high state of perfection in Japan, and those selected for the "Letters" are of the best, possessing not merely great artistic merit, but also historical interest. The old resident of Japan, no less than the expectant visitor, will find a rich store of ideas and information concerning Dai Nippon collected for him in this handsome volume.—*Singapore Free Press.*

This extensive list would seem to indicate that book publishers are confident that the Oriental war has increased the interest felt in things Japanese and Chinese, and even in all things Oriental.

HONGKONG NEWS.

The *China Mail* reports an interesting Club case from Labuan. Mr. Hugh St. John Hughes (described as the second son of a baronet) is a member of the Executive Committee of the Labuan Club. A candidate proposed by him was blackballed; and in the Club premises Mr. Hughes is alleged to have made certain objectionable remarks for which the Committee, at a meeting to which he had not been summoned, requested a written apology. Mr. Hughes retaliated by bringing an action for libel and defamation, claiming $10,000 as damages. The case was heard by Mr. MacDaniel Bruce, Puisne Judge, who decided for the plaintiff and awarded him $1,000 and costs. The Judge, in the course of his judgment, said he had made it a point of being introduced to the blackballed gentleman, and after ten minutes' conversation he had found him to be well fitted to become a member of the Labuan Club. The Committee propose to appeal, taking the advice of Messrs. Donaldson and Burkinshaw of Singapore, and it is not improbable that Mr. E. Robinson, Hongkong, will be requisitioned to argue the case on appeal. It is stated that the plaintiff has offered to forego the damages if the Committee pay $200 odd to cover the costs and agree not to carry the case to appeal. Mr. E. Robinson has left Hongkong for Sandakan.

One of the "bunders" that did duty as a sensation at the end of last week, remarks the *China Mail*, was the rumour that the German mail steamer *Bayern*, after sailing from Hongkong for Bremen, had gone up the Canton River, presumably to discharge a large consignment of munitions of war. We understand that the vessel seen in the Canton River (which gave rise to the story) was the *Wieland*, a large two-funnelled vessel, painted in such a manner as to resemble somewhat closely the North German Lloyd's mail steamers. If our information is correct, and we have every reason to believe it is, when the *Wieland* arrived at Whampoa her name had been obliterated, not only on the hull but on her boats and deck fixtures and fittings, but she was flying a flag with the name "Wieland" in large characters. Such extraordinary precautions are not taken by the ordinary honest trader, so it may reasonably be conjectured that the steamer succeeded in "running" a valuable cargo in safety, eluding the vigilance of the Japanese fleet which is supposed to be taking every means to prevent the carriage of contraband to China. Incidents of this description will probably have the effect of attracting greater attention on the part of the Japanese to the Canton River. With reference to this steamer the *Shanghai Mercury* says:—The Hamburg-American Line is fast clearing away its old steamers. Recently the *Wieland* was sold, it is said, to a Chinese house, though the medium of Mr. Theod. Lind. The *Wieland* in her time was one of the finest vessels of the old Eagle Line; she was built in 1875, but several times has been thoroughly repaired, and had been provided with triple-expansion engines, and is still a very fine steamship. The *Wieland* is bound for Hongkong, and has already left Hamburg. Near Blankenese on the lower river she was sent ashore by the floating ice, but got off again, and was laying at Bremenhaven waiting for the completion of her cargo. The vessel is now under command of Captain Bruhn, an old China trader.

A Hongkong paper says that a French steamer at present in that port was about to ship 600 Chinese coolies for service as carriers with the French expeditionary forces in Madagascar.

The steamer *Polyphemus*, with touched the Gap Rock Island, has been docked. Her injuries are much more serious than were at first expected, some twenty-five feet of her keel requiring renewal, together with a few plates.

Admiral Buller, the new commander-in-chief of the China Station, may be expected to arrive about the 15th proximo. H.M.S. *Alacrity*, says the *China Mail*, will remain in Hongkong until his arrival. The new cruiser *Rainbow* (for *Severn's* relief) left Suez on the 2nd instant. The *Æolus* and *Undaunted*, which are both repairing defects, will be ready for sea about the end of the current month. The *Spartan* is expected to leave soon for Formosa.

The steamer *Achilles*, says the *Hongkong Daily Press*, met with a serious accident on her way from Hongkong to Shanghai. She was off Pedro Blanco when her shaft broke, and she had to return for the repairs to be effected. There was no alarm felt on board, and the boat was towed into harbour by one of Messrs. Butterfield and Swire's tugboats. The *Achilles* is now lying at Kowloon dock.

At Singapore on the 6th inst. Mr. W. H. Jackson, a member of the World's Columbian Transportation Commission of America, was charged with photographing one of the forts. It appeared that Mr. Jackson had been taking photographs, but was unaware that the fort was included in one of them. The magistrate expressed himself satisfied that there had been no criminal intent on the defendant's part, he confiscated the negatives, and dismissed the case.

AUSTRALIAN ENTERPRISE.

The arrival in Kobe, says the *Chronicle*, of Mr. James Anderson, an Australian merchant of Sydney, New South Wales, may be said to remove the project of opening up trade between Australia and Japan from the region of speculation to that of fact. We have already referred to the horses brought to Japan by Mr. Anderson, but besides specimens of Australian horse-flesh, Mr. Anderson has with him samples of many Australian staples which ought to result in business. Butter can be made in Australia, he asserts, cheaper and of equal quality to that made anywhere in the world. A sample tin of the Ireland Rosebud Creamery, Newcastle, which we have examined and tested is certainly of first class quality, and if it can be laid down in Japan at a reasonable rate should find a good market here. Then again, Mr. Anderson, has samples of leather of all classes, kangaroo included, besides opossum and wallabi-skins, rabbit-skins, calf-kins, basils, horns, hoofs, and shank-bones, glue-pieces, and sinews for manufacturing purposes. We cannot profess to be great judges of leather, but certainly the specimens shown us have a finish, strength, and evident durability that must commend themselves even to those who cannot claim expert knowledge. Passing by the wool-press and water-pumps, which are scarcely likely to find an active market in Japan, though of course the wool samples, both scoured and greasy, may lead to considerable business, we find that Mr. Anderson has samples of Wilkinson's Colonial Wines from the Hunter River; also samples of tinned meats for the army; of wheat; of Lucerne hay, maize chaff, pollard and bran, for fattening cattle and producing a copious flow of milk in cows; and he also has with him many other samples of staples and manufactures which should interest merchants, but respecting which we cannot pretend to give an opinion.

All the samples are on view at the office of Mr. A. Cameron, No. 78B, Settlement, and may be seen there at any reasonable time. Mr. Anderson is staying at the Club Hotel in Division Street, and when not at the Livery Stables at Ikuta looking after the welfare of the horses he has brought to Japan, may be found at the Hotel by anyone who desires to consult him with a view to the introduction to Japan of the various goods we have indicated above. Mr. Anderson is provided with a letter of introduction from the Hon. Sydney Smith, the Minister for Agriculture and Commerce for New South Wales, to the Minister for Agriculture and Commerce in Japan, and as he also holds introductions to the British Minister in Tokyo from the Hon. Mr. Brunker, Colonial Secretary, New South Wales, and the Hon. J. H. Young, Minister for Works, N.S.W., merchants who desire to enter into business relations with him may be satisfied that they are not dealing with a speculative adventurer.

At present Mr. Anderson is especially desirous of introducing the Australian horse to Japan. Of late years the Australians have taken great pains in the breeding of horses, with the result that all the remounts for the Indian army are now procured in the Southern Colonies. Special endeavours have been made by care in the selection of sires and dams to produce horses that shall be serviceable for military purposes, and, judging from the selection of eleven horses to be seen at Ikuta, this object has been attained. There are fine, spirited horses suitable for cavalry and artillery mounts to be seen at the stables, as well as splendid deep-chested animals likely to be found invaluable in the baggage train. Notwithstanding

the long voyage up from Australia, the horses are in wonderfully good condition, and lovers of horse flesh who have not yet seen them will be interested in paying a visit to the Livery Stables at Ikuta. Mr. Anderson would like to give the Japanese Government the first refusal of the horses; and it seems to us that, in view of the decided want of a good strain of horse in Japan, of stuff that will stand laborious campaigning work, the military authorities would be well advised in examining the selection Mr. Anderson has brought with him, with a view to arrangements being made for the introduction of the Australian horse to this country. Mr. Anderson informs us that in the case of a contract, horses from Australia could be landed in Japan within about twenty days, and the suggestion is well worth the attention of the Government.

CHESS.

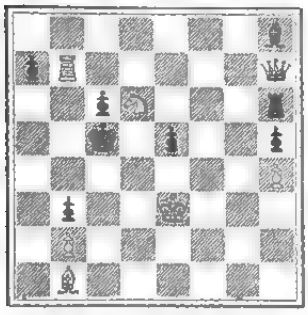
(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club meets at the Club Hotel, No. 5, Bund, on Monday and Thursday in each week from 5 to 11 p.m.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

Solution of Problem No. 173.

WHITE.	BLACK.
1—R to R 8	1—P to R 7
2—R to Q R 8	2—Anything
3—Q, R, or Kt mates accordingly.	



Correct solutions received from Omega, W.H.S., W. Barrie, and J.D.

E. J. King.—Your answer to No. 173 will not do. If Black plays 2—R to Q R 6 there is no mate.

Problem No. 175.

By V. Marin.

BLACK.

WHITE.

White to play and mate in three moves.

Game No. 253.

The following bright little skirmish shows the immortal Adolph Andersen at the best.

"ALLGAIER—KIESERITZKY GAMBIT."

WHITE. Rosater.	BLACK. A. Andersen.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—P to K R 4	4—P to Kt 5
5—Kt to K 5	5—Kt to K ■ 3 (a)
6—B to B 4	6—P to Q 4
7—P takes P	7—B to Q 3
8—P to Q 4	8—Kt to R 4
9—B to Kt 5 ch. (b)	9—P to B 3
10—P takes P	10—P takes P
11—Kt takes Q B P	11—Kt takes Kt
12—B takes Kt ch.	12—K to B sq.
13—B takes R	13—Kt to Kt 6 !
14—R to R 2 (c)	14—B to K B 4
15—B to Q 5	15—K to Kt 2 !
16—Kt to B 3	16—R to K sq. ch.
17—K to B 2	17—Q to Kt 3 (d)
18—Kt to R 4	18—Q to R 3 !
19—Kt to B 3 (e)	19—B to K 4 (f)
20—P to R 4 (g)	20—Q to B 8 ch. ! !
21—Q takes Q	21—B takes P ch.
22—B to K 3	22—R takes B wins.

(a) A perfectly sound defence.
(b) Inferior to Kt to Q B 3 or castles.
(c) K to B 2 is the lesser evil here.
(d) Threatening 18—B to K 4, &c.
(e) If 19—P to B 4, Q takes Kt; so—Q takes Q, R to K ■ ch.; —K to Kt, R to K 8 ch.; so—K to B 2, R mates.
(f) A magnificent combination initiated on Black's 14th move.
(g) If 20—P takes B, Q to Kt 3 ch. and wins.

A Chess Heirloom.

Chambers's Journal gives the following example of the abuse of patience over a game distinction—the one lived at Madrid, the other at Rome—who played a game of chess at that distance. They began when young, and though they both lived to a very old age yet the game was never finished. One of them dying appointed his executor to go on with the game. Their mode was: Each don kept a chessboard with the places ranged in exact order in their respective closets at Madrid and Rome, and having agreed who should move first the don informs his playfellow by letter that he has moved his K P two squares. The courier speedily returns and advises his antagonist that the minute after he had the honour to receive this he likewise moved his ■ P two squares, and so they went on. It would doubtless have turned the brain of either of these two wealthy dons if they could have been present at any of the occasions in recent times when a game has been begun and ended by telegraph between places far apart in a few hours.

Chess in San Francisco.

A four-handed game in which Messrs. Quiroga and Huber opposed Hallwegan and Thompson. Each of the four players made a move in rotation and played independently of the other. The full score of the game appears below, to which is appended several notes furnished by Senor Quiroga.

Game No. 254.

RUY LOPEZ.

White—Senor Quiroga, first move; Herr V. Huber, second move. Black—G. Thompson, first move; Hallwegan, second move.

WHITE.	BLACK.
1—P to K 4	1—P to K 4

20—Q to Q Kt 3	20—P to K B 3 (i)
21—R to Q Kt sq.	21—P to K R 5
22—Kt to K 2	22—P to K Kt 4
23—P to K B 5	23—P to K Kt 5
24—Kt to K B 4	24—Q R to K Kt sq. (j)
25—Kt to K 6	25—Kt takes Kt
26—B P takes Kt	26—Q to K sq.
27—P to Q R 5	27—B to Q sq.
28—P takes ■	28—B takes P
29—R takes P	29—R to K Kt 2
30—P to K 5 (! !)	30—Q to K 2
31—Q R to K B sq.	31—P takes P
32—R to K B 7	32—R takes ■
33—R takes R	33—Q to Q 3
34—Q to R 2 (!)	34—K to Kt sq.
35—R to Q 7	35—Q to K B sq.
36—Q to Q R 6	36—Q to Q B sq.
37—Q to Q R sq.	37—R to K ■ 4 (k)
38—R to K Kt 7	38—P to K 5
39—Q to Q sq.	39—Q to K sq.
40—Q takes P	40—R to R sq.
41—Q takes K P	41—Q takes P
42—P to Q 6	42—Q to R 3
43—Q to K 5	43—R to K B sq.
44—P to Q 7 (ch.)	44—K to R sq.
45—Q to Q 5 (ch.)	45—Q to Kt 2
46—P Queens and mates next move.	

(a) We believe this to be one of the best moves against the Steinitz defense of the Ruy Lopez.
(b) A fancy move, not sound, as, if Black takes Kt will get a superior game.
(c) Wasting time.
(d) Notwithstanding White's attack it would have been better to have castled on the K side.
(e) Kt takes Kt would be much better, as it would prevent the formation of White's strong centre of pawns and give Black a better chance for a counter attack.
(f) Mr. Thompson intended to play ■ to B 3, which seems better than the text move, but as no consultation was allowed he had to be satisfied with the move.
(g) The White allies began to exchange glances.
(h) The White allies continue to exchange glances.
(i) Mr. Thompson's preference was P to B 4, but he did not play it when his turn came for fear of appearing to object to his partner's play.
(j) A useless attack.
(k) "Obligato."

Inheritance.

Inherited qualities move, says Oliver Wendell Holmes, along their several paths "not unlike the pieces in the game of chess. Sometimes the character of the son can be traced directly to that of the father or of the mother, as the Pawn's move from one square to the next: Some[illegible] a line, or a succession of superior mothers, as the Black or White Bishop sweeps the board on his own colour. Sometimes the distinguished characters pass from one sex to the other indifferently, as the Castle strides over the Black and White squares. Sometimes an uncle or an aunt lives over again in a nephew or a niece, as if the Knight's move were repeated on the squares of human individuality."

Game No. 255.

Played recently in Tiflis, and reported in *La Stratégie*, between M. A. de Smitten (White) and Prince Dadian of Mingrelia (Black):—

WHITE.	BLACK.
1—P to K 4	1—P to Q 3
2—B to B 4	2—P to K Kt 3
3—P to Q 4	3—B to Kt 2
4—Q to K B 3	4—Kt to K B 3
5—P to K 5	5—P takes P
6—Q to Q Kt 3	6—Castles
7—P takes P	7—Kt to K Kt 5
8—P to K B 4	8—Q ■ Q 5
9—Kt to K R 3	9—Kt takes K P
10—P takes Kt	10—B takes Kt
11—Q takes B (a)	11—Q takes B and wins.

(a) If P takes B, Q to K 5 ch., wins.

The Great Cable-Match.

London, March 9th.

A large number of chess amateurs assembled to-day in the Victoria Hall, on the second floor of the Criterion Restaurant, which was tastefully decorated with white and gold. It was the same hall in which the famous international tournament in 1883 was played.

At 3.25 p.m. Lasker, the referee, drew for the move, and after the names of the players were exchanged it was the opinion of all that the teams were well matched. The players sat down at separate tables, being roped off from the public, but along the middle of the hall a table with ten chessboards was placed so as to give the spectators a chance to see the progress of the games. On these boards the moves were made simultaneously with those on the boards of the players. Here was where the spectators congregated, and the moves were followed with the greatest interest and eagerness. The cable instruments were placed opposite the players at the end of the hall.

The general opinion prevailed here that the play on both sides was very cautious on all boards. Much disappointment, however, was evinced as time passed, for it was seen that the game could not possibly be fought out. Secretary Bryne said all were very well satisfied with the cabling arrangements, but they can now see that more time should have been given. The experiment, however, was a good one and will certainly result in having an immense influence for the promotion of other international matches.

Lasker had this to say:—"The circumstances considered, the experiment was highly satisfactory. Playing was very good on both sides and the result shows how little difference there really is between the two teams. It was really a great encounter and attracted world-wide interest. The British chess club gathered a very strong team."

It was a rather dramatic scene when the play was stopped. Sir George Newnes had cabled to New York, at Lasker's suggestion, to call the match a draw, and he sat down beside the operator awaiting an answer. Time passed and no reply. At 11.30 the manager of the hall asked all to leave. The officers of the British Chess Club requested to be allowed to stay until the answer to their query arrived. The manager, however, replied that he must close the premises, and that the electric lights would be switched off at midnight. Newnes and the others showed the greatest anxiety and uneasiness as the hour approached. Lasker declared he would have to leave in order to catch a train but he was persuaded to stop a few minutes longer. Again the manager of the hall appealed to the people to depart, and then, as the hour struck, the lights went out, leaving the room in darkness except for a few gaslights under the ceiling. As they were leaving the room the instrument clicked. Newnes and the others halted and the operator shouted:

"Draw accepted."

"Tell them," cried Newnes, "we are giving three cheers for the Manhattan Chess Club," and, lifting his hat, he shouted "Hurrah!" and the company warmly responded.

As Newnes left the Criterion one of the company asked him whether he was satisfied, and he answered: "Yes; entirely so. It has been great."

The New York End.

New York, March 9th.

The cable chess-match between the Manhattan Chess Club [illegible]

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

6.30 o'clock one game was finished, its result being a draw, and the games were left in such a doubtful state when play was stopped that a decision was considered impossible.

When Lasker was asked at London to adjudicate upon these games he proposed that the match be called a draw, as the adjudicating of the remaining games could not be satisfactory to either club. The proposition was accepted and the match declared drawn.

Hundreds of chess-players from all parts of the country were at the Manhattan Club throughout the day. The arrangements were excellently carried out, and the whole event went off in the best possible and agreeable manner.

The only game which was finished was that between D. G. Baird and Mills. This resulted in a draw.

Lipschutz had an advantage at one time, but Owen managed to equalize things later on.

Showalter, on the other hand, had a decided advantage when the game was stopped and it looked as though he should have won had the contest been continued to the end.

Hodges could not make any headway against Locock, the game being even all the way through.

Hanham and Lord only played a few moves, as a mistake was made in calling this game, and a good deal of time was lost in rectifying it.

Ryan succeeded in getting a strong attack on Guest, and with clever play he ought to have won had the game been finished.

The game between Isaacson and Mortimer was prettily played, each having an attack ready when play ceased.

J. W. Baird and Trenchard were well matched and the game was even throughout.

Heppel gave up the exchange in his game with Simonson, and having a decided advantage in position the former might have won.

Devisser had the better of a game against Hunter, and was looked upon as a sure winner before the time was called.

Showalter and Baird entertain the opinion that the Manhattan Club would have beaten their opponents had the games left unfinished been played out.

A very appropriate corollary to the amateur match between the Manhattan Chess Club, of New York, and the British Chess Club, of London, is suggested by the *New York Tribune*. "Should the match be played there is no reason why another encounter should not take place, the teams representing the strongest American and British talent. If Steinitz, Showalter, Hodges, Pillsbury, and another were to meet Blackburne, Gunsberg, Mason, Teichmann, and another, there would be a capital contest." The *New York Clipper* approves of the idea, but regards "capital contest" as an inadequate phrase, instead of which it would read "the greatest event of trans-Atlantic chess ever set on foot."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, April 21.

It is reported that Germany, France, and Russia have agreed to take joint action to protect their interests in the East.

A Chinese loan of three millions sterling has been concluded by a German syndicate.

London, April 23.

The Times, in a leading article, states that Her Majesty's Government has acted wisely in refusing to join the other Powers in putting pressure upon Japan in regard to that country's treaty of peace with China, and that the proposed naval demonstration in the East is impolitic in view of the conditions of peace not in any way directly menacing British interests.

London, April 24.

The race for the City and Suburban resulted as follows:—

Mr. T. Cannon's Reminder 1
Lord Cadogan's Stowmarket..... 2

(FROM JAPANESE PAPERS.)

Hongkong, April 24.

As the pest is now prevalent at Macao and on the island of Hainan, the Governor of Hongkong has prohibited the arrival of Chinese from the two places. It is supposed that two or three cases of the plague have appeared in Kwangtung.

Steps, Officers, [illegible] mation of the Captains, Officers, and men of the *Yiksang* will be concluded by Saturday next. The Court is sitting all day. Mr. Masujima has again urged his former prayer for the release of the vessel.

Hiroshima, April 25.

Field-Marshal Count Yamagata, who was suddenly called to Port Arthur, has postponed his departure for a while.

Mr. Ito Miyoji, who was to leave here on the 28th or 29th inst. for Chefoo, will, it is said, set out for his mission on the 2nd or 3rd prox.

Hiroshima, April 26.

The Empress, escorted by the Chief of Police and a number of mounted soldiers, left Headquarters at 7 a.m. to-day, and started from Ōsuga Station by the 7.30 a.m. train for Kyoto. Among those who assembled at the station to bid her farewell were Count Saigo, Major-General Kodama, Mr. Okuyama, President of the Hiroshima Court of Appeal, and many other civil and military officers, members of the Red Cross Society, and leading residents of this town. When Her Majesty left her temporary residence a salute of 101 guns was fired in her honour. Both sides of the Imperial route were crowded by soldiers, school boys, and residents, and all houses were decorated with flags and lanterns.

Söul, April 26.

Kim Ka-chim, Vice-Minister of Public Works, has been appointed Minister of Agriculture and Commerce.

Shimonoseki, April 26.

The *Satsuma Maru*, which arrived here last night from Talien, brought Lieut.-Colonel Ikeda, Mr. Ishida Kannosuke, M.P., and Colonel Wogack, of the Russian Legation, and the party left for Ujina this morning in the same vessel.

Shanghai, April 26.

The Viceroy Li and Prince Kung are still at Tientsin.

Lord Li and Mr. Foster have proceeded to Pekin with the Peace Treaty to obtain the Imperial ratification.

Kobe, April 26.

Count Ito, the Premier, who visited Maiko yesterday morning, returned to Hiroshima by the 8 p.m. train yesterday.

Hyogo, April 26.

Viscount Mutsu, Minister of Foreign Affairs, who has been staying at Suma for the benefit of his health, is now nearly recovered, and is busily engaged in public affairs. After the visit of Count Ito, he exchanged frequent telegraphic communications with Hiroshima and Tokyo. The Viscount will probably return to the Principal Head-quarters.

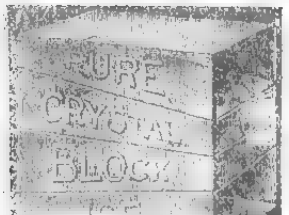
TEA.



Supplies are coming to hand in small quantities, and the *City of Peking* has the first shipments of the present season. They are, however, not of much account, either as regards quantity or quality. In fact tasters are dissatisfied with the new leaf (which, however, is eagerly taken up in small parcels at prices between $40 and $50 per picul) and say that prices paid are very high, as compared with the opening of last season.

EXCHANGE.

Exchange has fluctuated during the week, but rates at the close are firm at the rise of ¼ which is the latest movement.

April 27th, 1895. 3ins.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposer of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unrivalled purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea spoonful of Ointment was worth a fowl and any quantity of eggs and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughou World. May 1st, 1890.

THE PROCEEDINGS

OF THE

IMPERIAL JAPANESE DIET

IN BOOK FORM.

THE "Proceedings" include EPITOMISED DEBATES, Translations of the Bills discussed, Budgets, Speeches of the Ministers of State in full, Questions put and the answers of the Government, and the Legislative Work of the Session.

PRICE $1.

To be obtained at the Office of the *Japan Mail*, No. 51, Main Street.

THAMES ELECTRIC & STEAM LAUNCH Co

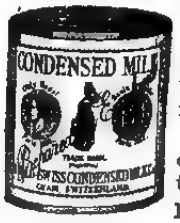
ELECTRIC LAUNCH "GLOW-WORM," 85ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings and Specifications for Launches in Wood, Steel, Delta Metal, or Composite, either with Steam or Electric Power—Speed from 6 to 20 miles per hour;—also Tugs, and Stern Wheelers, which, if required, will be prepared and constructed in Sections.

Launches of specially Light Draught constructed for Shallow Waters.

Electric and Steam Pinnaces for Harbour or Ferry purposes.

Builders of Electric Charging Stations, Floating or Stationary; and makers of all required fittings and equipments.



A selection of Electric Launches always ready for prompt delivery, of which particulars will be forwarded on application to

W. S. SARGEANT, M.I.M.E., *Manager.*

TWICKENHAM, ENGLAND.

April 23rd, 1893.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

September 8th, 1894.

ASK FOR

LIEBIG COMPANY'S EXTRACT OF MEAT

And see that each Jar bears Justus von Liebig's Signature in Blue Ink across the Label.

J. Liebig

FINEST AND CHEAPEST MEAT-FLAVOURING STOCK FOR SOUPS, MADE DISHES AND SAUCES.

Invaluable as an Efficient Tonic in all cases of Weakness.

Keeps good in the hottest Climates, and for any length of time.

To be had of all Storekeepers and Dealers.

The Company's NEW COOKERY BOOK sent free on application to

LIEBIG'S EXTRACT OF MEAT CO., Ltd., 9, Fenchurch Avenue, London, England.

Cookery Books on Application to Office of this Paper.

June 14th, 1894.

DINNEFORD'S MAGNESIA

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Bilious Affections.

The Physician's Cure for Gout, Rheumatic Gout and Gravel; the safest and most gentle Medicine for Infants, Children, Delicate Females, and the Sickness of Pregnancy.

Sold Throughout the World.

N.B.—ASK FOR DINNEFORD'S MAGNESIA.

January 1, 1895.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, MAY 4TH, 1895.

BIRTH.

At Nagasaki, on April 22nd, the wife of G. MÜLLER-BERCK, H.I.G.M.'s Consul, of a Son.

DEATH.

On Saturday, 27th April, at No. 98 Bluff, PAMELA MARGARET, the beloved wife of John Carst.

SUMMARY OF NEWS.

THE Court and the principal head-quarters are now in Kyoto.

MR. WOLLHEIM, the Mexican Minister, returned to Japan on Wednesday.

SOME amateur theatricals will be given in the Public Hall this evening.

MING, the ex-Premier of Korea, has gone from Hongkong to Shanghai.

FIELD-MARSHAL COUNT YAMAGATA has left Japan for the occupied districts.

THIRTY-SIX houses were destroyed by fire in Asakusa, Tokyo, on the 30th ult.

A WHOLE village of 300 houses has been destroyed by fire in Gumma Prefecture.

THE Indo-China steamer *Yik-sang* has been released by the Sasebo Prize Court.

THE grand celebration of the anniversary of the removal of the capital to Kyoto, has been postponed, the Emperor unfortunately having caught a cold, and thus being unable to be present on the day first fixed.

THE total number of Japanese gendarmes now in the occupied territories exceeds 1,300.

VISCOUNT MUTSU is still far from well, and is not expected back in Tokyo for some days.

THE sittings of the Tottori Prefectural Assembly have been suspended by the Governor.

MR. HYODO, of Osaka, is projecting the establishment of a large grazing ground at Chinchow.

TWENTY-ONE houses were destroyed by fire in China Town, Yokohama, on Tuesday morning.

THE Yokohama Rowing Club will be represented in four races at the Kobe Regatta, fixed for the Queen's Birthday.

THE Yokohama Sailing Club opened its season to-day with two races, one for the 26 and the other for the 17-raters.

PRINCE KOMATSU and staff have arrived at Port Arthur, where they were met by Field Marshal Count Oyama and staff.

OVER five hundred houses have been destroyed by fire at Takasaki, one of the chief towns of the silk-districts.

THE death is announced of Mr. Suzuki Shoji, ex-Radical M.P. for Niigata Prefecture, which took place in the capital on the 30th ult.

MR. ISHIWARA, ex-Governor of Yamaguchi, will shortly proceed to Korea. It is rumoured that he will be appointed adviser to the Peninsular Government.

A FORMOSA SOCIETY (*Taiwan Kyokai*) is to be formed in Tokyo with the object of inquiring into the manners, customs, geography, products, etc., of the island.

THE Spring Meeting of the Nippon Race Club took place on Wednesday, Thursday, and Friday of this week. Mr. Kingdon, on Dodo, won the Ladies' Purse.

A NOTIFICATION prohibiting priests from entering the capital of Korea has been withdrawn by the Korean Government at the request of the Japanese priests.

THE situation of Japan *vis-à-vis* Germany, France, and Russia remains very critical. It is now tolerably evident that China will not ratify the Shimonoseki Treaty.

A COMBINATION of all the political parties is being arranged in Kyoto and Tokyo to debate the situation created by the interference of Russia, Germany, and France.

MANY metropolitan and provincial journals have been suspended during the week. The *Jiji Shimpo* and the *Nichi Nichi Shimbun* have been allowed to appear again.

THE funeral of the late Viscount Kono Togama, the distinguished statesman, took place in the capital on the 28th inst., the ceremonies being in accordance with *Shinto* rites.

SURGEON MITAMURA, now in the Pescadores, reports that the spread of cholera in the neighbourhood of Makung has been greatly checked, and only two or three cases are now reported per day.

THE number of Chinese residents in Japan at the end of March last was as follows:—10 in Tokyo, 27 in Hokkaido, 72 in Osaka, 1,247 in Kanagawa Prefecture, 500 in Hyogo Prefecture, 329 in Nagasaki Prefecture; total, 2,186.

MR. KUSHIDA GIHACHI, a leading Unionist in Asakawa-mura, Minami-tama District, Tokyo, was murdered during the night of the 24th inst. He had been actively engaged during the day in the interests of his party in connection with the approaching election of members of the village assembly. Several arrests have been made.

THE Emperor has been graciously pleased to send presents to all the sick soldiers at the Pescadores. The articles were conveyed by the *Konoura Maru*, which lately left Ujina for the south.

THE Emperor and Empress, have presented *yen* 5,000 to the Hiroshima residents to be used on sanitary improvements, and *yen* 1,000 has been contributed to the Society for the preservation of the Itsukushima Shrine.

As experiment with gunpowder invented by Mr. Sakurai Heikichi is now being made at the Shinagawa forts. Satisfactory results were obtained in regard to its smokeless nature, but its explosive force is very weak and the powder is not entirely noiseless when discharged.

REUTER telegraphs:—A reservoir has burst at Bousey, near Epinal (in the Vosges), and 110 persons have been drowned, and several hundreds rendered homeless. Lord Cromer, H.B.M. Agent and Consul-General in Egypt, has issued his annual report, in the course of which he states that the Egyptian Ministers and the higher English officials were working in cordial co-operation, and that he hoped there would be no untoward event to mar the present *entente*. Mr. William Woodall, Financial Secretary to the War Office, replying to a question in the House of Commons, said that the Government hoped to introduce after Easter a Bill which would enable the services of Volunteers to be accepted in the event of a national emergency. The Irish Land Bill was read a second time in the House of Commons without a division. The engagement of Lord William Beresford to the Duchess of Marlborough is announced. The French, German, and Russian Ministers in Tokyo have officially remonstrated against the cession of territory on the mainland made by China to Japan. The British Commander, in enforcing an ultimatum, has allowed Nicaragua three days; and failing payment of the indemnity by that time has stated his intention of blockading Corinto and landing a force to occupy the town.

THERE is a combination of circumstances to deter business, and the condition of the Import trade is decidedly lifeless. Exchange declining has tended to advance quotations, and the political uncertainty in regard to the prospects of peace and possible foreign complications, have together worked in the direction of restricted operations, in addition to which the race holidays have added their quota to the situation. Affairs will probably be more settled in a week or ten days from now, when it is hoped that trade will resume its ordinary course. Manchester goods and Metals are hardly touched, and the same may be said of Kerosene, though from a different cause. The Sugar trade is quiet, but there is a good stock and holders are firm. There has been a little more done in Raw Silk, but the total does not amount to much. The Waste Silk business is quiet, as might be expected after the recent large reduction made in the stock on this market. The Tea trade will very shortly be in full swing, arrivals are already coming in more freely, and in another few days some heavy parcels of leaf may be expected. Prices have been somewhat irregular so far. Exchange has been fluctuated, and the general tendency has been downward.

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Apparently a reaction is setting in with regard to public belief in China's good faith. The majority of the vernacular newspapers, while thoroughly sensible of the habitual perfidy of China in matters of diplomatic negotiation, were nevertheless persuaded, on the occasion of the Shimonoseki Treaty, that the Chinese Government had resolved to depart from its wonted routine and to carry out the agreement conscientiously. They thought that China recognised her helplessness, and would not venture to provoke a renewal of the war. But when the stipulated period of 3 weeks, within which the exchange of ratifications was to take place, gradually drew so near its close that only a few days remained, and yet no definite message came from China, the press naturally began to suspect her sincerity, the more so since the Emperor of Japan had ratified the Treaty on the 20th ult., by which date, according to some newspapers, the two High Contracting Parties had pledged themselves to mutually communicate the fact that ratification had taken place. The *Nichi Nichi* writes as follows on this important topic:—Even making every allowance, the Viceroy had ample time to submit to his Sovereign the Treaty concluded and signed by him, and to obtain its ratification within 10 days subsequent to its signature at Shimonoseki. Nevertheless, two weeks have already passed since that time—this article appeared on the 2nd instant—yet nothing is yet heard of the ratification. Is the Court of Pekin determined to regard the Treaty signed and concluded by its Plenipotentiary as so much waste paper? If so, there can be no issue except a renewal of the war. Is Mr. Ito, Japanese Plenipotentiary for the exchange of ratifications, to go to Chefoo on the presumption that within the period fixed in the Treaty, China will despatch an Envoy to the appointed place carrying the ratified treaty? Or, is he to go there without counting on any such event, but simply for the purpose of faithfully and resolutely fulfilling the promise by which Japan and China alike bound themselves?" The *Nichi Nichi* inclines to believe that the latter course is contemplated. It does not know whether the Japanese Plenipotentiary has been invested with any function other than that of exchanging the ratifications, but if the ominous cloud that has now appeared on the horizon of the Orient, just as serenity and tranquillity were about to be restored, is destined to burst once more into storm and tempest, the departure of Mr. Ito will mark an important epoch in the history of the war. A common-sense view of things leads the *Nichi Nichi* to believe that China will not be so depraved as to disgrace herself by another grave breach of international faith: that she will not reject a Treaty signed and concluded by her special ambassador and most prominent statesman. But the sky of diplomacy is subject to such sudden changes from such unexpected causes that it is impossible to draw any confident augury before the expiration of another week. The *Choya* and the *Kokumin* are less guarded in their tone, especially the former. It holds that China's negligence to intimate the fact of ratification within the stipulated time is a grave insult to Japan, and it strongly inclined to the belief that this faithlessness will be followed by still greater perfidy on the day when the period indicated in the Treaty expires. What Japan must do under the circumstances is simply to cause her victorious troops to march upon Pekin. The *Choya* sees no occasion and disavows any competence to determine whether it is because China has some secret source of reliance that she acts in such an insulting manner toward Japan. Be that as it may, however, there is no difficulty in inferring the course of events that Japan must anticipate. The *Choya* concludes its article by defying any other country to place obstacles in the path of Japan, when the latter proceeds to chastise China for her gross breach of faith.

* * *

The *Mainichi* is not disposed to rate very highly the part that diplomacy has played up to the present in connection with the war. On the contrary, it holds it a very easy matter, as easy as the sailing of a ship before a favourable wind, for diplomatists to deal with a vanquished country. But in the event of certain contingencies arising, or certain inconvenient pressure being brought to bear, then the removed of such pressure or the successful management of such contingencies, so that the object originally contemplated may be achieved, depends entirely on the ability of the country's diplomatists. Only when the ship of State is successfully steered into haven against wind and tide can the trouble taken and the contrivances devised by diplomatists be recognised and appreciated. The *Mainichi* naïvely observes in conclusion that it cannot say whether any such difficult contingency exists or any such external pressure is felt at present.

* * *

The *Jiji* is more appreciative of the part thus far played by diplomacy. It thinks that it was largely due to the Foreign Office's able way of conducting business that Western Powers found no opportunity to interfere. The *Jiji*, therefore, feels grateful, and think that the public should be equally so, towards those charged with the diplomatic functions of the country. But their labours are yet far from being concluded, for not a few Western countries take, from time to time, a deep interest in Eastern affairs. Since nothing is certain or trustworthy in diplomacy, and since one considered a friend on the morning may turn out to be a foe in the evening, the peace now apparently promising to re-visit the sky of the Orient may be disturbed at any time. In short, grave and difficult tasks still await the empire's diplomatists, and the public sincerely hopes that they will dispose of all these tasks in a manner conducive to the glory and advantage of the nation. In such a guarded and indefinite manner do the vernacular papers deal, if they deal at all, with the momentous question of the day, foreign interference.

* * *

At the same time the standing problem, how to manage the Chinese districts ceded to Japan, is not neglected by the press. The *Jiji* suggests that the Government should impose no restraints whatever on Japanese emigration to the newly acquired territories. The great majority of persons moved by a desire to settle in those foreign districts must, it thinks, be poor men of adventurous disposition. Hence, if from any natural wish to preclude worthless vagrants or women of abandoned character from entering the new dominion troublesome rules be enacted, the probable result will be that the territories in question will never be Japonicised or their resources developed and utilized. In another article the same paper suggests the advisability of organizing a big emigration company for Formosa, which island, extremely fertile and full of resources as it is, has never been properly developed by China. What is wanted in Formosa is labour, and when that becomes easily procurable, either the Chinese capitalists now living in the island or capitalists from Japan will be induced to invest their money in various enterprises. With respect to the supply of labour, the *Jiji's* project is to have as much recourse as possible to the services of the coolies now employed at the seats of war. Several considerations induce our contemporary to prefer these men to ordinary labourers.

* * *

The *Mainichi*, writing on the same topic, says that in order to lead the Chinese living in the new dominions out of their present ignorance, the best and simplest method will be to introduce various material forms of civilization, and to teach them the benefit of enlightenment by means of object lessons. Railways and telegraphs should be extensively constructed. Another aid that should be largely enlisted in the same cause is the art of medicine. The Japanese medical art is highly esteemed by the Chinese, and its introduction would serve the good purpose of drawing the affections of the people towards their rulers by conquest.

* * *

The war and affairs incidental to it, though they continue to attract much attention from the vernacular press, have not been absorbing topics of discussion this week. Quite another kind of question has been debated with great earnestness by several of the Tokyo papers. It is nothing more than an oil painting of a nude subject presented to public gaze in the Kyoto Exhibition. The *Nippon* was the first to take up the subject, and as might have been expected, commented on it in a very severe manner. It has written two leading articles to expound its views. It condemns the painting of such pictures as tending to lower the tone of art itself and as disturbing public morals, and it strongly censures the painter, Mr. Kuroda, and still more strongly the Commissioners of the Exhibition who allowed the picture to be exposed. Formerly, it was a common histrionic practice in Japan to represent scenes of great horror and atrocity on the stage, but these were so severely condemned by foreign critics, that the Police judged it expedient to set limits to the abuse. Foreigners, however, are very fond of looking at nude female subjects, a fancy that the Japanese do not share at all. Is it not a peculiar process of reasoning to impose limits on Japanese dramatic representation in order not to offend the good taste of foreigners, and then to hang up a picture of the nude in a public place although Japanese taste is thereby offended? It was wise on the part of the Police to check the representation of disgusting scenes on the stage, but assuredly a similar veto should be imposed on the display of pictures offensive to the good taste of the higher and more refined portion of the Japanese community. The *Nichi Nichi* and the *Kokumin* do not endorse the view of their contemporary. But perhaps we had better quote a letter that Mr. Kuki, Chief Commissioner of the Exhibition, sent to Mr. Ogawa, a Police Inspector in Kyoto, in order to show how it fell out that the Committee decided to allow the public display of Mr. Kuroda's picture. The letter is an answer to one from Mr. Ogura, in which the latter advised the Chief Commissioner to have the picture removed. "It is not from obstinate adherence to any view of my own," Mr. Kuki said, "that I allow the picture to be exposed to public gaze. It is because, officially, I have not yet found adequate reason to order its removal. Nude statues in stone or metal are imported from abroad in considerable numbers, and are used for decorative purposes in the halls or salons of distinguished persons. The importation of such objects of art will continue in future as heretofore. Above all, should a World's Fair be held in Japan at a future date, grave difficulties would be experienced were Japan to interdict the exhibition of nude images or pictures. Such a restriction would seriously obstruct the satisfactory collection of art objects from foreign countries, and might even totally preclude the opening of an Arts section in an exhibition of the kind. Further, even in Japan, Buddhist images and pictures drawn by Hokusai, Uamaru, and Harunobu depict things of more questionable character than the subject chosen by Mr. Kuroda for his oil painting. Yet these old-time images and pictures are largely reproduced and publicly sold. Perhaps it is because the Kyoto folks are not accustomed to see such a picture that so much noise has been made about it. Tokyo is more advanced in this respect. There the exhibition of such a picture would not create any surprise. It is true that the opinion of the Commissioners was divided at first as to whether the picture should be accepted for exhibition. I represented my views to Viscount Enomoto, and said that, though more or less public censure would be unavoidable were the picture hung, I saw, scientifically and officially, no reason why it should be rejected. The Viscount himself deliberated very much on the question, and at last decided to allow the exhibition of pictures of the kind.

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

but my official responsibilities have obliged me to overrule my private taste. If, however, you, from your official point of view, deem the removal of the picture necessary, or if the Authorities consider that course advisable, then I have only to submit to the order and remove it."

EDITORIAL NOTES.

JOTTINGS FROM THE BATTLE OF NEWCHWANG.

THE following items—for whose authenticity we cannot vouch—are taken from several metropolitan journals, notably the *Kokumin*, *Yomiuri*, and *Miyako*:—In the first attack on Newchwang the Chinese offered a very stubborn resistance. Sliding wooden-shutters, bricks, and other building material were promptly brought by the Japanese soldiers from houses in the vicinity. All these *disjecta membra* were piled on top of each other so as to form a temporary rampart just opposite the city wall. On the heap climbed numbers of sharpshooters, who "potted" the Chinese whenever they made their appearance above or near the wall. Foremost among these marksmen was Lieutement Mimura, one of the heroes of the memorable escalade of the gate at Phyông-yang. He alone is said to have sent ten Chinamen to another and a better world.

* * *

At the moment when the fighting in the streets was at its hottest, Major-General Oseko was at the northern extremity of the city, in command of the troops there assembled. Suddenly a Chinese trooper sprang from a corner where he had lain concealed, crossed the river, and continued running eastward at the top of his speed. The General turned to the soldier in immediate attendance upon him and ordered him to shoot the fugitive down. Sighting for three hundred mètres the trooper took careful aim and brought down the runaway, who was hit in the thigh. Oseko was much pleased with the shooter's skill and exclaimed, "You are indeed an excellent marksman!"

* * *

Among the many corpses that lay scattered through the streets of the taken city, there were several dressed in clothes of very rich material. One particularly well-dressed corpse was discovered close by the North Gate, a richly caparisoned horse, mortally wounded, being beside the dead man. There is little doubt that this was the body of the Chinese General Li, who had signalised himself by seeking for a place of safety shortly after the battle began, and thus met with a craven's fate.

* * *

Shortly after Colonel Sato received his severe wound, his favourite horse, which had been left in charge of a groom, received a bullet in its chest. The horse was a coal-black steed of mixed breed, very sturdy and swift-footed. The groom bestowed the utmost care upon his master's favourite and succeeded in getting the suffering animal outside the city. But here the horse broke down and fell to the ground in mortal agony. The groom was at his wit's end, and longed to tell his master of what had happened, but feared that this might aggravate the Colonel's distress. At last he approached a lieutenant in the Colonel's regiment and asked 'if he might tell his master of the accident that had befallen his favourite charger?' The lieutenant decided that it was better not to do so, and that groom went sorrowfully back to the horse, which bled to death that night.

* * *

Field-pieces were several times used in clearing the streets of the enemy, and the shells wrought fearful havoc in the narrow thoroughfares. One of the shells fired from a battery of the Fifth Division was afterwards found to have killed no less than sixty Chinese troopers. It had happened to strike in the very midst of a dense crowd. "This shows," comments a contemporary, "that street-fighting is the cruellest of all cruel warfare."

PREVENTIVE MEASURES.

VERY praiseworthy are the efforts made by the Tokyo municipal authorities to prevent, if possible, the advent of cholera, or at least to minimize its effect if the dread visitor does come. Not only are drains and sewers subjected to thorough disinfection, but whole rows of houses, in quarters where low malarial fevers are of occasional occurrence, are being condemned and torn down. Police constables have been sent to every house in the city with the order that all cases of stubborn dysentery or diarrhœa or any sudden attack of the kind, shall be at once reported to the nearest Police Station; moreover, disinfection or removal of all offensive matter is insisted on. The price of carbolic acid has locally gone up more than seventy per cent. in consequence of these excellent regulations. If cholera does come to Tokyo—*absit omen*—it will find very few places where it can breed and spread undisturbed. The bacilli will be drowned in a deluge of disinfectants.

* * *

Some years ago a Cholera Hospital of very small dimensions was, we understand, erected in Benten Cho, Ushigome District, not far from Waseda. This building has never, we learn, been used for the purpose for which it was intended, owing to the violent opposition of the people living in the vicinity. The house is still standing, but will not be used as a Hospital except in case of violent epidemic. Much roomier premises have been taken elsewhere.

IN DISGUISE.

A CORRESPONDENT of the *Yomiuri Shimbun*, in speaking of the various disguises employed by Chinese soldiers to effect their escape, tells the following story:—One night, shortly before the attack on Newchwang, some outposts of the Fifth Brigade noticed a Chinaman, dressed in civilian clothing, who passed, or tried to pass, unconcernedly in their vicinity. The man was challenged and brought to a stop. He wore an innocent-looking pack on his back and appeared to be a non-combatant; yet the Japanese suspected him of being a Chinese soldier in disguise, and so sent him under guard to the Regimental Head-quarters, where a number of Japanese troopers were clustered around a fire. The prisoner at once drew near the pleasant blaze, evidently in a light-hearted mood, and while warming his hands chattered volubly to the assembled soldiers, albeit not one of them could understand a word that the man said. Believing that he was merely playing a part, an interpreter was sent for and the suspect rigidly examined: he positively affirmed, however, that he neither was nor ever had been a soldier. On this his bundle was opened and its contents thoroughly inspected, when the man's military badge and several most compromising documents were brought to light. "This," concludes the writer, "is a good example of the deceitfulness of runaway Chinese soldiers." True, but under like circumstances there are very few men in the army of any nation who would have avowed their connection with the enemy militant.

THE TWO THOUSAND GUINEAS.

THE great race at the Newmarket First Spring Meeting has been won by Kirkconnel, a bay colt by Royal Hampton—Sweet Sauce. His two-year-old career will hardly warrant his being described as a brilliant performer, when compared with some others of recent years, as, sent to the post half-a-dozen time over as many different courses, he is only credited with winning brackets in three events, neither of which can be looked upon as a great performance. But the colt evidently took the fancy of Sir J. Blundell Maple, as in the back end last year he was attached to the latter's string at a cost of 5,000 guineas. Kirkconnel first sported silk at Newmarket Second Spring in the Bedford Plate, which he won from eight others by three lengths, but in the New Stakes at Ascot he could get no nearer than third. He won the July Stakes at Newmarket and the Lavant Stakes at Goodwood, but though the colt started favourite in the Middle Park Plate he ran unplaced, and wound up his somewhat in and out two-year-old racing by getting home second to Raconteur in the Dewhurst Plate. Laveno, a bay colt by Bend Or—Napoli, belongs to Mr. Houldsworth, but does not appear to have started as a two-year-old. Sir Visto, a bay colt by Barcaldine—Vista, owned by Lord Rosebery, only ran twice last year, his first attempt being in the Woodcote Stakes at Epsom, where he ran unplaced: but the colt cut a better figure in the Imperial Stakes at Kempton Park, over a mile, in which race he showed his heels to a dozen others, though he only won by a short head. The three colts are all in both Derby and Leger, and are otherwise heavily engaged.

STOCKS.

DESPITE the crisis through which the country is now passing, the war loan bonds remain remarkably steady in the market. The quotations for the bonds on which 40 *yen* has been paid up have been as follow during the past week:—

23rd ultimo	.....	41.80 *Yen*.
24th ultimo	.....	42.00 *Yen*.
25th ultimo	.....	41.80 *Yen*.
26th ultimo	.....	41.50 *Yen*.
27th ultimo	.....	42.00 *Yen*.
28th ultimo	.....	No quotation.
29th ultimo	.....	41.20 *Yen*.
30th ultimo	.....	No quotation.

It will be seen that these bonds are at a premium of from 3 to 5 per cent. Evidently the people have great confidence in the Government's ability to steer the ship of State.

THE "NEWSPAPER PRESS DIRECTORY."

THE Jubilee issue of the "Newspaper Press Directory," Messrs. C. Mitchell & Co., London, has just reached us. It is a most complete volume of its kind, containing particulars of every newspaper, magazine, review, and periodical published in the United Kingdom and the British Isles, besides a list of continental, American, Indian, and Colonial papers, including the English press of China and Japan. The Directory contains several articles of great interest to journalists, and a description of the rise and progress of the Press in the principal English dependencies. At the close of 1894 there were 2,304 newspapers regularly published in the British Isles, and 2,081 magazines, of which more than 487 were of a decidedly religious character.

THE PROGRESSIONISTS.

SIGNS of activity on the part of the Progressionists are beginning to be apparent. On the 28th ultimo, the leading members of the Party now in Tokyo held a meeting at the office, and discussed the phase of the country's foreign relations. They resolved that visits must be made to the various Ministers of State, and advice tendered to them; that the members of the party now in the provinces must be recalled to Tokyo; that steps must be taken to establish cöoperative relations with the *Kokumin Kyokai*, and that delegates must be sent to Head-quarters. The *Kaishin-to* being the head and front of the Strong Foreign Policy association, it is easy to conjecture what such a meeting as the above implies.

A BASELESS STORY.

THE *Kobe Chronicle* is informed that the story of a sailor having been hung from the yard-arm of the *Vladimir Monomach* as she was leaving Hongkong, quoted from the *Hongkong Telegraph*, is quite untrue. The commanders of Russian war-ships have no power to inflict capital punishment, even in case of murder. An offender accused of a capital offence must in all cases be sent to Russia for trial. In the case of mutiny in time of war a man could be executed, as well as for desertion or cowardice or similar military offences, exactly as is permitted by the military and naval regulations of other countries, but in time of peace no power of capital punishment is vested in Russian commanding officers.

THE "RHEINGOLD" CASE.

WE are glad to be in a position to state that the *Rheingold* case is now [illegible] of being

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

settled. On condition that his decision shall be accepted by both sides, Mr. Enslie, the British Consul, has undertaken to hear evidence in the case and to render a decision, and heavy security has been deposited both by the agents of the steamer and by the charterers. The discharge of the cargo is now going on, and in the course of a day or two the vessel will be able to leave the port. She has been detained here for exactly eight weeks, so that the demurrage claim is likely to be a heavy one. It is estimated that it will be at least a fortnight before the arbitrator can give a decision, as a number of Japanese witnesses are to be brought from Fushiki and other places to give evidence. —*Kobe Chronicle.*

JOURNALISTIC SUSPENSION.

A good deal of grumbling has latterly been heard in Tokyo on the score of the suspension of the local press, hardly one journal having escaped falling under the ban during the last fortnight. That the *Nichi Nichi* and *Jiji* should meet with such a fate was a bolt out of the blue; for the former is popularly though erroneously supposed to be semi-official, while the last time the latter had to do penance of the kind was in 1886, if we remember correctly. Besides, all through the recent troublous months, the *Jiji Shimpo* has walked most warily; has been a disseminator of the earliest trustworthy information from the seat of war; and has altogether done much to increase its fame and assure its position as the first and greatest of Japanese newspapers. A large section of the reading public, therefore, has declared as its opinion that the action of the Authorities in this matter was too precipitate and arbitrary, entirely impeding the expression of public opinion. If, it is argued, the Government desires to keep in touch with the people; if matters are to be arranged on a mutually satisfactory basis; then it is of prime importance that the press should be unmuzzled and permitted to reflect public opinion. But does it reflect such opinion? By far the larger number of the leading journals are recognised organs of political parties, principally the two branches of the Radicals, and it cannot for an instant be supposed that the Japanese people as a whole belong to either one of these two organisations. At all events, the plain aim of the Authorities in this instance is to prevent any growth of popular excitement that might impede the country's safe passage through a difficult crisis. If the press were left free to ventilate extreme views, it might be impossible for the nation to maintain the calm and moderate attitude so essential at such a time.

LIFE IN CANTON.

The *Chinese Mail* (*Wah Tsz Pat Po*) says that rice and fuel are at present very dear in Canton, the former costing over $3 per picul and the latter 50 or 60 cents per picul. As the bulk of the rice consumed in Canton is imported from the southern countries, its dearness may be set down to the present war, but the dearness in fuel, which is a home-production, may not be so easily explained. The cause can be found in the fact that since the winter of last year lekin tax on this commodity has been raised to the rate of one mace per picul by a lekin office in Wong Kong of Shui Hing Fu, in that part of the country whence firewood comes. What with the enhancement in the prices of these staple articles, the long drought since spring of this year, with a prospective failing of the spring crops, and the frequent plundering raids in the city, life in Canton may be imagined.

FANCY BRANDS.

We have on several occasions spoken about the rather high-sounding names that some Japanese manufacturers see fit to apply to their wares. Two instances, deserving wider fame, have recently been brought to our notice. The first relates to a kind of "cure-all" pill styled *Kachi-doki*, or "Victory." That is, of course, as people take it; but one is inclined to fancy that the name refers rather to the joy of the proprietor at placing his nostrum successfully on the market than to any gratitude on the part of a long-suffering public. The *bira*, or posters, bearing the name and supposititious virtues of this new invention are further decorated with a most libellous portrait of Shimamura, the famous bugler at the battle of A-san: he who is the subject of one of Sir Edwin Arnold's latest poems, reproduced some time ago in these columns. But in far more questionable taste is the title chosen for a new brand of cigarettes turned out by a well-known Tokyo tobacconist. They are styled "All-Might;" and though all might suppose that the appellation applies to a tobacco of the strongest kind, this is far from being the case. Experiments prove that the brand is very mild indeed.

ADMIRAL BULLER.

If political considerations ousted Admiral Buller from the North American command, says a home paper, this gallant flag-officer has been selected for another appointment as Commander-in-Chief on the China Station. As a successor to Vice-Admiral Fremantle it would be difficult to find so proper a flag officer to fill this important and anxious post ■ Admiral Buller. He possesses a good knowledge of the station, having commanded the Naval Brigade during the operations against the Malays in 1875-76. For this he gained a C.B.-ship. Hospitable to a degree, with a full purse to dispense it, our future 'Ral in Celestial waters has neither starch, stiffness, nor affectation. Possessing great abilities, and unquestioned tact, he is universally popular among all those that have served, or the many that want to serve, under his flag.

JOURNALISTIC ENTERPRISE.

As an indication of home opinion on the capabilities of Japan as a market for British goods, the *Daily Press* mentions that the proprietors of the *British Trade Journal* have decided to establish an edition of their journal in the Japanese language. It is intended at present to issue it four times a year and it has been resolved to print and publish it in Japan itself. The object of the movement is to bring British manufactures to the notice of Japanese consumers. Mr. W. J. Rivington, the managing proprietor, arrived at Hongkong by the *Kaisar-i-Hind* and came on to Japan by the same steamer to arrange the details for the projected publication. He is now staying at the Grand Hotel.

FIRE IN AMOY HARBOUR.

The Douglas steamer *Thales*, when she arrived at Hongkong from Formosan Ports and Amoy, reports that fire broke out on board the steamer *Taicheong* in Amoy Harbour on the 20th ult. The steamer was laden with kerosene and general cargo. The fire originated in the forward part of the vessel about 2 p.m. Valuable assistance was promptly rendered by the officers and blue-jackets of the U.S. cruiser *Machias*, and Captain Bathurst, Mr. Milroy, and part of the crew of the *Thales*, and the result of their united efforts was to subdue the flames and to save the vessel from being completely gutted. The fire was caused by the overturning of a lamp in the compradore's room.—*China Mail*

THE "YIKSANG."

Friday's *Official Gazette* contains the judgment given by the Prize Court at Sasebo on the 26th ult. in regard to a portion of the cargo of the *Yiksang*. The Judges ordered that a portion of the goods, which they considered were not contraband of war, be released at once. A telegram in another column announces that the steamer herself has also been released.

THE PLAGUE.

Hongkong is seriously alarmed at the outbreak of plague at Macao, the outskirts of Canton, and the island of Hainan, and strict quarantine and preventive measures have been adopted in regard to Chinese vessels and immigrants.

THE SOUTH POLAR SEA.

Advices received from Melbourne state that the Norwegian steamer *Antartic* has returned there from a voyage towards the South Pole. The vessel penetrated the Antartic regions as far as 74° S. So high a latitude has only been attained in the South Polar regions twice before—in 1823 by Weddel, who reached latitude 74°15, and in 1842 by Sir James Ross, who reached 78°10. The voyage was undertaken with a view of discovering fresh whaling and sealing grounds, but from a commercial aspect the voyage was not a success.

THE MINISTER OF STATE FOR FOREIGN AFFAIRS.

Viscount Mutsu's return to Tokyo seems likely to be postponed for a little time. His Excellency's indisposition was aggravated by the journey from Maiko to Kyoto, and it is impossible for him to travel in his present condition.

We learn from Hakodate that the place where the steamer *Rhodora* is on shore is an exposed one, but that hopes were entertained of getting the vessel off within 24 hours.

THE STREET FIGHT AT NEW-CHWANG.

The Chinese that defended Newchwang being entirely out-manœuvred by the prompt evolutions of their assailants, those that had no time to fly quickly found themselves completely surrounded by the enemy. Thus brought to bay, they became desperate and determined, it seems, to fight to the last, for being the so-called veterans of the Liaosiang army, they had more fibre than raw recruits. They took up their positions in barracks, temples, and even citizen's houses, and the most terrible of all fights, a street fight, ensued, lasting till ■■ night. A Chinese building of the better class is very well suited for such a purpose. Being durably constructed of brick and surrounded by high brick walls, it resembles, in many respects, a miniature castle. From behind the shelter of the wall the Chinese fired at the enemy, while some defended the gates or even fired from the roof. In each enclosure there were from 30 to ■ many as 200 desperadoes, and as they offered the stoutest resistance, and fought, not as on other occasions, but with the fury of madmen, their assailants were obliged to employ the utmost caution. When Major Ishida surrounded one such enclosure and sent a native to summon the little garrison to surrender, not only was the summons rejected, but the native who acted as envoy was killed. The Major made his soldiers drive holes in the wall through which to fire upon the defenders, but the latter utilized the holes in the contrary sense, taking advantage of a moment when the Japanese were off their guard. The Major therefore decided to lead his soldiers in through the front gate, which manœuvre was accomplished with a rush. A terrible struggle ensued within the enclosure, and at last all the inmates, some fifty in number, were put to death. But it being afterwards considered that such a method of attack entailed an unnecessary waste of life on the part of the Japanese, the houses in which the Chinese attempted resistance were broken open with gun-cotton or dynamite, and their defenders, hunted out in that summary way, were shot or cut down. The Japanese shouted a war-song as they blew up one house after another. But the enemy behaved like wild beasts at bay. Many that had been driven out from their strongholds concealed themselves behind any shelter available, and still continued firing on the Japanese, even hurling bricks and stones at them when their ammunition was exhausted. The stoutest stand, however, was made by the troops that took refuge in the two barracks, the western and the eastern. Even after the buildings had been shattered with explosives the defenders held out, and it was only when mortars and field pieces were brought to bear upon their positions, and shrapnel shells were exploded among them, that they were obliged to hang out a white flag. The western barracks was the last to surrender, at about 10 in the evening. It was on account of this obstinate fight in the streets, after the main body of the Chinese had retreated, that the loss of the enemy was so terrible in the battle of Newchwang.

WAR NEWS.

SATURDAY, APRIL 27TH.

The *Hiroku Shimpo* gives a statement of the cost hitherto involved in connection with the maintenance of the Chinese prisoners held by Japan. The prisoners, including the officers taken in the Pescadores, aggregate 1,013, and are distributed at Hiroshima, Matsuyama, Osaka, Otsu, Nagoya, Toyohashi, Sakura, Takasaki, and Tokyo. They are fed and clothed exactly like Japanese troops, their daily allowance of rice being 6 *go*, of vegetables and fish, 7 *sen* worth, and of charcoal 10 *sen* worth. Adding to this outlay their travelling expenses (15,000 *yen*), the total expenditure up to date is 55,074 *yen*.

The *Tokei Shushi* says that the total number of patients treated at the Hiroshima hospital from the 8th of July last year up to the 2nd of March this year, was 11,791, of whom 4,429 recovered completely, 4,432 were transferred to other hospitals, 39 went home for treatment, 465 died, 218 were sent out of hospital for special reasons, and 2,208 are now under treatment.

There has apparently been a disposition among certain Japanese to return to China the portion of her Peiyang Squadron now in the possession of this country. The advocates of such a step argue that China being an integral part of the Orient, ought not to be deprived by Japan of all means of maritime defence; that under existing circumstances there is very little chance of her being able to provide herself with new ships for some years; that without ships all the progress hitherto made by her in naval affairs will be lost; that being defenceless, she offers a tempting bait to foreign aggression, and that if her territory be divided among Western Powers, Japan's safety will be menaced. To all this an anonymous Vice-Admiral, quoted by the *Nippon*, replies that the permanent occupation of Port Arthur by Japan puts an end to the idea of China's developing any real strength at sea, and that Japan must take upon her own shoulders the whole responsibility of defending the Orient.

We read in the *Yomiuri* that after the ratification of the Treaty of Peace Japan contemplates constructing in the Pescadores the largest dock in the East.

MONDAY, APRIL 29TH.

It is claimed by the *Nippon* that China has violated the terms of the armistice on a wholesale scale. The armistice does not preclude either Power from moving troops within its own borders or lines, provided that such troops be not reinforcements of armies now actually taking part in the campaign. The obvious and well-understood purpose of this proviso is to leave either Power free to make preparations for any new enterprise, offensive or defensive, that may be deemed necessary in the event of the armistice ending before peace becomes an accomplished fact. According to the *Nippon*, however, the Chinese have taken advantage of the temporary cessation of hostilities to raise their Mukden Army to 20,000 men; the Liaoyang army to 20,000; their troops in the vicinity of Newchwang to 30,000; their Shanhaikwan army to 60,000; their Tsaohokow force to 10,000; their troops between Shanhaikwan and Tientsin to 30,000, and to reinforce their armies in other places by about 30,000. The same journal adds that Liu Kun-yi, the commander-in-chief of the troops defending the overland approaches to China, boasts that he is at the head of 280,000 men awaiting the onset of his foes. We should think that it would be very difficult to prove these breaches of agreement. At all events, they might have been anticipated from the outset. If the Chinese commanders in the field do not know how to respect a white flag, it is not likely that they would be very successful in observing the conditions of an armistice couched in such terms as that signed at Shimonoseki, however solicitous the central Government might be to act in good faith.

The above is not the only violation of the armistice charged against the Chinese. It is further alleged that on the 7th instant the Japanese in Haicheng released about a thousand Chinese prisoners, who proceeded in a body, without arms, of course, to Liaoyang. Coming close to the latter place they were suddenly fired upon by the garrison, 400 of their number being killed and the remainder flying back to the Japanese lines. Opening fire upon a party of unarmed men coming from the enemy's lines during an armistice is a peculiar method of observing a truce. As for the motive that actuated the Chinese to slaughter their own countrymen in such a barbarous manner, one hypothesis is that they regard as traitors all soldiers surrendering to the Japanese, and are prepared to kill them wherever they find them. Another theory is that the troops at Liaoyang were instructed under no circumstances to permit persons coming from the enemy's direction to enter the Chinese lines. The officer in command at Liaoyang is understand to claim that he fired blank cartridge only, and that no one was either killed or wounded. It should be noted that no official statement with reference to any of these occurrences has been published. Possibly they may be greatly exaggerated, if not quite untrustworthy.

The *Mainichi Shimbun* has a note about the Nippon Yusen Kaisha and the probable result of the war upon its finances. That the big steamship company has performed its duty to the country in a thoroughly efficient manner is not questioned, and it therefore fully deserves to be paid for its services. It has had a great fleet of steamers constantly chartered by the Government since last July, and it has received an access of more than twenty-nine vessels, several of which have been similarly chartered, while others have been employed for the purposes of the coast-wise carrying trade. The consequence is, according to the *Mainichi*, that the Company is in a position to declare a dividend of fully 50 per cent. But there is little probability that it will do anything of the kind. It has to consider its position after the war is over, and the numerous responsibilities that will devolve upon it in connection with the opening of new lines and the employment of its largely increased fleet. Various other reasons are assigned for a policy of caution, and the conclusion reached by the *Mainichi* is that the Directors will not declare a dividend of more than 10 per cent.

The days of actual fighting being past, and very little probability existing of their recurrence, no great interest attaches to the composition of the Head-Quarter Staff under H.I.H. Prince Komatsu. The *Kokumin*, however, gives the following:—Vice-Admiral Kabayama; Lieut.-General Kawakami; Mr. Suyematsu Kencho, Chief of the Legislative Bureau; Surgeon-General Ishiguro; Inspector-General Noda; Major-General Teranchi; 38 officers of various ranks, from Colonel to Ensign, and various non-comissioned officers, gendarmes, guards, bandsmen, grooms, and land-transport men, the whole numbering 362, with 95 horses.

From the commencement of the war, writes the *Hochi Shimbun*, until the end of March, the sums contributed by foreigners and Japanese to the funds of the Red Cross Society aggregated 59,138 *yen*: and the articles sent in were:—Materials for bandages, 8,340 rolls, 6,877 pieces (*tan*), and 15 *kwan* 243 *momme* of medicaments; clothing, 2,156 articles; surgical articles, 79 boxes; drugs, 9 varieties; books, 2,614; articles of food, 27 kinds; miscellaneous articles, 32 kinds. The number of persons by whom these various contributions were made, was 22,650 Japanese and 50 foreigners. The Society has now 141,947 members, of whom 81,318 have joined since the war.

The *Chiuo Shimbun* alleges that a telegram was received in Hiroshima on the 27th instant from the Viceroy Li announcing the ratification of the Treaty by the Emperor of China. We do not know how much reliance may be placed in this statement. H.E. Mr. Ito Miyoji, who has been appointed Plenipotentiary for the purpose of exchanging the ratifications, was to have started for Chefoo on the 27th instant, but did not leave Tokyo until the morning of the 28th. If he travels continuously he will reach Chefoo on the 3rd proximo.

The *Hochi* thinks that the sight of a Japanese flotilla of 50 steam transports passing Shimonoseki on the 14th instant, escorted by a squadron of war-ships, had much to do with the Viceroy Li's acceptance of Japan's conditions of peace. But the Viceroy must have known very well what force of transports Japan possesses long before he saw them steam westward from Shimonoseki.

The *Yomiuri* publishes a conversation said to have taken place between a foreign correspondent and Major Ishida at Yingkow. The only point worth noting in the affair is that Major Ishida, pressed to give his opinion as to the result of a conflict between Japan or an anonymous European Power—evidently Russia—said that as the issue of the war with China had been so inconsistent with the forecasts of foreigners, it was possible that the conflict in question might prove a similar surprise.

TUESDAY, APRIL 30TH.

News from Haicheng is to the effect that the troops quartered there, now under Lieut.-General Okubo, are busily engaged constructing temporary forts on the hills that command the approaches to the place. It will be remembered that, according to intelligence from the Newchwang correspondents of Shanghai journals, the hills around the town had been strongly fortified by the Japanese from the close of last year, but the fact is that only slight entrenchments existed throughout the winter. The ground being frozen to a depth of several feet, it would have been scarcely possible to construct earthworks of any consequence. Entrenchments sufficed, however, to defy the frequent assaults of the Chinese, and we learn that the steps now taken by the Japanese to utilize the natural advantages of the place will render it virtually impregnable to any army, except by regular process of seige.

Correspondence emanating from foreign sources places us in possession of fuller particulars as to the outrage committed by the Chinese in firing upon Major Aoki's flag of truce. When news of the armistice and its terms—one of which required that the Generals in the field should lose no time in communicating with each other for the purpose of arranging practical details—reached Haicheng, the First Army had its advanced posts at Anshantsan, mid-way between Haicheng and Liaoyang, the Chinese van being stationed 5 miles farther north on the Liaoyang road. Major Aoki left Haicheng on the 1st instant, with the object of communicating with the Chinese. Arrived at Kanshipu, half way to Anshantsan, he sent a despatch to General I, who commanded the Chinese in that quarter, asking that a staff officer be appointed to meet him. The messenger not returning, another despatch of similar import was forwarded the next day. And this, too, failed to elicit any reply. The messengers sent were Chinese peasants, so that there could have been no difficulty in their reaching their destination. At noon on the 3rd instant, accompanied by only a Japanese who was to act in the capacity of interpreter, and a Chinese guide, Major Aoki set out by the Liaotung road toward the enemy's lines. The party carried a white flag, but when it arrived within 300 yards of the Chinese position, the enemy opened fire upon it, and the Chinese guide was wounded. Major Aoki and his interpreter retired, but the guide, being unable to walk, fell into the hands of the Chinese. After returning to Anshantsan, Major Aoki sent another letter to General I, asking why his soldiers had fired on a Japanese officer carrying a flag of truce during an armistice. Not until the 5th was an answer received. It came from a Chinese Colonel Tsua, and it stated simply that the firing had taken place in ignorance of the existence of an armistice. As to the flag of truce, no explanation was offered. Later on the same day, Colonel Tsua sent two troopers to invite Major Aoki to visit General I, but the Major had now received

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

instructions to the effect that, as the Japanese emissary had been fired upon, no further attempt should be made to approach the Chinese lines for the purpose of communicating: the Major was to wait within his own lines until an envoy came from the Chinese side. The next incident in the story was the receipt of the following letter from the acting Governor of Liaoyang:—

To Field-Marshal Nodzu, Commander-in-Chief of the First Army, and Major Aoki, Staff Officer of the First Army.

I received your letter yesterday and hasten to reply to it. I have now been informed that, according to the will of the Great Emperor of Great China, an armistice has been established between the forces of China and Japan for 21 days, namely, from the 5th of the present month to the 26th. The Great Emperor has given instructions to all the local Governors to inform all the military officers of this fact. I therefore immediately informed all the military officers of the district under my rule. Your army, however, occupied Anshantsan and Chitongzin on the 7th and the 8th of the month. This occupation took place, therefore, after the declaration of the armistice and contrary to its terms. The act was opposed to the will of His Majesty the Emperor of China, and the Japanese themselves in occupying these places were undutiful subjects to their own Emperor. Still, on the day when your army occupied those places, you had perhaps not received orders from your Emperor concerning the armistice, and your action in occupying them need not, therefore, be strongly condemned. Now, however, that you have received orders from your Emperor, you ought to obey, and to withdraw your troops from those places, although I have issued orders to the military officers in the district under my command, to act in strict accordance with the principles of international law, and to do nothing during the armistice that is likely to precipitate a conflict, yet, since there are no less than 300,000 well disciplined soldiers under my command, and these men are of a most loyal spirit, I have some fear lest, in spite of my orders, they should attack your army. I hope, therefore, that you will withdraw your troops to Haicheng, and, awaiting there calmly the conclusion of peace, avoid any disasters that might otherwise unexpectedly overtake you.

I write this letter hoping that peace is about to be secured, and hoping, also, that recognising the force of what I have said, you will act in accordance with my advice.

(Signed) Shui,
Acting Governor of Liaoyang.

The insolent tone of this letter is thoroughly Chinese. As for the charges preferred in it, they are altogether illusory, Chitongzui having been occupied by the Japanese troops on the day before the signing of the armistice, while Anshantsan had been long in their possession, being in fact the place where the Third Division and the Fifth Division joined forces on March 2nd, since which time it has been garrisoned by a Japanese force. Being one of the strongest positions in Manchuria, and commanding the road from Liaoyang to Haicheng, the Chinese would doubtless have been glad to recover it without fighting; hence Governor Shui's trumped up charge. The letter is suggestive of the construction that Chinese officials will put on the arrangements for peace. Of course the Japanese took no notice of such an insulting communication, and they likewise ignored several similar letters subsequently received urging their withdrawal from Anshantsan. On the 7th and 8th of April, messengers were sent by the Chinese General announcing an impending visit of a Staff Colonel, and Major Aoki went out to meet him, but the Chinese officer never came. Ultimately a letter was sent to General I, giving an exact delimitation of the Japanese front and informing the General that no Chinese soldier would henceforth be allowed to enter except for purposes of parley, a necessary warning in view of the fact that the Chinese seemed to consider the opening of communications directed by armistice as a good opportunity for sending soldiers into the Japanese lines. We may mention, in this context, that in response to repeated demands from the Japanese, the Chinese guide wounded on the 2nd instant was returned to the Japanese camp on the 9th.

Wednesday, May 1st.

The correspondence sent to the *San Francisco Chronicle* by Mr. Walter Gifford Smith seems to us to be among the most interesting contributions to the story of this war. Coming to Yokohama, however, at least six weeks after the date on which it is written, it serves sometimes to point very marked contrasts. We quote a few paragraphs:—

The Formosa question is not unlikely to prove troublesome. Next to their ambition to take Pekin the Japanese put the annexation of that island to the empire, but with the news that their troops are about to start that way comes a definite hint, with reasons added, that Great Britain will interfere. Yesterday an English diplomat, in the manner of a man of whom diplomacy had come to require speech rather than reticence, said that with Formosa in the hands of a possible enemy the Australian trade of England would be put in as great jeopardy as the Chinese trade. It was his further remark that Australia is excited on this subject. As for that the Yokohama English colony is also, a petition having been sent by it to the British Government imploring speedy intervention.

"But is not Formosa a geographical part of Japan?" I asked, "and has not Japan the same moral right to take it that Germany had to annex Alsace and Lorraine?"

"Well," said the diplomat, "if you talk geographical logic to Great Britain where would she herself come out? Her empire would be confined to her own group of islands. As to moral rights, Japan may have them, so far as Formosa is concerned, but so have we. It is our moral right to protect the commerce of Australia, Hongkong, and the Formosa Channel—and there you are."

"But what of Russia, which might aid Japan?"

Haven't you read about the visit of the Prince of Wales to the Czar and the friendly relations which have followed?"

Despite the lessons of history touching the friendship and intermarriages of royal houses, the English here are counting very much on Russia's aid, or neutrality, in the event of this phase of trouble in the far East. But for that matter, the Japanese—at least the Japanese of the military party—are also; and as Russia and Japan are bound by the ties of sympathy that always connect two nations whose natural enemies are the same, and as Great Britain is the enemy in the case, it is reasonable to suppose that Japan will find the Czar on her side in the event that a Formosa intervention puts her in need of a strong ally.

We had not previously heard of a petition forwarded by the British community of Yokohama imploring the speedy intervention of the home Government, and we are disposed to think that Mr. Smith is mistaken. Such an important step could not have been taken so secretly as to escape the notice of many persons in the community as well as of the local press. Another statement in Mr. Smith's letter greatly surprises us. It is that "Russia and Japan are bound by the ties of sympathy that always connect two nations whose natural enemies are the same, and as Great Britain is the enemy in this case, it is reasonable to suppose that Japan will find the Czar on her side in the event that a Formosan intervention puts her in need of a strong ally." So diametrically opposed is this assertion to everything seen and heard by us during the past thirty years in Japan that we are disposed to suspect an inadvertent transposition of names on Mr. Smith's part. At all events, he would scarcely be disposed now, we imagine, to describe England as the common enemy of Russia and Japan. Truth compels us to say, though we say it with reluctance, that England's unpopularity among a certain class of Japanese has been due in a considerable degree to American criticism. It is the habit with not a few Americans to depict England in the light of a grasping, selfish, and unscrupulous Power, the terror and foe of all Oriental peoples, and so steadily has this misrepresentation been pushed into prominence that it now commands a measure of credence in Japan. Such criticisms will not outlive the logic of events. To-day for the first time that infallible test has been applied, and we see how the Powers of Europe have grouped themselves under its influence.

Another extract from Mr. Smith's letter is worth noting:—

In Chefoo Lieutenant Beacom met Mr. Cowen of the London *Times*, who has lately been accused in the Japanese papers of having gone to Chefoo to give information to the enemy. Mr. Cowen had been *persona grata* to the army until after he reached Wei-hai-wei, when the text of his long-suppressed "atrocity" letter reached head-quarters. He was immediately called to account by officers of the general staff in such severe terms that the interpreter (as the latter told me) took it upon himself to make a modified translation. Still, enough had been said to give the correspondent an idea of the serious nature of his mistake, and, according to the interpreter's story, Mr. Cowen promised to repair it in his next news letter.

The following day, February 22nd, all the correspondents were sent on board a transport bound for Japan, but Mr. Cowen, leaving his baggage, horse, interpreter, coolie, and even his overcoat and camera, on board, went off to the British cruiser *Porpoise*, ostensibly to take lunch, but he did not return before the transport sailed the Japanese officers were convinced that he had remained on the *Porpoise*, which was to leave that day for Chefoo. Already a "suspect," Mr. Cowen could have done nothing more disagreeable to the Japanese than to venture, without permission, into the enemy's lines, and so it is likely that he will find the Japanese War Office troublesome if he should return to its sphere of jurisdiction. The correspondent's probable reason for going to Chefoo was to get interviews with the paroled foreign prisoners from Weihaiwei. Knowing the man well, I do not find it conceivable that he would carry the Chinese any information from the Japanese side, or that he had any other object in getting to Chefoo except a professional one.

We are glad to see that Mr. Smith does Mr. Cowen the justice of concluding that his visit to Chefoo was purely professional. Mr. Cowen, we believe, went to Chefoo because there only could he hope to learn details of the defence of Weihaiwei—the domestic history, as to speak, of the fortress' fall. At Chefoo only could he meet and converse fully with the foreign employés that had served in the forts and on the ships. But it is due to Mr. Cowen that we contradict most emphatically the assertion that he went to Chefoo—in other words, passed into the enemy's lines—without permission. The truth is that he had been careful to seek and obtain the permission of Field-Marshal Count Oyama before he took a step which, though certainly open to misconstruction, was a natural and even necessary procedure on the part of any energetic and zealous correspondent under the circumstances. The paragraphs we have quoted from Mr. Smith's letter plainly suggest that in consequence of the account of the Port Arthur affair published in the London *Times*, Mr. Cowen became very unpopular with the Japanese Authorities and Army, and received from Head-quarters a communication that induced him to modify his tone considerably. Mr. Cowen certainly did modify his tone in a subsequent letter to *The Times*, and it is not improbable that he was induced to do so by facts that the Japanese Authorities were in a position to submit, as well as by disgust at the sensational writing of Mr. James Creelman. But we have it from Mr. Cowen himself that he experienced the utmost courtesy throughout the Weihaiwei campaign, and the fact that he had no difficulty in obtaining permission to accompany the expedition to the Pescadores shows very plainly that neither his communications to *The Times* nor yet his visit to Chefoo led the Japanese military authorities to discriminate against him.

Nothing seems to us more unfortunate than the personalities that have disfigured the writings of several of the correspondents sent out to report the progress of the war from European and American journals. These gentlemen appear to have proceeded on the assumption that even their mutual quarrels and jealousies were matters of public interest. Gradually time has brought the truth to light, but there remains still unelucidated one point that caused, perhaps, the bitterest recrimination of all. We allude to the allegation that Mr. A. B. de Guerville warned the Japanese Military Authorities to be on their guard against Mr. Creelman as a Chinese spy, and that the latter correspondent was consequently in mortal peril for a while. We have received an exact statement of the truth of this matter from a high Japanese of-

ficial who introduced Mr. de Guerville to Lieut.-General Kawakami, and who was present throughout the interview that ensued. Lieut.-General Kawakami, Head of the Japanese Staff, was not, it seems, at all disposed at the outset to consider that newspaper correspondents were necessary concomitants of an army in the field, or to grant them any special facilities. By the persuasion of the official to whom we have alluded he was ■ length induced to change this attitude, and Mr. de Guerville, the first correspondent on the scene, was consequently given an appointment to meet the Lieut.-General. In the course of the conversation that ensued, Mr. de Guerville explained that his sentiments toward the Japanese were thoroughly friendly, but, ■ the same time, he took occasion to say that it would be an error to ascribe similar sentiments to every correspondent who might subsequently apply for permission to go to the front. Beyond that vague and apparently superfluous caution, nothing whatever passed that could be construed in the sense of the accusations afterwards perferred against Mr. de Guerville. Being in possession of these facts, we deem it a duty to publish them.

The *New York Herald*, rightly judging that the most interesting phase of Far Eastern politics would be that succeeding the war, has sent out an able correspondent, Colonel J. A. Cockerill, to keep it posted in the events of the next twelve months. Several of Colonel Cockerill's letters have already appeared in the *New York Herald*, and very interesting they are. It is a pity, however, that a writer of his reputation and ability should be swayed by such a marked anti-British bias as his letters display. He seems to regard England as a noxious aggressor that all upright men should combine to hold in check. Yet, it can not be denied by even the most prejudiced readers of history, that never since the earliest era of written annals has any country's contributions to the cause of civilization been so large and so wide-reaching as those of Great Britain. Colonel Cockerill would probably admit all that, were the question put to him, and he would have to admit also that the blood running in his own veins is English and that the great country from which he comes owes most of its greatness to its Anglo-Saxon capacities. It is certainly one of the curious phenomena of *fin-de-siècle* days that our own kith and kin should be among our inveterate traducers. Colonel Cockerill goes even so far as to suppose that the most reckless and unscrupulous of the foreign journals published in Yokohama is in sympathy with British interests. After longer residence he will doubtless discriminate more closely. Every cause, involving question of keen public interest, is doomed to find among its advocates some ill-balanced persons who disgrace while they try to promote it. The cause of the foreign *imperium in imperio* in Japan has not escaped that fate. The loudest of its supporters are journalists of whom every decent Englishman is heartily ashamed.

Writing about the two men who, after their release on parole by the Japanese authorities, deliberately violated their word of honour, and sold their services to the Chinese, Colonel Cockerill says :—

> The Japanese authorities decline to parole them, as they have other prisoners, and it is understood that a court-martial will at once be ordered. That these men have forfeited their lives under the universal laws of war is not denied, but if the Japanese government shoots them, as it should, there will of course be a lot of twaddle in Manchester and Birmingham's peaceful circles on the part of the good people who have forgiven Mr. Bull for sending Brandt and his Indians into the Mohawk and Wyoming valleys during our colonial troubles, to cut the throats of women and children, and for blowing captive Sepoys from the mouth of cannon in India. The charge of "barbarism" will surely be raised, but at the same time it is to be sincerely hoped that the Japanese will not be deterred from a plain duty. The killing of these false and perjured mercenaries is a plain duty if war between nations is hereafter to mean anything more than a scientific military picnic.

It is an error, we may note *en passant*, to say that the two men are now in custody. Only one was recaptured at Weihaiwei. Of course the Japanese would be justified in adopting very strong measures in his case, but we trust that merciful counsels will prevail.

According to the *Hochi Shimbun*, the Viceroy Li, during the progress of the Shimonoseki negotiations, spoke very strongly and plainly as to the inadvisability of dissensions between China and Japan. He considered that the two empires should be united for the purpose of opposing Western aggression. The idea is natural under the circumstances, but we are not told by the *Hochi* what answer the Japanese Plenipotentiaries made.

The *Kokkai* says that rumours prevalent in Tientsin are to the effect that the Emperor of China will not ratify the Treaty.

The *Fiji* notes that the amount of the indemnity to be paid by China exceeds by fifty million *yen* the total value of the coins of all kinds struck at the Osaka Mint during the 24 years of its existence.

THE "KEIZAI ZASSHI" DISSATISFIED WITH THE TERMS OF PEACE.

We are surprised to find such an eminent thinker as Mr. Taguchi, editor of the *Keizai* and parliamentary representative of a section of Tokyo, announcing himself dissatisfied with the terms of peace—terms that even Metropolitans papers notorious for their wanton opposition to every measure issuing from the Government, have received with unreserved satisfaction. What the *Keizai* writes on the subject in its latest issue is as follows :—We maintained from the first that the Treaty of Peace should be concluded after the entry of the Japanese expeditionary army into Peking. Consequently, we are led to think that the territory and indemnity obtained by Japan from China, in virtue of the present Treaty, are not necessarily satisfactory. And yet, the restoration of peace being a blessing for society and war a great bane, we can not but welcome the return of tranquillity. What we strongly suspect, however, as we have more than once observed, is that peace obtained as it has now been attained may not last long, but that, on the contrary, the horizon of the East will soon become more clouded than ever. We do not think that China, like Japan, is capable of reforming her national systems, and we therefore believe that she can not hold her own against this country to whatever degree her military equipment be extended and organized. When the frontiers of the two empires become contiguous, troubles will probably crop up from time to time. That is the principal reason why we think that the Eastern horizon will be clouded." The *Keizai* concludes its article with some brief remarks about the necessity of retrenching administrative expenses in the future. It will be seen from the foregoing statements of the *Keizai* that its tone is not of decided dissatisfaction, and we are led to believe that the Japanese "Economist" made such observations, not from positive dissatisfaction, but merely for the sake of consistency with its former utterances. If so, its fancy has cost it very dear, for the article has been condemned by the Press censors as obnoxious, and the *Keizai* has been suspended, a very rare incident, or most probably the first of the kind since the journal was founded about 16 years ago. It may be added here that the *Keizai* declared a few weeks ago, when the Tokyo papers competed with each other to draw up the terms of peace, that Japan must demand the cession of the three province of Kirin, Shinking, and Chihli, in the north, and Formosa in the south, when she granted peace to China. But this was too extraordinary a demand to be made with any show of decency to China, and we believe, therefore, that such an impracticable idea is no longer entertained by our contemporary. The entry of the expeditionary army into Peking was considered necessary by it as a display of Japan's strength.

THE EMPEROR.

Rumour, as might have been expected, has greatly magnified the Emperor's indisposition, not a few persons being persuaded that His Majesty is seriously ill. We are happy to be able to say that such apprehensions have no ground whatever. The Emperor is suffering from nothing worse than a slight chill contracted in the train *en route* from Hiroshima to Kyoto. Possibly exceptional care is exercised in this case, for His Majesty, while in Hiroshima, had a somewhat severe attack of inflammation of the lungs, which, though it caused considerable uneasiness among the officials of the Court and the Minister of State, was not revealed to the general public.

THE FINE ARTS EXHIBITION IN TOKYO.

The Fine Arts Exhibition in Tokyo is now fully furnished and well deserves a visit. All the manufactures for which the city is famous are fairly represented, though it is easy to see that the superior claims of the Kyoto Exhibition have operated to diminish the number of exhibits in Tokyo. Perhaps the most remarkable specimens to be seen in the Uyeno Galleries are porcelains from the workshops of Makuzu, Seifu, Takemoto, and Gosuke (of Owari). The last named artist figures in a new rôle as the manufacturer of some remarkable glazes. Japanese potters of the present day are developing skill far beyond anything attained by their predecessors in the production of monochromatic and polychromatic glazes. But their prices are much too high to promise an extensive market.

KOREAN NEWS.

ARREST OF LI SHUNYO.

Sōul was the scene of an extraordinary commotion on the evening of the 18th instant, write correspondents of the vernacular papers; a commotion that is still far from abating. Its cause was the arrest of a Prince of the Blood, Li Shunyo, the favourite grandson of the Tai Wōn-kun, on a charge of high treason. Li's conduct of late had been distinctly peculiar. Contrary to his own wishes, he was appointed Minister to Japan. Subsequently, however, when the assassins of the Vice-Minister of Justice were arrested and subjected to strict examination, he suddenly became enamoured of the office that he had originally disliked, and was all eagerness to start for Japan, whereas the Government were equally anxious to dissuade him from setting out. Various efforts were made to induce him to resign the appointment, the principal agent employed being Boku, Minister of Home Affairs, who craftily represented to Li that at this momentous epoch of Korea's history, men of his prestige and ability had better stay in the country and contribute to the reform of its administration. Li fell into the snare and resigned the post of Representative to Japan, remaining in Korea while the investigations that incriminated him were going on. When sufficient evidence was procured, much difficulty presented itself with reference to his arrest, despite the gravity of his contemplated crime against the Court, inasmuch as he was related to the King by a close tie, that of uncle and nephew. After conference with the Japanese Ambassador, the Cabinet at last decided to arrest him, and, for that purpose, the sanction of the King was specially obtained. The Central Police caused two of its detectives to enter the household of Li and narrowly watch his movements. These detectives presently informed the Police Office that he intended to make a trip into the country and that prompt steps should be taken to arrest him. The Police determined to act upon this advice and to send a body of constables to Li's residence as soon as a royal warrant had been issued against him. Armed with the warrant, the vice-chief of the Metropolitan Police, at about 7 on the evening of the 18th, proceeded to the residence of Li at the head some 80 police.

Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

Li already knew that the course of events was turning against him, but relying on his high rank and special relationship to the Court, he was not prepared for any treatment so radical as arrest. When the band of police entered his residence by both the front and back gates, he was utterly taken by surprise, and not until a constable tried to arrest him did he recover himself sufficiently to resist violently. He loudly demanded that the privileges of a Prince of the Blood be respected, and protested so vehemently that the constables hesitated to make the arrest. Seeing that, the Vice-chief himself, a man of considerable physical strength, rushed upon Li, seized him, and despite his struggles carried him on his back to the provisionary Court, where he was at once placed in confinement. His servants at first attempted to resist the police, but fled when they saw their master seized and carried away. So soon as tidings of these events reached the ears of Li's grandfather, the Tai Wōn-kun, whose Palace stood not far from that of his grandson, the old man, though confined to bed by indisposition, rushed out unattended and ran barefoot to the provisionary court, entering which he exclaimed frantically, "Who has robbed me of my grandson; give him back to me. Who has been so contumacious as to arrest a Prince of the Blood, and to take away my grandson without my permission." He repeated these exclamations again and again, knocking at the doors, kicking the screens, and behaving altogether like a mad man. The police, numerous as they were, stood aloof, awed by the vehemence of the aged prince, and the Minister of Justice, entirely at a loss what to do, sent a special messenger to the Japanese Ambassador to seek his advice. In the meanwhile, the rage of the Tai Wōn-kun abated from sheer exhaustion, and he suffered himself to be removed from the Court. Presently his servants came and endeavoured to persuade him to return to the palace. But he obstinately refused, and had at last to be placed in a shop standing next door but one to the provisionary Court. The King, pained to hear of the condition of the aged prince, his father, sent a messenger to console him; but the Tai Wōn-kun would not hear of anything of the sort and continued to repeat his exclamations, even refusing to take refreshment. Apparently the shock had been too much for the old man and for a time at any rate he became irresponsible. The examination of Li Shunyo was commenced on the afternoon of the 19th, by Cho Hoku, a councillor, and Li Zaisho, Vice-Minister, of Justice. Cho is a man of fearless and independent mind. He won much renown by his boldness in unravelling the Queen's doings, when she sent a secret message to Ming Yeishun, after the latter's downfall. On this occasion, when everybody else hesitated to undertake the grave task of examining Li, Cho boldly volunteered his services. The Vice-Minister of Justice was appointed his associate. Messrs. Hoshi Toru, now a legal adviser of the Korean Government, and Takehisa, a Police adviser, were desired to help by furnishing whatever legal information might be needed. The accused, at his first examination, was perfectly composed and cleverly defended himself against various charges preferred against him. The gravest part of these charges was the assassination of the late Vice-Minister of Justice, and an attempt against the Throne. Li obstinately maintained that such charges were fabricated by slanderers. The correspondence of the vernacular papers gives the particulars of the first day's trial only, but as a telegram subsequently received in Tokyo reports that Li has been deprived of his princely rank and degraded to the status of a commoner, he must have confessed his guilt, or his offences must have been proved very clearly. It is said that the people of Sōul were astonished when they learnt of the arrest of Li, but that the wealthier merchants were glad of the occurrence, for they declared that thenceforth the true reform of the country would become possible. The Body-guard that was once under the command of Li made no commotion whatever, we read, when the facts were communicated to it.

THE NEW BUILDINGS OF THE HONGWAN TEMPLE.

The new buildings of the Hongwan Temple, on which no less than eight million *yen* have been spent, were completed last month, after the lapse of about 17 years. They are the most magnificent specimens of Japanese architecture not only in Kyoto, but also in the whole country. About three centuries ago, Iyeyasu, from political considerations, divided the descendants of Shinran, the founder of the Shin sect, into two district branches, the Western and the Eastern, and took measures to have the Eastern Hongwan temple erected by way of counterpoise to the influence of the Western, which was under the special patronage of Hideyoshi. Basking in the sunshine of the Shogunate's patronage, the new temple rose at once to be the most influential religious centre in the whole of Japan, the older and legitimate centre of the sect being reduced to an altogether subordinate position. The fall of the Shogunate did not affect the prestige of the temple, which so far eclipsed the other that the existence of the latter came to be even forgotten by the public. The Eastern Hongwan-ji was reduced four times to ashes during the lapse of less than one century, yet such was the enthusiastic devotion of the masses, that on each occasion the buildings were re-constructed, even on a more magnificent scale than before, so that those now newly erected surpass, it is said, all their predecessors in point of splendour and dimensions. They are two in number, the Daishi-do and the Amida-do, and have been erected entirely by means of subscriptions from the devout parishioners and subsidiary temples of this the most powerful religious community in Japan. Each subsidiary temple was desired to contribute according to its means, and as the least wealthy forwarded the sum of 100 *yen*, the amounts contributed by temples situated in populous and flourishing districts must have amounted to great sums. The largest subscription that came from a single individual was 80,000 *yen*, from the head of the Homma family of Sakata, if we remember rightly. The timbers used were the best that could be obtained in the whole country, and were, for the most part contributed by believers who also defrayed the cost of transportation and sometimes themselves carried the materials to their destination, so anxious were they to render any service, however small, towards the building of the great temple. Enormous cables made of human hair are now preserved in the temple, by way of evidence testifying how zealous the people are in this great sect, for these cables were used to haul huge baulks of timber contributed by the believers of Echigo, and to make such ropes hundreds of thousands of women must have shorn off their tresses. The construction of the buildings was commenced in the time of the late Chief Abbot, who died last year, but it was Mr. Atsumi Kaiyen, one of the most influential deans of the temple, that conceived and successfully carried out the plan.

The Daishido, the greater of the two new buildings, measures 210 feet from north to south and 192 feet from east to west. It is 126½ feet high; it covers an area of 4,744 square yards, and the tiles on the roof aggregate 173,967. The Amida-do is of much smaller dimensions. It measures 126½ feet by 156½ feet, and its area, spread of roof, and so forth are proportionately smaller. The construction of this building did not, of course, take so long as that of the main edifice, yet, though inferior in size, it is more gorgeously decorated. In the golden tabernacle a standing image of Amida is placed, flanked by tablets of the reigning Emperor and of the late Emperor Komei. In the side tabernacles stand images of Shotoku-taishi and Honen Shonin, and images of the six celebrated priests of the Sect, together with the tablet of the Emperor Kameyama are placed in other parts of the same building. The ceiling of the Daishido is made of hinoki, a species of white pine, and the rafters are all of keyaki of uncommon size. Of the 93 pillars the largest measures more than 3 ft. in diameter, and the next in size about 2½ ft. Two of the rafters are of most extraordinary dimensions, being more than 48 feet long and 4 feet thick. One of the two has an interesting story attached to it. When the temple was first destroyed by fire in 1788, the believers of Echigo made arrangements to transport this huge beam to Kyoto. On the way the ship that carried it was wrecked and the timber lay for more than a hundred years at the bottom of the sea. It was raised shortly before the commencement of the recent construction, but sudden exposure to the air and sun caused it crack, and iron had to be hammered into the fissure before it could be finally used for the purpose to which it had been originally destined.

The glyptic decoration of the two buildings was undertaken by Messes. Maruyama Shintaro, Hayase Chobei, Tamura Rihichi, and Matsui Jyounsai, and the painting by Messrs. Kono Bairei, Hara Zaisen, Mochizuki Gyokusen, Suzuki Shobei, Haneda Gesshu, and Utsumi Kichido. The buildings were planned and constructed by Mr. Kiko Tosai, of Wakasa province, and Mr. Ito Hanyemon, of Awaji. Several of the artists that took part in the work are now dead. It is impossible to convey by words an adequate idea of the magnificence of the buildings. They must be seen to be appreciated. It is said that for the lotus flowers drawn by the late Kono Bairei on the screens at the back of the tabernacle set in the Daishi-do, the sum of 10,000 *yen* was paid.

EXTENSIVE FIRE IN CHINA-TOWN.

In the early hours of Tuesday morning a fire broke out in China Town, Yokohama, which resulted in the complete destruction of twenty-one houses. The alarm was given from the look-out tower at the Fire Brigade station at 2.45, and very quickly Superintendant Morgin and his men were proceeding towards the scene of the conflagration, No. 164, Honmura Road, with three hose-reels and standpipes, and one steamer. The fire, which had broken out in an upper-room of a Chinese restaurant known as the In Hong, had spread rapidly from the beginning, a stiff breeze urging the flames on, and by the time the Brigade got to the spot, the whole block standing on Lot 164 was doomed. This block consists of eight houses of the usual flimsy half-brick-thick order which prevails in and around this particular quarter of the town. No resistance could therefore be opposed to the flames, and soon they had swept across the road to the corner block, No. 192, which stands at the conjunction of Mayebashi-cho and Hakodate-cho. These thirteen houses likewise proved an easy prey. Notwithstanding the early hour, crowds of people were quickly assembled in the adjoining streets, causing no small inconvenience to the army of salvers who made desperate attempts to save a few of the goods and chattels belonging to the occupants of the burning houses. So quickly did the buildings burn that very little was saved. The police brigades lent efficient aid, and the supply of water was very plentiful, a deep well at No. 76 being brought into requisition along with the mains. At one period it looked very much as though the conflagration would spread to a disastrous extent, huge sparks and bits of burning wood being carried on the breeze all over the Creek-side districts and far up the Bluff, but happily they seem to have become speedily innocuous after falling. The houses, we are given to understand, are insured, though to what extent is not definitely known. As to the cause, several conjectures have been started, but the most probable hypothesis is that which ascribes the outbreak to the possible upsetting of a lamp by Chinese gamblers, though the Chinamen in the neighbourhood stoutly deny the allegation. The Brigade men were still playing water over the ruins as we went to press.

THE LATE VISCOUNT KONO.

The late Viscount Kono was born in Kochi in 1844. His father was a retainer of the Lord of Tosa. From his youth he distinguished himself by loyalty, and upheld the cause of the Court in concert with those of the same view in the Tosa fief, he being the youngest of the party. In pre-Restoration days Tosa, like other fiefs, was disturbed by two hostile parties; one, composed of men in the higher ranks, who sided with the Shogunate; the other, consisting of lower *Samurai*, who earnestly espoused the cause of the Imperial Court. The antagonism between the two finally grew to open violence and one night a councillor of the *Han* was assassinated. Naturally, suspicion fell on the Imperialist Party, and Takeichi and others, its leaders, were arrested and either put to death or sentenced to commit *seppuku*. The Viscount, then only 18 years of age, was arrested, but, in consideration of his youth, his judges commuted his punishment by one degree, sentencing him to imprisonment for life. When he had endured the hardships of prison life for six years—a terribly severe ordeal in those days—the Shogunate was overthrown, and the Imperial Court restored to its ancient position of ascendency. This meant immediate liberation for Kono. After regaining his freedom, he remained for a while under the care of Mr. Goto Shojiro, now Count Goto, who acted at that time in the fief of Tosa as the leader and patron of youths adopting progressive views. The Viscount was very eager to go to Tokyo and to find a situation suited to his ability. With a letter of recommendation from his patron to Eto Shimpei, then Minister of Justice, he started for the capital, and succeeded in obtaining a position in that Department, where his uncommon ability soon made him conspicuous. Eto Shimpei devoted himself earnestly to the task of codifying the laws of the realm. It was while he presided over the Department of Justice that the new Criminal Code was compiled to take the place of the old penal code administered during the era of the Tokugawa Regency. To acquire knowledge for improving the laws of the land, Eto purposed travelling in Europe and America, but he never carried out that intention owing to causes familiar to all students of Japan's modern history. Kono, despatched in his stead, undertook the task of inspecting the legal institutions of Western countries. He was accompanied by the late Viscount Inouye Ki and Numa Shuichi, as well as by Messrs. Namura Taizo, now Chief Judge of the Supreme Court, and Masuda Kokutoku. It was on that occasion that the eminent French jurist, M. Boissonade, was engaged by the Japanese Government. When the Viscount returned home he found the Cabinet considerably disturbed over the Korean question. The Minister of the Department of Justice, Eto Shimpei, was among the most earnest advocates of sending a military expedition against the peninsular kingdom. Hence the reform of the laws and of the Judiciary was left entirely to the care of Mr. Kono, and he soon came to be regarded as the chief of Japanese jurists. About that time a very grave affair engrossed public attention, namely, the case of the celebrated Ozarusawa Copper Mine. It may be noted here that in opposition to all the Ministers of State of the time, Mr. Kono, then a Judge of only the 4th grade, inflexibly maintained the necessity of bringing up for trial every one connected with the Ozaruzawa affair, however high the rank and position of the incriminated persons, in order to assert the independence and uncorruptibility of the Judiciary, although it was then in a state of subordination to the Executive. When Eto Shimpei raised the standard of revolt in Saga, in 1874, Mr. Kono accompanied the late Okubo thither, and undertook the task of judging the rebels. In the discharge of this most trying duty he showed the strictest impartiality and the most rigid obedience to the dictates of justice, examining and subsequently sentencing to capital punishment the principal leader of this insurrection, his former patron or his friend and close friend. Next year, when the Senate came into existence, Mr. Kono was appointed a Senator, and soon afterwards became one of the two Managers (*Kanji*) of that now extinct institution. Viscount Mutsu, now Minister of State for Forign Affairs, was his partner, and the two were spoken of as the "two celebrities" of the Senate. In the Satsuma civil war, Mr. Kono again had to undertake the judicial part of the business, and on the restoration of peace he was appointed Vice-President of the Senate. In recognition of his services he was decorated, at the same time, with the 3rd class of the Order of the Rising Sun, and received also a reward of 500 *yen*. In 1880, he was appointed Minister of State for Education, from which post he was removed in the following year to a similar position in the Department of Agriculture and Commerce. The same year, conjointly with Count Okuma, then Minister of State for Foreign Affairs, he resigned the post and became President of the Tokyo Stock Exchange, being also appointed Vice-President of the Progressionist Party presided over by Count Okuma, though his connection with the Party was apparently more nominal than practical. In 1888, we find him again entering the Government as a Privy Councillor, from which position he was removed four years afterwards to be Minister of State for Agriculture and Commerce. The year of high office that ensued was remarkable for Mr. Kono, since he held consecutively, in the short space of twelve months, no less than three portfolios, that of Agriculture and Commerce, that of Justice, and that of Home Affairs. Ill-health, however, compelled him to resign. In November of 1893, in consideration of his special services to the State, he was created a peer, the patent of Viscount being conferred on him. The sickness that proved fatal was inflammation of the spine, which developed serious symptoms in April of 1893. The deceased was a man of noble and independent mind and exceptional resolution. His ability was highly appreciated by the late Marquis Okubo, to whose special recommendation his rapid promotion was in part due.

COLONEL SATO.

Colonel Sato, whose death in Haicheng was recently announced, but who is now understood to be recovering from his wound, is widely known as one of the bravest and most skilful officers in the Japanese Army. It was he who, undergoing indescribable privations and hardships, led a body of troops from Gensan, and attacked the eastern face of Phyŏng-yang, breaking through the defences of the Gemmu Gate. His men, the now celebrated 18th (Toyohashi) Regiment, forded the upper course of the Yalu and routed the enemy entrenched at Hushan. The Regiment played an equally distinguished part in the battles of Haicheng, of Newchwang, and sundry other fights. It was the glory of the Colonel's corps that whenever a difficult operation had to be undertaken, the 18th was detached for the service.

Born in Hiroshima in 1846, the Colonel was the son of a retainer of the Lord of Aki. Like most other officers of his age and position, he took part in many of the battles fought in Japan during the 30 years that have elapsed since the War of the Restoration, when he fought on the Imperialist side. He highly distinguished himself in the civil wars of Hagi and Satsuma. On the occasion of the Satsuma rebellion, he commanded a company in Count Kuroda's column, which, landing at Yatsushiro, attacked the rebels in the rear. It is related that one day, completely wearied by exceptional fatigue and also by lack of food, Sato, then a captain, was lying by the road-side in a state of sheer exhaustion. A soldier happened to pass carrying a fowl. The famished officer got hold of the fowl, and having devoured a portion of it then and there, rushed once more into the thick of the battle. At that time, Sato, the late Major-General Odera, and another were reputed to be the three bravest young officers in the whole army. Colonel Sato never spared himself nor his troops in the matter of discipline. Indeed, his severe ideas of duty not infrequently brought him into collision with outsiders. In 1882, when serving as a Major in the Osaka Garrison, he was highly incensed at the treatment that the local Police extended to the soldiers, and after consultation with his commanding officer, he peremptorily demanded satisfaction from the police. The matter was settled with difficulty after repeated intercession by distinguished officials. Three years later, he was promoted to be a Lieut.-Colonel and appointed to the staff of the 2nd (Sendai) Division. The following year, while confined to bed by illness, he learned that certain staff exercises were about to be held, and such was his conception of an officer's obligations that he insisted upon tendering his resignation because he could not attend the exercises. He was, therefore, placed on the Retired List. Three years afterwards, he was again called out for active service and was appointed to the command of the Fukuoka Regiment. While he was in Fukuoka troubles arose between the Regiment and the high school, founded and patronized by Marquis Kuroda, ex-lord of the fief, and Colonel Sato enhanced his reputation by the tact shown by him on that occasion. In 1892, he was removed from Kumamoto to take command of the Toyohashi Regiment. One day he heard that the station master in Kakegama had behaved disrespectfully to his soldiers. Thereupon he ordered out a party of his men, surrounded the station, made the sappers hew down the pillars of the building, and then directed the infantry to batter down the edifice itself. These curious feats accomplished, he led his party back. In truth his conception of military honour and of the respect due to military men, amounted almost to fanaticism. It is said that when events in Korea became more and more threatening and a rupture between Japan and China seemed inevitable, Colonel Sato daily led his troops, by way of discipline, to the top of a mountain that stands some 17 miles away from Toyohashi. So steep and precipitous was the road that at first quite a number of the soldiers fell ill from the excessive strain and exhaustion of mounting it. Within a few weeks, however, they became inured to hardship, and were thus enabled to bear up against the privations that they underwent when traversing the mountains from Gensan to Phyŏng-yang.

PARTICULARS OF THE SEIZURE OF THE "YIKSANG."

Particulars of the seizure of the *Yiksang* by the *Tsukuba Kan*, I.J.N., for carrying contraband of war, are given as follow by the *Yomiuri*:—The *Tsukuba Kan* left Port Arthur on the 5th instant and reached Taku at dawn on the 7th. It had previously been the habit of the Japanese men-of-war to examine ships encountered along the northern coast of the Gulf of Pechili, but as the locality proved inconvenient for the purpose, it was subsequently determined to change the place to Taku, since ships are generally obliged to unload their cargo there. At first the *Tsukuba* anchored at a spot some 11 miles from the Taku forts, but gradually she approached the coast till the distance between her and the forts lessened to about 7 miles. There she inspected in turn all the ships that were moored there, without discovering anything suspicious. At noon next day, she met a steamer named the *Yiksang*, and as the latter did not present any particularly suspicious appearance she was inspected in the ordinary manner, the books first, and then the cargo. At 7 a.m. on the 9th, as the *Tsukuba* was going back to her moorings after having inspected a certain steamer, she saw the *Yiksang* discharging her cargo into a lighter. This was considered such a good opportunity for further examination of the nature of the cargo, that the *Tsukuba* steamed very close to the lighter. A number of suspicious-looking boxes was then found on nearer inspection among the [illegible] of

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

scribed as "steel-bars," but as there was something very peculiar about them, one was broken open, when it was discovered that it contained ammunition for repeating rifles. When this was brought to light the captain of the lighter turned pale, and replied, when questioned, that the boxes came from the *Piksang*. Leaving three marines in the lighter, the *Tsukuba* then at once proceeded towards the *Piksang* and sent an armed party on board the steamer. The captain, who had denied having anything contraband when his ship was at first inspected, now admitted that the boxes had been carried by his steamer, but pleaded that he knew nothing about them, and had accepted them as boxes containing steel-bars. He maintained also that, according to international usage, he need not hold himself responsible for any cargo that was already discharged. Thereupon the officers caused the marines to thoroughly search the ship for any other contraband, when four other boxes of the same description and containing the same material were turned out, to the dismay of the captain. In the face of such incontestable evidence, the captain had nothing to say in his defence. He was easily compelled to submit to the orders of the Japanese man-of-war. The lighter was set free after her cargo had been confiscated, as she had evidently been unaware of the contents of the boxes. Two officers of the *Tsukuba* went on board the *Piksang*, accompanied by 2 warrant officers and 20 marines, and steered her toward Port Arthur, which was reached at noon of the 10th, some 7 hours in advance of the arrival of the *Tsukuba*. Of the crew five were Englishmen inclusive, of the captain, and the rest all Chinamen. The Captain is now undergoing examination at the Sasebo Prize Court.

TERRIBLE WHIRLWIND AND HAIL-STORM IN SAITAMA AND IBARAKI.

On the afternoon of the 19th and 20th inst., certain districts in Saitama and Ibaraki Prefectures were visited by a terrible whirlwind and hail-storm, killing several persons, wounding many others, and causing serious damage to buildings and crops. At about 2 p.m. on the 19th, the inhabitants of the town of Satte, Saitama Prefecture, saw in the north-western quarter of the sky a bank of ominous black clouds spreading over the heaven with extraordinary rapidity and travelling north-eastward. As soon as this cloud came over the old Tone river, it was observed to descend and then to draw the waters upward, lightning flashing and thunder pealing terribly all the while. Next moment hail-stones as big as the common stone used to strike fire in farmer's kitchens, fell, and day was turned for a short while into the darkness of night. The village of Shirooka suffered most from this unnatural weather. Five houses were destroyed and eight of their inhabitants wounded. One of them, an *enceinte* woman, was whirled upward some 20 feet, and fell down about 12 yards from the place, receiving injuries that produced unconsciousness. A similar atmospheric phenomenon visited the south Saitama district the next day but with far more terrible results. Three young girls, spinning yarn in the back-yard of a house in Harinuki village, were caught up by the whirlwind, and their bodies have not yet been discovered. A waggon drawn by a horse and attended by a man were also carried up, and the corpse of the driver alone was found afterwards in a pond far off. The village contained only 28 houses, but of these 15 were entirely wrecked, to say nothing of the damage that the crops and trees sustained. The damage to life and property in Ibaraki Prefecture by the whirlwind that visited it on the 18th and 19th was still more serious. From the account given in the *Official Gazette*, the figures are as follow:—Buildings entirely destroyed, 233; buildings partially destroyed, 33: persons killed, 7; persons wounded, 55.

AN ELECTRIC RAILWAY BETWEEN TOKYO AND YOKOHAMA.

A scheme for laying an electric railway between Tokyo and Yokohama is now on the *tapis*. An application was forwarded on the 18th instant by Mr. Wakao Ippei and 19 other projectors, all business men of great influence in Tokyo and Yokohama. According to the scheme elaborated by these gentlemen, the construction of the rails is to be commenced in the vicinity of Shinsenza, Shiba, whence they will be stretched along the western side of the Tokyo-Yokohama railway as far as Gotenyama. From thence to Kanagawa the new railway will lie along the eastern side of the present Government line, and will terminate at Hanazakicho, Yokohama, after traversing Hiranuma Shinden. The distance measures 18 miles, and the rails will be double throughout the whole length. The cars used will be somewhat larger than those now employed by the Tokyo Tram-way company, and every 5 minutes a train, made up of one car of the 1st, 2nd, and 3rd grade each, will start. The velocity being 30 miles per hour, the distance will, it is believed, be covered in 35 to 40 minutes. A passenger will be allowed to alight at any place along the line, and consequently there will be no necessity to construct stations; still at such places as Kawasaki the construction of stations is deemed necessary. As to profit, it is said that if 9 passengers of the lowest grade and 3 passengers each of the two higher grades be assumed to ride in each train, and the number of trains per day be forty, between 6 a.m. to 11 p.m., a satisfactory financial result will be obtained by fixing the charge for a passenger of the lowest grade at 15 *sen*, and that a tolerable profit will be secured even if the fare be reduced to 10*sen*. The capital will be 2 million *yen*, to be divided into 40,000 shares of 50 *yen* each.

Thus, considered from every standpoint, the provision of such facilities of communication between the two cities is a matter to be earnestly desired, and the question is, will the scheme be practicable, not from an engineering, but from a legal, point of view, seeing that the Private Railway Regulations forbid the construction of any railway deemed unnecesary or calculated to injure the interest of railways already in existence.

The projectors naturally think that there is no valid reason to forbid the construction of an electric railway between Tokyo and Yokohama. The grounds they take are there:—

The provision in the Railway Regulations about the interests of other railways is in connection with railways of the same nature. But the Government railway and the line they propose to contruct are of a different sort. Moreover, the new project has the advantage in point of time, expense, and convenience over the old, and is in all respects a great improvement upon the system now in operation. It is natural that new and superior, mechanism should supersede old and inferior, and if on account of the existence of the latter the former can not be availed of, nothing could be more injurious to the promotion of public prosperity. Moreover, the Government railway is not limited to the interval between Tokyo and Yokohama, but extends farther south, its traffic between the two places being only a very small part of the whole business.

The construction of an electric railway between Tokyo and Yokohama is decidedly not unnecessary, seeing that it would confer so many benefits. Yokohama is, as it were, the postal of the Empire while Tokyo is its inner chamber; and now that the affairs of the country are to become extraordinarily active, no one can deny the necessity of introducing new and improved facilities of communication between the two most important cities of Japan.

On such grounds, the projectors press earnestly to have the scheme sanctioned by the authorities, and not only they, but also the public at large are equally eager to hear what the Government has to say on the subject.

We take the foregoing from the *Shogyo Shimpo*.

CHINESE NEWS.

There were doubts in Tientsin, two days after the signature of the Treaty of Peace at Shimonoseki, whether it would be ratified by the Court in Pekin. The telegram announcing this fact, adds that one of Japan's terms had been the opening of Pekin to foreign trade, but that the Chinese Plenipotentiaries had successfully resisted that demand.

"Philo-Sinensis," writing in the columns of the *North China Daily News*, says that a large class of Europeans, namely, the Roman Catholic Missionaries in China, are responsible for perpetuating the evil of foot-binding. These missionaries have about ten thousand orphan and abandoned girls under their charge, and as they desire ultimately to find Chinese husbands for their *protégés*, they bind the latter's feet. But "Philo-Sinensis" points out that these girls are always married to converts, and that, if a proper antipathy to the evil of foot-binding were educated among the converts, the unfortunate girls might be saved the suffering and inconvenience of having their feet cramped into deformities.

It seems that anti-foreign placards are again making their appearance in Shensi. Spring, with its blood-heating propensities, generally brings out such things. The placards are big things. One is described as 52 inches × 23 inches; another, as 46 inches × 22 inches. Some of the ideographs inscribed upon them will not bear translation in the columns of a civilized newspaper. Others run thus:—

1.—Foreigners are vile men; therefore boycott them or use any other strong measures for their extirpation.

2.—Be it known that it is both unpatriotic and unlawful to sell either land or property to foreigners; therefore in the day any one sinnest thereof he shall surely come to grief.

By order of the Gentry and Scholars.

Some excuse is urged on behalf of the Chinese, they are probably exasperated by the pertinacity of the Roman Catholic Missionaries, who are said to be "pursuing a very unwise course" in insisting on building a chapel on foreign architectural lines. British officials have emphatically advised that Chinese architecture should always be followed for buildings in the interior, but that wholesome counsel is not followed, we read, by the Catholics in Shensi, and they are consequently charged with endangering the peace and safety of the 40 foreigners resident in the province. We should like to hear what the Roman Catholic Missionaries themselves have to say on the subject.

The mistake made by Major Ishida in issuing an order that foreigners should not be allowed to go outside the gates of Yingkow, is severely commented on by the Newchwang (Yingkow) correspondent of the *North China Daily News*. We described the facts of the case in a recent article. Major Ishida was certainly wrong, not merely in issuing such an order, but also in attempting to enforce it against foreigners without previous reference to their Consuls.

The same correspondent says that when General Katsura advanced upon Newchwang he did not convey any notification to the Consuls, but merely wrote a letter to one of the missionaries. It is difficult to understand such a complaint. Yingkow was not occupied by General Katsura's troops but by those of General Yamaji. Be that as it may, however, what shall be said of the contention that the Commander of a Japanese Army is bound to notify foreigners living in a Chinese town of his intention to attack it? Granting that the Japanese General possessed means of communicating with the British Consul in Yingkow—a most uncertain hypothesis—was he under any obligation whatever to convey to the Consul information of plans that every commander seeks to conceal as far as possible? The supposition seems to us quite ludicrous. Our Shanghai contemporary's correspondent says that General Katsura; when advancing on Newchwang, was bound "in ordinary civility" to notify H.B.M's Consul. We should like to hear such a proposition advanced with regard to a Western General were he advancing against a Chinese

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

town in which there happened to be a Japanese settlement. We should like to hear him charged with a breach of "ordinary civility" because he failed to notify the Japanese Consul of his army's movements. And we should like to hear his answer to such a charge. Warfare conducted by the Japanese with due deference to the rights that some foreigners believe themselves possessed of, would be the funniest kind of fighting imaginable.

"The opinion entertained by many foreigners that the bodies of the Chinese at Tienchwangtai were mutilated after death" is again put forward in correspondence from Newchwang. The correspondent adds further :—

Whether this was so or not, it is very certain that the order "no quarter" must have been given, and without being a sentimentalist, I must say that to pass such an order when engaged in fighting an enemy capable of presenting no determined resistance, furnishes us with a very sufficient standard by which to judge this army, formulated and disciplined, led and commanded on the most approved foreign lines of civilised warfare.

The whole question of the Tienchwangtai affair having been fully ventilated, and reduced to a possibility that a few of the wounded may have fallen victims to their own habit of shooting or stabbing at any Japanese approaching them, it would not be worth while to refer again to the matter did not the above correspondent declare it to be "very certain" that the order "no quarter" was given. It is quite obvious that nothing of the kind can be "very certain," and that the correspondent has allowed himself to be betrayed into a palpable extravagance. Field-Marshal Nodzu has officially and in the most emphatic terms denied that any killing of wounded Chinese at Tienchwangtai occurred, so far as is known to himself and his officers, and the telegraph says that both the original formulator of the charge and the journal (*N.-C. Daily News*) that circulated it, have formally withdrawn their accusation. We venture to surmise that if a Japanese newspaper correspondent ventured to characterise as "very certain" the hypothetical issue of such an order by the General of a European force under similar circumstances, there would be a loud and well deserved outcry against Japanese disregard for truth.

Here is a sentence really worth quoting from the correspondence columns of the *N.-C. Daily News* :—

My own idea—I advance it in all humanity—is that as long as foreigners are so foolish, so blind to the respect they owe themselves, as to treat the Oriental as a European, so long will the Oriental consider himself not only their equal but their superior, and the episode of the gate will be but the precursor of many similar absurd and annoying occurrences. To suppose that the antipathy to foreigners so cordially entertained and openly manifested some years ago by the Japanese has been totally eradicated is a mistake our home Ministers may, with their enlightened notions on things in the East, be pardoned and condoled with for falling into, but for any man who has lived even a short time amongst Orientals, to suppose that they are not imbued with the idea of their own importance as compared with the European, and that they have not a hearty contempt for the latter, restrained only by a very wholesome fear and a very thin veneer of civilisation, there is no excuse.

It is really wonderful that the writers of such views have not more capacity for analyzing the plain significance of their own assertions. Reduced to a brief compass the proposition laid down by the correspondent we have quoted is this :—So soon as foreigners are foolish enough not to show that they have a hearty contempt for the Japanese and that they count them far below Europeans, so soon will the Japanese be guilty of the unpardonable sin of entertaining a hearty contempt for Europeans and of counting them inferior to Japanese.

The *North China Daily News*, after describing, in a leading article glowingly phrased, Japan's achievements in the present war, writes thus :—

She has performed no insignificant feat, and led us to anticipate in her a virtual addition to the hitherto exclusive circle of Western policy. She has done all this, and created a picture in European colouring which, if not faultless, still challenges our approval, and then just as the final touches were to be given, has smeared the whole with gaudy Asiatic hues thereby defying its admittance to a Western gallery. Japan's latest act can only be described as a political *hara-kiri*. By one rash stroke she has stamped herself as Oriental after all, and prematurely admitted into the comity of nations. By the deliberate proposal of an offensive and defensive alliance with a corrupt and effete Asiatic power like China she has shown where her affinity really lies, and thrown off the mask of her affected Europeanisation and high moral desire for the benefit of mankind at large. Allowing that Japan originally undertook the war from natural and laudable motives of self-preservation, her proposal to unite herself with China retains its character of a direct and unmistakable challenge to the West, and she must expect the gauntlet to be picked up. As we have already remarked, by this last suicidal act, Japan has completely cut adrift European sympathy and scuttled the possibility of effecting that revolution in China's domestic economy of which she has talked so much.'

Is there no limit to the unreasoning credulity of foreign journalists in the East? Surely a moment's reflection should have shown to our Shanghai contemporary the inherent improbability, nay impossibility, of the mad policy attributed by him to Japan. Fancy Japan linking her fate for good or for evil with that of a country whose utter helplessness and effeteness she has herself demonstrated in the most thorough manner! Nothing short of a sudden access of vertigo could have betrayed Japanese statesmen into the course they are said to have pursued. If the conclusion of an offensive alliance between China and Japan be the only piece of false colouring in the brilliant picture that our Shanghai contemporary credits Japan with having painted by her conduct of the war, we beg to offer our most emphatic assurances that the picture is entirely without defect, for no such alliance exists outside the imagination of sensational newsmongers.

A correspondent—evidently well informed—of the leading Shanghai journal, writes about the recent accident at Woosung. After describing that the guns in the forts there are 40-ton muzzle-loading guns of 12-inch calibre, 25 feet long, fired by means of a percussion primer, the vent being axial, *i.e.* in the centre of the cascable screw, and that their ordinary full charge is 200-lbs. of prismatic powder, and the projectile weighs 800-lbs., he proceeds to say :—

It appears that in consequence of the gun not having been properly sponged out after firing, a cartridge exploded during reloading. In the loading position the gun is pointed into a loading gallery, communicating with which are the shell room and a small expense magazine. The effects of discharging 200-lbs. of prismatic powder without wad or projectile, into this gallery, the shell room, and magazine, can be imagined. But the effect of the explosion which inevitably followed have to be accounted for. The loading gallery is a chamber about 45ft. long, 9ft. high, and 6ft. wide in line with the bore of the gun when the latter is being loaded. The shell room and magazine are each about 10ft. square, and 9ft. high, and lead by separate openings out of one side of the loading gallery. The floor, walls, and roof of all are of Portland cement concrete, from 5ft. to 10ft. thick, and such seems to have been the strength of this concrete, that it withstood the shock of discharge of 2,000-lbs. of powder stated to have been stored in the magazine and shell room, and the loading gallery became a gigantic gun, the discharge from which appears to have blown the 40-ton gun off its mounting. Unfortunately the accident is attended with a sad loss of life, the result solely of carelessness or ignorance.

It is stated from Tientsin that, on the evening of the 8th instant, a clear moonlight night, "the Japanese ran in and lifted some of the torpedoes laid on and about the Taku bar, and out again, and no notice was taken of them from the forts. The incident is its own commentary."

The following is from the *Chefoo Express* :—

On Sunday the 7th inst. about 1,000 soldiers, under the command of General Yang Chen-K'wei, entered the city of Pingtu, and finding insufficient accomodation in the local inns, broke into the lock-uped premises of the American Baptist Mission, consisting of unfurnished Dispensary buildings, and chapel, situated on the principal street in the west suburb; and took possession of the place. Dr. Randle was immediately informed of this, by his native assistants, and went round to find the place full of soldiers. Picking out the wearer of a white button, he asked him why they were there. The man said they wanted the place for lodgement, and would go on next morning. The doctor told him, they were welcome to lodge there while passing through Pingtu, but that he objected to the way they had helped themselves to the accommodation. Then seeing two officers outside (probably of the rank of Captains), he explained to them that the buildings were at their disposal, but again stated his protest at the way they had gone in. Then he went on his way to Mr. Sears' house where Sunday services are temporarily held. As he passed along the streets, both people and soldiers shouted out "Beat the foreign devil," "Kill him, kill him." He took but little notice of this, thinking that it would amount to no more. But an evil crowd followed, the people seemed urging the soldiers on. Upon reaching the gateway leading to Mr. Sears' house, two soldiers rushed up and attempted to drag the doctor away. He was struck over the head with a sword, and knocked down; and upon attempting to rise (when only half up), he was struck down again by another sword-blow over the head. Dr. Randle knew the danger of being down, and was up again immediately, when he received a sword cut upon the palm of his left hand, which he had raised to defend his head, and was again tumbled over into the mud. They struck and kicked him while on the ground, and tried to hold him down, when feeling the situation was becoming serious he made an effort, rose, got loose, and ran into Mr. Sear's house. A less active man would certainly have fared much worse. The doctor's wounds bled freely, though they were not serious, as the weapons the men used were blunt short swords of ancient type.

The Chief Magistrate went to see Dr. Randle soon after the outrage, and has since done all in his power to make amends. The military authorities however totally ignored the whole thing, and went away from the city soon after they knew of the attack.

The Magistrate followed the General to Laishanfu, and on Tuesday the 9th inst. sent a messenger back to say that he had seen the General, who had told him that the men were identified, and would be severely punished.

"One who was there" is quoted by the *China Gazette* as telling the following story about Weihaiwei :—

After the Japanese had landed at Yungchen Hsien and captured three of the four forts defending the Eastern or Southern entrance to the harbour, orders were given by Admiral Ting to dismantle the remaining fort, so that the enemy could not use the guns against the fleet, after having captured the last fort, which was also the Torpedo Station. The commandant of the forts, on seeing the remaining guns being dismantled, telegraphed to Tientsin saying that he would have to retire owing to the action of Admiral Ting in causing the fort and Torpedo-Station guns to be disabled; he, the commandant of the forts could not be held responsible for the loss of the place, he was thereby deprived of the means of defence. Li Hung-chang, it is said, ordered the guns to be fully equipped immediately, and accordingly the whole of the gear was taken back to the fort, and the guns refitted before midnight. At 4 a.m., the Japanese occupied the fort very quietly, and it was with these very guns, 20 or 22 centimetre calibre, that the Chinese Fleet and the Island of Liu Kun-tao, were forced to surrender to them. Having possession of these guns, they kept the Chinese Fleet at a respectable distance, whilst they removed the boom and torpedoes from the fairway near the said forts, and thus let in two of their torpedo boats. One of these torpedo boats at night made a feint attack on the *Ting-yuen* drawing the fire of her machine guns, whilst advancing and retiring; meanwhile the other torpedo boat got close under the quarter of the *Ting-yuen* unperceived, and launched a torpedo which took immediate effect, then retired. Other ships were sunk by torpedoes from the Japanese boats, or by shells from the Chinese guns and forts. So ending the conflict.

This is a very pretty tale, but how the incidents described can have occurred we are at a loss to conceive. The four forts defending the eastern side of Weihaiwei harbour were all taken by the Japanese during the forenoon of the same day. How on earth could the interval between the capture of three of the forts and that

Digitized by Google
UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

of the fourth have sufficed for the series of events described above?

There appears to be terrible distress in Chihli owing to the floods of the past few years. Millions of people are said to be destitute, their miserable plight being rendered worse by the oppression of officials and soldiery.

The *North China Daily News* declares its belief that a treaty exists between China and Russia. It professes to have received information in that sense some considerable time back, but to have refrained from publishing it. The grounds of its belief, however, are not very conclusive, being nothing more than allegations. We quote:—

This undertaking has been privately known in Europe since the day when His Excellency Wang Sze-chung and his extensive suite left these shores on his ostensibly congratulatory visit to St. Petersburg with the Treaty with Russia in his pocket for ratification. The Chinese Ambassador left here in the French mail on 6th January, prior to to which date communication with Russia had been going on extensively, all the details of the Treaty having been arranged by wire. It will perhaps be remembered by those who suspected the nature of his visit sufficiently to watch His Excellency's movements, that the Ambassador was at some pains to render his visit to St. Petersburg as ambiguous as possible, if we may use such an expression, and endeavoured to make his errand really appear all that it purported to be. But whether from the apparent unnecessariliness of a special Ambassador being sent to the Russian Court, a Chinese Minister being at the capital already, or for other reasons of which we known nothing, the better informed of the London papers from time to time dropped a word or two which favoured the supposition that Wang Sze-chung's visit to St. Petersburg had a deeper import than appeared on the surface. A few days after the Ambassador's arrival, he was honoured with an audience by the Czar, and according to a telegraphic despatch received in Peking a few days later, the interview was of a very satisfactory nature, the Czar repeating the assurance of assistance to China for which the Treaty stipulated. The Czar is said to have not only assured Wang Sze-chung that when the time came Russia would take up the cudgels against Japan, but that he would use his influence to induce England to follow a like policy.

All this is very positive, but if such an understanding really existed it seems very singular that no attempt was made to give effect to it before China's plight became so hopeless. The Shanghai journal's theory is that China promised to cede to Russia certain territories in the Pamirs in return for the Czar's vague promise of interference; that China expected Russia to intervene much sooner, and that Russia did not intervene until now because she desired to allow the Japanese to conquer Manchuria before entering the arena herself, since she could then claim the territory on her own account after driving the Japanese out of it. In other words, Russia played a double game all round, and a most singular game at the same time. She waited until the Chinese had lost all their first-class fortresses and fleet, and had suffered such demoralizing defeats as to be quite useless to any ally; she waited also until the Japanese had gained a firm footing on the territory she coveted, and then she stepped forward to make an active ally of China and to expel the Japanese. Moreover, she entered into an agreement with China in consideration of a promise to receive a portion of the Pamirs, whereas her intention all the while was to rob China of Manchuria. We can not think quite so badly of Russia as all that, nor can we think that if she had really contemplated interference of the character alleged, she would have chosen her opportunity so badly.

"Official despatches received by some of the local Mandarins from Taipehfu," writes the *North China Daily News*, "report that there is excitement bordering on rebellion amongst the people of Formosa. This has been caused by the report that Formosa is to be ceded to Japan in perpetuity. The Governor of the island, T'ang Chin-ts'ün, has been called upon by innumerable deputations of the head citizens of Formosa, and the sentiments expressed by them were that the people were determined to fight for it even if the government should desert them, but at the same time they asked that the Governor should pray the Emperor not to ratify such a treaty with Japan."

"The local authorities in Pekin, says the *Pekin and Tientsin Times*, "are showing unusual activity in suppressing gambling establishments and opium dens. This movement is said to originate with the Emperor, who desires to clear the city of these undesirable elements. As usual, however, with such reform movements in Pekin, this good purpose of the Emperor only gives an opportunity to the subordinate officials to squeeze the sinners to the last extreme, and then leave them to go on with their accustomed work. One man was mulcted a thousand taels, 400 taels going to his examining officer in the Board of Punishments. Unfortunately, the big sinners are more liable to escape the law than the small ones. The gambling or opium dens that are safely sheltered under the wing of a Duke, Marquis, or other scion of hereditary aristocracy, go free, the officials not daring to intrude. For this protection and the use of his building the lord of the mansion is paid from one to two taels per day. With many of them, this is their chief source of income."

The *North China Daily News* continues to place faith in the rumour of an offensive and defensive alliance between Japan and China, and writes of it as Japan's greatest mistake in the present war. We should have supposed that by this time the *canard* was completely dispelled, but some falsehoods die hard. Our Shanghai contemporary thinks that China would not have the same motives as Japan for concealing such an alliance, did it exist, and that, consequently, the Chinese reports of the fact may be accepted as trustworthy. We do not appreciate the argument. If the Chinese Government hopes to save its face before the nation by proclaiming that it has thrown in its lot definitely with the people that were to be "rooted from their lairs," according to the Emperor's original proclamation, it must have greatly changed its estimate of its subjects' mood. We could understand an endeavour on the part of Chinese statesmen to persuade the people that Japan had been allowed to absorb some unimportant outlying portions of the empire, or even that a sum of money had been paid to her by way of solatium for her sufferings in the war. But to proclaim that the issue of the long fight has been to establish a partnership for good or evil between the men of the Middle Kingdom and the despised Wojen, is a step from which we should have expected Chinese officialdom to shrink, unless, indeed, the idea be to pretend that, as a special act of gracious patronage, China has agreed to take Japan under her protecting wing.

The *Chefoo Express* of April 22nd writes:—

The *Marie* returned yesterday from a cruise, and reports the following from the places she has visited. Liukungtao is being rapidly cleared by the Japanese, all guns and ammunition are taken away to Japan, seemingly with great haste. The houses formerly occupied by the foreigners are inhabited by Japanese coolies, several of the houses are standing empty and from these all the furniture has been taken out and burnt. In Talienwan the cholera is raging, about 150 are said to have died from the effects of the disease. There were 56 transports anchored in Talienwan Bay, the greater part of them with troops, who have been on board since they left Japan four weeks ago. The highest in command of the Japanese Army and Navy, Prince Komatsu, with his staff arrived at Port Arthur on the 7th inst. by the *Ikai Maru*, on which ship he remains for the present. From Port Arthur also all guns and ammunition are being removed to Japan. The Japanese squadron left that port on the 19th; among the ships were the *Idzumi Kan*, late *Esmeralda* (Chile) and the torpedo-catcher *Taisuta Kan*, which latter vessel is said to have arrived from England in March. The *Chenyuen* was still in dock, and as there is lack of workmen the repairs of the ship will not be finished for another two months. She has a hole 83 feet in length on her backboard side close to the keel, running from midships forward. The bottom plates aft are dented and leaking. On the starboard side she has only got a few small holes. There are no cases of cholera at Port Arthur.

We question the correctness of this statement so far as concerns the dismantling of Port Arthur and Liukungtao.

Mr. Y. D. Luk, a Chinaman, writes this in the *N.-C. Daily News*:—

What is the use of binding the feet? This question it answered by saying that its purpose is the same as "waist-tightening" amongst the European ladies. Do you tighten the waist for comfort? No. Is it to make one look taller or shorter? No. Then what is it for? It is for beauty. It is to catch the eyes of men. So is footbinding. They are both for the benefit of man. Footbinding does not do as much harm as waist-tightening. The former only crushes the metatarsal bones (which is very painful) which cannot be so injurious to the body as the latter, which displaces the vital organs, that they cannot perform their proper functions. I have heard of people who have met their deaths by waist-tightening, but not by footbinding. When so many medical men have written against the harm of waist-tightening, and have not succeeded, how much more then can a number of European ladies think to succeed in putting a stop to this very ancient custom of ours? There are now many medical ladies, why do they not first begin to loosen their waists? They must surely know the effect upon the organs of their body. It would be as useless for a number of our Chinese women to start a Society against waist-tightening, as a number of European ladies would against footbinding. You enlightened Christian ladies, should begin at home by forming at Anti-waist-tightening Society, then we Chinese may perhaps follow your good example.

My hearty wishes with you in the success of your work. I, for one, wish footbinding would go out of China. My heart aches to see the poor girls crying, but it is no use to cry over spilt milk.

We think it right to reproduce the following article from the *N.-C. Daily News*, and would call our Japanese readers' attention to the fact that the article is based on information furnished by a British naval officer:—

No doubt that during the excitement of war and the changes brought about by the advance of a victorious enemy, the residents of Yingkow were led to jump to hasty conclusions about circumstances taking place around them, and our correspondents sent us the accounts of certain events judged from their point of view, which they no doubt honestly thought were correct, but as certain charges was made against the Japanese and were published by us in good faith, it is but right that we should give another side of the question. A British naval officer who has recently arrived from Newchwang has given us an explanation of some of the circumstances recorded, which in common fairness we are bound to make public, especially as coming from a professional man who has had experience of warfare, and who would not be biassed in opinion by private interests, which might unconsciously influence those whose occupation would be affected by the startling changes which occurred.

It is asserted that the Japanese would have avoided Yingkow altogether had not the Chinese insisted on making it their base of operations, probably influenced by the supposition that the Japanese would not advance against any place where foreigners resided, so the Japanese were forced to drive the Chinese out of the place, and according to our informant they did so in such a way as to give no cause of offence to the foreign residents, and were in every way particularly careful that no injury should be inflicted on foreign property and that no danger to foreign life should be incurred that could possibly be avoided. So, when the advance was made on Yingkow, the Japanese remained drawn up outside the Settlement and allowed the Chinese to flee across the river towards Tiuchwangtai, and it was only when they perceived that the Chinese were getting a battery into position to shell the Japanese position that their troops were sent across the river to fire a few volleys at a long distance against the body of Chinese without any serious attempt to engage them, which was quite sufficient to drive them away from the neighbourhood in hurried flight.

Our informant points out how careful the Japanese were to avoid drawing on the Settlement the Chinese fire from the fort lying to the southward, as they did not advance against it from the Settlement, which would have been the most convenient and direct approach to it, but they made a detour to the eastward, so that shots fired from the fort against the attack would in no way endanger foreign lives or property, and they finally retired from the attack with the expectation that the Chinese would evacuate the fort during the night, which turned out to be the case.

When the Japanese were in possession of Yingkow our informant says their conduct was admirable, and that it was possible to avoid

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

friction with foreigners, and moreover were very serviceable in preventing looting by the Chinese which was commenced within the Settlement on the very first opportunity, and which foreigners themselves were powerless to repress. The Japanese certainly attempted to take possession of the Custom House, but as the orders given from head-quarters were that all Chinese public buildings were to be seized, it was not unreasonable that the officer in command of the troops should conclude that the Customs, where the Chinese flag was flown usually, formed one of them, but when the proper explanation was made and understood that the premises belonged to a British subject, the troops were withdrawn from the place and no attempt was made to enter the compound.

It was true that for a short time foreigners were restrained from going outside the Settlement, but we are informed that this was merely because certain residents went out shooting contrary to advice, and a persistence in such course of action might have led to serious complications, which the Japanese were anxious to avoid. The one mistake the Japanese made was in not officially informing the Consul that they found it necessary to give instructions to the sentries to prevent foreigners passing out of the Settlement, instead of leaving the residents to find this out for themselves, and this was no doubt the cause of ill feeling which might have been avoided. But in every way, our informant asserts, the Japanese were most anxious that foreigners should not run into any danger, and if this were really the case it shows a consideration on their part which was, under the circumstances, highly commendable.

Our informant visited the field of battle at Tienchwangtai, and after close inspection failed to find any Chinese bodies except one which showed signs of mutilation, and experience in warfare enabled him to judge how those who had fallen came by their deaths; and in no case but one was anything unusual observed. The one body which showed signs of wounds inflicted under exceptional circumstances might have been that of a suicide, and there appeared to be no other reasonable way of accounting for its condition. As a severe blizzard raged for two days immediately after the fight, it is quite possible that any wounded who were left on the field fell victims to the weather, and those wounded who were capable of escaping would naturally flee westward and not towards the Settlement, which would be quite sufficient to account for the fact that the residents of Yingkow did not come across any of them.

The fact must not be overlooked that war is not a pastime, and that as conquerors the Japanese had a perfect right to take what repressive measures they thought fit, no matter how disagreeable it may have been to the foreign residents of Yingkow, so the credit should certainly be given them of having, on the whole, behaved with singular moderation.

The latest story circulated in China is to the effect that some of the Japanese war-ships in the Pescadores have been captured by the Chinese, or rather blown up. The thing was accomplished by means of divers, who swam out carrying explosives, dived under the doomed ships and blew them up!

The canards emanating from Chinese sources with reference to fighting near Liaoyang, and reported defeats of the Japanese are still circulated. We find the following in the leading Shanghai journal:—

Shortly after the agreement upon the recent armistice we published in these columns several telegrams from Shanhaikwan, etc., as being from Chinese sources, reporting that fighting had been going on between Chinese and Japanese in the vicinity of Liaoyang in spite of the truce. Despatches from Moukden and Liaoyang have now been received by the local mandarins professing to confirm this news. It is stated that hostilities commenced on the 2nd inst. owing to the Japanese endeavouring to take a certain eminence commanding the city of Liaoyang, but which happened to have been already held by two battalions of Chinese militia under the command of the subprefect of the city. The enemy were eventually compelled to abandon their design, but not until after nine days of incessant skirmishing and assaults. Generals I-kō-tang-a and T'ang Jeu-lien, aided by auxiliaries composed of the brigade of ex-bandit Han Pien-wei and the militia of the prefect, Hsü, hold the city and environs of Liaoyang, and from last accounts (13th April), are posted stronger than ever there.

It is plain that these tales are entirely baseless, as upon April the 2nd that Major Aoki, accompanied by a Chinese Official and a Japanese interpreter, attempted to open communications with General I, in accordance with the terms of the Armistice. We have it on the authority of *The Times* correspondent that no fighting or skirmishing of any kind took place in the early days of April between the Japanese-Chinese forces near Liaoyang, and it really seems as though the stories re-produced above had no better foundation than the fact that by firing treacherously on a party of three men carrying a flag of truce, General I's troops compelled them to beat a retreat.

Two Honan men, arrested on a charge of purchasing rifles from the soldiers and subjected to examination by torture, confessed that they belonged to the *Kolao-hui*, and that a great number of the latter, distributed in Wuchang, Hanyang, and Hankow, had planned a rising to take place on the 21st and 22nd of April. It is suspected that the affair was trumped up in order that the local officials, who took steps to anticipate the *émeute*, might gain a reputation for vigilance.

Dr. Nevino has published a book on the subject of demon possession in China. The gist of the author's conclusions is contained in the following:—

1.—Certain abnormal physical and mental phenomena, such as have been witnessed in all ages, and among all nations and attributed to possession by demons, are of frequent occurrence in China and other nations, have been generally referred to the same cause.

2.—The supposed demoniac at the time of possession passes into an abnormal state the character of which varies indefinitely, being marked by depression and melancholy; or vacancy and stupidity amounting sometimes almost to idiocy, or it may be that he becomes ecstatic, or ferocious and malignant.

3.—During transition from the normal to the abnormal state, the subject is often thrown into paroxysms more or less violent, during which he sometimes falls on the ground senseless, or foams at the mouth presenting symptoms similiar to those epilepsy or hysteria.

4.—The intervals between these attacks vary indefinitely from hours to months, and during these intervals the physical and mental condition of the subject may be in every respect healthy and normal. The duration of the abnormal states varies from a few minutes to several days. The attacks are sometimes mild, and sometimes violent. If frequent and violent the physical health suffers.

5.—During the transition period the subject often retains more or less of his normal consciousness. The violence of the paroxysms is increased if the patient struggles against and endeavours to repress the abnormal symptoms; when he yield himself to them, the violence of the paroxysm abates or ceases altogether.

6.—When normal consciousness is restored after one of these attacks, the subject is entirely ignorant of everything which has passed during that state.

7.—The most striking characteristic of these cases is that the subject evidences another personality and the normal personality is for the time being partially or wholly dormant.

8.—The new personality presents traits of character utterly different from those which really belong to the subject in his normal state, and this change of character is with rare exceptions in the direction of moral obliquity and impurity.

9.—Many persons while "demon-possessed" give evidence of knowledge which can not be accounted for in ordinary ways. They often appear to know of the Lord Jesus Christ as a divine person, and show an aversion to and fear of Him. They sometimes converse in foreign languages of which in their normal states they are entirely ignorant.

10.—There are often heard, in connection with "demon-possessions," cappings and noises in places where no physical cause for them can be found; and tables, chairs, crockery and the like are moved about without, so far as can be discovered, any application of physical force, exactly as we are told is the case among spiritualists.

Many cases of "demon-possession" have been cured by prayer to Christ, or in his name, some with difficulty, so far as we have been able to discover. This method of cure has not failed in any case, however, stubborn and long continued, in which it has been tried. And in no instance, so far as appears, has the malady returned, if the subject has become a Christian, and continued to lead a Christian life.

NEW ADDITIONS TO JAPANESE SHIPPING.

From June last to March of this year, writes the *Jiji*, the total registered tonnage of steamers, either newly built or bought from foreign countries, amounts to 78,071.67 tons, which corresponds with 123,111.55 tons burden. Of these, the steamers owned by either the Navy or Army aggregate 26,947.87 tons register and 41,334.35 tons burden. Here is the list of the ships newly acquired:—

Name.	Burden tons.	Register tons.
Nanyetsu Maru	1,325.80	821.09
Juitsu Maru	90.42	48.82

FOREIGN INTERFERENCE BETWEEN JAPAN AND CHINA.

THH *Nichi Nichi Shimbun*, referring to Reuter's recent telegram that Russia, Germany, and France have combined to oppose the acquisition of territory by Japan on the continent of Asia, writes a temperate but dignified article, to the effect that the three Powers in question having no common interests to protect in the Far East, the joint action attributed to them could scarcely be reconciled with any principle of international justice, and that, under any circumstances, Japan, guided by what is fairly her due, must pursue her path without fear or hesitation, not soliciting unwilling assistance or dreading unwarranted interference.

So numerous are the rumours recently circulated, and so obviously baseless have they been in almost every case, that we have shrunk from the task of attempting to refute them, trusting that public intelligence would not fail to discriminate between the extravagances of sensational newsmongers and the proceedings of prudent statesmen. It must be obvious to every thoughtful person that all title to credence is at once forfeited by writers blind enough to believe, for example, the extremely silly canard of an offensive and defensive alliance between Japan and China; a canard upon which columns of journalistic comment have been expended. The commonest exercise of reflection should protect the public against being worried by dissertations on such impossibilities. But we cannot dismiss the latest rumour as incredible, neither can we entirely follow the reasoning of the *Nichi Nichi Shimbun* on the subject. The motives underlying the actions of European Powers in the Orient will often be overlooked if we seek for them only in the Orient. Russia's case, indeed, seems simple enough. It cannot be pretended, of course, that the acquisition of the Liaotung Peninsula by Japan directly concerns the great Northern Power in the smallest degree. By a delicate chain of indirect hypotheses Russia could profess to persuade herself that, in some dimly remote future, her own southward growth or Japan's northward expansion might involve mutual contact in Manchuria. But such an extremely tenuous contention could never be magnified into a solid plea for armed intervention between China and Japan at the present juncture. Russia's real position is much less recondite. In Europe and in Asia alike she is urged by the same desire—the desire of finding a southern outlet. It is a perfectly natural desire, and among Englishmen a sentiment is growing that to hold such a purpose in forced check is unreasonable and therefore unwarrantable. But Great Britain's policy has been inflexible in this matter. She has always striven to keep Russia back, not because she entertains any chronic jealousy of another Power's development, but because, owing to Russia's illiberal commercial policy, every extension of her sway signifies a corresponding shrinkage of British trade. In the Far East the route of Russia's southward growth lies through China and Korea, and it therefore conduces best to her interests that neither of those States should develop strength to offer a serious barrier to her progress. On the other hand, nothing could be less unwelcome to her than the interposition of a strong and warlike Power between her present restricted frontiers and the natural goal of her expansion. Hence Japan, as she has now shown herself, is an apparition that Russia would fain exorcise. Japan, stretching one arm into Korea and placing the tips of the other hand's fingers upon southern Manchuria, might one day present a rigid barrier to Russia's southward march, and although that southward march may be still a remote contingency, it must be included in the calculations of far-seeing statesmen. Hence it is easy to conceive a Russian motive for attempting to upset the recently concluded Chino-Japanese Treaty. We do not pretend to find fault with her attempt. Nothing seems to us more contemptible than the too constant habit of railing against Russian aggression, while every European Power exhibits precisely the same tendency, if only opportunity offers. A different explanation suggests itself for Germany's cō-operation, if it be true that she is cō-operating. The policy inaugurated at Berlin by Prince BISMARCK did not change with his retirement from office. It remains to this day the aim of German statesmen to transfer the drama of European dissensions to an Oriental stage. So long as Russia's attention is diverted to Constantinople or to the Far East, her influence on the European problem loses much of its inconvenience for Germany. We have no difficulty, therefore, in imagining that the latter Power might act in concert with the former at the present crisis, not because the terms obtained by Japan from China have the least practical interest on their own account for Germany, but because it suits the purpose of the statesmen in Berlin to find occupation for Russia in these remote regions. France, on the other hand, may be influenced by her *entente* with Russia, and may also be attracted by the idea of softening the bitterness of her relations with Germany by rowing in the same boat with her under whatever circumstances. It is, of course, within the competence of the Cabinet in Paris to devise a plea for interfering between Japan and the acquisition of Formosa, but as to the inclusion of the Liaotung Peninsula among Japan's possessions, no exercise of diplomatic ingenuity could establish a connection between that event and French interests.

The considerations set down here dispose us to differ from the *Nichi Nichi Shimbun's* conclusion that no intelligible reasons exist for a combination of Russia, Germany, and France at the present crisis of Far Eastern affairs. But although the influence of the three Powers might possibly be exerted so as to save China from some of the consequences of her defeat, nobody can imagine for an instant that any one of the three would raise a finger in China's defence for China's sake. We need not elaborate that point. Such procedure as the telegraph assigns to Russia, France, and Germany, could not mislead China in the smallest degree, and would furnish to Japan a useful object lesson as to the value set upon her friendship and the regard paid to her legitimate claims by certain Governments. We do not, for our own part, imagine that the issue of such a combination would be to soften the situation in any respect for China. Its consequence would be merely to divert a portion of the *spolia belli* from the Power to which they belong by right of conquest to a Power not yet prepared to acquire them in that manner. But whatever may be the result, there can be no question about Great Britain's interests. It has recently pleased some of our countrymen in the East to represent the sudden growth of Japan's national stature as a menace to England, and to gird at the statesmen in Downing-street because they have not interfered to check this unlooked for development of an Oriental Power. They fail to perceive that the interests of Great Britain and Japan are convergent, and that though petty misunderstandings may momentarily separate the two, the inevitable trend of events must ultimately force their feet into the same path. Whatever Russia gains at this crisis will certainly not be to England's advantage, and whatever strength Japan acquires will certainly not facilitate Russia's exit southward. A wise discretion, therefore, has induced Great Britain to stand aloof from the combination now said to threaten Japan. The fact may well be commended to the consideration not only of the Japanese themselves, but also of the British journalistic agitators whose jealousy of Japan effectually blinds them to the true interests of their own country.

YINGKOW.

THE Japanese occupation of Yingkow has given rise to some interesting questions not unlikely to evoke public comment hereafter. The first relates to the tenure of the land and buildings in occupation by the Chinese Imperial Customs. Very soon after the Japanese troops entered Yingkow, the former matter came into prominence. Acting under orders from the General commanding the army of occupation, a Japanese officer proceeded

Digitized by Google UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

to the Custom House and informed the Commissioner of Customs, Mr. HUGHES, that he had received instructions to place a guard over it for purposes of protection. To this Mr. HUGHES replied that no guard was required. Subsequently an interview took place between H.B.M.'s Consul and the officer in command of the town, with the result that the idea of posting a guard was abandoned. The matter did not rest there, however. On the evening of March 10th, the British Consul, Mr. HOSIE, and the Commissioner of Customs, were informed by a Japanese officer that he had been ordered to take possession of the Customs buildings and hoist the Japanese flag there. Mr. HUGHES objected. He said that the land on which the Custom House stood was leased to a foreigner and that the buildings themselves were foreign property. In this contention he seems to have been supported by the Consul. At all events, the latter intimated that the question was too delicate to be summarily disposed of, and in deference to these objections the Japanese officer agreed to suspend action pending fuller inquiry. That evening, Mr. HOSIE wrote to Field-Marshal NODZU, asking that, in view of the peculiar nature of the case, an officer be sent to receive explanations. In response to this request, Lieut.-Colonel FUKUSHIMA, Civil Administrator of the Districts conquered by the First Army, waited upon Mr. HOSIE, and received from him a statement of the arguments bearing on the question, as set forth in a despatch addressed by the Commissioner of Customs to the Consul. Briefly speaking, the exposition given was this:—The land and the buildings occupied by the officials of the Chinese Imperial Maritime Customs in Yingkow were in foreign possession and had been paid for with foreign money, no portion of them having ever been given or lent as Chinese State property by the Chinese Government. From the date of its establishment, the Chinese Customs Service has been conducted in accordance with a clearly defined arrangement. In consideration of discharging the duties of superintending the foreign customs and collecting customs dues, a fixed periodical remuneration is paid by the Chinese Government, out of which the Commissioners of Customs, without any reference whatever to the Chinese Government, provide themselves not only with suitable buildings for residence and offices for the discharge of duties, but also with guards for purposes of protection. In consequence of this arrangement, the lands on which Customs edifices stand have been acquired in perpetual lease in the same manner as land occupied by foreigners generally in China for houses and stores, and the offices themselves have been erected without any Chinese official intervention, posal of the foreign Inspector-General of Customs. The despatch in which Mr. HUGHES set forth the above facts, went on to say that so soon as Yingkow passed into Japanese possession, he, of course, ceased to exercise his former functions in connection with the Customs, and he became, in common with the staff of his office, simply a foreigner residing in foreign premises, and entitled to the same protection from his Government as that enjoyed by any other foreigner. On receiving this explanation, Lieut.-Colonel FUKUSHIMA said that Field-Marshal NODSU'S orders has been issued on the supposition that the Customs buildings were Government property, and that he regretted the trouble caused and the misunderstanding that had arisen. There the matter seems to have ended, but the point is peculiar, and in view of the fact that Japanese journals have found fault with the removal of the Japanese guard from the Custom House, it is well that the exact circumstances should be known.

We may here take the opportunity of referring to another matter that seems to have caused some friction at Yingkow. When the Japanese took possession of the place, Field-Marshal NODZU issued instructions to the effect that it was inexpedient for foreigners to go far from the town. There were apparently two motives for this order, so far as we can learn. One was that the Japanese desired to preserve secrecy as to their military movements; the other, and principal reason, that they were anxious for the safety of foreigners in the then disordered state of the country. For some time, however, the instruction remained a dead letter: foreigners came and went at will. By and by, however, the officer commanding the U.S.S. *Petrel* made application for a pass to visit Field-Marshal NODZU at Kaokan. This was refused, as was also the application of a party of foreigners, desiring to shoot in the neighbourhood of the same place. The shooting expedition took place none the less, and its members were treated with perfect courtesy by any Japanese soldiers they encountered. After their return, however, Major ISHIDA, commandant of the town, acting on his own interpretation of Field-Marshal NODZU'S general instructions, issued orders to the sentries that no foreigners be suffered to pass outside the gates. This, of course, led to trouble. The British Consul quickly interfered, pointing out that, under any circumstances, a notification of the intention to imprison foreigners in the town should have been conveyed to him in the first instance, and requesting that telegraphic inquiries be addressed to the Field-Marshal to ascertain whether his instructions had been properly interpreted. The result was that the prohibition was withdrawn four days later, Major ISHIDA explaining that he had misunderstood Field-

THE SITUATION.

THERE appeared in *The Times* of the 13th ult. a leading article of which we give an epitome elsewhere. Its gist is that, according to the recognised principles of international law and the customs of civilized nations, no Power is entitled to interfere in the peace arrangements made by two belligerent States, unless it has borne a part in the risks and charges of the struggle, or unless its interests are directly threatened by the proposed terms. Such a proposition admits of no question, and recognising its justice, Great Britain has decided to stand aloof from the combination of Powers now understood to be interfering between Japan and China. We explained in our last issue the motives evidently prompting the action of the three Powers that form the combination, and it may now be interesting to consider how far those motives consist with the principle enunciated by the leading English journal and evidently recognised by the British Government.

The considerations influencing Russia are of two kinds. There is the comparatively remote contingency that at some future date her own southward expansion may follow the routes of Manchuria and Korea, and that the effective independence of the latter or the competent resistance of the former would, in that event, be extremely inconvenient. From this point of view it is plainly in Russia's interest that the helpless, effete condition into which both Korea and Manchuria have fallen under Chinese rule or influence should be perpetuated. No troublesome local barriers to her future growth would then present themselves. That such a prospect might be taken into account by far-seeing statesmen admits of no doubt. But it could not possibly appeal to other Powers, or find a place in any basis of inter-state combination. A great and growing country may take thought for the contingencies, however remote, of its own aggrandisement, but it can not, with any pretence of reason, invite other countries to aid it in providing for such contingencies. Considerations of this nature evidently had no influence in bringing the three Powers into line.

There is one direction, however, in which Russia, with much show of justice, may claim that her interests are involved: she may seek to secure the independence of Korea; or, at any rate, to provide that the absorption of the peninsula by some powerful State shall not place the latter on her own borders. The question then arises, is the independence of Korea threatened by the terms of peace arranged at Shimonoseki? From a geographical point of view the answer may be affirmative. The neck of the Liaotung Peninsula

Digitized by Google

coast-line of the Yellow Sea, and stretches some thirty miles up the bank of the Yalu River. It may possibly be contended that Korea, touched at its north-western corner by Japanese territory, could not hope to remain independent. But such a plea could have no validity except on the hypothesis that Japan is wholly untrustworthy. This war was avowedly undertaken by her to secure the independence of Korea. She set out to achieve that object, first, by eliminating China's interference in the affairs of the peninsular Kingdom; secondly, by leading Korea into the path of progress, to the end that the development of the little State's resources and the reform of its administrative system might endow it with competence to be self-protecting. Hence, at the head of the terms exacted from China after her defeat stands her unequivocal recognition of Korea's independence, and in Korea itself Japan is working to introduce Western civilization. In a word, Japan has openly fought for Korea's independence; has pledged herself before the world to secure that independence, and has exacted from her adversary a solemn promise to respect it. What is more, the limits of the neck of the Liaotung Peninsula were fixed entirely in the interests of Korean independence. Holding Yingkow, Haicheng, Fenghwan, and Chiulien, Japan can effectually check any overland movement from Pekin toward the Yalu, or any attempt on the part of the Philo-Chinese clique in Korea to re-open communications with the Middle Kingdom. If, then, a territorial acquisition possessing no value except as facilitating Japan's interposition between China and the latter's sometime "dependency," is to be construed as a menace to Korean independence, in the face of the facts that Japan has fought for that independence, has pledged herself to secure, maintain, and respect it, and is now devoting her finances and her best statesmanship to lay its foundations in Korean progress, then, in truth, the amount of confidence placed in Japanese good faith is absolutely *nil*. No one can pretend to think that the Kingdom of Korea was really independen- prior to the present war, whatever its nominal status may have been. Japan has lavished blood and treasure to vindicate its independence, yet now, one of the principal steps taken by her to avert the danger of any fresh imposition of Chinese suzerainty, is construed as a peril to Korean independence. It results, therefore, that not the terms of the Treaty, but Japan's good faith, is in question.

Such is the logical outcome of the allegation that Korean independence would be illusory did Japan acquire territory stretching 30 miles up the Yalu River. Nevertheless, a menace to Korea's independence is the one and only objection that Russia could openly advance to the occupation of the Liaotung Peninsula by Japan, and such an objection advanced under such circumstances assumes the character of a mere pretext, since the occupation of the territory in question is avowedly one of the means adopted by Japan to secure the very independence on account of which Russia professes to be solicitous.

It is not to be denied, however, that Russia is entitled to distrust Japan if she pleases. Only, as critics of ordinary intelligence, we have to recognise that Russia need not have waited to advance her protest until the terms of the Treaty were declared, inasmuch as her true objection evidently is to Japan in Korea, not to Japan in the Liaotung Peninsula.

If Russia's title to step in, without having borne any of the risks or charges of the War, depends solely, as it plainly does, on her distrust of Japan's intentions in Korea, what shall be said of German and French cöoperation? By what principle of international law or usage of civilized nations can the aid lent by them to Russia be justified? The dependence or independence of Korea does not matter a pin's head to either Germany or France. They have no kind of interest, proximate or remote, in the status or ownership of the peninsula. How, then, are we to construe their interference? Must we conclude that Germany, merely in the hope of transferring to an Oriental stage the drama of European complications, is deliberately sacrificing Japan's friendship, which she has done so much in the past to cultivate, and that France, in deference to a sentimental *entente* with Russia in Europe, and for the shadowy sake of softening her estrangement from Germany in the West by momentary companionship with her in the East, is lending assistance to dash the cup of victory from the lips of of a friendly State? It is scarcely possible to believe these things. Yet by no exercise of ingenuity can we discover how French or German interests are concerned in Japan's occupation of the Liaotung Peninsula. Were there question of an offensive and defensive alliance between Japan and China, constituting a general menace to Occidental interests and influence in the Orient, we could comprehend a unanimous protest by all the Powers of the West, with England and America at their head. But there is no question of anything of the kind. Were there again, question of a menace to French interests in Cochin China by Japan's acquisition of Formosa, something, though in truth very little, might be urged in defence of France's action. But there is no question of anything of the kind: Russia's association on such grounds would be too farcical. Thus finally, if, as rumour alleges, Korean independence the be sole basis of this joint interference, then Germany and France are standing sponsors for a novel principle of international law, namely, that considerations of domestic policy entitle a State to interfere in the settlement of foreign wars, not bearing directly on its own interests nor having involved it in any kind of risk or expense.

The principles concerned in this case being so clear, it must be a source of profound satisfaction to every Englishman that Great Britain has decided to stand aloof from a combination opposed not only to her traditional policy but also to international morality. Some of her critics profess to detect inconsistency in her present attitude of abstention as compared with her previous efforts to secure united intervention on the part of the Great Powers of the West. There is no inconsistency. Great Britain's action throughout the war has been uniformly directed toward the preservation or restoration of peace. She sought to prevent the two empires from closing in combat, and she sought to separate them after they had closed. But the aim of the triple alliance now confronting Japan is to defeat an arrangement that would have re-established peace. Great Britain's inconsistency would begin from the moment that she joined such an alliance.

DIRECT TRADE WITH THE OCCIDENT.

(COMMUNICATED.)

IN an Imperial Proclamation, a translation of which was recently published in these columns, the Japanese as a people are urged "to be constantly on the watch against any feeling of self-content;" to "ever labour in a spirit of modesty;" and finally to do nothing instigated solely by "the pride of recent victory." Remarkable language this, coming from the SOVEREIGN of a land hitherto underrated and misunderstood, yet which has achieved, single-handed, the most signal and complete victory of the century. It would be entirely natural if the Japanese were to exhibit a feeling of exultation, not to say overweening pride, at the present moment. That they are, as a nation, deeply and profoundly grateful for the triumphs won by their arms, is apparent; but we have yet to meet with any instance of truculent pride, either written or spoken. They have, all things considered, taken the defeat of China as a matter of course: they were sure of the result from the inception of the war; but we fancy that in a European country the ebullitions of joy would have been more striking or louder-voiced.

There is indeed only one direction in which we note any symptom of change, either real or desired, in Japan's dealings with foreign lands. It has for years past been the great wish of Japanese traders to obviate the necessity of foreign middlemen and deal directly with the great manufacturing or trading industries of Europe and America. Quite recently, the

Digitized by Google Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

visit of a Special Commissioner from Australia emphasized this feeling; and now it is pertinently asked by several commercial journals and magazines whether Japan cannot, in future, manage her own mercantile interests without having recourse to any foreign agencies in the coast-ports. If, it is argued, the Japanese have been fully competent to carry the war with China to a successful issue without ever feeling the necessity of a foreign loan; if Japan has been able to buy warships, war-material, etc., amounting to millions of *yen* without seeing her currency depreciated or her credit in any way impaired, why should she not go a step farther and deal henceforth with foreign lands on her own responsibility, unhampered by commission firms and Occidental go-betweens? Let those who refuse to trade directly with Japanese merchants hereafter go by the board. There are as good fish still in sea as have ever been taken out of it. What one house may refuse to do, a dozen others will gladly accede to, for never was Japan's prestige greater than at the present moment, and never was the time more opportune for getting rid of foreign middlemen.

In all this we recognise one of the unfortunate results of the policy consistently adhered to by a portion of the Yokohama foreign press. Indeed that much is plainly stated in some quarters. Why should we deal, it is urged, with those who, from the beginning of the war have done nothing but prophesy ultimate national disaster, or tried to stir up ill-feeling between us and Western Powers, and invariably minimized each victory won by our arms? If the foreign community of Yokohama is really represented by such papers as the *Japan Gazette*, it is neither right nor just that they should be allowed henceforth to enrich themselves by having any connection whatever with Japan's trade. These and similar sentiments are what one constantly hears at present; and not only spoken but written or declaimed from the orator's podium. It is impossible not to regret that such popular feeling has assumed this phase, nor does it seem possible to convince the Japanese that the Yokohama foreign press represents only a very small portion of a very small community; or rather that, as a well-known speaker stated at a public meeting not long ago, the foreign community of Yokohama suffers from "press misrepresentation rather than representation." But putting these considerations aside for the moment, it would be well for those who support the theory of direct trade to understand the difficulties which they must encounter.

It is undeniably more profitable to trade directly, to avoid calling the services of foreign middlemen into requisition. Yet the history of the various attempts hitherto made at direct trade with Europe and America has not been encouraging; it has, almost without exception, resulted either in failure or in a disheartening modicum of success. This is not, we fancy, due to any want of skill or adroitness on the part of Japanese dealers, or even wholly to lack of precedent and experience. It is attributable rather to the fact that commercial credit, as such, has until recently been an unknown factor in Japan. The foreign firms of Yokohama and other ports are in intimate sympathy with, and have a clearly demarked line of credit among, the manufacturers and traders of the Occident. On either side, each knows that the other is to be trusted; that he is good for so and so much; that his margin of profit is not to, and will not, exceed a certain figure; that his telegraphic advices are final and implicitly trustworthy. Each works as much in the interest of the other as in his own. It is a system of mutual profit, mutual faith, based on commercial credit of a high order. There are, of course, exceptions to the rule; but we speak here of firms whose names are synonymous with fair-dealing among the Japanese. The question then arises, can the Japanese expect to build up a system like this? Not in a quarter nor yet in half a century, we believe. In the first place, there is the race problem to deal with; the inherent distrust existing between Occidental and Oriental—unjustifiable, it may be, in the case of Japan, yet evident none the less. Secondly, the commercial methods of Great Britain, for example, are the result of centuries of gradual development. The qualities of the father, his credit, his good name, are inherited by the son, and thus handed done through generations. A brief cypher message there will do more than an hour's talk in Japan. The business methods are more rapid, more conclusive, more promptly satisfactory. In all these points Japan is as yet unable to compete with Europe and America. Her own domestic trade is still content to pursue methods unknown in the West, methods that would seem arbitrary and irksome to foreigners. Europe and America are commercially on a far higher level—one to which the Japanese have not yet attained, though we do not for an instant doubt that they will ultimately do so. With such men as MAYEDA MASANA in their midst, they cannot fail to win recognition for their commercial as well as their many other sterling qualifications.

We would finally point out that the Japanese owe a debt of gratitude to the foreign commercial community. That their fictile and textile fabrics have won renown is largely due to these men, who have known when to show and where to place. This is a fact which the Japanese who advocate direct export and speedy elimination of the foreign middleman, should not ignore. For it is through the efforts of these able merchants that her commerce is what it is to-day; that her navy has earned the command of the Sea of Japan; that her railroads have been constructed; that new industries have started up on every side; and that, last but not least, she has been able to fight her greatest war with China unaided by a foreign loan. If it had not been for the foreign middlemen Japan would be a far poorer country than she is to-day; nor could she ever have embarked without pecuniary assistance upon the great undertaking that she has now brought to so successful an issue.

FRIENDLY INTERVENTION AND UNFRIENDLY RETICENCE.

THE Viceroy LI, during his stay at Shimonoseki, was represented as saying that he disapproved altogether of inviting foreign interference in a war between China and Japan about an affair that concerned the two empires only; that if such interference were permitted on the present occasion, it would become a precedent for the repetition of similar interference on future occasions, so that all liberty of action on the part of an Oriental State would be impossible, and that under no circumstances would China solicit foreign interference. When these expressions were publicly attributed to the Viceroy by the press, much scepticism was expressed, but, for our own part, we thought it probable enough that the old statesman had used the words quoted, not in sincerity but because he desired to please the Japanese. His duplicity is now severely commented on by the *Hochi Shimbun*, which alleges that when H.E. WANG CH' CHUN went to St. Petersburg in connection with the Coronation of the Czar, he appealed to the latter to interfere between the two belligerents in the East, and that the Chinese Representative in London was instructed to make a similar appeal to the QUEEN, and to convey certain valuable gifts to HER MAJESTY at the same time. It seems superfluous to discuss such matters at this late period. That China appealed several times to Foreign Powers, and that from first to last she relied on their intervention, is an established fact.

Speaking of this, we may note a point that has hitherto apparently escaped the attention of public writers. After Japan's terms were made known to the Viceroy in Shimonoseki, a long interval ensued, during which His Excellency held telegraphic consultation with Pekin. It is a moral certainty—indeed we have it on the authority of correspondents addressing the Shanghai journals from Pekin—that steps were taken by the Tsung-li Yamên to acquaint the Foreign Representatives in Pekin of Japan's demands, and to obtain, their opinions. The Legations of Russia,

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

France, and Germany were certainly not omitted from the consultation. Can it be reasonably doubted that the Chinese Government acquired on that occasion, virtual assurance that if any portion of Manchuria were ceded, the three Great Military Powers of Europe would interfere? And shall we not be justified in going a step further, and concluding that when the Pekin Government authorized the Viceroy to sign the Treaty they were thoroughly well aware that its ratification would never become a necessity and that they might plead the veto of the three European Powers in extenuation of their refusal to ratify? China must have had that outlook in sight. Moreover, Japan's terms were made known by Japan herself to the Governments of Europe and America almost simultaneously with their formulation to the Chinese Envoy in Shimonoseki. If the Governments of Germany, Russia, and France found the terms unacceptable, why did they not convey some timely intimation in that sense to Japan? Why did they wait until the objectionable term had been included in a Treaty signed by the Plenipotentiaries of the two empires, and until the Treaty had received the ratification of the EMPEROR of Japan? It is difficult to conceive any course better calculated to place Japan in a painful dilemma than the course that has been adopted. Common justice, to say nothing of friendliness, required that if three Powers like Germany, Russia, and France intended to dictate to Japan in a certain contingency, they should have made known their intention to her so soon as ever the contingency presented itself, and should not have allowed her to take a step virtually irrevocable before warning her that such a step would involve their united opposition. It has been charged against Japan's statesmen that they committed a diplomatic blunder in not adopting means to assure themselves of the complaisance of Western Powers before they definitely framed their terms of peace: in other words, the complaisance of Russia, for by no recognised process of reasoning could the interests of any other State be regarded as appreciably involved. We do not share that view. It seems to us that any attempt to preface the peace negotiations by a secret understanding with Russia would have provoked—and justly provoked—the suspicions of Great Britain to a degree fraught with only troublesome consequences for Japan. Her most prudent course was her most straightforward; namely, to go steadily on, without looking to the right or to the left, and without offering to any particular foreign Power confidences that she withheld from the rest. She could not but foresee that when the day for negotiation arrived, there would be ample time for the Powers of the West to examine her terms and to announce their attitude toward them, before she should have committed herself to anything definitively. In that day her soundest hope of avoiding complications was to be in a position to say that all the States of the Occident had received absolutely equal consideration at her hands, and that she relied on general principles of justice, not on special and partial collusions. Assuredly, she could not be expected to anticipate that three Great Powers, maintaining relations of avowed friendship with her, would observe silence while she finally committed herself to a course against which they intended to protest, and would reserve their opposition until to yield to it must bring upon her the maximum of humiliation and embarrassment.

THE SITUATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In reading your Editorial on "The Situation," in the issue of the 29th inst., wherein you discuss the possible motives for the inception of joint action on the part of Russia, Germany, and France, in view of the stipulations entered into between Japan and China for the settlement of their differences and to conclude a permanent peace, you devote your reasoning to the position in which Japan stands, and will stand, in relation to Korean independence. You write, "This war was avowedly undertaken by her to secure the independence of Korea. She set out to achieve that object, first, by eliminating China's interference in the affairs of the Peninsular Kingdom: secondly, by leading Korea into the path of progress, to the end that the development of the little State's resources and the reform of its administrative system might endow it with competence to be self-protecting. Hence, at the head of the terms exacted from China after her defeat stands her unequivocal recognition of Korea's independence, and in Korea itself Japan is working to introduce western civilization. In a word, Japan has openly fought for Korea's independence and has exacted from her adversary a solemn promise to respect it. What is more, the limits of the Liaotung Peninsula were fixed entirely in the interests of Korean independence." All this is undoubtedly true. Japan fought to eradicate all Chinese influence in the administration of Korea's affairs. Chinese interference was inimical to the aspirations of Japan, commercially and politically, in Korea. Practical politics, as viewed by Japanese statesman, demanded that Korea should be brought into unison with Japanese aspirations as the progressive leader of western civilization in the Orient. China was a stumbling block in the pathway of the realization of that conception. Japan viewed Korea as a field upon which was to be developed a condition of affairs that would inure to the benefit of the Empire of Japan, if delivered from the domination of China. If the foregoing propositions are correct, and I think they are, was there not something more, and beyond, Korean independence in view when war was inaugurated? Just as soon as Japan went outside of the territory of Korea she was fighting for something more and beside the initial programme. In concluding the treaty there was something more than the independence of Korea from Chinese dominance in view. With the occupied territory conceded by China, "Japan can effectually check any overland movement from Pekin toward the Yalu, or any attempt on the part of the Philo-Chinese clique in Korea to re-open communications with the Middle Kingdom." Further, Japan has placed herself in a position to command the little Kingdom to do her bidding in her own good time. That the absorption of Korea is contemplated as a possibility in the future who may know, except the guiding minds of Japanese statecraft. The world must place credence in the statements formulated by those who now have control of affairs. What may be developed in the march of the imperial progress of Japan, when perchance other hands hold the reins of government, is outside the purview of the present. All the same, Japanese foresight has taken a bond of value in the Liaotung Peninsula. She has placed herself where she can be protector or destroyer. So far as Korean independence is a tangible quantity, it is at the dictation and mercy of Japan. And more, Japan has placed herself where she can dictate to China should occasion require. Korea has been divested of an incubus to be dominated by a live power; that she is more independent than before can hardly be proved. In China Korea had a meddler, in Japan she has a master. Korean independence to-day is virtually Japanese dictation. Whatever lines Korea may adopt for her future guidance will be laid down by Japan in her own interests. Korean independence will be fashioned by Japanese guidance and Japanese policy. The expenditure of life and treasure by Japan in the struggle—the bold venture she made, pitting her resources and power against the bulk of the Middle Kingdom—warrants her in all that she may deem due as an equivalent. She played for a high stake and won. She has the right to set the measure of her demands and requirements. It is very well to ascribe high motives to all national movements. Yet it is, nevertheless, necessary to remember that national aggrandisement is at the base of national endeavour. Nations have not the moral conscience of the individual. It was not to win glory only that Japan entered upon the war; it was not that Korean policy was dominated by Chinese policy *per se*, that caused Japan to unsheathe the sword; rather was it that Japan might subserve her own interests, at the expense of China if need be, Korea being viewed as a plastic thing to be moulded to the shape that would redound to the advantage of the Japanese empire. Taking the history of western nations as examples, Japan was right in the conception of the possibility and advantages of her endeavour. Now as Japan had in view her material advantage when she entered upon the war, it is but fair to other nations that they be allowed to act as may seem best to them for their national benefit. Japan assumed to act in behalf of a general advance in Occidental civilization, her ulterior aim being to reap an advantage thereby. Claiming to be a leader of Occidental civilization, which she was, she aimed to become a dictator as well as leader. With her new possessions, when they are consolidated and effectively brought under Japanese methods, she will be in a position to dictate very largely in Occidental politics. She will be a mighty power for good or evil. Russia has interests on the Pacific that are of paramount importance to her. Russia has as large an interest in Korean independence as has Japan. Yet how long will Korea be known as an independent State? The geographical position of Korea is against the presumption that she can continue independent for many years more. It is inevitable that Korea will be absorbed by either Russia or Japan, or partitioned between them in the near future. Nothing can prevent it except the renunciation of national aggrandisment by Japan and Russia. Had Russian enterprise not conceived a Trans-Siberian railway, Korea might have had a long tenure as a sovereign State. From the moment of the conception of the Trans-Siberian road, Korea was doomed as an independant state. The logic of fate presaged it and when "might is right" in national affairs Korea could hope for nothing but a brief extension of her national existence. Korea, to be exempt from absorbtion by Russia, must be made an integral portion of the Japanese Empire. War or diplomacy will determine when Korea shall be effaced to become either Japanese or Russian territory. So far as the world at large is concerned it would be better that it became Japanese than Russian, and for the inhabitants of the peninsula they would be infinitely the gainers under Japanese auspices. Russia without a portion of Korea will never be satisfied; for her development she must have it, as Russia has commercial aspirations and a necessity for harbour accommodation she cannot resist the temptation or desire to appropriate to herself what to her is a supreme need, and she will not be hindered by any protests or arguments from any quarter short of signal defeat in a gigantic war. Japan waged war to mould the future of Korea—who shall complain if Russia inaugurates a policy especially in her own interests, ignoring Japan's interests as well as Korea's rights. It is the way of the world, one of the beacon lights of western civilization especially—for the nations to appropriate what they desire. Japan has learned the lesson and now if one of the masters of the school, who has been one of the foremost practisers of the teaching, steps to the front with the demand it may become a matter of force, but the consistency of the move cannot be questioned. When Russia gets ready there will be music in the air. If Japan is in the mood to say to Russia, "You cannot expand your frontier on eastern [illegible]

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

she must be prepared for a more serious strain than her war with China exposed her to. Is a partition of Korea between Russia and Japan not to be thought of? Better that than war, better for both Russia and Japan to halve the apple of discord and keep the peace.

Yours truly,
X.

Yokohama, May 1st, 1895.

JAPANESE ROOTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you allow me a few lines of your space to repudiate the views as to the identity of Japanese roots with those of other—especially Aryan—languages, attributed to me by Dr. Edkins in a recent issue of your journal.

It is true that twenty years ago, in a paper read before the Asiatic Society of Japan, I suggested that there was some *prima facie* evidence in favour of this hypothesis—nothing more—but even this position I have long since abandoned, and would now set down such similarities as exist to the action of onomatopoetic causes or to accident.

Dr. Edkins also somewhat exaggerated my opinion as to the number of common roots in Japanese and Korean. I have frequently said that they are remarkably few, considering the great similarity in the grammars of the two languages.

Yours obedient servant,
W. G. ASTON.

Woodlands, Seaton, Devon,
March 16th, 1895.

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, N.Y., April 4th.

We who receive on our breakfast-table daily the telegrams from the Far East, from Shimonoseki, Formosa, and Manchuria, and get even daily reports of the pulse temperature of Li Hung-chang, are nevertheless, not satisfied. Telegraph operators, newspapers correspondents, and leader-writers contrive quite effectually to bleach out the Oriental local colour and to give chiefly what they think will suit the tastes and eyes of their readers. Those who have the Far East in their memories, and whose sympathies are quickened by former experience, take refuge in what is old and standard, as well as in the things of yesterday. One is tempted immediately to moralize and wonder why it was not one of the ineffectual brace of envoys who received the *soshi's* bullet in his cheeks. In such a case, it might have been that the wound would be treated in the old Chinese way, with all sorts of animal *exuviae* and products, with outward applications of wax, the hides of living animals, etc. Li Hung-chang, however, is to be congratulated, that having for so many years bravely advocated foreign science and art, he has now the *argumentum ad hominem* so deftly applied. All the world hopes that he will get well; and "all the world" includes financiers, lovers of peace, and well-wishers of the Far East and of humanity in general.

No doubt in ordinary physical troubles and in convalescence, average Chinese and Koreans, and many an old-fashioned Japanese, still puts trust in ginseng. It is more than probable that, in spite of the advance in modern science and therapeutics, the plant will still hold its own for generations to come, in both mystical appreciation and in actual practice. At least, that seems to be the faith of a good many Americans, whose nerves of interest in the Far East start directly from their pockets. Within a fortnight, your correspondent has received two strong proofs that the Americans are going to make out of ginseng, especially in the Oriental trade, all they can. In Washington, is published by authority of the Secretary of Agricultural, Bulletin, No. 16, a pamphlet of pages, devoted to "American Ginseng: its mmercial history, protection and cultivation." s compiled by George B. Nash. This report been prepared in response to a popular deand for information on the cultivation of Amen ginseng. The bulletin brings out the facts the wholesale price of American ginseng has dily increased from 52 cents per pound in 1858 mewhat more than three dollars per pound in , and that the value of the export for the decade has amounted to between $600,000 $1,000,000 per year. Your correspondent is in a region of country—the pretty Lake ict of Central New York—where the gin- was formerly very abundant in a wild

Nearly a century and a half ago, when ne (not Dominie) Kirkland and his preors and successors in missionary, com- l, and pioneer life, occupied this beautiful Orient, or some other good Old Mortality in Japan lake region of Central New York, they were in more than one instance during the long winters of their life in what was then a nearly unbroken forest tract, saved from starvation by the Indians. The friendly red-men dug up ginseng and sold it to the Dutch traders at Albany, who imported it into China. This plant was first discovered by a Jesuit, Father Lafitau, a missionary, among the Iroquois Indians, after long search and inquiry among them. It quickly became a source of wealth to the French, Dutch, and English colonists as early as 1716. The discovery by the missionary, who had received descriptions of the plant from his confreres in China, was first made near Montreal, Canada. The root was valued at two francs per pound in Quebec, but was sold at 25 francs per pound in China. In 1751 the price had gone up to 12 francs per pound, bouncing up in a few years to 33 francs. Over-haste in preparation and poor selection of roots soon afterwards killed off the Canadian trade.

From 1730 on, the main stock of American ginseng was collected in New England and New York. Later, in the march of population, the ginseng of Wisconsin and Minnesota was collected and sent to the Far East. On our continent, the American plant has about the same range of latitude for its growth as in China, though with us it extends farther south. A marked map of the United States shows that the whole country east of the Mississippi, except the southern cotton belt, and the strip of coast between the Alleghanies and the ocean shore (as far north as the great glacial moraine, which crosses New Jersey, at about the region of Newark), was once a vast ginseng field. Nevertheless, the supply of wild roots is so rapidly decreasing, owing to the insatiable Chinese and Korean demand, that its extermination, if present conditions continue, is inevitable. To forestall what seems certain, American farmers have already begun cultivating the wild plants and sowing the seed thus obtained. Though many attempts to cultivate ginseng with commercial methods were made in the past, they were not encouraging.

This period, however, is past, and the danger now is that the market will be overstocked. Such a contingency, however, is at present remote. Mr. George Stanton of Summit Station, Onondaga Co., N.Y., who has experimented largely for the past 6 or 7 years, has demonstrated the success of his method and now furnishes abundantly both root and seed. In transplanting the wild roots, the time required is shorter than when the seeds are sown; the latter method necessitating from four to seven years. The details of culture are very interesting. We also find that Kawana, N.C. has a ginseng garden. There is also another at Somerset, Ky. Indeed, it is more than probable that the day of jest and sneers is over, and the era of assured success has come. It is also probable that, owing to the steady eradication of the wild roots, a present outlay of $100, to the intending cultivator will be equal to five hundred dollars expended a decade hence. It is highly probable, also, that the Americans will in time equal or excel the Chinese in the preparation of the root.

We remember when calling on the Korean Envoy, Ming Yong Ik, at the Victoria Hotel on Broadway (which hotel, by the way, has just been sold out and has suspended business), that he, with ill-concealed scorn of certain foreign dishes and beverages, brought out about half a peck of dried ginseng roots (a decoction of which he said he enjoyed daily) from which he selected a good specimen for presentation to his American caller.

While we are exporting ginseng, the Far Easterners are importing rice. One of the sights in New York harbour which I enjoyed a few days ago, was, beside the steamship *Alliance* (fired on by a Spanish gun boat, but unhit) were the ships coming in from the ends of the earth. One of these, the *Batoum*, had on board 36,000 bags of Japan rice, much of it went to the mill of New York's great rice firm, Dan Talmage's Sons.

It must be known that the Talmages have an Oriental interest and historical connection. Descended from a Connecticut Yankee father and a New Jersey mother of Dutch stock, the sons were John, Daniel, Goyn, Henry, and Thomas De Witt. The latter and youngest is the famous Brooklyn preacher, who fills to overflowing Irving Hall in New York every Sunday afternoon, and whose namesake was Rev. Thomas De Witt of the Collegiate Dutch Reformed Church of New York City. Dr. DeWitt nominated and recommended to our first American Minister Mr. Townsend Harris, his efficient secretary, Mr. Henry. C. J. Heusken, who, as his tomb in the cemetery at Tokyo tells us, was born in Amsterdam, Holland, January 20th, 1832, and died (by assassination) at Yedo January 16th, 1861. (Let us hope that Mr. will keep Mr. Heusken's grave cleared, and the inscription plain). John Van Ness Talmage, the oldest brother, was a missionary at Amoy, China, for a period longer than the average generation of men, and a spirited biography of him by Rev. John S. Pagg has just left the press. Daniel Talmage was the leading rice merchant of New York City and a man of considerable literary cultivation. Goyn, the handsomest of the five brothers, was an eloquent preacher and successful pastor, and Henry was another of the four clergymen in his family, all of the Reformed Church, though De Witt's ecclesiastical connection is at present Presbyterian. We may add that in the second generation there are several sons following their fathers in their vocation, one of them, the son of De Witt having already made a brilliant record.

While on the waters of the harbour of New York, especially with the New York *Tribune* in hand, it was easy to recall points of information of some interest to present and former residents in Japan. In crossing the Brooklyn Suspension Bridge, we always take a fond look at the Navy Yard and its usually numerous fleet of ships. The contrast is striking between the white men-of-war, modern build and armament, such as the *New York*, *Cincinnati*, *Castine*, and *Vesuvius*, with the old wooden vessels. The line-of-battle-ship *Vermont*, three or four decks high, and seine-like with one hundred portholes, shows how European ideas in naval architecture would not work in America. Memories of the seas of China and Japan are recalled by the *Essex*, *Lancaster*, and *Portsmouth*. In the old days, when Mr. Harris was an exile at Shimoda, the *Portsmouth* was a trim and useful sloop-of-war. Now, alas, her stores have been taken out, her officers and crew are scattered, and she is to be dismantled and broken up to go the way of naval fire-wood, to be largely burnt for her old iron and copper. When Mr. Harris' biography and journals shall have been published, as they will be by Messrs. Houghton, Mifflin & Co., of Boston, her name will appear once more on the printed page.

With old ships, the old men also pass away. On March 4th, Mr. Charles Lamman died at his home, Washington, from heart disease, aged 81. Known as the Private Secretary of Daniel Webster, and interested from the first in Japan, he afterwards became the secretary of the Japanese Legation in Washington, through the long term of years from 1866 to 1882. He wrote a number of articles on Japan, giving timely and needed information, and also edited a volume on "The Japanese in America," and "Leading Men of Japan." He was an amateur artist, and though he never saw Fuji-san, the oil painting of this great natural landmark of Nippon, which hangs on the Legation walls at Washington, is a highly creditable work of art. In his early days he opened the Adirondacks and a good deal of Canadian scenery to the attention of the world of anglers, sportsmen, and tourists. In all, he wrote about twenty-five volumes, several of which were printed in Great Britain. Many Japanese will remember his kindly offices. Less known, but intensely interested in the country and people of Japan, was President Henry Coppee, of Lehigh University, whose service in the Mexican War under Commodore Perry and General Scott, and whose scholarly works in biography were equally widely known.

We have the Japanese lecturer now in the field. He uses the English language in attractive literary form, and throws on the screen, by the aid of the stereopticon, pictures of the prominent scenes and men in the China-Japanese war. Mr. Takahashi spoke before a New York audience a few evenings ago, having his thousand or more hearers, many of his own countrymen being present, whose applause was hearty and frequent. Less fortunate than the level-headed lecturer, was poor Kakuzo Tsukumoto, formerly a cook in the United States Navy, who had become entirely unbalanced by the war news. He was adjudged insane by physicians, and placed in the county asylum. When the Charities Department officer attempted to arrest him, Tsukumoto took him for a Chinaman and nearly strangled this representative of peace and benevolence, before yielding to the padded room. This incident recalls a curious book we once read by the famous Dr. Benjamin Rush of Philadelphia, who had studied the physical effects of the alarms and excitements of the Revolutionary War. Dr. Rush showed that not a few persons lost their health and even their lives without contact with powder, ball, fire, or battle missles of any sort, but simply through excitement and nervous derangement.

The book-world seems to be unusually attractive this spring, and there is no suggestion of "hard times" in the voluminous announcements of publishers. Books are no longer luxuries but necessities. Furthermore, the rapid growth of public

Digitized by Google
Original from UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

libraries throughout the United States make it frequently possible for publishers to issue a work with profit, even though the number of private individual buyers may not amount to a hundred. The libraries absorb a whole edition. From an inspection of the publications announced in theology, philosophy, and religious literature, it is evident that the day, both of destructive criticism and of the popular fear, formerly amounting almost to terror, of both textual and literary criticism of the Bible, and of comparative religion and the application of science to theological study, is over, and that the day of construction and welcome has come. The Parliament of Religions, as a localized event is past, but as a continuing process and a permanent method, it is and is to come, more and more. Chicago bids fair still to remain the centre of the movement in the latter direction, though for a long time to come, the schools of the East will hold their leadership and supremacy in science, philosophy, and the humanities.

As evidence that all the facts in the development of mind and religion are to be faced, appraised and correlated, we notice the issue, of a pamphlet on the worship of the Phallus, by Mr. Edmond Buckley, who lived several years in Japan as teacher and investigator, at first hand, of a profound subject. His dissertation is set forth in a thirty-four paged pampelet, with the title, "Phallacism in Japan," with photographs, bibliography, etc. The pamphlet is on sale by the Chicago University, and the treatment is that of a thorough scholar. Before this whole subject of Phallic worship in Japan sinks into oblivion, the traces and survivals of it should be noted by travellers and students. Old residents of Japan ought to take the trouble of furnishing testimony of what they have seen in the old days of unreformed Japan. Either the writer or Dr. Buckley will be very glad to receive from any observer, information as to the locality and use of phallic emblems, in order that induction may be made from as full a supply of actual facts as possible. It seems curious that in all the books by foreigners on Japan that only four authors, according to Mr. Buckley, make any reference to what was once a very wide-spread form of religion.

W.E.G.

TIEN TSU HUI.

There was a well attended drawing-room meeting at Mrs. J. F. Seaman's on Tuesday, 16th April, to hear an address from Dr. Elizabeth Reifsnyder on the subject of "Footbinding." Mrs. Little presided, and very briefly introduced the well-known doctor of the Margaret Somerville Hospital to the exceedingly representative meeting of ladies; after which

Dr. Reifsnyder began with an account of the origin of footbinding, the motives alleged for it, which seemed to consist chiefly in the young man's first question as to his future wife: "Is she good looking; has she small feet?" She then said the Chinese usually began binding their children's feet at 4. After 7 the child was said to suffer a great deal more; she did not know how this might be, but she knew that the child could then take the bandages off. There were in either case three years of agony. A woman's bandages were five yards long. A cleft was soon made between the heel and the rest of the foot, this according to Chinese usage must admit of a silver dollar, but was often as long as her finger. What is called a small daughter-in-law is often taken into a Chinese family. Her feet would be bound by her mother-in-law, and she hoped she should not hurt any of the ladies present by saying that of all cruel people a Chinese mother-in-law was, she believed, the cruelest. Under her treatment toes often dropped off, indeed not uncommonly half the foot would go. She told of a poor girl's burst of grief; "Why; there is half my foot gone!" And how she herself had said to her that with half her foot, and that half in good condition, she was much better off than most of those around her. And so it had turned out, this girl walked better than the others. The foot of another daughter-in-law she knew dropped off entirely under the process of binding. But it seemed that Chinese men wanted these deformed feet. If men did not, women would soon leave off this torture. People often have the idea that after the first it hurts no more. She had in her employ a woman 50 years old, and she knew that after more standing than usual this woman's feet would still bleed. She then showed a shoe two and a half inches long, and begged the ladies to realise that a weight of 140lb. stood upon those shoes, concluding by saying that if for every girl with bound feet a boy had to have his feet bound she thought that the practice would soon be done away.

Mrs. Bird Bishop, so well known as author and traveller, then moved a vote of thanks to Dr. Reifsnyder, saying what horrible results she had herself seen in hospitals from this cruel practice. Eight months in China had not been long enough for her to get hardened to seeing it. She described how the Hakka women carried heavy burdens, and how, though she did not rejoice as their burdens were heavy, she did rejoice to see them moving alert and active under them, resting on their feet of natural size. Some gentleman had recently written to her from England saying that he had been so much touched by the sufferings of mules, as depicted in a recent book of travels of hers, that he thought a society ought to be formed to protect them. As she had sat at that meeting she had thought how far worse were the sufferings of women in China than those of the mules in Khoordistan, and women had far great sensibility to pain. Whilst lately in Tientsin she had seen the foot of a child betrothed to the son of a General. The child was in the hospital with her mother, and one day there had been a great commotion in the hospital, all the child's aunts arriving, and making a great disturbance that lasted three days. It seemed they said the little girl's foot had been seen unbound, and that this was a thing that could not be got over, and that none would ever marry her now. The hospital Doctor, in order the save the child's foot from gangrene, had had to unbind it. The foot was saved. But he had seen it, and the end of the business was there came a letter from the young man, the fiancée, saying he would have nothing more to do with the child or her family. Success might be long in coming, it might not come in the lives of the ladies there present, but if they could but save twenty children a year from this torture, let them rest assured they were doing a good work.

Mrs. James Buchanan seconded this vote of thanks.

Mrs. Little, who had before given Mr. Timothy Richard's greeting to the meeting, that they must not be deterred by a little difficulty, remembering that if the matter were easy it would have been done without them; together with Dr. Fryer's suggestion that through the foreign Ministers they should address an appeal to the Emperor asking him to forbid any official to marry his son to a small foot woman, now said she had recently learnt that not only were the Empress and ladies of the Court with natural feet, but that no woman with crippled feet was admitted within the palace walls; that Li Hung-chang in conversation openly denounced the practice, and that lady doctors at Kiukiang and Chinkiang found a great difference in the health of the women at these two places, which, for definite reasons, they could not but attribute to the practice of footbinding being so more general at the one place than at the other. She then invited all present to give in their names as ready to help the Tien Tsu Hui (Natural Feet Society) by spreading its leaflets, the first of which, a poem by a Chinese lady, appealing to the women of China, was on view, and said also they wanted money to pay for these as also for prizes, which they had decided to offer to young men for the best essays on the subject, the first subject to be "The Origin and History of Footbinding; its objects; how far spread throughout all China; how widely diffused among all classes; whether practised by Chinese over seas; and whether there had ever been any Chinese movement against it." She then moved a very hearty vote of thanks to Mrs. Seaman for her great kindness in giving this meeting. This was seconded by Mrs. Drummond, and no sooner carried than nearly every lady present wrote down her name as sympathising with the objects of the Tien Tsu Hui, and willing to help where she could. After which the ladies adjourned to examine the deformed foot of a Chinese lady, who had with great self-sacrifice volunteered to exhibit it and the method of its wrapping. Even her good nature could not repress many half stifled exclamations.—*N.-C. Daily News.*

The colony of New South Wales is governed by its own Legislature, consisting of two Chambers; the one a nominee Council, of which the members are appointed for life by the Government for the time being; these numbering 37 at the present time. The second Chamber, or Legislative Assembly, consists of 125 members, who are elected by manhood suffrage, under the protection of the ballot. No property qualification is required on the part of candidates for a seat in the Assembly; and most of the members of the Ministry are selected from that body. Many of the members of both Houses, especially those belonging to the Labour Party, were originally working-men, or commenced business life with limited means.

SHANGHAI LADIES' "NATURAL FEET SOCIETY."

(COMMUNICATED.)

Missionary effort has now resulted amongst other things in the formation of a very influential ladies' Tien-tsu-hui (Natural Feet Society) in Shanghai. All the Consuls' wives have given their names to be on the committee, together with several others of the leading residents. Mrs. Drummond is the President; Mrs. Marshall, 1, Yuen-ming-yuen Road, the Treasurer; Mrs. Buchanan, 2, Yuen-ming-yuen, and Mrs. Seaman, 70 Bubbling Well Road, are the Local Secretaries, and Mrs. Little, Ichang, the Organising Secretary. This Society, for the most part not speaking Chinese, will devote itself to issuing a supply of literature on the great foot-binding question, samples and packets of which either of the Shanghai Secretaries will be glad to furnish free on application. The first paper issued will will be a sheet poem by a Chinese lady of Hangchow, with illustrations. This was translated by Dr. Edkins, and appeared in *Woman's Work*, August, 1894, page 30. They have also in hand a short treatise drawn up in the first instance by Pastor Kranz—the five reasons generally given in support of foot-binding with their refutations, then five reasons why it ought to be done away with. They have also offered two money prizes for the best essays on the Origin and History of Footbinding, how it arose, its object, how far it is universal throughout China, how far diffused through all classes, whether carried on equally by Chinese across the seas, and whether there have ever been any Chinese movements against it. These prizes are open for competition to young men throughout China, and will, it is hoped, lead to much earnest thought and enquiry upon the subject. Dr. Timothy Richard, Dr. Fryer, Dr. Edkins, and other distinguished sinologues are rendering the ladies every possible assistance about this and about their publications. And there is to be a three months' interval between the announcement of the subject and the sending in of the essays. The committee to adjudge the merit of the essays will, it is hoped, be composed half of Chinese scholars and half of foreigners.

That the ladies might fully appreciate the gravity of the evil they are combatting, Mrs. Seaman kindly gave the drawing-room meeting at her house, which Dr. Elizabeth Reifsnyder, of the Margaret Williamson Hospital, spoke. It is hoped that local committees may be formed in all the out-ports. Wherever feasible, it would be well to have a drawing-room meeting in the first instance addressed by a medical missionary, or some one well acquainted with the subject, as long usage has dulled in most of us the disgust at the practice of foot-binding that probably every foreigner feels on first arrival in China, and few of us have really any idea of the greatness of the disadvantages attached to it. Thus it is certain that there would be much more enthusiasm displayed about forming a committee and giving donations to the fund for printing expenses, if a few accurate facts and details were first mastered. Some doctors assert that it would be more humane to amputate under chloroform in very early childhood the feet of every girl born in China rather than to expose them to the protracted agony and many dangers inherent to binding. Whilst probably every traveller must feel that had the women of China the heaviest chains that ever prisoners have had attached to them, they could not be more heavily handicapped than they now are in doing their women's work of cleaning, mending and the like. This is naturally much more evident in the interior, where every woman is crippled, than in Shanghai, where already it is possible for foreign ladies to a great extent to insist upon having amahs with natural feet, and for the factories to a certain extent to choose them by preference. Naturally, the poor crippled factory women must have seats supplied to them, and appreciate these so greatly that they often remain seated when their machines require tending. If the present war results in the opening up of China to any extent, the present system of crippling half the Chinese race in a most painful manner will become more glaringly disadvantageous than ever, whilst doctors can tell us how far this crippling is responsible for the widespread of many of the most distressing illnesses to which women are subject, as probably it is for the opium smoking and degeneracy of the Chinese race. Dr. Fryer, of the Shanghai Arsenal, after careful enquiry, is of opinion that one little girl in ten dies actually either under the operation of foot-binding or of the after consequences.

CHESS.

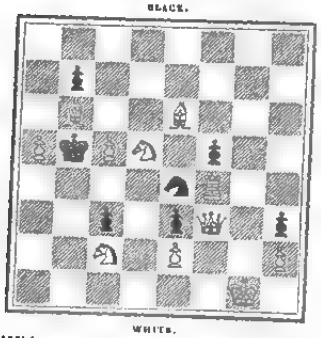
(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and reopens on 3rd October.

The Tokyo Chess Club meets at the Tokyo Hotel every Friday from 1 to 7 p.m.

SOLUTION OF PROBLEM No. 174.

WHITE.	BLACK.
1—Q to R 5	1—Any
2—Mates accordingly.	



Correct solutions received from Omega, Erich Putzier, Digamma, W.H.S., Kr., E. J. King, and J.D.

This problem has been much admired by our solvers, who would also appear to concur in Mr. Loyd's opinion that it is one of the most difficult two-movers extant.

PROBLEM No. 176.

By J. N. BABSON.

BLACK.

WHITE.

White to play and mate in two moves.

CHESS IN NEW YORK.

The match between the City and Brooklyn Chess Clubs at the Union Square Hotel, New York, attracted a large crowd of spectators. The pairing was as follows:

J. W. Showalter vs. H. N. Pillsbury, E. Delmar vs. Ph. Richardson, A. Ettlinger vs. J. F. Barry, H. Voigt vs. F. M. Teed, S. W. Bampton vs. S. R. Rocamora, W. J. Ferris vs. William M. de Visser, W. Huntington vs. W. F. Eno, J. W. Halpern vs. J. C. Tatum, Referee, Dr. O. P. Honegger, Metropolitan C. C.

The City C. C. was represented by the first man in each pair.

After an hour's play two games were decided, Delmar and Pillsbury being the winners. Here are their games: the Notes thereto are by our valued contributor "Digamma," of Tokyo.

GAME No. 256.

QUEEN'S GAMBIT DECLINED.

WHITE. Pillsbury.	BLACK. Showalter.
1—P to Q 4	1—P to Q 4
2—P to Q B 4	2—P to K 3
3—Q Kt to B 3	3—K Kt to B 3
4—Kt to B 3	4—B to K 2

4. P to Q Kt 3 (preventing 5. P to B 5) followed by P to B 4; and, according to circumstances, by B to Kt 2 and B to Q 3 is much better. Unless Black means to Castle at once, there is no reason for B to K 2 at this juncture.

5—B to B 4	
6—P to K 3	5—Q to Q 2
7—Q to B 2	6—P to Q R 3
	7—P to B 4

This is a good move and we prefer it to B to Kt 2 later on, though both moves are among the best which White can adopt in this opening. B to Kt 2 is, however, the more popular; although contrary to Steinitz's view that the Bishop should be kept in touch with both wings.

Black is aware now of the necessity for prompt action: but has missed valuable opportunities of development. His moves, so far, are a justification of the "book-moves" which he has disdained.

8—Q P takes P	8—Q P takes P
9—B takes P	9—B takes P
10—Castles	10—P to Q Kt 4
11—Kt to K 4	11—Kt takes Kt

Impulsory!

12—Q takes Kt	12—R to R 2
13—Kt to Kt 5	13—P to Kt 3
14—B takes Kt	

12 to R 3—a tempting move, attacking three undefended men—then Black replies P to K B 3, a good defence.

15—Q to R 4	14—B to Kt 2
16—B takes R	15—P to K R 4
17—K R to Q sq.	16—B takes B
18—B to Q Kt 3	17—Q to K 2

Standing *en prise* for seven moves, the Bishop is at last driven. It is an interesting subject for study why Black all that time could not take this Bishop. His tenth P to Q Kt 4) was only otherwise

	18—B to Kt 3
19—Kt to K B 3	19—Resigns.

GAME No. 257.

QUEEN'S PAWN OPENING.

WHITE. Delmar.	BLACK. Richardson.
1—P to Q 4	1—P to Q 4
2—P to K 3	2—P to K 3
3—B to Q 3	3—P to Q B 4
4—P to Q Kt 3	4—Kt to K B 3
5—Kt to K B 3	5—Kt to Q B 3
6—Castles	6—B to Q 3
7—B to Q Kt 2	7—P takes P
8—P takes P	8—Castles.
9—P to Q R 3	

To prevent exchange of the well-placed Bishop. So far the game has followed the usual lines of this opening.

	9—Q to B 2
10—R to K sq.	10—P to Q Kt 3
11—Q Kt to Q 2	11—R to K sq.
12—Kt to K 5	

White has finished his development and now begins to attack.

	12—B takes Kt
13—P takes B	13—Kt to Q 2
14—Q to K R 5	14—Kt to K B sq.

His best move undoubtedly.

15—R to K 3	15—P to K R 3
16—R to K Kt 3	16—K to R sq.
17—Q R to K sq.	17—Kt to K R 2
18—Q R to K 3	18—R to K Kt sq.
19—Kt to K B 3	19—B to Q Kt 2

Too late. To make this effective, requires too many additional moves for which Black has absolutely no time. Note throughout the game how well White's isolated Pawn has been supported, despite its apparent weakness at times: Note also how it prevents the advance of P to K B 4 at the critical stage of the game.

20—B takes Kt	

This knight is the key of Black's position: and without taking it (even at an apparent sacrifice) no immediate attack is possible. Black should not have taken the Bishop, which action leads to the actual mate: R to K B sq. followed by Q to K 2 would have prolonged the defence, but would scarcely have availed to save the game owing to the unfavourable position of Black's Queen-side pieces.

	20—K takes B
21—Kt to Kt 5 ch.	21—K to R sq.
22—Kt takes B P ch.	22—K to R 2
23—Q to Kt 6 mate.	

Brooklyn won at the end with 4½ to 3½ points. The score:—

Table. City Chess Club.		Brooklyn Chess Club.	
1.—J. W. Showalter...	0	H. N. Pillsbury	1
2.—E. Delmar	1	Philip Richardson...	0
3.—A. Ettlinger.....	0	J. F. Barry.....	1
4.—H. Voigt	½	F. M. Teed.....	½
5.—S. W. Bampton...	½	S. R. Rocamora.....	½
6.—W. J. Ferris	0	Wm. M. de Visser...	1
7.—W. Huntington ...	½	W. F. Eno	½
8.—J. W. Halpern ...	1	J. C. Tatum	0
Total 3½		Total.....4½	

Referee—Dr. O. P. Honegger, Metropolitan Chess Club.

The Yokohama Chess Club closed for the season on Monday, 30th ultimo; and will reopen on Thursday, 3rd October. The Tokyo Chess Club remains open throughout the present month. We are sorry these Clubs have not met in friendly contest during the past winter; but hope that hostilities will be renewed early in the next session.

GAME No. 258.

QUEEN'S PAWN OPENING.

WHITE. Janowsky.	BLACK. Mieses.
1—P to Q 4	1—P to Q 4
2—P to K 3	2—P to K 3
3—B to Q 3	3—P to Q B 4
4—P to Q B 3	4—Kt to K B 3
5—Kt to Q 2	5—B to K 2
6—P to K B 4 (a)	6—Castles
7—K Kt to B 3	7—P to Q Kt 3
8—Kt to K 5	8—B to Kt 2
9—Q to B 3	9—Q Kt to Q 2
10—Castles	10—Q to B 2
11—P to K Kt 4 (b)	11—P to Kt 3
12—Q to R 3	12—Kt to K 5
13—R to B 3 (c)	13—Q Kt takes Kt
14—Q P takes Kt (d)	14—Kt takes Kt
15—B takes Kt	15—P to Q 5
16—K P takes P (e)	16—B takes R
17—Q takes B	17—Q R to Q sq.
18—B to K 3	18—P takes P
19—P takes P	19—B to B 4 (f)
20—Q to K 4	20—B takes P
21—B takes B	21—Q to Q 2
22—B takes P	22—P takes B
23—B to B 2	23—Q to Q 5 ch.
24—K to Kt 2 (g)	24—Q takes Kt P
25—R to K B sq.	25—R to Q 7 ch.
26—K to B 2	26—R takes R ch.
27—K takes R	27—R to B 80.

NOTES.

(a) The "stonewall" attack. Successfully adopted by Lipke against Schiffers and Tarrasch in the Leipsic congress of 1894.

(b) Premature. It ought to have been preceded by the development of his Queen's side.

(c) A mistake, the consequence of which is that Black is enabled to clear the long diagonal of his inactive Queen's Bishop.

(d) Compulsory. If, instead, 14 B P takes Kt, 15.....Kt to Kt 5, winning the exchange.

(e) If 16 R to Kt 3, then 16.....P to B 4; 17 B to K sq. P to Q 6; and if 16 P to K 4, then 16.....P to Q B 4, to be followed by .....P to Q 6, White, in either case, incurring disadvantage in position. He prefers to sacrifice the exchange—a still more unsatisfactory alternative.

(f) The speediest way of finishing the game.

(g) If 24 Q takes Q, then 24.....R takes Q, 25 R to K B sq. R to Q 7; 26 R to B 8, K R to Q sq.; and Black wins.

If the chess learner would realise that chess is a battle, and would resolve, says the chess editor of *The Times*, to school himself to the constraint necessary to avoid premature attack, he would go far on the road to becoming a strong player. No commander would be held to be sane who would venture on approaching a hostile line with one, or perhaps two, of his most valuable battalions, or who would dare to provoke a contest with the whole of the opposing forces, they being in their intrenchments, and he being in the open. But on any day insanity worse than this may be observed in any chess resort. In utter disregard of first principles, and in the hope of snatching a victory by some off-chance, a player may be seen bringing his Queen and his Knight to bear on some easily-defended point, and being promptly compelled to hark back. He has provoked attack, with the result of finding that he has lost time, and that forlorn and discouraged he has left his opponent in possession of the field. If he had devoted to development the moves which he has simply thrown away, how superior would have been his position.

THE LATE R. A. PROCTOR'S LOVE FOR THE GAME.
